

Banking Process Flows — BIAN Capability Model Reference

Generated on 2026-07-06 | Domain: Banking | Framework: BIAN (Banking Industry Architecture Network)

BIAN Capability Model Reference

The BIAN (Banking Industry Architecture Network) Capability Model defines the standard business capabilities for banking institutions. The table below lists all relevant capabilities grouped by domain. Each process flow in this document is mapped to its relevant BIAN capability codes.

Channels

Capability	Code	Description
Channel Activity Analysis	BC001	Analyze customer channel usage and preferences
Contact Center	BC002	Manage omnichannel customer interactions including voice, email, chat
Channel Management	BC003	Manage all customer interaction channels consistently
Internet Banking	BC004	Deliver banking services through internet channel
Mobile Banking	BC005	Deliver banking services through mobile devices

Customers

Capability	Code	Description
Customer Onboarding	BC032	Manage end-to-end customer onboarding and KYC processes
Customer Access Entitlement	BC031	Manage customer authentication, authorization, and entitlements
Customer Relationship Management	BC033	Manage customer data, interactions, and relationships

Products

Capability	Code	Description
Payments	BC060	Process domestic and cross-border payments across all schemes
Payment Execution	BC061	Execute payment instructions including validation and settlement
Correspondent Banking	BC062	Manage correspondent banking relationships and nostro/vostro accounts
Trade Finance	BC063	Manage letters of credit, guarantees, and trade finance instruments
Lending	BC070	Originate, underwrite, and service loan products
Cards	BC071	Manage card lifecycle from issuance to transaction processing to disputes
Deposits	BC072	Manage current and savings deposit accounts
Savings	BC073	Manage term deposits and savings products including sweep accounts
Wealth Management	BC074	Manage client investment portfolios, financial planning, and advisory services
Asset Management	BC075	Manage institutional assets, fund management, and investment strategies

Operations

Capability	Code	Description
Collections & Recovery	BC077	Manage debt collection, recovery, forbearance, and charged-off accounts

Finance & Risk Management

Capability	Code	Description
Regulatory Reporting	BC012	Generate and submit regulatory reports to authorities
AML & Sanctions	BC013	Screen against AML and sanctions lists
Treasury Management	BC014	Manage liquidity, funding, and treasury operations

Business Management

Capability	Code	Description
Fraud Monitoring	BC023	Monitor and detect fraudulent transactions and activities
Fraud Management	BC024	Manage fraud cases, investigations, and resolutions
Channel Activity Analysis	BC034	Analyze contact center performance and customer behavior patterns

Resource Management

Capability	Code	Description
Reconciliation	BC049	Reconcile transactions and positions across internal and external systems
Settlement	BC010	Manage settlement of financial transactions across clearing systems

1: Customer Onboarding & Account Management - BC032 BC033 BC031

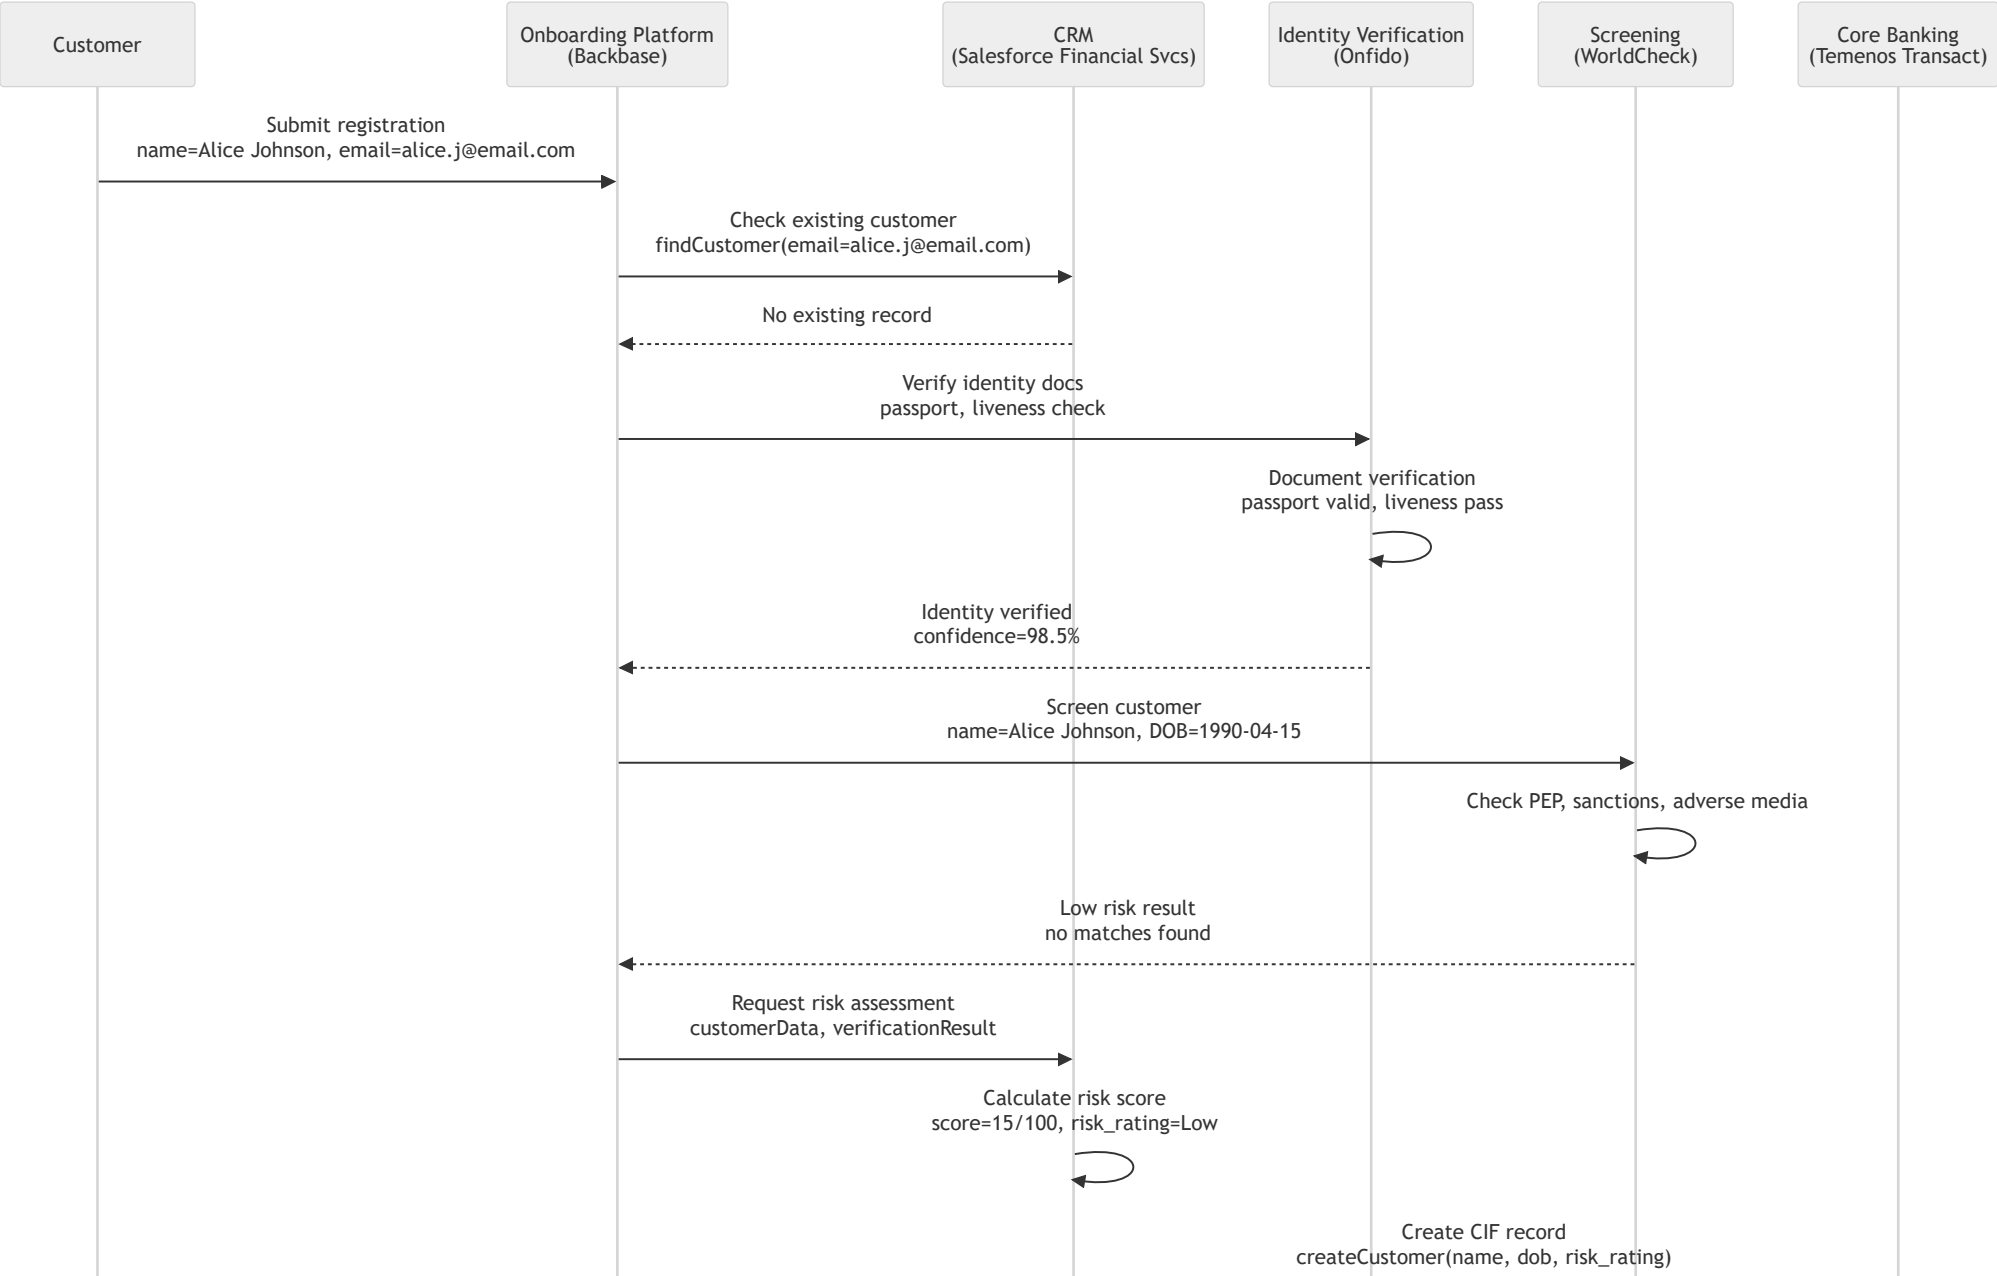

1.1 New Customer Onboarding & KYC

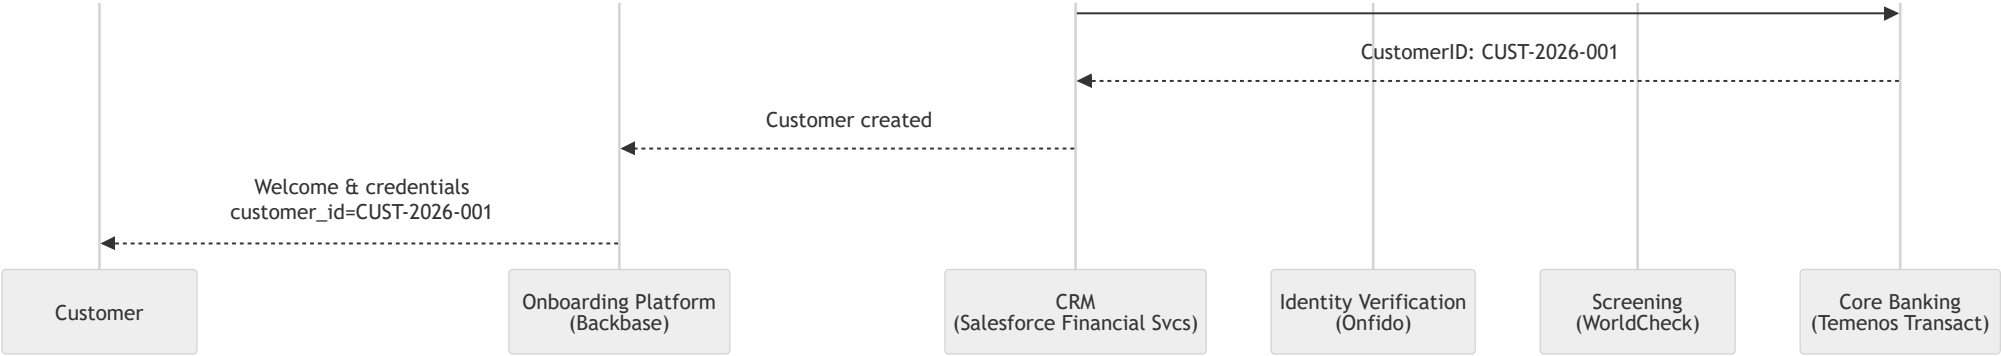

Description: Customer registers via digital channel. System performs identity verification, KYC checks, sanctions screening, risk assessment, and creates customer record.

