

Banking Process Flows — BIAN Capability Model Reference

Generated on 2026-07-06 | Domain: Banking | Framework: BIAN (Banking Industry Architecture Network)

BIAN Capability Model Reference

The BIAN (Banking Industry Architecture Network) Capability Model defines the standard business capabilities for banking institutions. The table below lists all relevant capabilities grouped by domain. Each process flow in this document is mapped to its relevant BIAN capability codes.

Channels

Capability	Code	Description
Branch Services	BC001	Manage physical branch operations, teller services, and lobby management
Contact Center	BC002	Operate call center, IVR, and customer service desk
Digital Channels	BC003	Deliver internet banking, mobile banking, and digital self-service
Channel Management	BC004	Orchestrate omnichannel consistency, channel analytics, and channel optimization

Finance & Risk Management

Capability	Code	Description
Financial Accounting	BC010	Manage general ledger, accounts payable/receivable, and financial close
Management Accounting	BC011	Perform cost allocation, profitability analysis, and management reporting
Risk Management	BC012	Identify, assess, monitor, and mitigate credit, market, operational, and liquidity risk
Compliance	BC013	Ensure regulatory compliance, AML/CTF, sanctions screening, and conduct risk
Treasury Management	BC014	Manage liquidity, funding, investments, and interest rate risk

Customers

Capability	Code	Description
Customer Relationship Management	BC031	Manage customer interactions, campaigns, loyalty programs, and relationship lifecycle
Customer Onboarding	BC032	Onboard new customers including identity verification, KYC, and account setup
Customer Due Diligence	BC033	Perform KYC/CDD/EDD checks, risk rating, and ongoing monitoring
Customer Servicing	BC034	Handle customer inquiries, service requests, complaints, and case management

Operations

Capability	Code	Description
Payment Operations	BC060	Execute and manage domestic and cross-border payment instruments
Settlement & Clearing	BC061	Clear and settle payments, securities, and financial transactions
Reconciliation	BC062	Reconcile accounts, transactions, and nostro/vostro positions
Trade Operations	BC063	Process trade finance, letters of credit, and document handling

Products

Capability	Code	Description
Lending	BC070	Originate, service, and manage consumer and mortgage loans
Credit Cards	BC071	Issue, authorize, settle, and manage credit and debit card programs
Deposits	BC072	Manage current accounts, savings accounts, and demand deposits
Term Deposits & Savings	BC073	Manage term deposits, structured savings, and investment products

Business Management

Capability	Code	Description
Strategy Management	BC080	Define corporate strategy, business planning, and performance management
Product Management	BC081	Design, develop, price, and manage banking products throughout lifecycle
Marketing Management	BC082	Plan and execute marketing campaigns, brand management, and market intelligence

Resource Management

Capability	Code	Description
Human Resource Management	BC050	Manage workforce planning, recruitment, performance, and payroll
Training & Development	BC051	Manage employee training, certifications, and competence development

BIAN Capability Model Reference

The BIAN (Banking Industry Architecture Network) Capability Model defines the standard business capabilities for banking institutions. The table below lists all relevant capabilities grouped by domain. Each process flow in this document is mapped to its relevant BIAN capability codes.

Channels

Capability	Code	Description
Branch Services	BC001	Manage physical branch operations, teller services, and lobby management
Contact Center	BC002	Operate call center, IVR, and customer service desk
Digital Channels	BC003	Deliver internet banking, mobile banking, and digital self-service
Channel Management	BC004	Orchestrate omnichannel consistency, channel analytics, and channel optimization

Finance & Risk Management

Capability	Code	Description
Financial Accounting	BC010	Manage general ledger, accounts payable/receivable, and financial close
Management Accounting	BC011	Perform cost allocation, profitability analysis, and management reporting
Risk Management	BC012	Identify, assess, monitor, and mitigate credit, market, operational, and liquidity risk
Compliance	BC013	Ensure regulatory compliance, AML/CTF, sanctions screening, and conduct risk
Treasury Management	BC014	Manage liquidity, funding, investments, and interest rate risk

Customers

Capability	Code	Description
Customer Relationship Management	BC031	Manage customer interactions, campaigns, loyalty programs, and relationship lifecycle
Customer Onboarding	BC032	Onboard new customers including identity verification, KYC, and account setup
Customer Due Diligence	BC033	Perform KYC/CDD/EDD checks, risk rating, and ongoing monitoring
Customer Servicing	BC034	Handle customer inquiries, service requests, complaints, and case management

Operations

Capability	Code	Description
Payment Operations	BC060	Execute and manage domestic and cross-border payment instruments
Settlement & Clearing	BC061	Clear and settle payments, securities, and financial transactions
Reconciliation	BC062	Reconcile accounts, transactions, and nostro/vostro positions
Trade Operations	BC063	Process trade finance, letters of credit, and document handling

Products

Capability	Code	Description
Lending	BC070	Originate, service, and manage consumer and mortgage loans
Credit Cards	BC071	Issue, authorize, settle, and manage credit and debit card programs
Deposits	BC072	Manage current accounts, savings accounts, and demand deposits
Term Deposits & Savings	BC073	Manage term deposits, structured savings, and investment products

Business Management

Capability	Code	Description
Strategy Management	BC080	Define corporate strategy, business planning, and performance management
Product Management	BC081	Design, develop, price, and manage banking products throughout lifecycle
Marketing Management	BC082	Plan and execute marketing campaigns, brand management, and market intelligence

Resource Management

Capability	Code	Description
Human Resource Management	BC050	Manage workforce planning, recruitment, performance, and payroll
Training & Development	BC051	Manage employee training, certifications, and competence development

Customer Onboarding & Account Management - BC032 BC033 BC031 - BC032 BC033 BC031

End-to-end lifecycle of customer acquisition, identity verification, account opening, and ongoing relationship management across retail and corporate segments.

1.1 New Customer Onboarding & KYC

Description: Customer registers via digital channel. System performs identity verification, KYC checks, sanctions screening, risk assessment, and creates customer record.

Actors: Customer, Relationship Manager, Compliance Officer

Systems: CRM (Salesforce Financial Services), Digital Onboarding Platform (Backbase), Core Banking (Temenos Transact), Identity Verification (Onfido), Screening (WorldCheck), CIF System

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Customer Onboarding	Customer	CheckExistingCustomer	Onboarding Platform (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Customer Onboarding	Identity	VerifyDocuments	Onboarding Platform (Backbase)	Identity Verification (Onfido)	Backbase REST API	Onfido API (API Key)	API-led (Real-time)	Medium
Customer Onboarding	Sanctions	ScreenCustomer	Onboarding Platform (Backbase)	Screening (WorldCheck)	Backbase REST API	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Customer Onboarding	CIF	CreateCustomerRecord	CRM (Salesforce Financial Services)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Customer Onboarding	Customer	CheckExistingCustomer returns correct match/no-match for given email	Customer record found or 'no existing record' returned within 2 seconds
Customer Onboarding	Identity	Identity documents verified against Onfido document and liveness checks	Passport and liveness pass with >=95% confidence; failure returns clear error
Customer Onboarding	Sanctions	Customer screened against WorldCheck PEP/sanctions/adverse media lists	Low risk result with no matches; any match >=90% triggers AML alert
Customer Onboarding	CIF	Customer CIF record created in Temenos Transact with all mandatory fields	CustomerID returned and propagated to CRM; non-repudiable audit trail created

1.2 Retail Account Opening

Description: Customer selects account type, system validates eligibility, opens account in core banking, links digital channels, produces documentation.

Actors: Customer, Relationship Manager

Systems: CRM (Salesforce Financial Services), Digital Onboarding Platform (Backbase), Core Banking (Temenos Transact), Card Management (Fiserv), Digital Banking (Backbase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Account Opening	Eligibility	ValidateEligibility	Onboarding Platform (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Account Opening	Account	CreateAccount	Onboarding Platform (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Account Opening	Card	OrderDebitCard	Onboarding Platform (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Medium
Account Opening	Digital Banking	EnrollUser	Onboarding Platform (Backbase)	Digital Banking (Backbase)	Backbase REST API	Backbase REST API (JWT)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Account Opening	Eligibility	Validate eligibility returns true/false based on customer risk rating and flags	Eligible customers proceed; ineligible customers see reason with appeal path
Account Opening	Account	Account created in core banking with correct type, currency, and IBAN generation	IBAN returned, account status=Active, initial balance reflected in <5 seconds
Account Opening	Card	Debit card ordered via Fiserv card management system	CardID returned, card status=Ordered, tracking reference provided
Account Opening	Digital Banking	Digital banking enrollment created with username linked to customer ID	Login credentials issued; MFA enrollment triggered within 1 minute

1.3 Corporate Account Opening

Description: Relationship Manager initiates corporate account opening. Company documents verified, beneficial ownership structure captured, multi-signatory setup, account opened.

Actors: Relationship Manager, Compliance Officer, Customer (Corporate)

Systems: CRM (Salesforce Financial Services), Document Management (M-Files), Core Banking (Temenos Transact), Screening (WorldCheck), Compliance Case Management (Pega)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Corporate Account	Documents	StoreCompanyDocs	CRM (Salesforce Financial Services)	Document Mgmt (M-Files)	Salesforce REST API (OAuth2)	M-Files REST API (API Key)	API-led (Real-time)	Simple
Corporate Account	Screening	ScreenCompanyUBO	CRM (Salesforce Financial Services)	Screening (WorldCheck)	Salesforce REST API (OAuth2)	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Corporate Account	Compliance	ApproveCompliance	CRM (Salesforce Financial Services)	Compliance Case Mgmt (Pega)	Salesforce REST API (OAuth2)	Pega API (REST)	API-led (Real-time)	Medium
Corporate Account	Account	OpenCorporateAccount	CRM (Salesforce Financial Services)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Corporate Account	Documents	Company documents stored in M-Files with correct metadata tagging	Documents retrievable by company ID; version history maintained
Corporate Account	Screening	Company and UBOs screened against sanctions lists	Low risk result or escalated compliance case; screening completed in <10 seconds
Corporate Account	Compliance	Compliance approval obtained via Pega case management workflow	Case approved/cleared; rejection includes reason and resubmission guidance
Corporate Account	Account	Corporate account opened with multi-signatory mandate configuration	Account created with all signatories; mandate rules enforced on transactions

Flow	Entity	Acceptance Criterion	Expected Outcome
------	--------	----------------------	------------------

Payments & Transfers - BC060 BC061 - BC060 BC061

End-to-end payment processing covering domestic, cross-border, and real-time payment instruments. Integration with clearing systems, correspondent banks, and settlement engines.

2.1 Domestic Payment (SEPA/ACH)

Description: Customer initiates domestic transfer via digital channel. Payment hub validates, routes to clearing, executes, and reconciles.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), SEPA Clearing (EBA Clearing), Reconciliation Engine (SmartStream)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Domestic Payment	Payment Instruction	SubmitPayment	Digital Banking (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante API (ISO 20022)	API-led (Real-time)	Medium
Domestic Payment	Clearing	SubmitToClearing	Payment Hub (Volante)	SEPA Clearing (EBA Clearing)	Volante API (ISO 20022)	EBA Clearing API (ISO 20022)	API-led (Real-time)	High
Domestic Payment	Ledger	PostTransaction	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Domestic Payment	Reconciliation	MatchTransaction	Payment Hub (Volante)	Reconciliation Engine (SmartStream)	Volante REST API	SmartStream API (REST)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Domestic Payment	Payment Instruction	ISO 20022 pain.001 message generated and submitted to payment hub	Payment hub acknowledges with unique reference; invalid messages rejected with reason
Domestic Payment	Clearing	SEPA credit transfer submitted to EBA Clearing via ISO 20022 pacs.008	Clearing confirmation received with status=Settled within SEPA timelines
Domestic Payment	Ledger	Debit and credit entries posted correctly to source and beneficiary accounts	Source account debited, beneficiary account credited; balance reconciliation matches
Domestic Payment	Reconciliation	Transaction matched by SmartStream reconciliation engine	Match status=success; unmatched items flagged with discrepancy details

2.2 Cross-Border Payment (SWIFT)

Description: Customer initiates international wire. Payment hub validates, formats SWIFT MT103, sends via SWIFT, correspondent bank processes, cover payment via MT202, status tracking.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), SWIFT Alliance Gateway, Correspondent Bank (Deutsche Bank)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Cross-Border Payment	FX Quote	CheckFXRate	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Cross-Border Payment	SWIFT Message	SendMT103	Payment Hub (Volante)	SWIFT Alliance Gateway	Volante ISO 20022	SWIFT Alliance (MT)	API-led (Real-time)	High
Cross-Border Payment	Cover Payment	ProcessCover	SWIFT Alliance Gateway	Correspondent Bank (Deutsche Bank)	SWIFT Alliance (MT)	SWIFT MT202	Batch (Scheduled)	High
Cross-Border Payment	Status	TrackGPIStatus	SWIFT Alliance Gateway	Payment Hub (Volante)	SWIFT GPI API	Volante REST API	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Cross-Border Payment	FX Quote	FX rate returned for currency pair with valid from/to currencies	Rate within 0.5% of market mid-rate; expired quotes rejected after 30 seconds
Cross-Border Payment	SWIFT Message	SWIFT MT103 message formatted and sent via SWIFT Alliance Gateway	SWIFT ACK received; UETR assigned; format validation errors cause rejection
Cross-Border Payment	Cover Payment	MT202 cover payment processed correctly by correspondent bank	Cover funds received by correspondent; nostro account debited correctly
Cross-Border Payment	Status	SWIFT GPI tracker updated with end-to-end payment status	Status transitions visible in GPI tracker; final ACCC confirmation received

2.3 Real-Time Payment (Faster Payments)

Description: Customer initiates instant payment. Payment hub processes in real-time via Faster Payments Service, immediate confirmation.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), Faster Payments Service (FPS), Beneficiary Bank

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Real-Time Payment	Payment Request	SubmitRTPayment	Digital Banking (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante REST API	API-led (Real-time)	Medium
Real-Time Payment	FPS Message	SubmitToFPS	Payment Hub (Volante)	Faster Payments Service (FPS)	Volante API (ISO 20022)	FPS API (ISO 20022)	API-led (Real-time)	High
Real-Time Payment	Credit	CreditBeneficiary	Faster Payments Service (FPS)	Beneficiary Bank	FPS Network API	Bank API (ISO 20022)	API-led (Real-time)	High
Real-Time Payment	Ledger	PostDebit	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Real-Time Payment	Payment Request	Real-time payment request received and validated by payment hub	Request accepted or rejected within 1 second; invalid data returns specific error
Real-Time Payment	FPS Message	ISO 20022 pacs.008 message submitted to Faster Payments Service	FPS acknowledges within 2 seconds; settlement confirmation in <15 seconds
Real-Time Payment	Credit	Beneficiary account credited immediately by beneficiary bank	Funds available to beneficiary within 10 seconds of initiation; no holds applied
Real-Time Payment	Ledger	Source account debited correctly with real-time balance update	Available balance reduced immediately; trans

Flow	Entity	Acceptance Criterion	Expected Outcome
			action appears in transaction history

Lending & Credit Management - BC070 - BC070

End-to-end lending lifecycle from origination through servicing. Credit assessment, approval workflows, disbursement, and ongoing account management.

3.1 Retail Loan Origination

Description: Customer applies for personal loan. LOS processes application, initiates credit bureau check, calculates affordability, recommends decision, routes for approval.

Actors: Customer, Loan Officer, Credit Risk Analyst

Systems: LOS (nCino/Finastra), Core Banking (Temenos Transact), Credit Bureau (Experian), Decision Engine (FICO)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Loan Origination	Application	SubmitLoanApp	Digital Banking (Backbase)	LOS (nCino)	Backbase REST API	nCino REST API (OAuth2)	API-led (Real-time)	Medium
Loan Origination	Credit Check	CreditBureauCheck	LOS (nCino)	Credit Bureau (Experian)	nCino API	Experian API (SOAP)	API-led (Real-time)	High
Loan Origination	Decision	CalculateAffordability	LOS (nCino)	Decision Engine (FICO)	nCino REST API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Loan Origination	Disbursement	DisburseLoan	LOS (nCino)	Core Banking (Temenos Transact)	nCino REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Loan Origination	Application	Loan application submitted from digital banking to nCino LOS	Application ID created; all fields mapped correctly; incomplete applications rejected
Loan Origination	Credit Check	Experian credit bureau check returns credit report and score	Credit score returned within 5 seconds; bureau error handled gracefully with retry
Loan Origination	Decision	FICO affordability calculation returns DTI ratio and max loan recommendation	DTI <=40% auto-approved; >40% routed to manual underwriting
Loan Origination	Disbursement	Loan funds disbursed to customer account in Temenos Transact	Customer account credited within 30 seconds; loan account created with correct terms

3.2 Mortgage Lending

Description: Customer applies for mortgage. LOS manages document collection, valuation, solicitor coordination, offer issuance, completion.

Actors: Customer, Mortgage Advisor, Underwriter

Systems: LOS (nCino), Core Banking (Temenos Transact), Valuation Provider (Hometrack), Solicitor Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Mortgage Lending	DIP	DecisionInPrinciple	LOS (nCino)	LOS (nCino)	Internal	Internal	API-led (Real-time)	Simple
Mortgage Lending	Valuation	OrderValuation	LOS (nCino)	Valuation Provider (Hometrack)	nCino REST API	Hometrack API (SOAP)	Event-driven	Medium
Mortgage Lending	Solicitor	InstructSolicitor	LOS (nCino)	Solicitor Portal	nCino REST API	Solicitor API (REST)	Event-driven	Medium
Mortgage Lending	Funds	ReleaseFunds	LOS (nCino)	Core Banking (Temenos Transact)	nCino REST API (OAuth2)	Temenos REST API (API Key)	Event-driven	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Mortgage Lending	DIP	Decision in Principle calculated based on submitted income and commitment data	DIP issued with provisional amount and term; declined DIP shows reason
Mortgage Lending	Valuation	Property valuation ordered from Hometrack with correct property details	Valuation report returned within 24hrs; automated valuation for LTV <80%
Mortgage Lending	Solicitor	Solicitor instructed via portal with all required case documents	Solicitor confirmation received; all title deed requests submitted
Mortgage Lending	Funds	Mortgage funds released to solicitor on completion	Funds transferred via CHAPS within 2 hours of completion request; tracking reference provided

3.3 Credit Assessment & Scoring

Description: Credit analyst reviews score, bureau data, bank statement analysis. Decision engine computes risk score, recommends limit/terms. Underwriter approves.