Actors: Customer, Relationship Manager, Compliance Officer

Systems: CRM (Salesforce Financial Services), Digital Onboarding Platform (Backbase), Core Banking (Temenos Transact), Identity Verification (Onfido), Screening (WorldCheck), CIF System

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Customer Onboarding	Customer	CheckExistingCustomer	Onboarding Platform (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Customer Onboarding	Identity	VerifyDocuments	Onboarding Platform (Backbase)	Identity Verification (Onfido)	Backbase REST API	Onfido API (API Key)	API-led (Real-time)	Medium
Customer Onboarding	Sanctions	ScreenCustomer	Onboarding Platform (Backbase)	Screening (WorldCheck)	Backbase REST API	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Customer Onboarding	CIF	CreateCustomerRecord	CRM (Salesforce Financial Services)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	Medium
Customer Onboarding	Customer	SendWelcomeEmail	CRM (Salesforce Financial Services)	Email Service (SendGrid)	Salesforce REST API (OAuth2)	SendGrid SMTP API	Event-driven	Simple
Customer Onboarding	Consent	CaptureRegulatoryConsent	Onboarding Platform (Backbase)	Consent Repository (SealSign)	Backbase REST API	SealSign API (REST)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Customer Onboarding	Customer	CheckExistingCustomer returns correct match/no-match for given email	Customer record found or 'no existing record' returned within 2 seconds
Customer Onboarding	Identity	Identity documents verified against Onfido document and liveness checks	Passport and liveness pass with >=95% confidence; failure returns clear error
Customer Onboarding	Sanctions	Customer screened against WorldCheck PEP/sanctions/adverse media lists	Low risk result with no matches; any match >=90% triggers AML alert
Customer Onboarding	CIF	Customer CIF record created in Temenos Transact with all mandatory fields	CustomerID returned and propagated to CRM; non-repudiable audit trail created
Customer Onboarding	Customer	Welcome email sent to new customer post-registration	Email delivered within 60 seconds; tracking pixel confirms open
Customer Onboarding	Consent	Regulatory consent captured and stored for GDPR/FCA compliance	Consent record created with timestamp; audit trail of consent captured

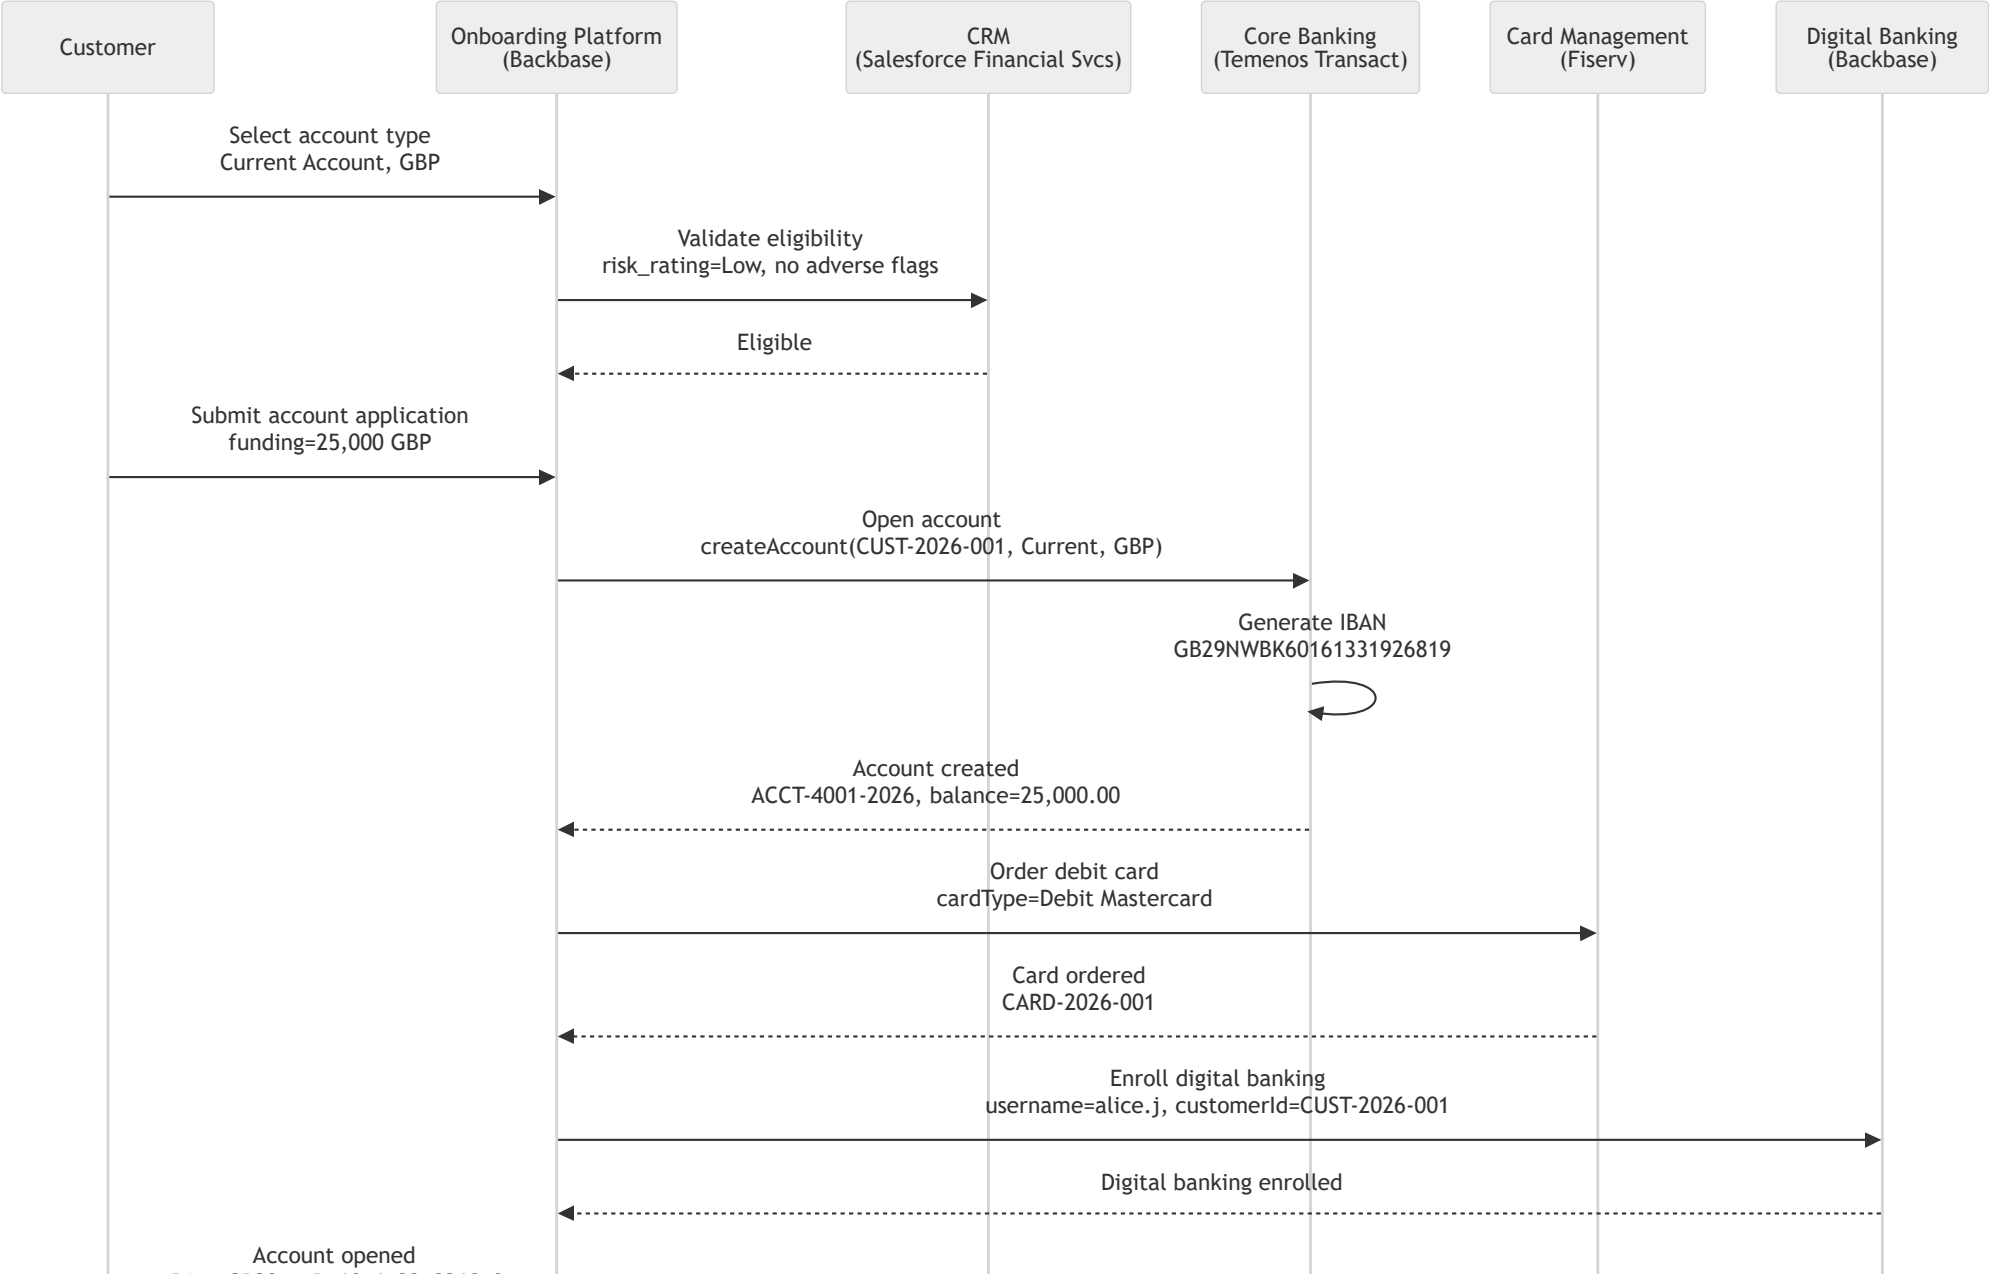

1.2 Retail Account Opening

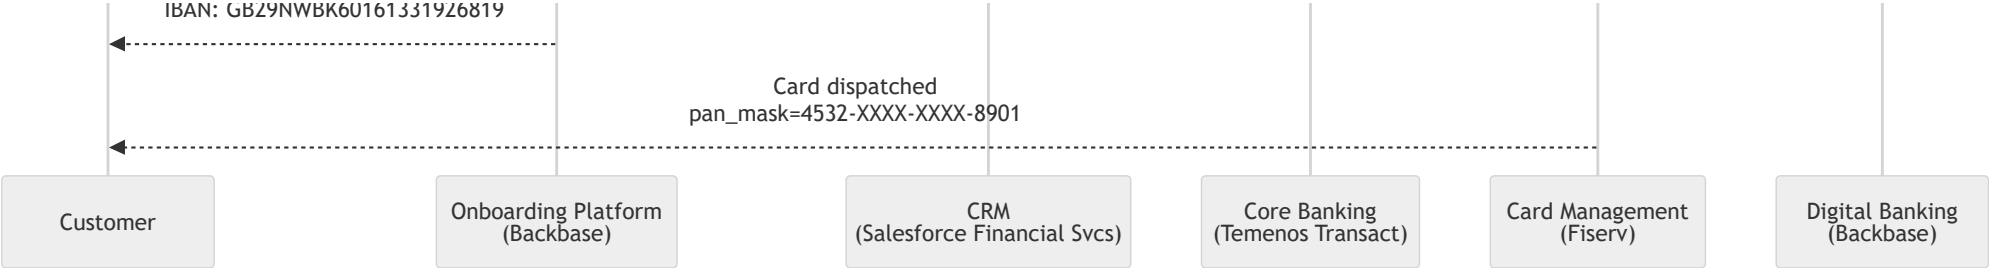

Description: Customer selects account type, system validates eligibility, opens account in core banking, links digital channels, produces documentation.