Actors: Credit Risk Analyst, Loan Officer, Underwriter

Systems: LOS (nCino), Credit Bureau (Experian), Decision Engine (FICO), Open Banking API (Token.io)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Credit Assessment	Application Data	SendForScoring	LOS (nCino)	Decision Engine (FICO)	nCino REST API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Credit Assessment	Credit Report	GetCreditReport	Decision Engine (FICO)	Credit Bureau (Experian)	FICO Blaze API	Experian API (SOAP)	API-led (Real-time)	High
Credit Assessment	Bank Statements	GetTransactionData	Decision Engine (FICO)	Open Banking (Token.io)	FICO API	Token.io API (OAuth2)	API-led (Real-time)	High
Credit Assessment	Approval	ApproveUnderwriting	LOS (nCino)	Workflow (Pega)	nCino REST API (OAuth2)	Pega Workflow API (REST)	Event-driven	Medium

Acceptance Criteria

d> Approval recorded in LOS; conditions tracked; approval valid for 90 days

Flow	Entity	Acceptance Criterion	Expected Outcome
Credit Assessment	Application Data	Application data sent from nCino to FICO decision engine	Data accepted by decision engine; missing mandatory fields cause rejection
Credit Assessment	Credit Report	Experian credit report retrieved with score, history, and default information	Full credit report returned; bureau downtime handled with cached score or manual fallback
Credit Assessment	Bank Statements	Transaction data retrieved via Open Banking API with customer consent	12 months data retrieved; consent refresh handled; data unavailable flagged
Credit Assessment	Approval	Underwriter approval recorded with conditions (if any)	

Cards Management - BC071 - BC071

Full lifecycle of credit and debit card programs — issuance, authorization, transaction processing, clearing, settlement, and dispute management.

4.1 Card Issuance

Description: Customer requests card. Card Mgmt system personalizes, orders production, activates card, sets PIN, enables digital wallet.

Actors: Customer, Card Operations

Systems: Card Management (Fiserv/FDR), Card Production Bureau (CPI), Digital Banking (Backbase), Digital Wallet (Apple Pay / Google Pay)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Issuance	Card Request	CreateCardRequest	Digital Banking (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Medium
Card Issuance	Production	OrderProduction	Card Management (Fiserv)	Card Bureau (CPI)	Fiserv API (ISO 8583)	CPI API (SFTP)	Batch (Scheduled)	High
Card Issuance	Activation	ActivateCard	Digital Banking (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Simple
Card Issuance	Tokenization	TokenizeCard	Digital Wallet (Apple Pay)	Card Management (Fiserv)	Apple Pay API	Fiserv Token API	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Issuance	Card Request	Card creation request sent to Fiserv card management with correct customer and account	Card details generated (PAN, expiry, CVV); card ID returned
Card Issuance	Production	Production order file sent to CPI bureau for card personalization	File acknowledged by CPI; physical card dispatched within 3 business days
Card Issuance	Activation	Card activated by customer via digital banking or IVR	Card status changes from Issued to Active; activation timestamp logged
Card Issuance	Tokenization	Card tokenized for Apple Pay/Google Pay with device-bound token	Token issued; PAN never shared with wallet provider; token domain-restricted

4.2 Card Transaction Processing

Description: Customer makes POS purchase. Authorization request flows from terminal → acquirer → network → issuer. Clearing and settlement follows.

Actors: Customer, Merchant, Acquirer

Systems: Card Management (Fiserv/FDR), POS Terminal, Merchant Acquirer (Worldpay), Payment Network (Visa/Mastercard), Core Banking (Temenos Transact)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Transaction	Authorization	AuthorizeTransaction	POS Terminal	Merchant Acquirer (Worldpay)	POS Protocol (ISO 8583)	Worldpay Gateway API	API-led (Real-time)	High
Card Transaction	Routing	RouteToIssuer	Merchant Acquirer (Worldpay)	Payment Network (Mastercard)	Worldpay API (ISO 8583)	Mastercard Network (ISO 8583)	API-led (Real-time)	High
Card Transaction	Issuer Auth	AuthDecision	Payment Network (Mastercard)	Card Management (Fiserv)	Mastercard Interface	Fiserv API (ISO 8583)	API-led (Real-time)	Medium
Card Transaction	Settlement	SubmitSettlement	Merchant Acquirer (Worldpay)	Payment Network (Mastercard)	Worldpay Settlement API	Mastercard Settlement (ISO 20022)	Batch (Scheduled)	High
Card Transaction	Posting	PostCardTransaction	Card Management (Fiserv)	Core Banking (Temenos Transact)	Fiserv REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Transaction	Authorization	POS authorization request sent and response received in <2 seconds	Auth approval code returned; declined transactions show reason code
Card Transaction	Routing	Transaction routed to correct issuer via Mastercard network BIN lookup	Route determined correctly; BIN table updated weekly
Card Transaction	Issuer Auth	Issuer validates available balance/funds and returns auth decision	Sufficient funds approve; insufficient funds decline; all decisions logged
Card Transaction	Settlement	End-of-day settlement file exchanged between acquirer, network, and issuer	Settlement file reconciled to zero; exceptions <0.1% of volume
Card Transaction	Posting	Card transaction posted to customer account in core banking	Transaction appears on statement; available balance updated; posting date = transaction date

4.3 Card Dispute Management

Description: Customer disputes a transaction. Dispute system manages chargeback lifecycle: retrieval request, chargeback, pre-arbitration, and arbitration.

Actors: Customer, Card Operations, Merchant, Acquirer

Systems: Card Management (Fiserv/FDR), Dispute System (Fiserv), Payment Network (Mastercard), Merchant Acquirer (Worldpay)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Dispute	Case	CreateDisputeCase	Digital Banking (Backbase)	Dispute System (Fiserv)	Backbase REST API	Fiserv Dispute API (SOAP)	API-led (Real-time)	Medium
Card Dispute	Retrieval	SubmitRetrievalRequest	Dispute System (Fiserv)	Payment Network (Mastercard)	Fiserv API	Mastercard Dispute API (ISO 8583)	API-led (Real-time)	High
Card Dispute	Chargeback	IssueChargeback	Dispute System (Fiserv)	Payment Network (Mastercard)	Fiserv API	Mastercard Chargeback API	API-led (Real-time)	High
Card Dispute	Reversal	ReverseFunds	Dispute System (Fiserv)	Core Banking (Temenos Transact)	Fiserv REST API	Temenos REST API (API Key)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Dispute	Case	Dispute case created with all transaction details and reason codes	Case ID generated; mandatory fields validated; duplicate case detection active
Card Dispute	Retrieval	Retrieval request sent to acquirer via Mastercard dispute network	Acquirer acknowledges within 48hrs; evidence due within 10 calendar days
Card Dispute	Chargeback	Chargeback issued with correct reason code and amount	Chargeback accepted by network; funds provisionally reversed to cardholder
Card Dispute	Reversal	Funds reversed to custo	Customer account credited; reversal appears on next statement

Flow	Entity	Acceptance Criterion	Expected Outcome
		mer account upon chargeback confirmation	

Deposits & Savings Products - BC072 BC073 - BC072 BC073

Management of demand deposits (current/savings accounts), term deposits, sweep accounts, and investment-linked savings products.

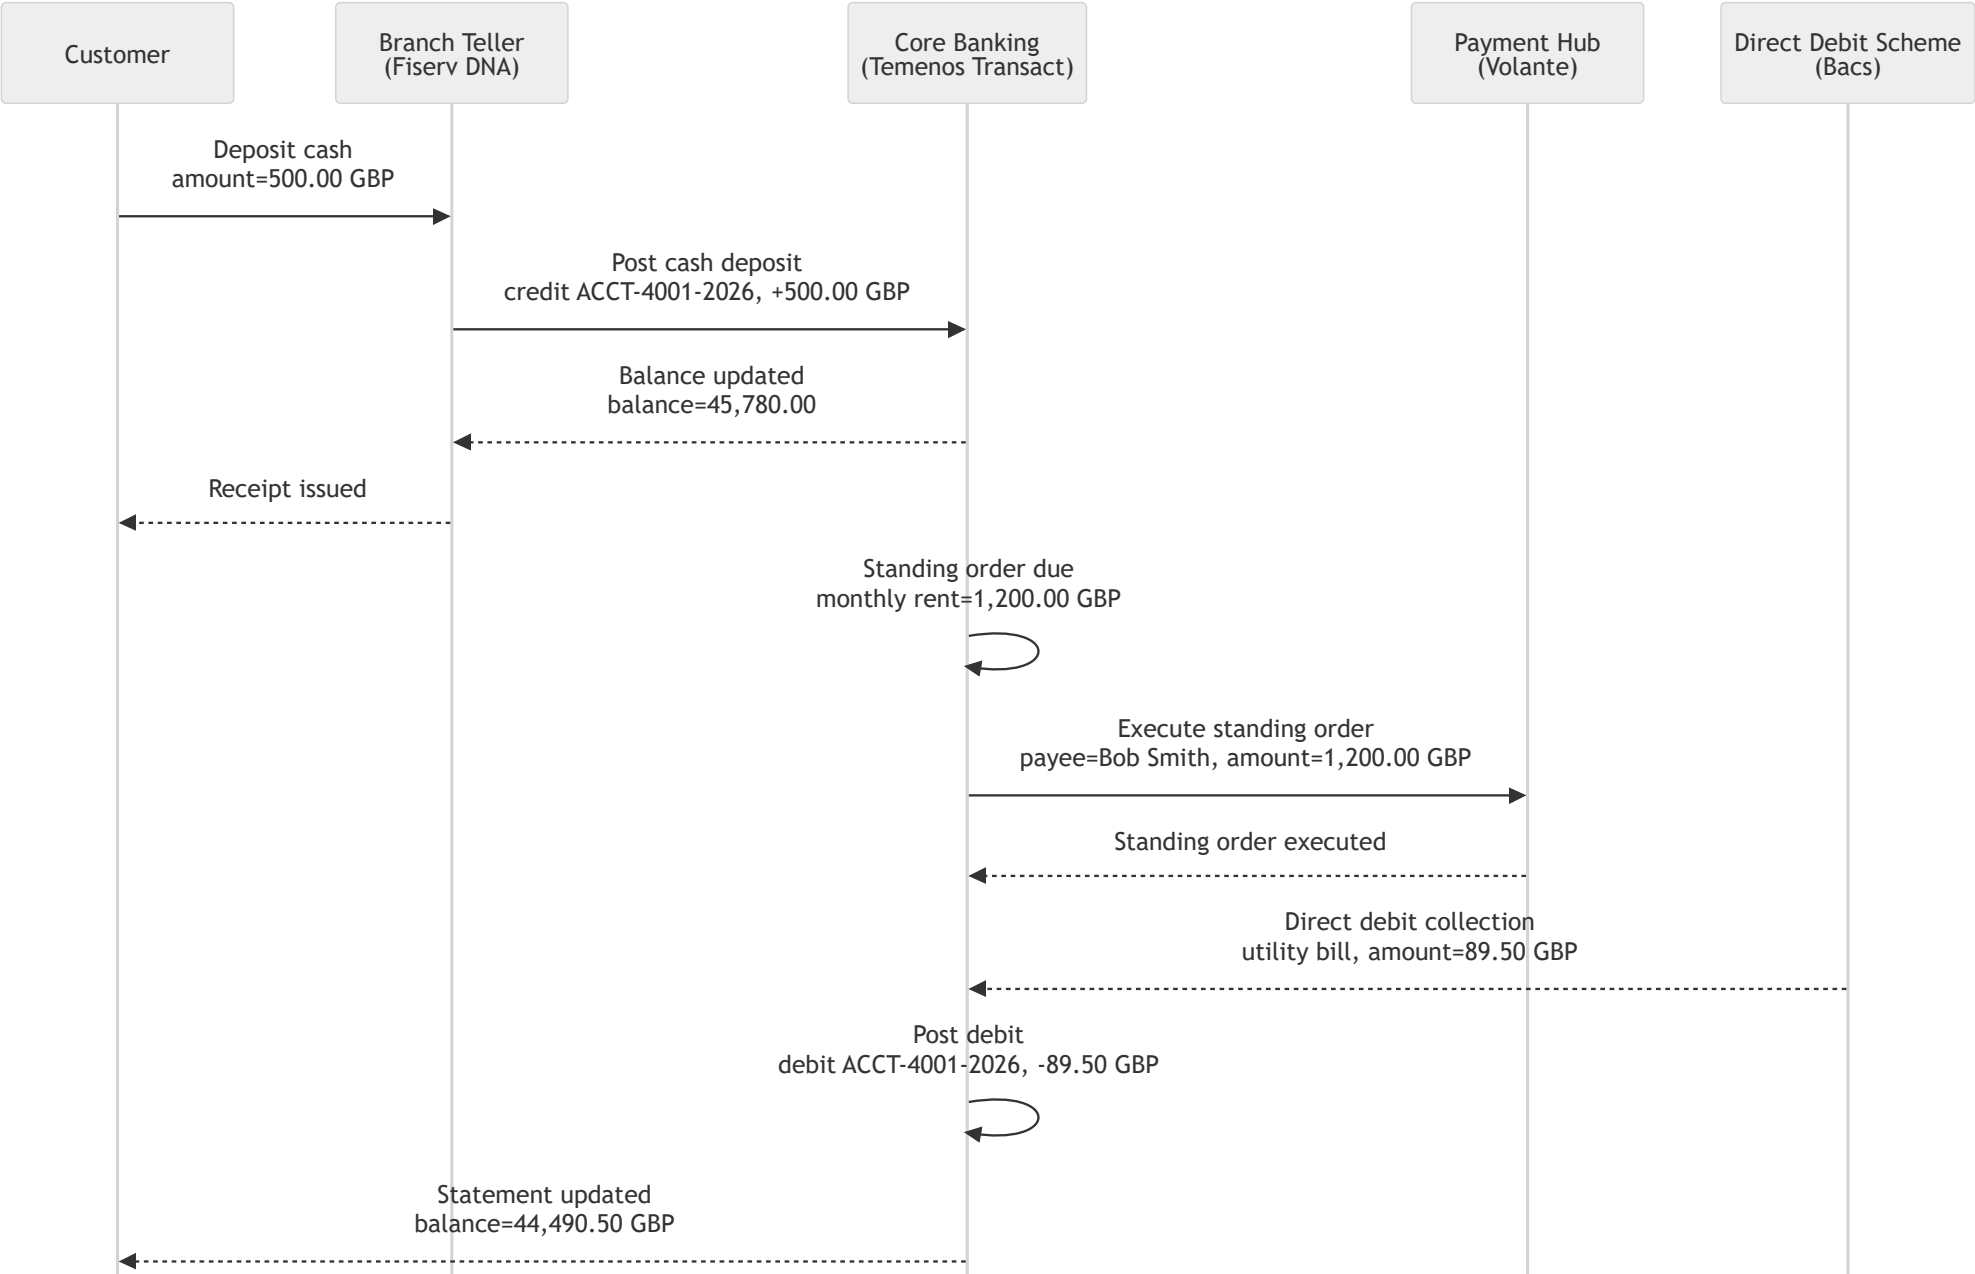

5.1 Account Operations (Current/Savings)

Description: Customer performs basic account operations — deposits, withdrawals, standing orders, direct debits. Systems process transactions and update ledgers.

Actors: Customer, Product Manager

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Payment Hub (Volante), Direct Debit Scheme (Bacs/SDD)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Account Operations	Cash Deposit	PostCashDeposit	Branch Teller (Fiserv DNA)	Core Banking (Temenos Transact)	Fiserv Teller API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Account Operations	Standing Order	ExecuteStandingOrder	Core Banking (Temenos Transact)	Payment Hub (Volante)	Temenos REST API	Volante API (ISO 20022)	API-led (Real-time)	Medium
Account Operations	Direct Debit	ProcessDirectDebit	Direct Debit Scheme (Bacs)	Core Banking (Temenos Transact)	Bacs API (ISO 20022)	Temenos REST API	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Account Operations	Cash Deposit	Cash deposit posted to correct account with accurate amount	Balance updated immediately; receipt generated with transaction reference
Account Operations	Standing Order	Standing order executed on due date for correct amount and payee	Payment sent to payment hub; next run date calculated correctly
Account Operations	Direct Debit	Direct debit collection processed correctly via Bacs scheme	Account debited on due date; unsuccessful collections retried per scheme rules