Actors: Customer, Relationship Manager

Systems: CRM (Salesforce Financial Services), Digital Onboarding Platform (Backbase), Core Banking (Temenos Transact), Card Management (Fiserv), Digital Banking (Backbase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Account Opening	Eligibility	ValidateEligibility	Onboarding Platform (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Account Opening	Account	CreateAccount	Onboarding Platform (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Account Opening	Card	OrderDebitCard	Onboarding Platform (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Medium
Account Opening	Digital Banking	EnrollUser	Onboarding Platform (Backbase)	Digital Banking (Backbase)	Backbase REST API	Backbase REST API (JWT)	API-led (Real-time)	Simple
Account Opening	Mandate	SetupStandingOrderMandate	Onboarding Platform (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante API (ISO 20022)	Event-driven	Medium
Account Opening	Terms	CaptureSignedTerms	Onboarding Platform (Backbase)	Document Mgmt (M-Files)	Backbase REST API	M-Files REST API (API Key)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Account Opening	Eligibility	Validate eligibility returns true/false based on customer risk rating and flags	Eligible customers proceed; ineligible customers see reason with appeal path
Account Opening	Account	Account created in core banking with correct type, currency, and IBAN generation	IBAN returned, account status=Active, initial balance reflected in <5 seconds
Account Opening	Card	Debit card ordered via Fiserv card management system	CardID returned, card status=Ordered, tracking reference provided
Account Opening	Digital Banking	Digital banking enrollment created with username linked to customer ID	Login credentials issued; MFA enrollment triggered within 1 minute
Account Opening	Mandate	Standing order mandate setup triggered for new account	Mandate reference created; first payment scheduled correctly
Account Opening	Terms	Signed terms and conditions stored in document management	Document retrievable; signature verification completes; terms version tracked

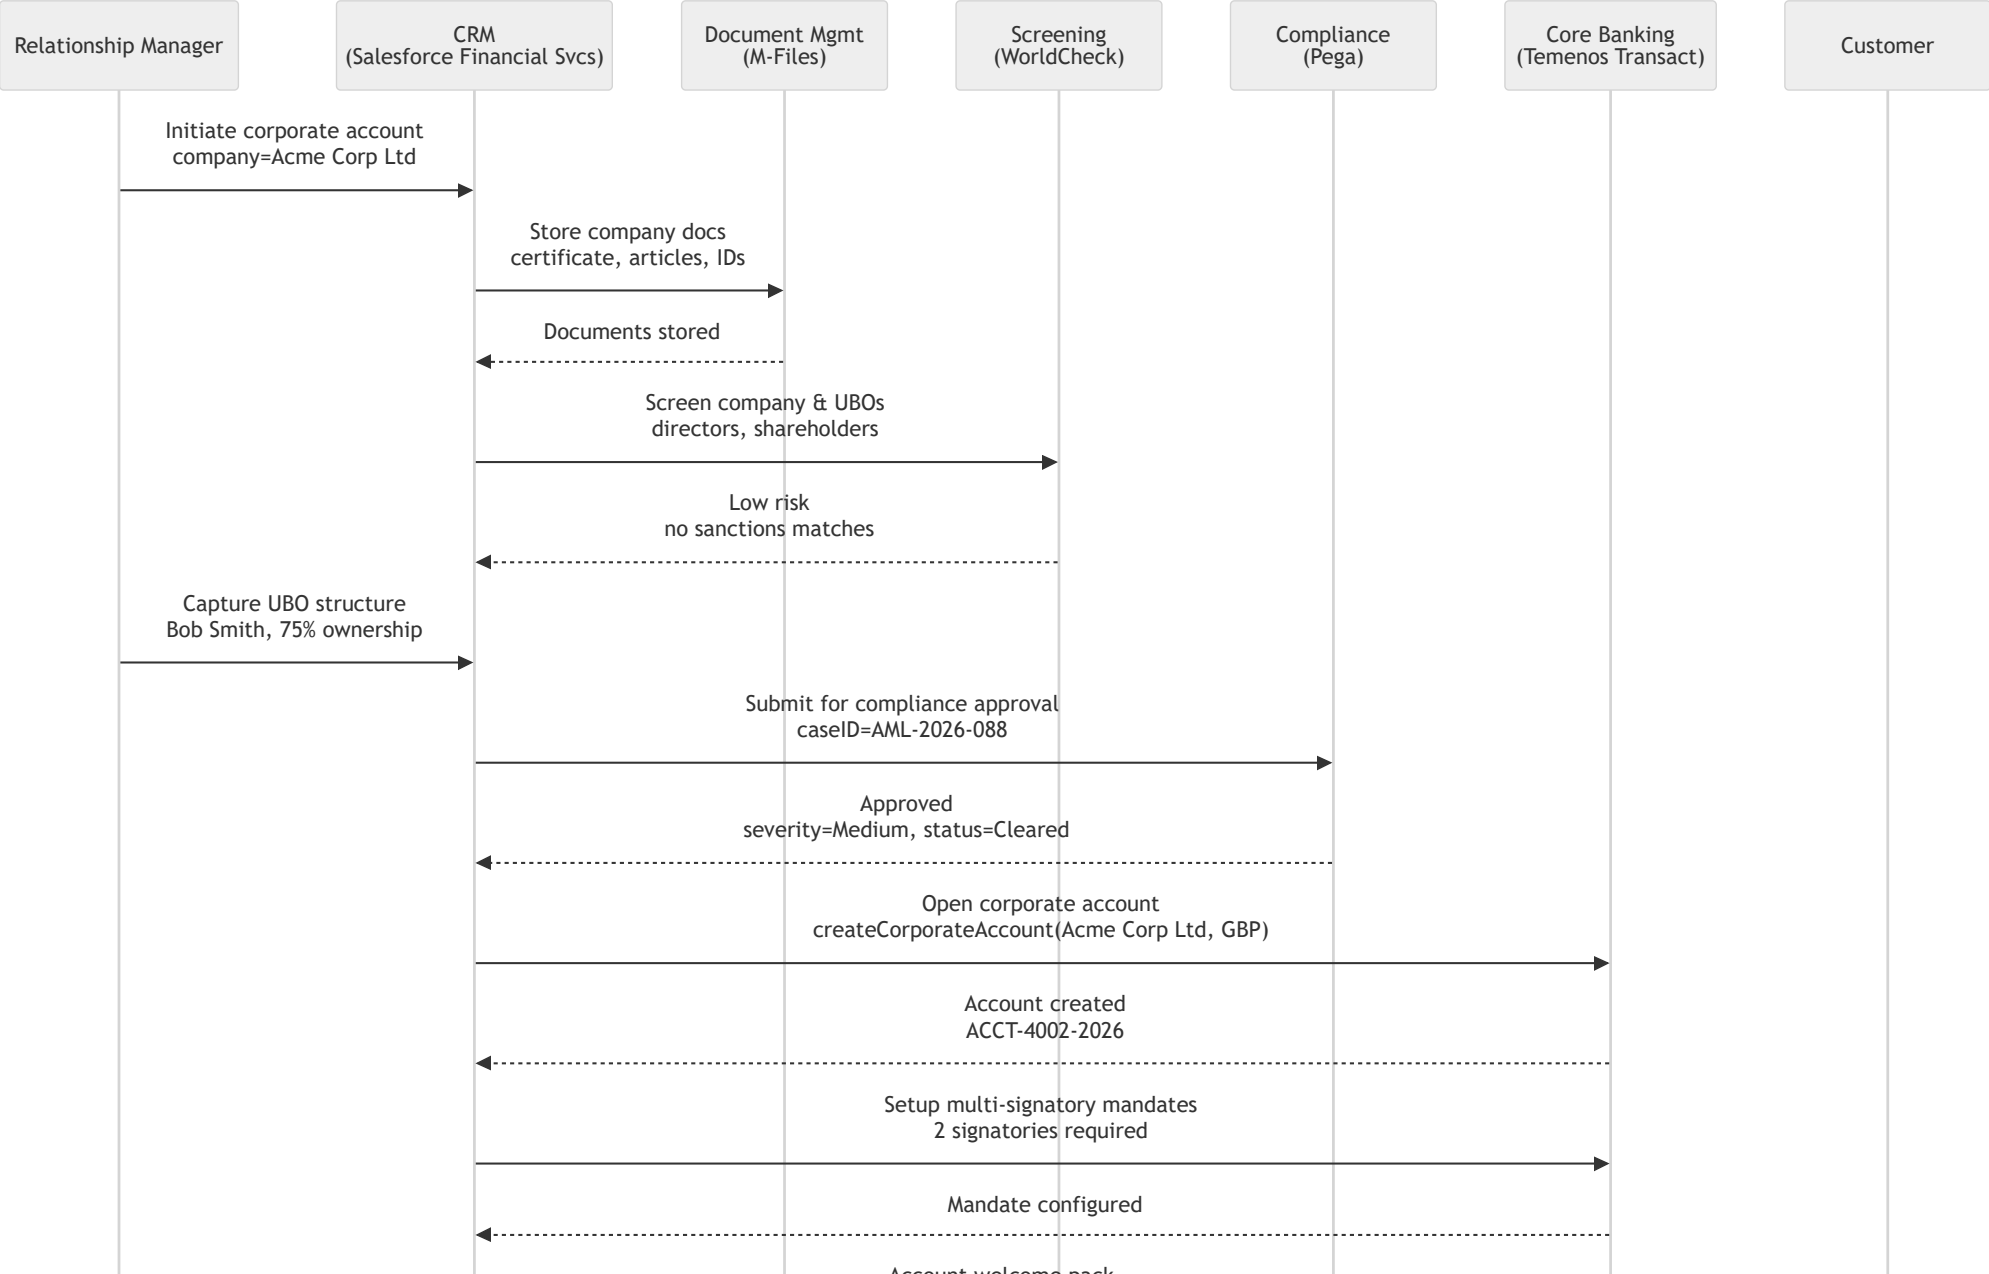

1.3 Corporate Account Opening

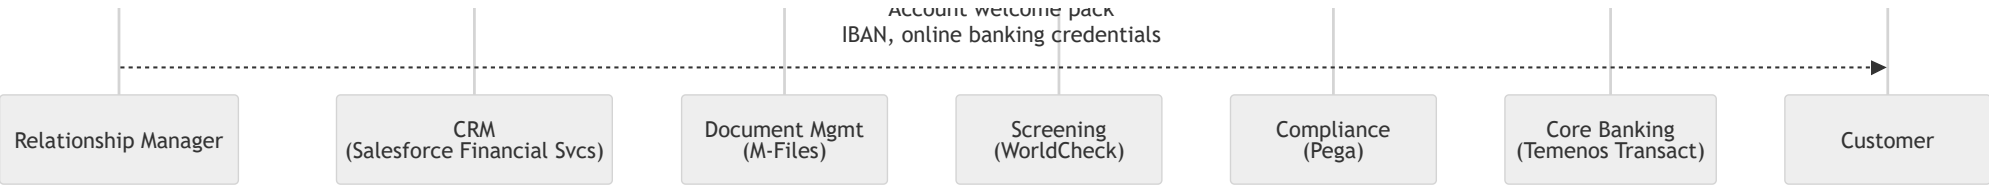

Description: Relationship Manager initiates corporate account opening. Company documents verified, beneficial ownership structure captured, multi-signatory setup, account opened.

Actors: Relationship Manager, Compliance Officer, Customer (Corporate)

Systems: CRM (Salesforce Financial Services), Document Management (M-Files), Core Banking (Temenos Transact), Screening (WorldCheck), Compliance Case Management (Pega)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Corporate Account	Documents	StoreCompanyDocs	CRM (Salesforce Financial Services)	Document Mgmt (M-Files)	Salesforce REST API (OAuth2)	M-Files REST API (API Key)	API-led (Real-time)	Simple
Corporate Account	Screening	ScreenCompanyUBO	CRM (Salesforce Financial Services)	Screening (WorldCheck)	Salesforce REST API (OAuth2)	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Corporate Account	Compliance	ApproveCompliance	CRM (Salesforce Financial Services)	Compliance Case Mgmt (Pega)	Salesforce REST API (OAuth2)	Pega API (REST)	API-led (Real-time)	Medium
Corporate Account	Account	OpenCorporateAccount	CRM (Salesforce Financial Services)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	High
Corporate Account	Signatory	VerifySignatoryIdentity	CRM (Salesforce Financial Services)	Identity Verification (Onfido)	Salesforce REST API (OAuth2)	Onfido API (API Key)	API-led (Real-time)	Medium
Corporate Account	Fee	SetupAccountFeeSchedule	CRM (Salesforce Financial Services)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Corporate Account	Documents	Company documents stored in M-Files with correct metadata tagging	Documents retrievable by company ID; version history maintained
Corporate Account	Screening	Company and UBOs screened against sanctions lists	Low risk result or escalated compliance case; screening completed in <10 seconds
Corporate Account	Compliance	Compliance approval obtained via Pega case management workflow	Case approved/cleared; rejection includes reason and resubmission guidance
Corporate Account	Account	Corporate account opened with multi-signatory mandate configuration	Account created with all signatories; mandate rules enforced on transactions
Corporate Account	Signatory	All signatories' identities verified through Onfido	Each signatory verified with >=95% confidence; failed verification blocks account
Corporate Account	Fee	Account fee schedule configured correctly in core banking	Fee schedule applied; monthly fees calculated correctly from sta