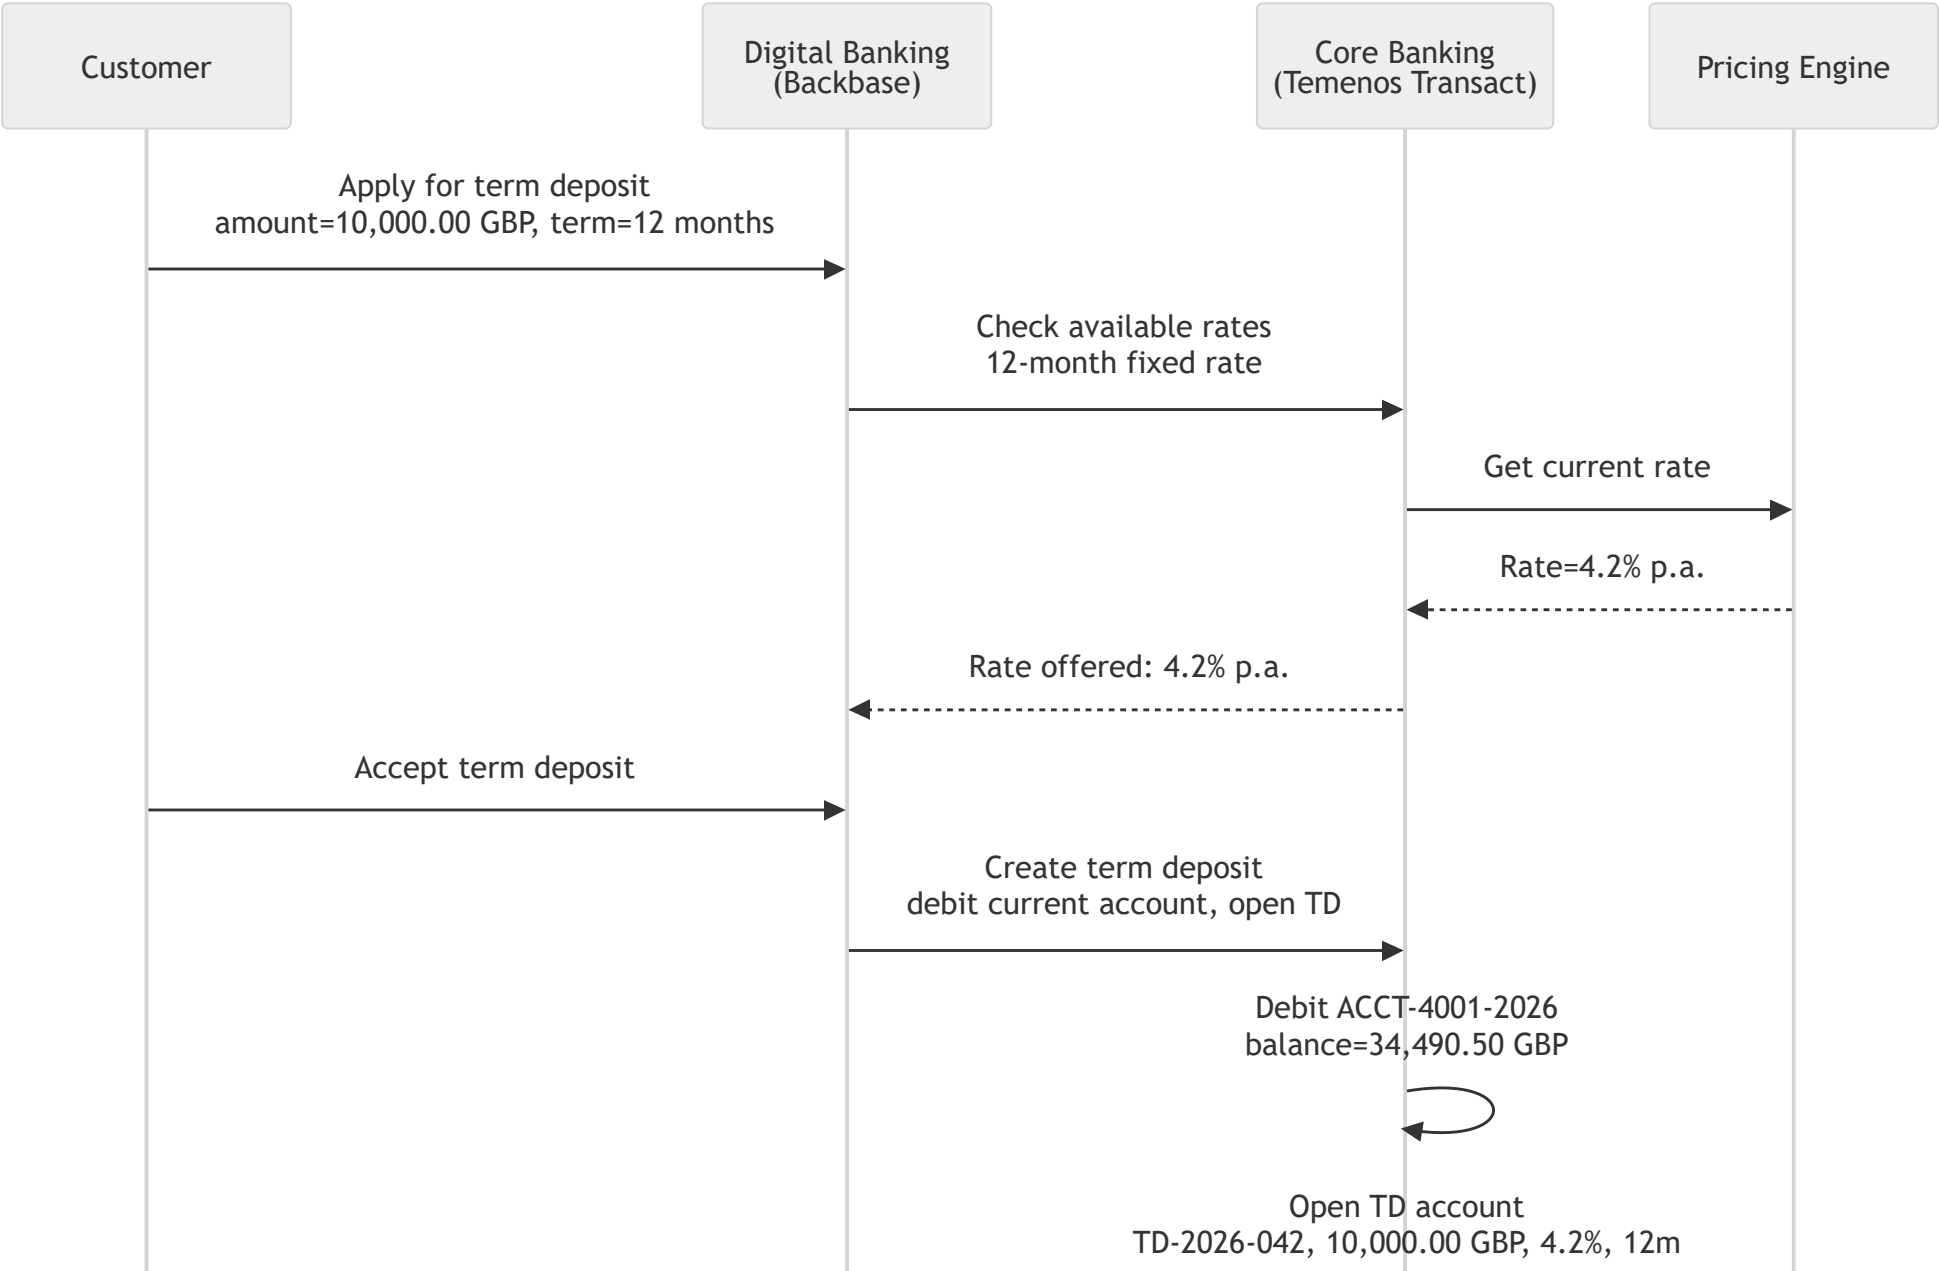

5.2 Term Deposits

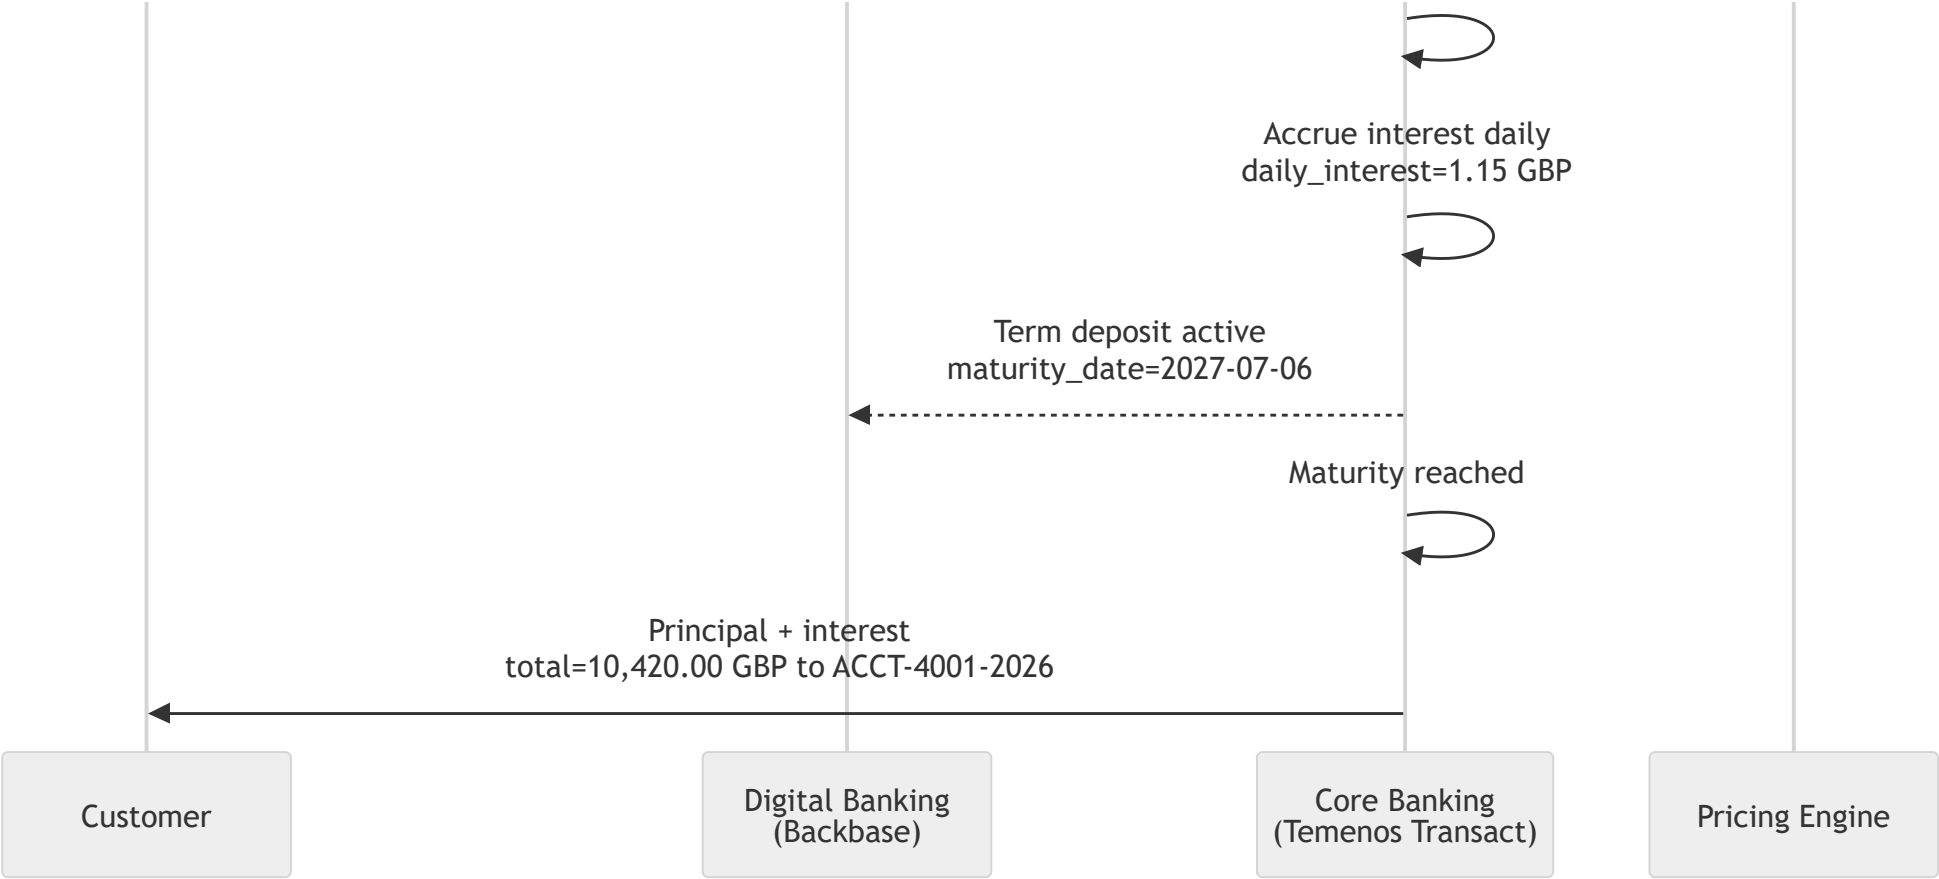

Description: Customer places term deposit. System applies interest rate, manages maturity, handles renewal/redemption.

Actors: Customer, Product Manager, Treasury

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Pricing Engine

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Term Deposit	Rate Quote	GetCurrentRate	Core Banking (Temenos Transact)	Pricing Engine	Temenos REST API	Pricing API (REST)	API-led (Real-time)	Simple
Term Deposit	Placement	CreateTermDeposit	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	API-led (Real-time)	Medium
Term Deposit	Maturity	ProcessMaturity	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Term Deposit	Rate Quote	Current term deposit rate returned from pricing engine	Rate matches published product rate; rate guaranteed for quote validity period
Term Deposit	Placement	Term deposit account created with principal debited from current account	TD account opened with correct rate, term, and maturity date; principal debited
Term Deposit	Maturity	Principal plus interest credited at maturity; renewal option processed	Maturity proceeds credited on value date; auto-renewal terms applied if configured