Flow	Entity	Acceptance Criterion	Expected Outcome
			rt date

2: Payments & Transfers - BC060 BC061

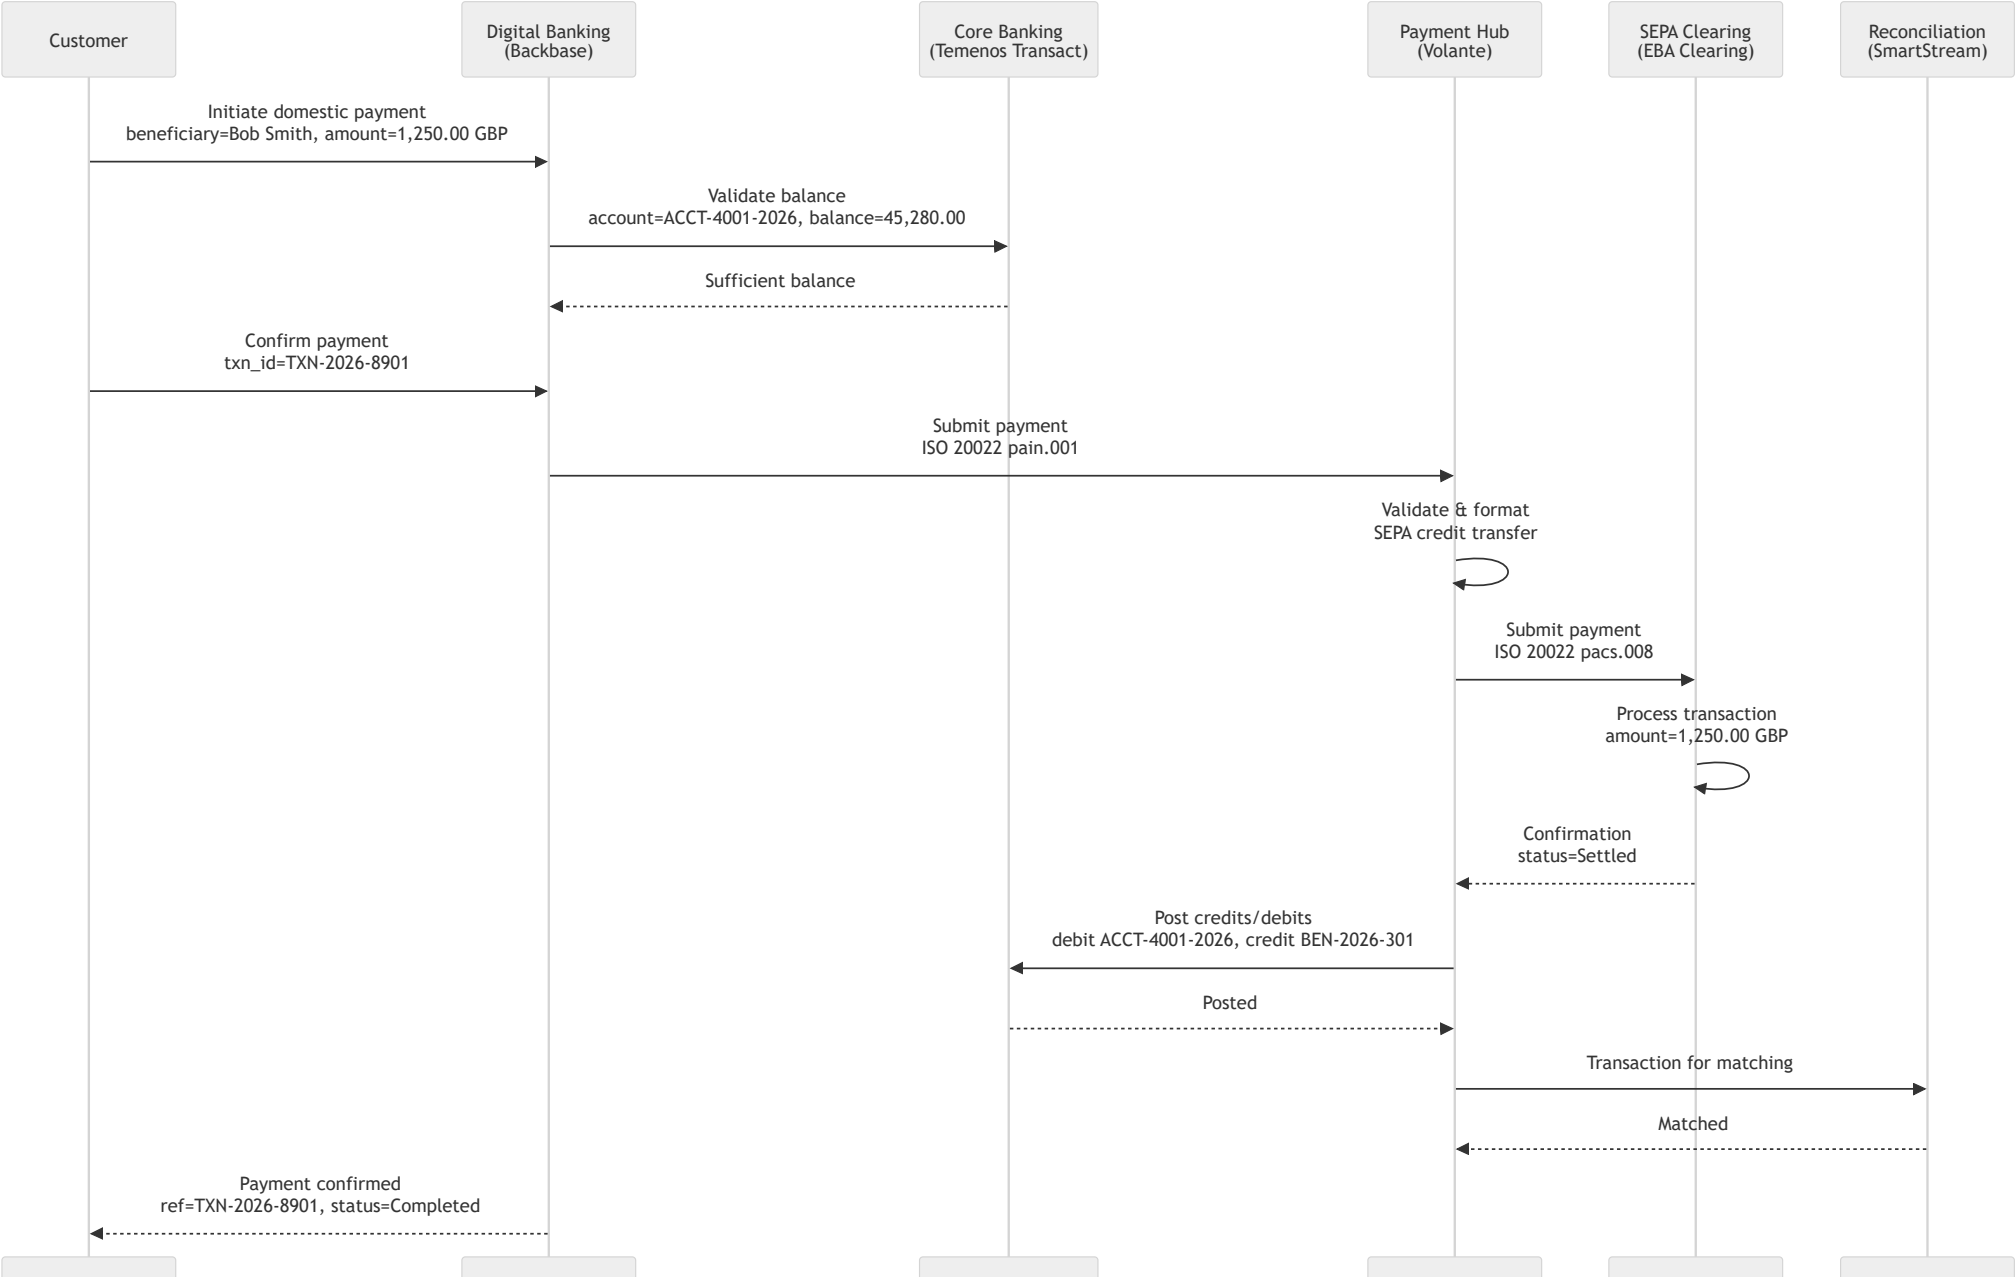

2.1 Domestic Payment (SEPA/ACH)

Description: Customer initiates domestic transfer via digital channel. Payment hub validates, routes to clearing, executes, and reconciles.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), SEPA Clearing (EBA Clearing), Reconciliation Engine (SmartStream)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Domestic Payment	Payment Instruction	SubmitPayment	Digital Banking (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante API (ISO 20022)	API-led (Real-time)	Medium
Domestic Payment	Clearing	SubmitToClearing	Payment Hub (Volante)	SEPA Clearing (EBA Clearing)	Volante API (ISO 20022)	EBA Clearing API (ISO 20022)	API-led (Real-time)	High
Domestic Payment	Ledger	PostTransaction	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Domestic Payment	Reconciliation	MatchTransaction	Payment Hub (Volante)	Reconciliation Engine (SmartStream)	Volante REST API	SmartStream API (REST)	API-led (Real-time)	Simple
Domestic Payment	Notification	SendPaymentConfirmation	Payment Hub (Volante)	Notification Service (Firebase)	Volante REST API	Firebase FCM API	Event-driven	Simple
Domestic Payment	FX	ApplyFXConversion	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Domestic Payment	Payment Instruction	ISO 20022 pain.001 message generated and submitted to payment hub	Payment hub acknowledges with unique reference; invalid messages rejected with reason
Domestic Payment	Clearing	SEPA credit transfer submitted to EBA Clearing via ISO 20022 pacs.008	Clearing confirmation received with status=Settled within SEPA timelines
Domestic Payment	Ledger	Debit and credit entries posted correctly to source and beneficiary accounts	Source account debited, beneficiary account credited; balance reconciliation matches
Domestic Payment	Reconciliation	Transaction matched by SmartStream reconciliation engine	Match status=success; unmatched items flagged with discrepancy details
Domestic Payment	Notification	Payment confirmation notification sent to customer	Push/email notification delivered within 30 seconds; reference included
Domestic Payment	FX	FX conversion applied correctly for payments in non-base currency	Rate from FX feed applied; conversion amount verified; rounding rules followed