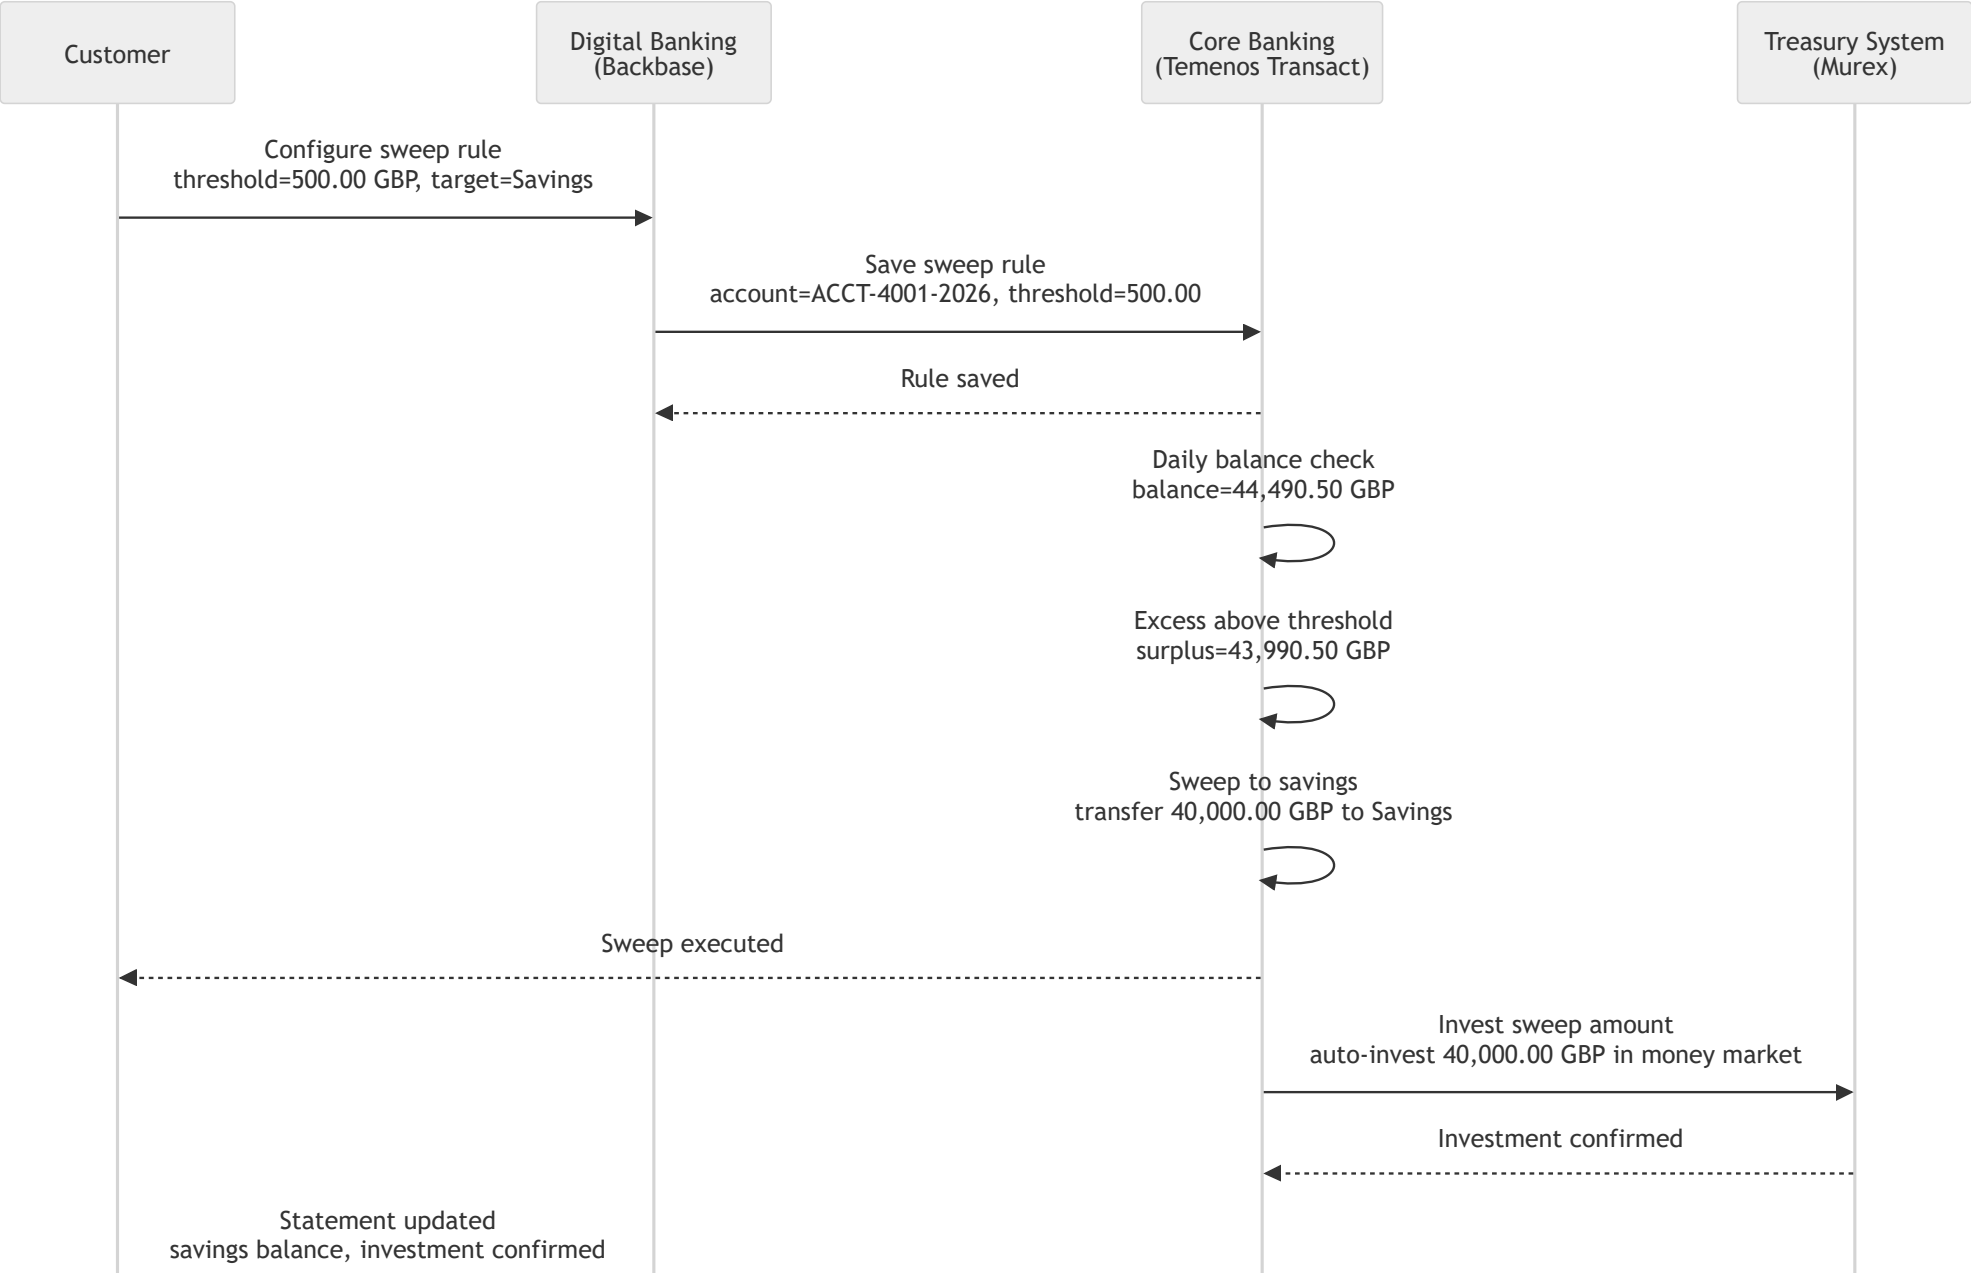

5.3 Sweep & Investment Products

Description: Customer sets up sweep rules between accounts. Excess funds swept to savings or investment product.

Actors: Customer, Treasury

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Treasury System (Murex)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Sweep Products	Rule	SaveSweepRule	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Sweep Products	Sweep	ExecuteSweep	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Medium
Sweep Products	Investment	AutoInvestSurplus	Core Banking (Temenos Transact)	Treasury System (Murex)	Temenos REST API	Murex API (SOAP)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Sweep Products	Rule	Sweep rule saved with correct threshold, source, and target accounts	Rule activated; sweep runs at next balance check cycle
Sweep Products	Sweep	Excess funds swept from source to target account per configured threshold	Funds transferred; both accounts updated; sweep amount = balance - threshold
Sweep Products	Investment	Swept	Investment confirmed; fund price and units recorded; NAV reported daily

Flow	Entity	Acceptance Criterion	Expected Outcome
		funds auto-invested in money market fund via Murex treasury system	

Risk & Compliance - BC012 BC013 - BC012 BC013

Enterprise risk management, fraud detection, AML/CTF compliance, sanctions screening, and regulatory reporting across all banking operations.

6.1 Fraud Detection & Prevention

Description: Transactions monitored in real-time. Fraud detection system scores transactions, triggers alerts, blocks suspicious activity, escalates to investigators.

Actors: Fraud Investigator, Risk Analyst

Systems: Fraud Detection (FICO Falcon), Core Banking (Temenos Transact), Case Management (Pega)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Fraud Detection	Transaction	SendTransactionEvent	Core Banking (Temenos Transact)	Fraud Detection (FICO Falcon)	Temenos REST API	Falcon API (ISO 8583)	API-led (Real-time)	High
Fraud Detection	Alert	CreateFraudAlert	Core Banking (Temenos Transact)	Case Management (Pega)	Temenos REST API	Pega REST API (OAuth2)	Event-driven	Medium
Fraud Detection	Unblock	UnblockCard	Case Management (Pega)	Core Banking (Temenos Transact)	Pega REST API (OAuth2)	Temenos REST API	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Fraud Detection	Transaction	Transaction event sent to FICO Falcon for scoring in real-time	Score returned in <100ms; high-risk transactions blocked before completion
Fraud Detection	Alert	Pega case created for transactions exceeding fraud threshold	Alert created with all context; assigned to investigator queue; SLA 30 minutes for high risk
Fraud Detection	Unblock	Card unblocked by fraud investigator after customer confirms authenticity	Card status restored to Active within 60 seconds of investigator action

6.2 AML/Sanctions Screening

Description: Customer and transaction screening against sanctions lists, PEP databases, adverse media. Alerts generated for compliance review.

Actors: Compliance Officer, Risk Analyst

Systems: AML System (Oracle FCCM), Sanctions Screening (WorldCheck), Case Management (Pega), Core Banking (Temenos Transact)

Sequence Diagram

Core Banking
(Temenos Transact)

AML System
(Oracle FCCM)

Sanctions Screening
(WorldCheck)

Case management
(Pega)

Compliance Officer

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
AML Screening	Payment	ScreenPayment	Core Banking (Temenos Transact)	AML System (Oracle FCCM)	Temenos REST API	Oracle FCCM API (SOAP)	API-led (Real-time)	High