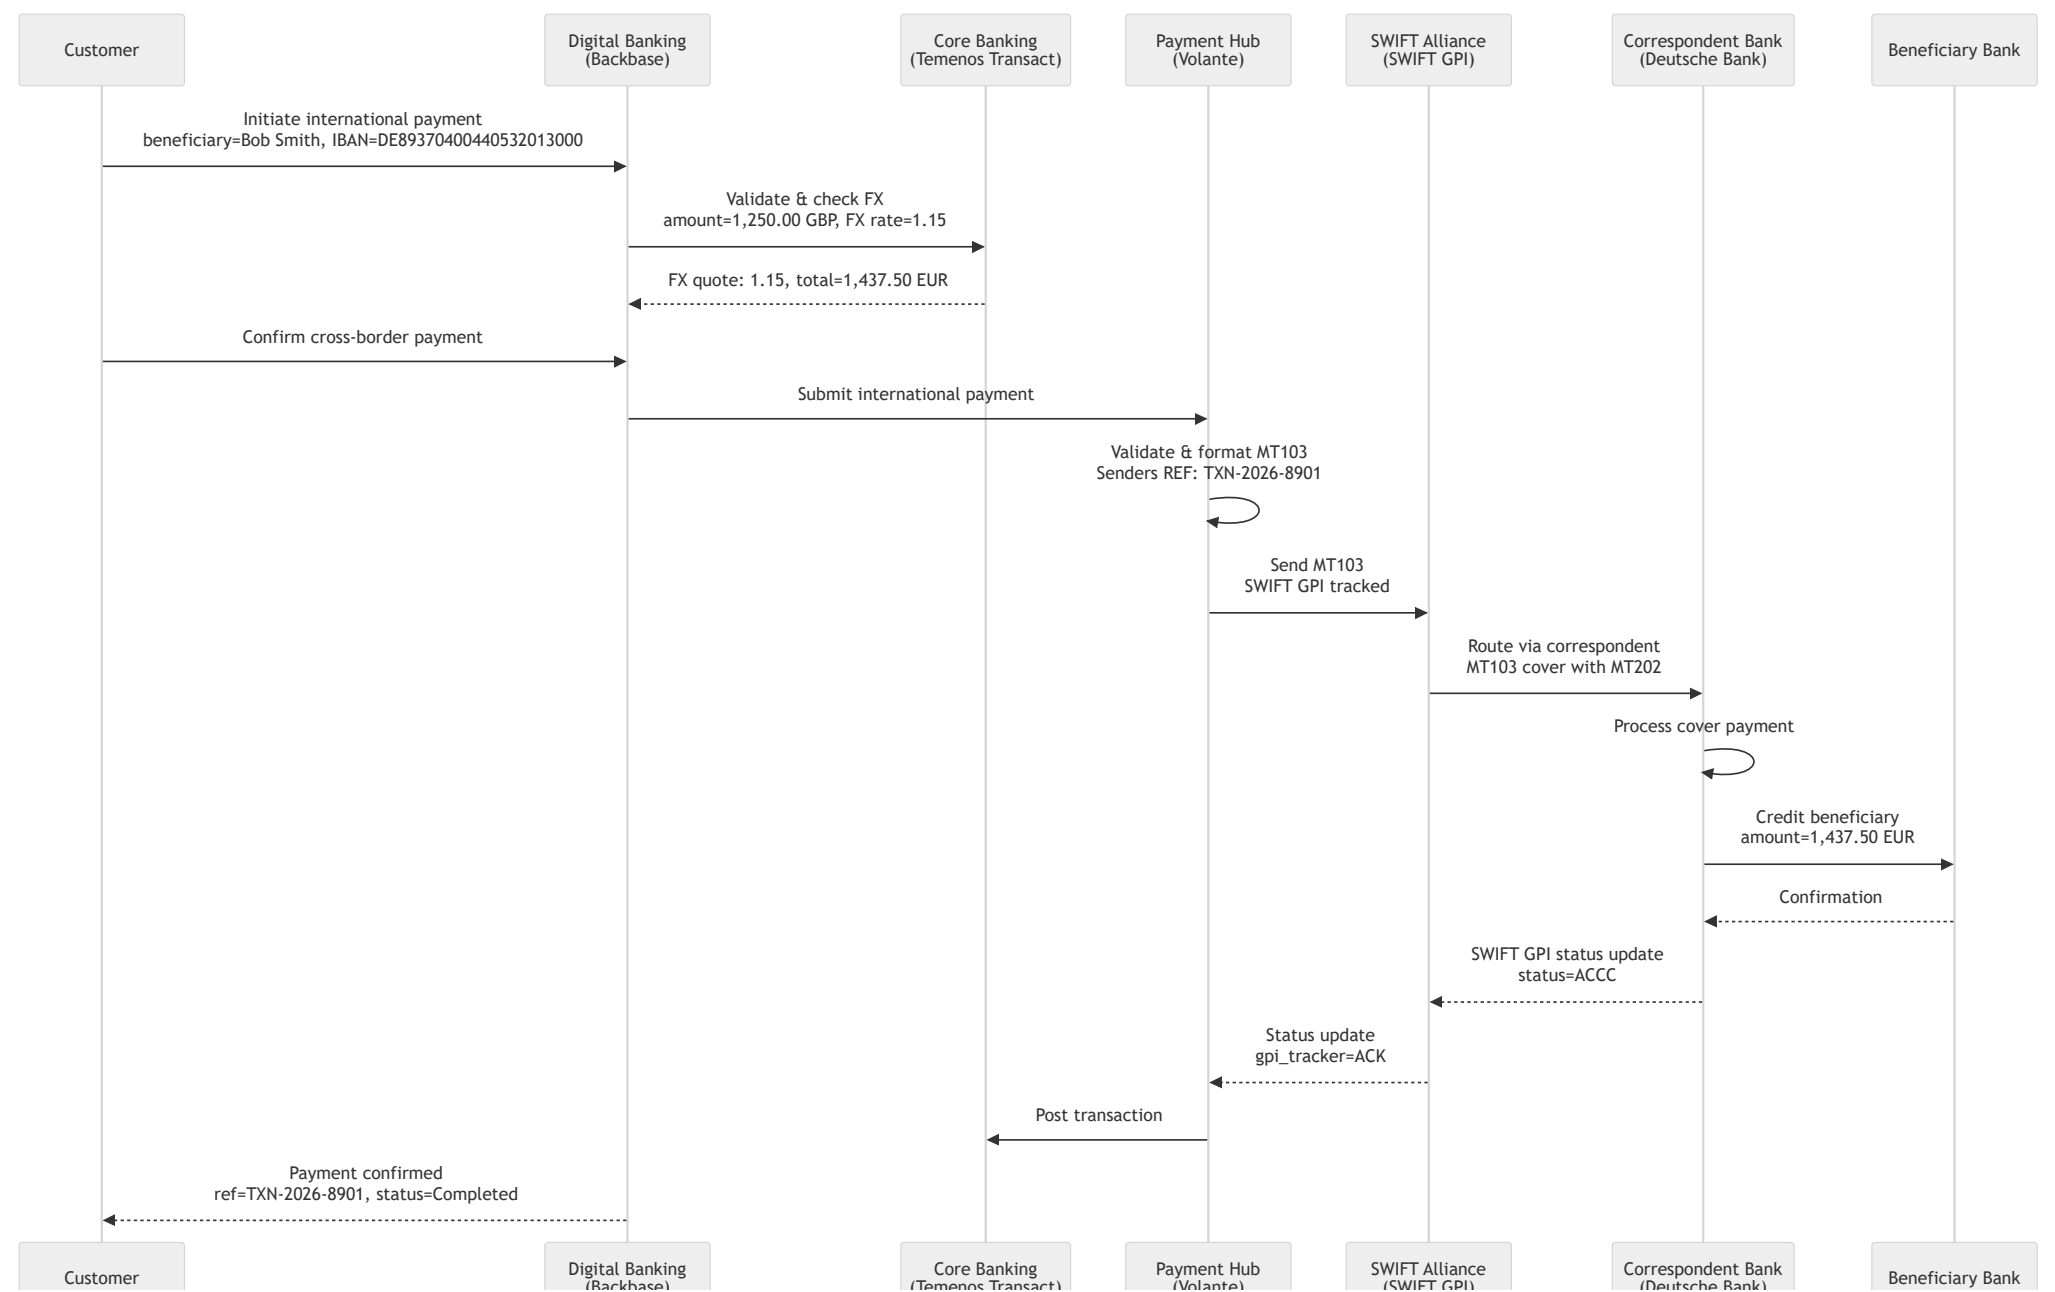

2.2 Cross-Border Payment (SWIFT)

Description: Customer initiates international wire. Payment hub validates, formats SWIFT MT103, sends via SWIFT, correspondent bank processes, cover payment via MT202, status tracking.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), SWIFT Alliance Gateway, Correspondent Bank (Deutsche Bank)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Cross-Border Payment	FX Quote	CheckFXRate	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Cross-Border Payment	SWIFT Message	SendMT103	Payment Hub (Volante)	SWIFT Alliance Gateway	Volante ISO 20022	SWIFT Alliance (MT)	API-led (Real-time)	High
Cross-Border Payment	Cover Payment	ProcessCover	SWIFT Alliance Gateway	Correspondent Bank (Deutsche Bank)	SWIFT Alliance (MT)	SWIFT MT202	Batch (Scheduled)	High
Cross-Border Payment	Status	TrackGPIStatus	SWIFT Alliance Gateway	Payment Hub (Volante)	SWIFT GPI API	Volante REST API	Event-driven	Medium
Cross-Border Payment	Compliance	ScreenCrossBorderPayment	Payment Hub (Volante)	AML System (Oracle FCCM)	Volante REST API	Oracle FCCM API (SOAP)	API-led (Real-time)	High
Cross-Border Payment	Fee	DeductTransactionFee	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Cross-Border Payment	FX Quote	FX rate returned for currency pair with valid from/to currencies	Rate within 0.5% of market mid-rate; expired quotes rejected after 30 seconds
Cross-Border Payment	SWIFT Message	SWIFT MT103 message formatted and sent via SWIFT Alliance Gateway	SWIFT ACK received; UETR assigned; format validation errors cause rejection
Cross-Border Payment	Cover Payment	MT202 cover payment processed correctly by correspondent bank	Cover funds received by correspondent; nostro account debited correctly
Cross-Border Payment	Status	SWIFT GPI tracker updated with end-to-end payment status	Status transitions visible in GPI tracker; final ACCC confirmation received
Cross-Border Payment	Compliance	Cross-border payment screened for AML before SWIFT submission	Payment held until compliance clearance; held payments flagged to operations
Cross-Border Payment	Fee	Transaction fees deducted correctly and transparently	Fee amount disclosed before confirmation; fees posted to income GL