AML Screening	Sanctions	CheckSanctionsLists	AML System (Oracle FCCM)	Sanctions Screening (WorldCheck)	Oracle FCCM API	WorldCheck API (SOAP)	API-led (Real-time)	High
AML Screening	Alert	CreateAMLAler	AML System (Oracle FCCM)	Case Management (Pega)	Oracle FCCM API	Pega REST API (OAuth2)	Event-driven	Medium
AML Screening	Release	ReleasePayment	Case Management (Pega)	Core Banking (Temenos Transact)	Pega REST API (OAuth2)	Temenos REST API	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
AML Screening	Payment	Payment sent to Oracle FCCM for AML screening before processing	Payment held in pending state; released only after compliance clearance
AML Screening	Sanctions	Payment checked against UN, OFAC, EU, and HMT sanctions lists	Clear matches > =90% blocked; false positive process allows compliance override
AML Screening	Alert	AML alert created in Pega for compliance officer review	Alert with risk score and match details; SLA for review: 24 hours for medium risk
AML Screening	Release	Payment released by compliance officer after false positive determination	Payment processed within 60 seconds of release; audit trail of release decision logged

6.3 Regulatory Reporting

Description: Bank generates regulatory reports (COREP, FINREP, Basel IV, PSD2). Data extracted from source systems, transformed, validated, submitted to regulators.

Actors: Compliance Officer, Finance Manager

Systems: Regulatory Reporting (AxiomSL), Core Banking (Temenos Transact), Lending System (nCino), Treasury System (Murex), Regulator Portal (PRA/ECB)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Regulatory Reporting	Balance Sheet	ExtractBalanceSheet	Core Banking (Temenos Transact)	Regulatory Reporting (AxiomSL)	Temenos ODBC	AxiomSL JDBC	Batch (ETL)	Medium
Regulatory Reporting	Lending Data	ExtractLendingPortfolio	Lending System (nCino)	Regulatory Reporting (AxiomSL)	nCino REST API	AxiomSL REST API	Batch (ETL)	Medium
Regulatory Reporting	Treasury Data	ExtractTreasuryPositions	Treasury System (Murex)	Regulatory Reporting (AxiomSL)	Murex API (SFTP)	AxiomSL SFTP	Batch (Scheduled)	High
Regulatory Reporting	Submission	SubmitToRegulator	Regulatory Reporting (AxiomSL)	Regulator Portal (PRA)	AxiomSL XBRL	PRA Gateway (SFTP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Regulatory Reporting	Balance Sheet	Balance sheet data extracted from Temenos Transact to AxiomSL	Extract completed for all entities; data validated against GL; discrepancies <0.01%
Regulatory Reporting	Lending Data	Lending portfolio data (EAD, PD, LGD) extracted from nCino	All active loans included; risk parameters match source system
Regulatory Reporting	Treasury Data	Treasury position data extracted from Murex for liquidity reporting	LCR and NSFR calculated correctly; intraday positions included
Regulatory Reporting	Submission	COREP/FINREP reports submitted to regulator via XBRL	Regulator acknowledgment received; submission timestamp logged; retry on failure with backoff

Flow	Entity	Acceptance Criterion	Expected Outcome
------	--------	----------------------	------------------

Channels & Digital Banking - BC001 BC003 BC002 - BC001 BC003 BC002

Omnichannel banking delivery across internet banking, mobile apps, and physical branch network. Consistent experience, channel orchestration, and integration with core systems.

7.1 Internet Banking

Description: Customer logs in, views dashboard, performs banking activities. System authenticates, presents consolidated view, processes requests.