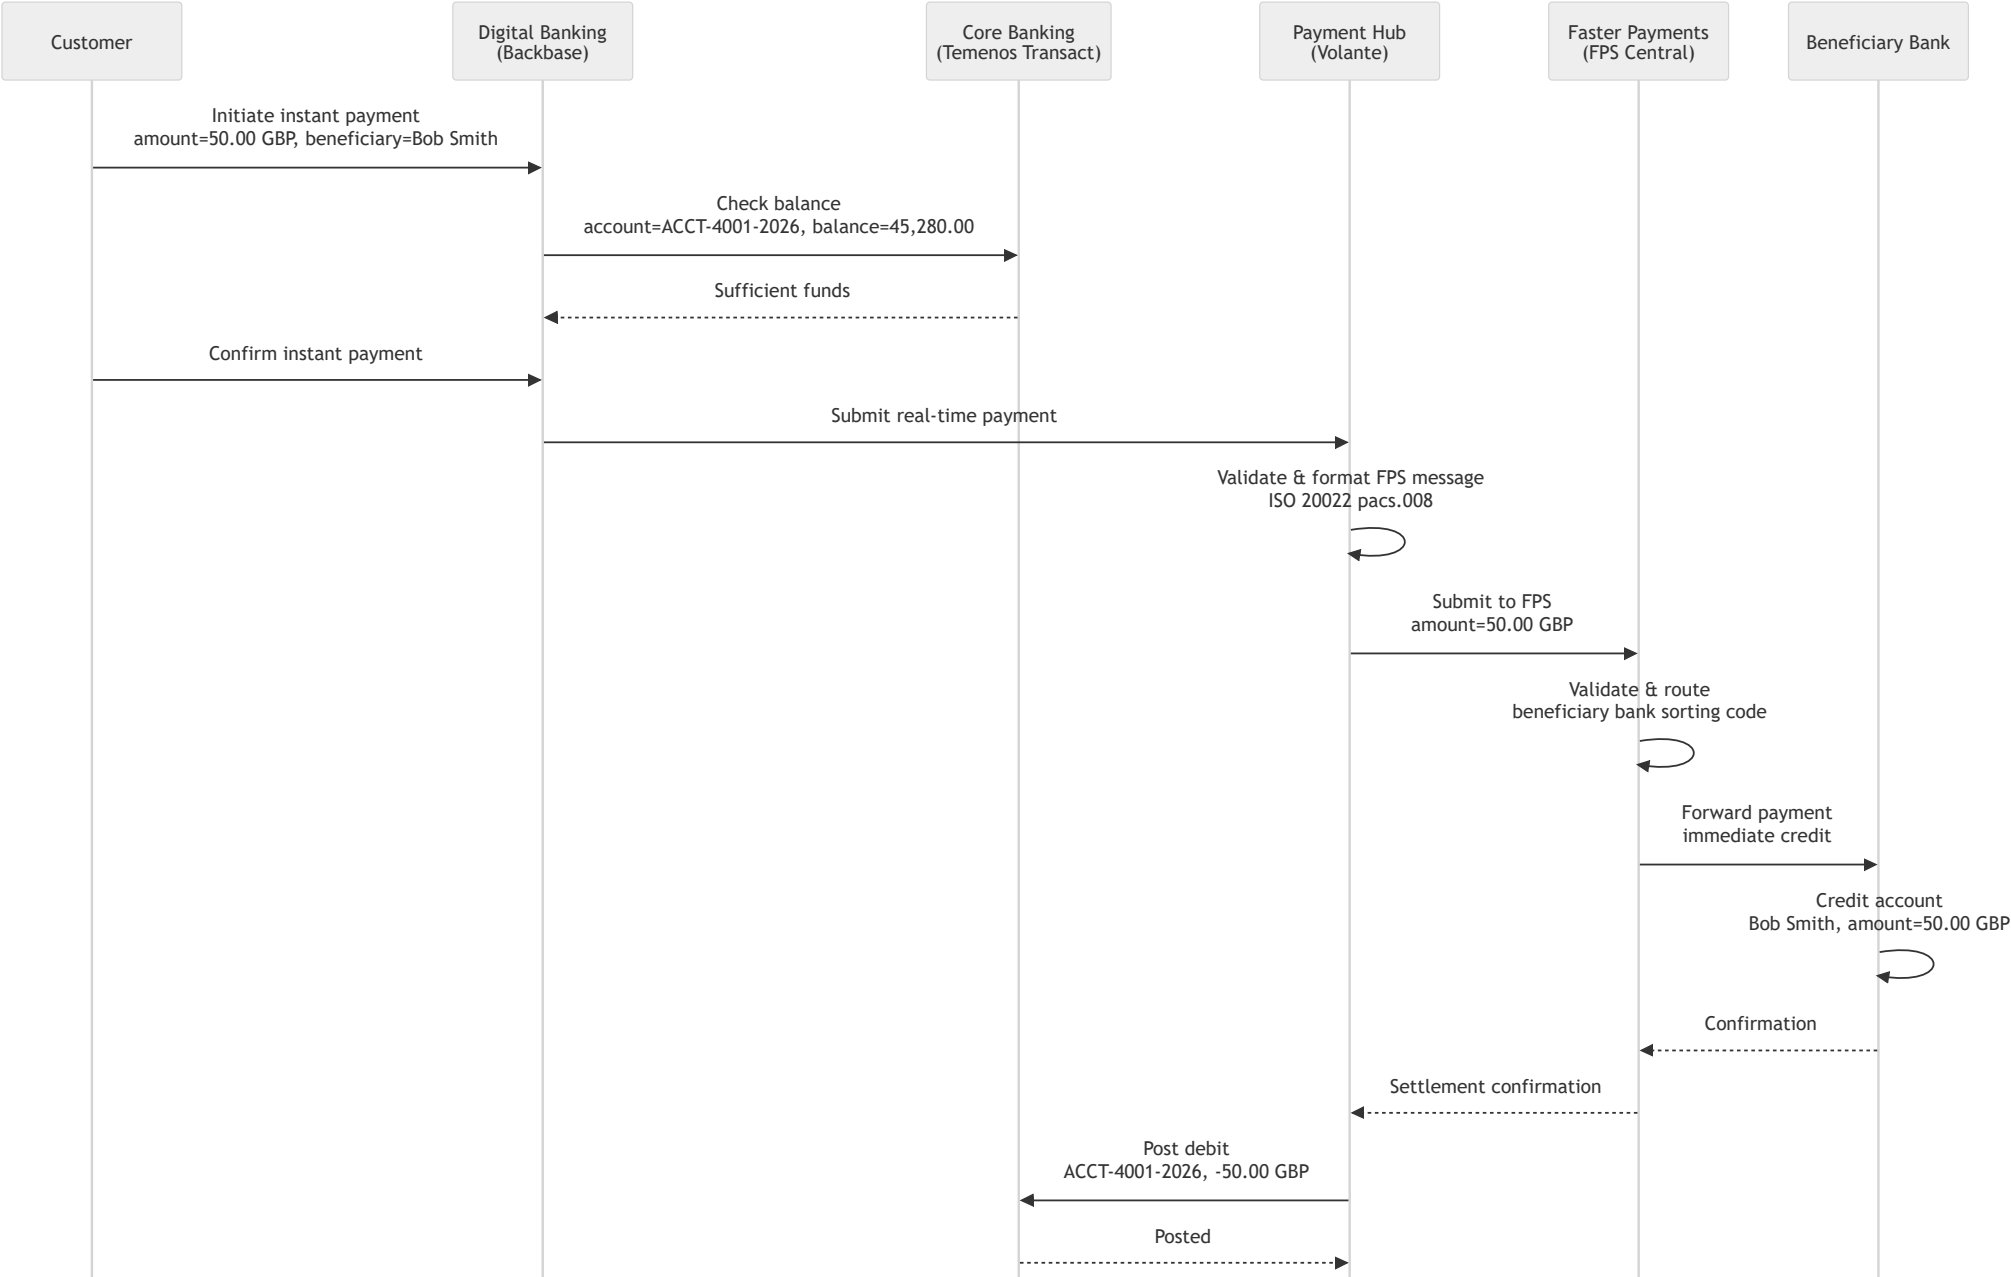

2.3 Real-Time Payment (Faster Payments)

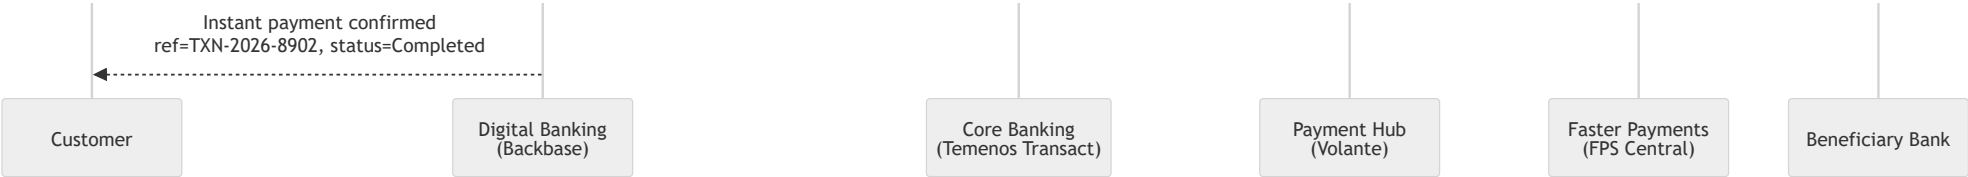

Description: Customer initiates instant payment. Payment hub processes in real-time via Faster Payments Service, immediate confirmation.

Actors: Customer, Payment Operations

Systems: Core Banking (Temenos Transact), Payment Hub (Volante), Faster Payments Service (FPS), Beneficiary Bank

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Real-Time Payment	Payment Request	SubmitRTPayment	Digital Banking (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante REST API	API-led (Real-time)	Medium
Real-Time Payment	FPS Message	SubmitToFPS	Payment Hub (Volante)	Faster Payments Service (FPS)	Volante API (ISO 20022)	FPS API (ISO 20022)	API-led (Real-time)	High
Real-Time Payment	Credit	CreditBeneficiary	Faster Payments Service (FPS)	Beneficiary Bank	FPS Network API	Bank API (ISO 20022)	API-led (Real-time)	High
Real-Time Payment	Ledger	PostDebit	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Real-Time Payment	Fraud	RealTimeFraudCheck	Payment Hub (Volante)	Fraud Detection (FICO Falcon)	Volante REST API	Falcon API (ISO 8583)	API-led (Real-time)	High
Real-Time Payment	Confirmation	SendInstantConfirmation	Payment Hub (Volante)	Digital Banking (Backbase)	Volante REST API	Backbase REST API (JWT)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Real-Time Payment	Payment Request	Real-time payment request received and validated by payment hub	Request accepted or rejected within 1 second; invalid data returns specific error
Real-Time Payment	FPS Message	ISO 20022 pacs.008 message submitted to Faster Payments Service	FPS acknowledges within 2 seconds; settlement confirmation in <15 seconds
Real-Time Payment	Credit	Beneficiary account credited immediately by beneficiary bank	Funds available to beneficiary within 10 seconds of initiation; no holds applied
Real-Time Payment	Ledger	Source account debited correctly with real-time balance update	Available balance reduced immediately; transaction appears in transaction history
Real-Time Payment	Fraud	Real-time fraud check completed before FPS submission	Fraud check response in <200ms; high-risk scores block payment before transmission
Real-Time Payment	Confirmation	Instant confirmation sent to customer after FPS settlement	Confirmation visible in digital banking within 5 seconds of settlement

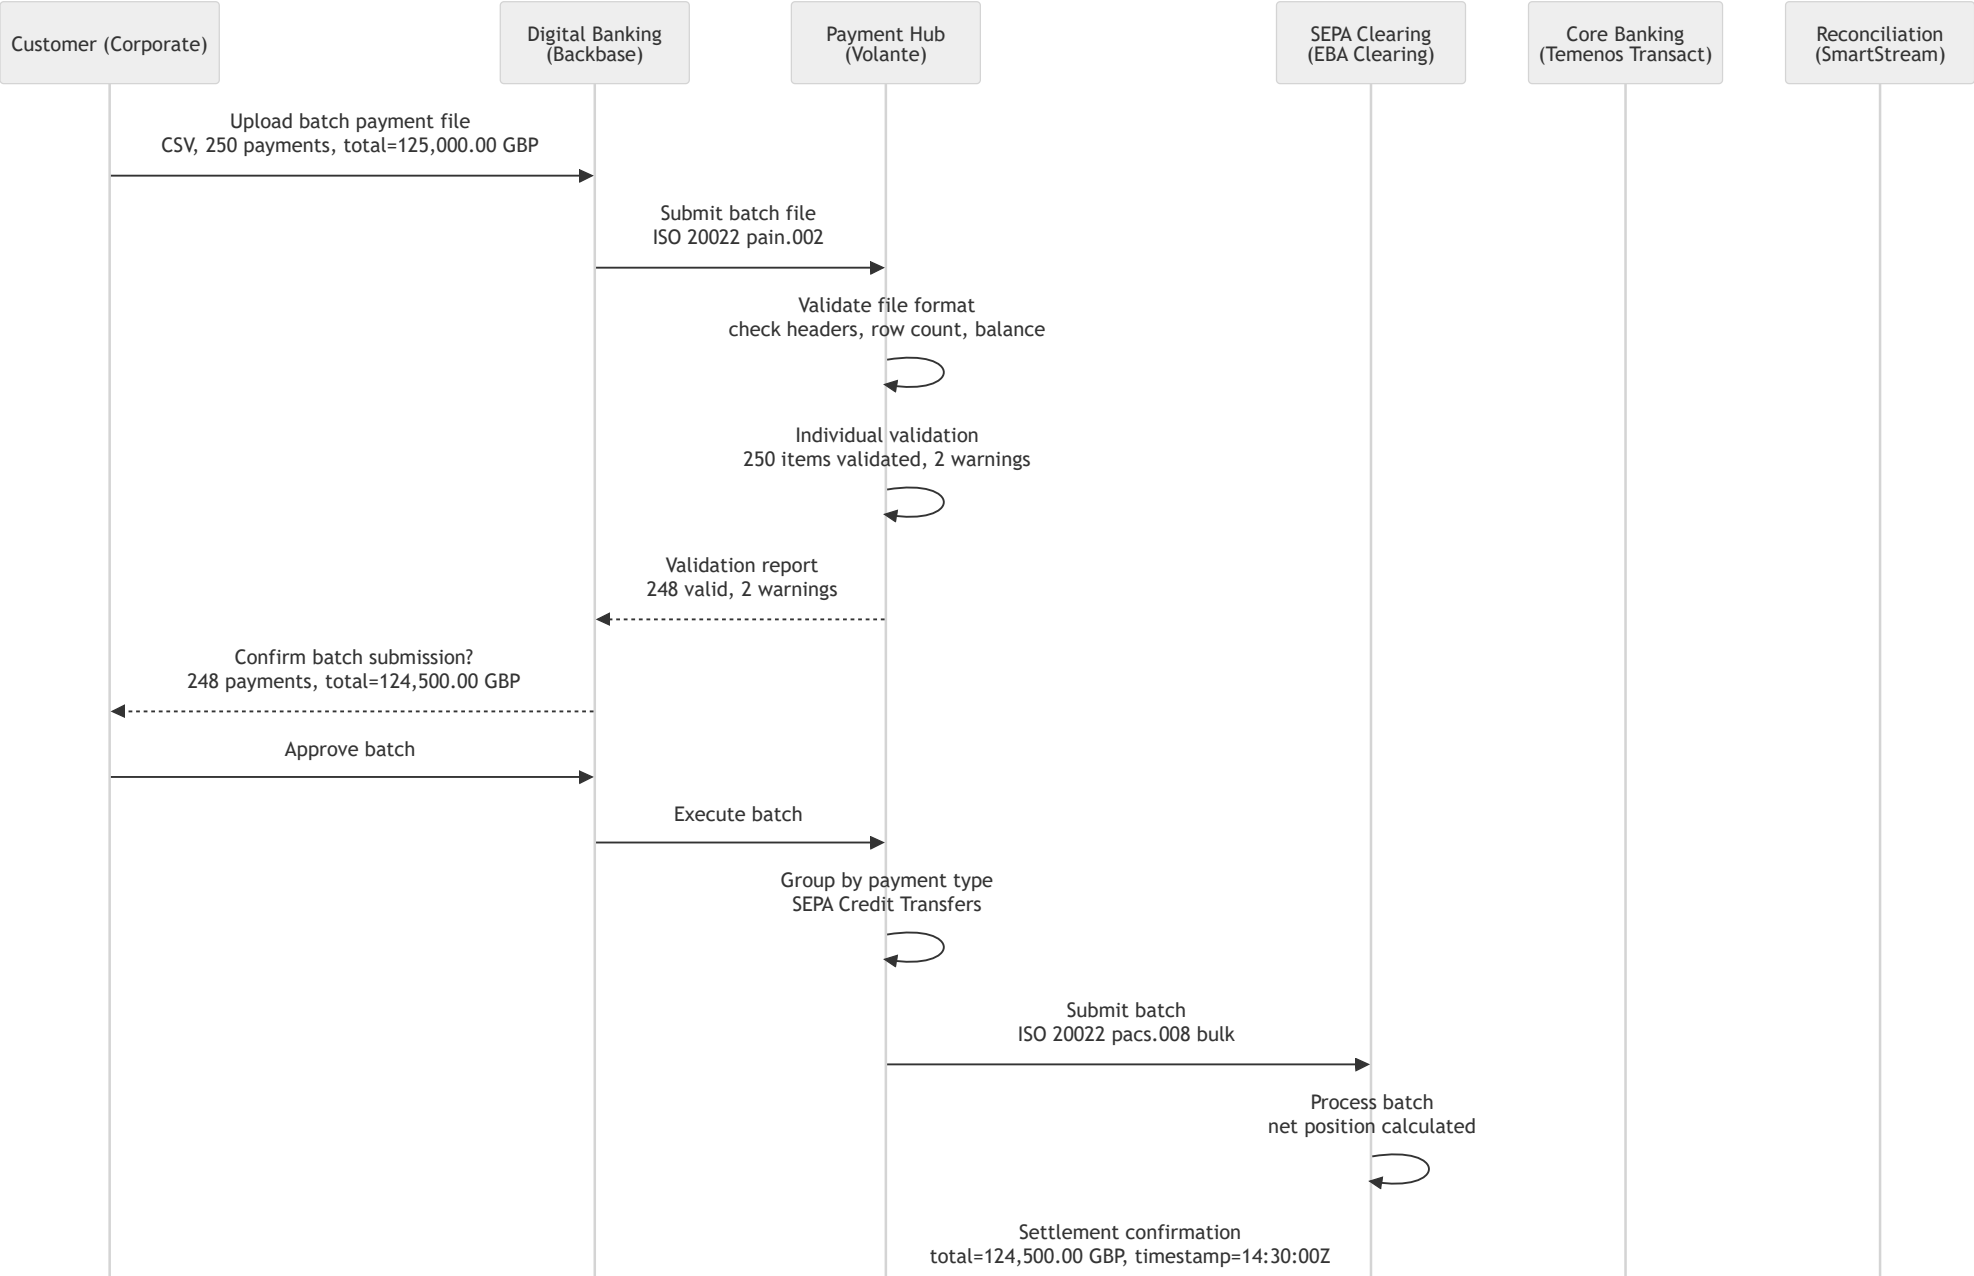

2.4 Batch Payment Processing

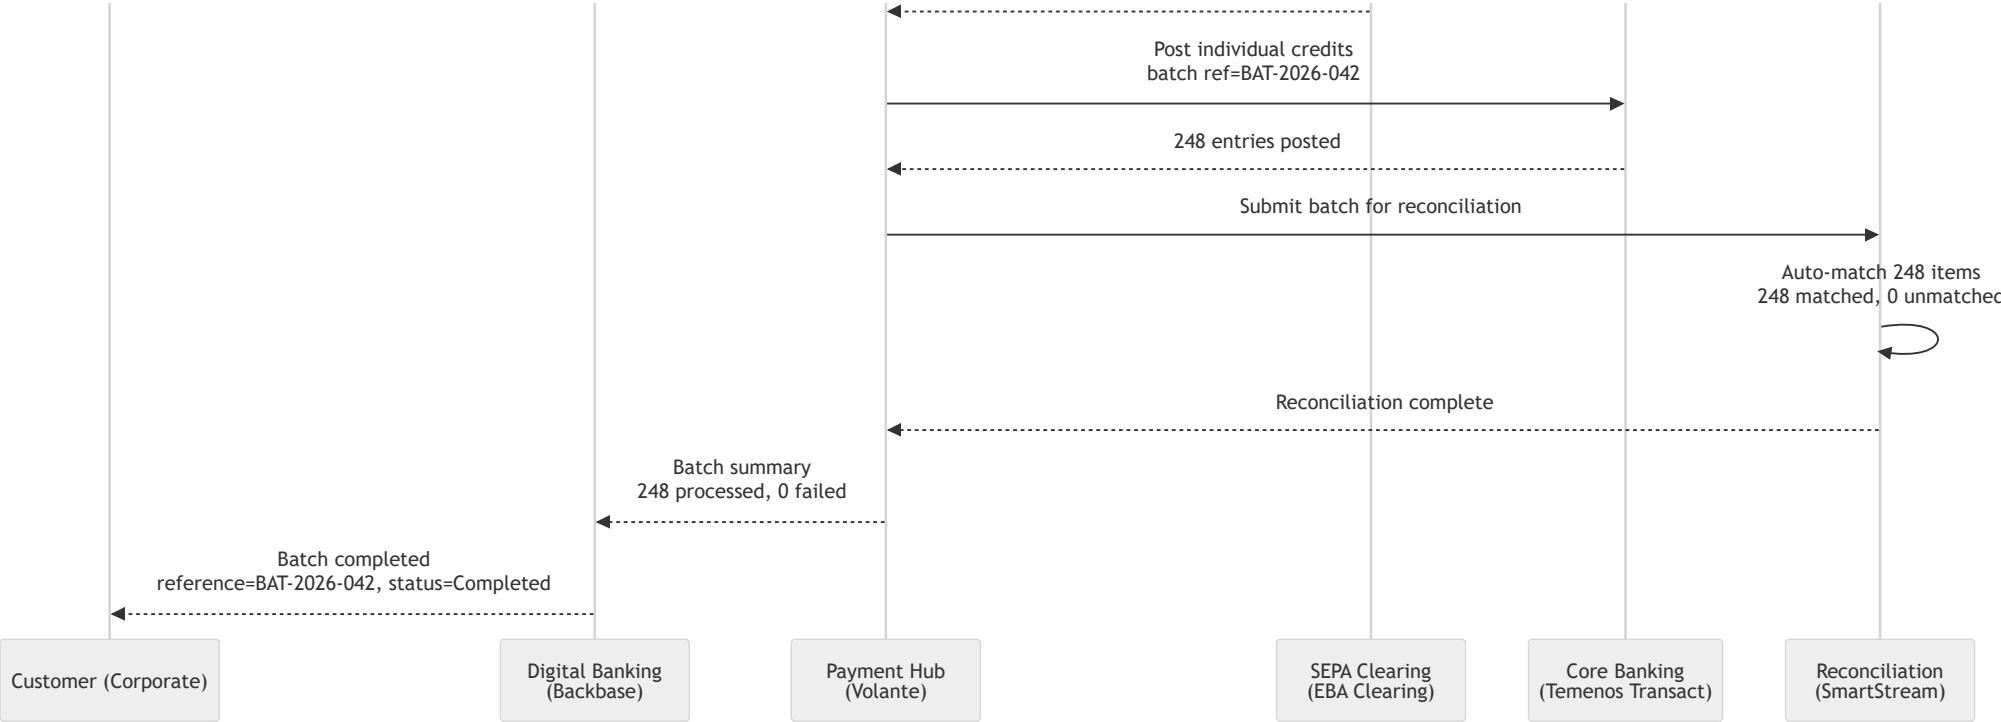

Description: Corporate customer submits batch payment file. Payment hub validates, processes bulk payments through clearing, generates reconciliation report.

Actors: Customer (Corporate), Payment Operations

Systems: Digital Banking (Backbase), Payment Hub (Volante), SEPA Clearing (EBA Clearing), Reconciliation Engine (SmartStream), Core Banking (Temenos Transact)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Batch Payment	File Upload	UploadBatchFile	Digital Banking (Backbase)	Payment Hub (Volante)	Backbase REST API	Volante API (ISO 20022)	API-led (Real-time)	Medium
Batch Payment	Validation	ValidateBatchFile	Payment Hub (Volante)	Payment Hub (Volante)	Internal	Internal	Batch (Scheduled)	Medium
Batch Payment	Clearing	SubmitBatchToClearing	Payment Hub (Volante)	SEPA Clearing (EBA Clearing)	Volante API (ISO 20022)	EBA Clearing API (ISO 20022)	Batch (Scheduled)	High
Batch Payment	Posting	PostBatchEntries	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	Batch (Scheduled)	High
Batch Payment	Reconciliation	ReconcileBatch	Payment Hub (Volante)	Reconciliation Engine (SmartStream)	Volante REST API	SmartStream API (REST)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Batch Payment	File Upload	Batch payment file uploaded in supported format (CSV/ISO 20022 XML)	File parsed successfully; row count and total amount validated
Batch Payment	Validation	Each payment validated individually; warnings non-blocking	Invalid rows rejected with reason; valid rows processed; partial acceptance supported
Batch Payment	Clearing	Batch submitted to SEPA Clearing as ISO 20022 bulk pacs.008	Clearing confirmation received; settlement timestamp recorded; exceptions reported
Batch Payment	Posting	All valid payments posted to individual accounts	248 entries posted; total debited matches batch total; posting report generated
Batch Payment	Reconciliation	Batch fully reconciled with zero unmatched items	Reconciliation report generate

Flow	Entity	Acceptance Criterion	Expected Outcome
			d; any breaks investigated before next batch