Actors: Customer, Digital Team

Systems: Internet Banking (Backbase), Core Banking (Temenos Transact), CRM (Salesforce Financial Services), Content Management (Adobe AEM), Analytics (Google Analytics)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Internet Banking	Authentication	AuthenticateUser	Internet Banking (Backbase)	Internet Banking (Backbase)	Internal	Internal	API-led (Real-time)	Simple
Internet Banking	Balances	FetchAccountBalances	Internet Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Internet Banking	Profile	GetCustomerProfile	Internet Banking (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Internet Banking	Content	FetchMarketingContent	Internet Banking (Backbase)	Content Mgmt (Adobe AEM)	Backbase REST API	AEM REST API	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Internet Banking	Authentication	User authenticated via MFA (OTP) with correct credentials	Valid credentials -> access granted; invalid OTP -> locked after 3 attempts
Internet Banking	Balances	Account balances fetched from Temenos for all customer accounts	All accounts displayed; balances updated to real-time; masking for inactive accounts
Internet Banking	Profile	Customer profile and offers retrieved from Salesforce CRM	Personalized offers displayed; profile data matches CRM source
Internet Banking	Content	Marketing content fetched from Adobe AEM CMS	Content rendered correctly; A/B variants served per customer segment

7.2 Mobile Banking

Description: Customer uses mobile app. Biometric authentication, push notifications, mobile check deposit, card management.

Actors: Customer, Digital Team

Systems: Mobile App (Backbase), Core Banking (Temenos Transact), Push Notification (Firebase/APNs), Cheque Processing

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Mobile Banking	Authentication	BiometricAuth	Mobile Banking App (Backbase)	Mobile Banking App (Backbase)	Device Biometric API	Internal	API-led (Real-time)	Simple
Mobile Banking	Notification	SendPushAlert	Push Notification (Firebase)	Mobile Banking App (Backbase)	Firebase Cloud Messaging	Backbase Mobile SDK	Event-driven	Simple
Mobile Banking	Payment	AuthorizePayment	Mobile Banking App (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Mobile Banking	Cheque Deposit	ProcessChequeImage	Mobile Banking App (Backbase)	Cheque Processing	Backbase REST API	Cheque API (Image)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Mobile Banking	Authentication	Biometric authentication (fingerprint/face) matches device-bound credential	Authentication completes <1 second; biometric mismatch shows PIN fallback
Mobile Banking	Notification	Push notification sent via Firebase for pending payment approval	Notification delivered within 5 seconds; tap opens correct approval screen
Mobile Banking	Payment	Payment authorized and processed via mobile approval flow	Payment confirmed; transaction appears in history; notification sent
Mobile Banking	Cheque Deposit	Cheque image processed with MICR read and amount OCR	MICR and OCR accuracy >99%; cheque accepted with 2-day hold applied

7.3 Branch Banking (Teller)

Description: Customer visits branch. Teller processes cash/cheque transactions. Branch system integrates with core banking for real-time balance and transaction posting.

Actors: Customer, Branch Staff, Teller

Systems: Branch Teller (Fiserv DNA), Queue Management (Qmatic), Core Banking (Temenos Transact), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Branch Banking	Queue	CheckInCustomer	Queue Management (Qmatic)	Branch Teller (Fiserv DNA)	Qmatic API	Fiserv Teller API (REST)	Event-driven	Simple
Branch Banking	Transaction	PostCashDeposit	Branch Teller (Fiserv DNA)	Core Banking (Temenos Transact)	Fiserv Teller API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Branch Banking	Interaction	LogCustomerInteraction	Branch Teller (Fiserv DNA)	CRM (Salesforce Financial Services)	Fiserv REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Branch Banking	Cross-Sell	GetCrossSellOffer	Branch Teller (Fiserv DNA)	CRM (Salesforce Financial Services)	Fiserv REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Branch Banking	Queue	Customer checked in at Qmatic kiosk and assigned to next available teller	Ticket issued; estimated wait time displayed; teller assignment within <5 minutes
Branch Banking	Transaction	Cash deposit posted to customer account in real-time via teller system	Balance updated; receipt generated with transaction reference; teller cash drawer reconciled
Branch Banking	Interaction	Customer interaction logged in Salesforce CRM with type and amount	Interaction record created; customer 360 view updatedtd>
Branch Banking	Cross-Sell	CRM returns cross-sell suggestion based on customer profile and transaction	Offer displayed to teller within 1 second; offer accepted/rejected tracked

Finance, Treasury & Settlement - BC010 BC014 BC061 BC062 - BC010 BC014 BC061 BC062

Financial accounting, treasury operations, interbank settlement, and reconciliation across the entire banking enterprise.

8.1 Nostro/Vostro Reconciliation

Description: Bank reconciles nostro (domestic bank's accounts held at foreign banks) and vostro (foreign bank's accounts held at domestic bank) positions daily.

Actors: Settlement Operations, Finance Manager

Systems: SWIFT Alliance Gateway, Reconciliation Engine (SmartStream/Duco), Core Banking (Temenos Transact), General Ledger (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Nostro Reconciliation	Statement	ReceiveMT950	SWIFT Alliance (Correspondent)	Reconciliation Engine (SmartStream)	SWIFT MT950	SmartStream API (REST)	Batch (Scheduled)	High
Nostro Reconciliation	Transactions	LoadInternalTxns	Core Banking (Temenos Transact)	Reconciliation Engine (SmartStream)	Temenos ODBC	SmartStream JDBC	Batch (ETL)	Medium
Nostro Reconciliation	Adjustments	PostAdjustments	Reconciliation Engine (SmartStream)	General Ledger (SAP)	SmartStream REST API	SAP API (SOAP)	Event-driven	Medium
Nostro Reconciliation	Response	SendMT940	Reconciliation Engine (SmartStream)	SWIFT Alliance (Correspondent)	SmartStream API	SWIFT MT940	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Nostro Reconciliation	Statement	SWIFT MT950 statement received from correspondent bank and loaded	Statement parsed correctly; all 125 transactions loaded; unmatched items <5%
Nostro Reconciliation	Transactions	Internal transactions loaded from Temenos for matching period	All internal txns loaded; date range matches statement period
Nostro Reconciliation	Adjustments	Unmatched items manually reviewed and adjustment journals posted to SAP GL	Adjustment entries posted; GL impact correctly calculated; audit trail maintained
Nostro Reconciliation	Response	MT940 response sent to correspondent bank with confirmed balance	Balance confirmed within tolerance; discrepancies escalated to treasury

8.2 Treasury & Liquidity Management

Description: Treasury monitors liquidity position, executes money market trades, manages FX exposure, ensures regulatory liquidity ratios met.

Actors: Treasury Analyst, Finance Manager

Systems: Treasury System (Murex), Core Banking (Temenos Transact), FX Matching Platform (FXall), SWIFT Alliance, General Ledger (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Treasury Management	Position	ReceivePositionData	Core Banking (Temenos Transact)	Treasury System (Murex)	Temenos REST API	Murex API (REST)	Event-driven	Medium
Treasury Management	FX Trade	ExecuteFXOrder	Treasury System (Murex)	FX Matching (FXall)	Murex API	FXall API (FIX)	API-led (Real-time)	High
Treasury Management	Confirmation	SendMT300	Treasury System (Murex)	SWIFT Alliance	Murex API (MT300)	SWIFT Alliance	API-led (Real-time)	Medium
Treasury Management	Liquidity	PostLiquidityReport	Treasury System (Murex)	General Ledger (SAP)	Murex API (REST)	SAP API (SOAP)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Treasury Management	Position	Cash position data received from Temenos Transact into Murex	Position updated in real-time; forecast horizon configurable (1-30 days)
Treasury Management	FX Trade	FX order submitted to FXall and executed at quoted rate	Trade executed within 10 seconds; rate within 0.1% of quoted; confirmation received
Treasury Management	Confirmation	SWIFT MT300 confirmation sent and matched with counterparty	Confirmation matched; unmatched confirmations escalated within 1 hour
Treasury Management	Liquidity	LCR and NSFR liquidity ratios calculated and posted to SAP GL	Ratios within regulatory limits; breach alert generated if below threshold

8.3 End-of-Day Settlement

Description: Bank settles all payment obligations, net positions submitted to RTGS, finality achieved, GL updated.

Actors: Settlement Operations, Treasury

Systems: Payment Hub (Volante), RTGS System (TARGET2/Bank of England), Core Banking (Temenos Transact), General Ledger (SAP), Reconciliation Engine (SmartStream)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
EOD Settlement	Net Position	SubmitNetSettlement	Payment Hub (Volante)	RTGS System (TARGET2)	Volante API (ISO 20022)	TARGET2 API (ISO 20022)	Batch (Scheduled)	High
EOD Settlement	Posting	PostSettlementEntries	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
EOD Settlement	GL	PostGLJournal	Payment Hub (Volante)	General Ledger (SAP)	Volante REST API	SAP API (SOAP)	API-led (Real-time)	Medium
EOD Settlement	Matching	MatchSettledItems	Payment Hub (Volante)	Reconciliation Engine (SmartStream)	Volante REST API	SmartStream API (REST)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
EOD Settlement	Net Position	Multilateral net position calculated and submitted to TARGET2 RTGS	Net position calculated correctly; submission before cut-off time
EOD Settlement	Posting	Settlement entries posted to Temenos core banking	All entries posted; debit/credit match net position; rejected entries investigated
EOD Settlement	GL	End-of-day GL journal posted in SAP	GL balanced; suspense accounts zero; variances <0.001%
EOD Settlement	Matching	Settled transactions matched by SmartStream reconciliation engine	100% matched; any breaks investigated and resolved before next day opening