3: Lending & Credit Management - BC070

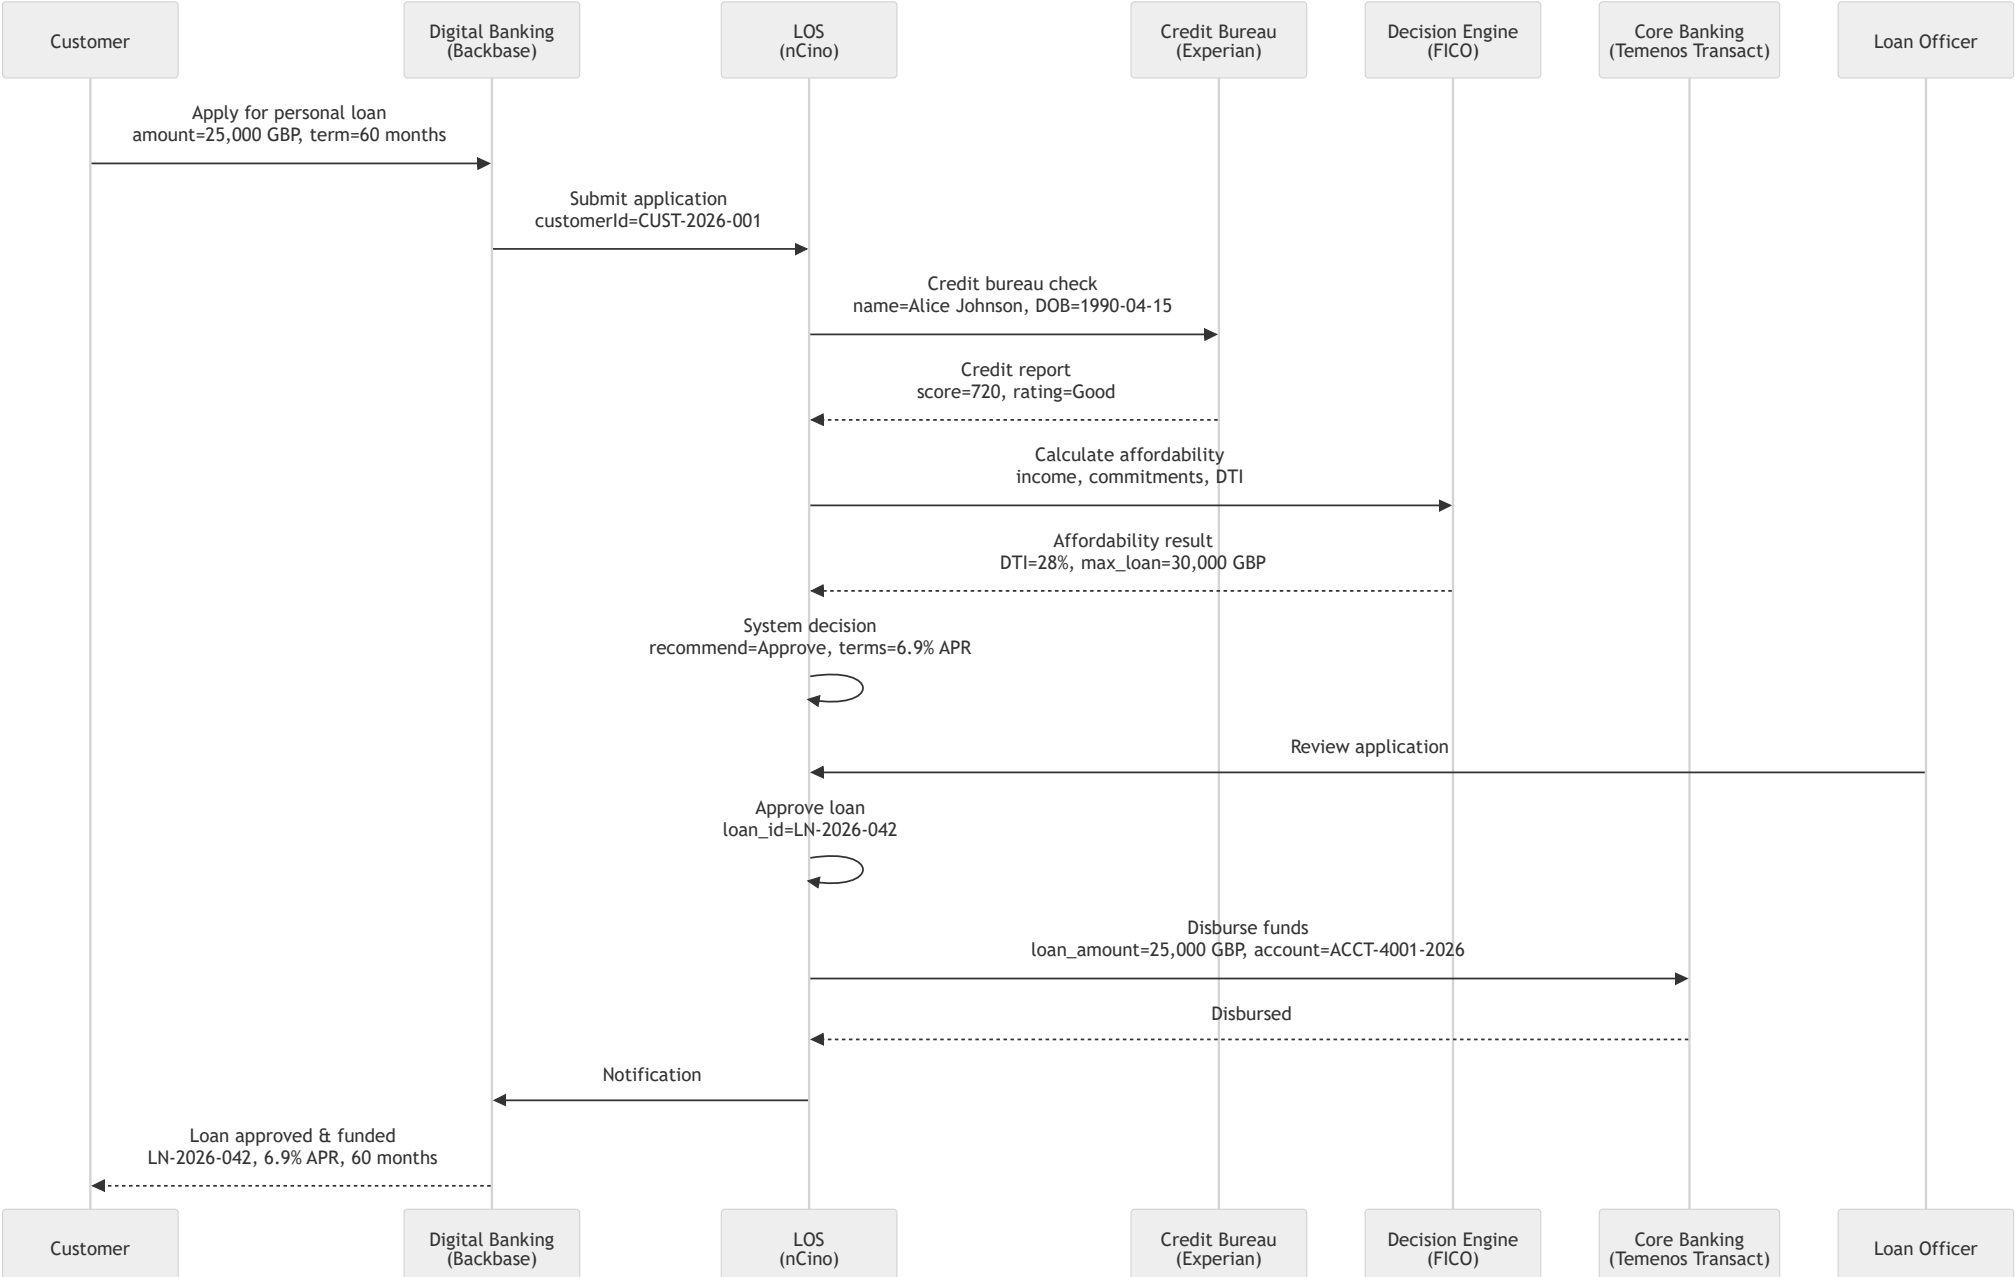

3.1 Retail Loan Origination

Description: Customer applies for personal loan. LOS processes application, initiates credit bureau check, calculates affordability, recommends decision, routes for approval.

Actors: Customer, Loan Officer, Credit Risk Analyst

Systems: LOS (nCino/Finastra), Core Banking (Temenos Transact), Credit Bureau (Experian), Decision Engine (FICO)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Loan Origination	Application	SubmitLoanApp	Digital Banking (Backbase)	LOS (nCino)	Backbase REST API	nCino REST API (OAuth2)	API-led (Real-time)	Medium
Loan Origination	Credit Check	CreditBureauCheck	LOS (nCino)	Credit Bureau (Experian)	nCino API	Experian API (SOAP)	API-led (Real-time)	High
Loan Origination	Decision	CalculateAffordability	LOS (nCino)	Decision Engine (FICO)	nCino REST API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Loan Origination	Disbursement	DisburseLoan	LOS (nCino)	Core Banking (Temenos Transact)	nCino REST API (OAuth2)	Temenos REST API (API Key)	API-led (Real-time)	Medium
Loan Origination	Document	UploadLoanDocuments	LOS (nCino)	Document Mgmt (M-Files)	nCino REST API	M-Files REST API (API Key)	API-led (Real-time)	Simple
Loan Origination	Pricing	GetRiskBasedPricing	LOS (nCino)	Pricing Engine	nCino REST API	Pricing API (REST)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Loan Origination	Application	Loan application submitted from digital banking to nCino LOS	Application ID created; all fields mapped correctly; incomplete applications rejected
Loan Origination	Credit Check	Experian credit bureau check returns credit report and score	Credit score returned within 5 seconds; bureau error handled gracefully with retry
Loan Origination	Decision	FICO affordability calculation returns DTI ratio and max loan recommendation	DTI <=40% auto-approved; >40% routed to manual underwriting
Loan Origination	Disbursement	Loan funds disbursed to customer account in Temenos Transact	Customer account credited within 30 seconds; loan account created with correct terms
Loan Origination	Document	Loan application documents uploaded and stored in M-Files	All documents linked to application ID; automated document classification applied
Loan Origination	Pricing	Risk-based pricing returned from pricing engine	Rate within defined band for risk score; manual override requires approval

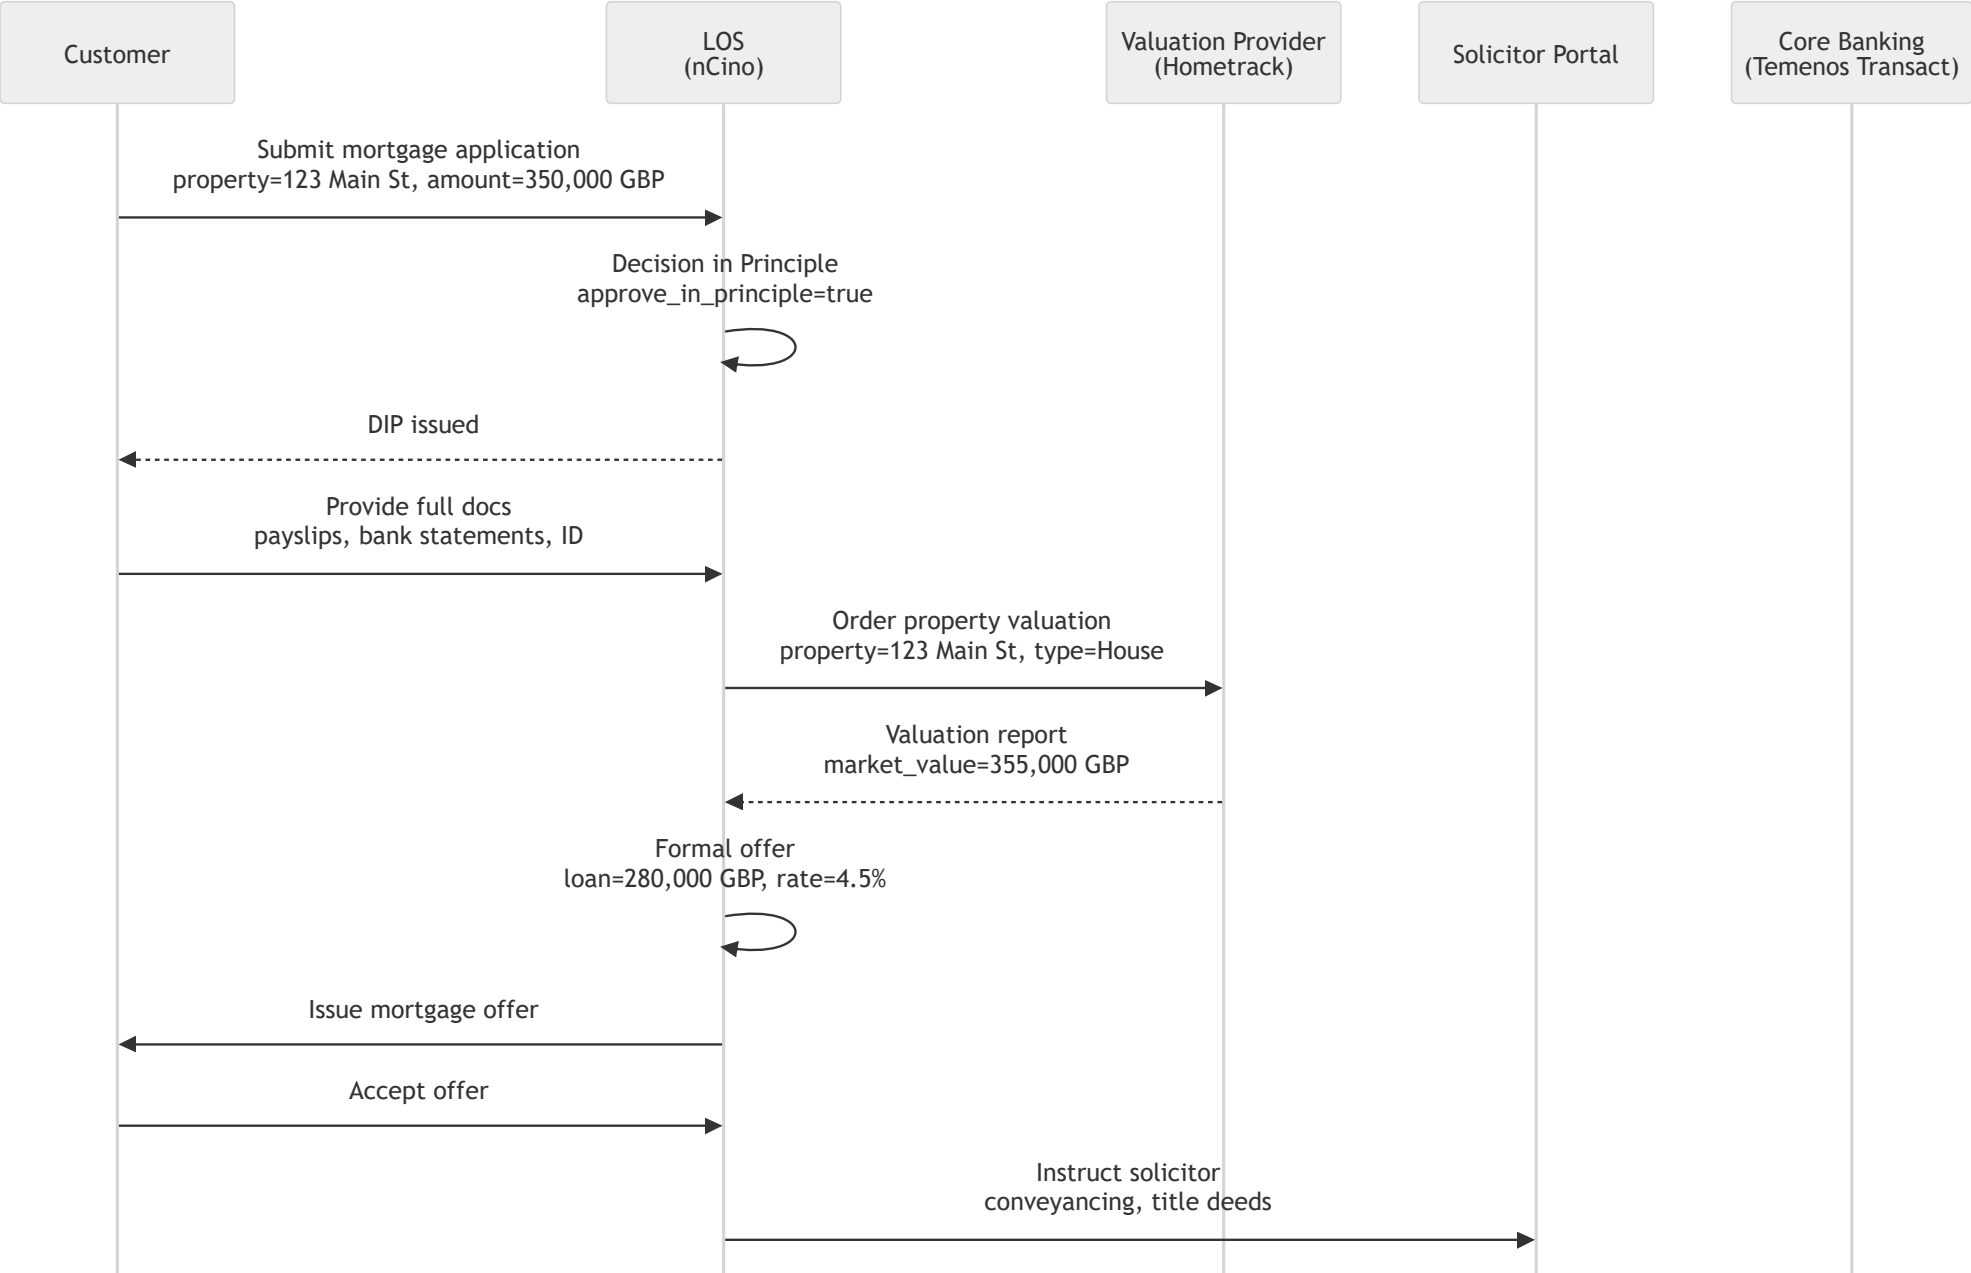

3.2 Mortgage Lending

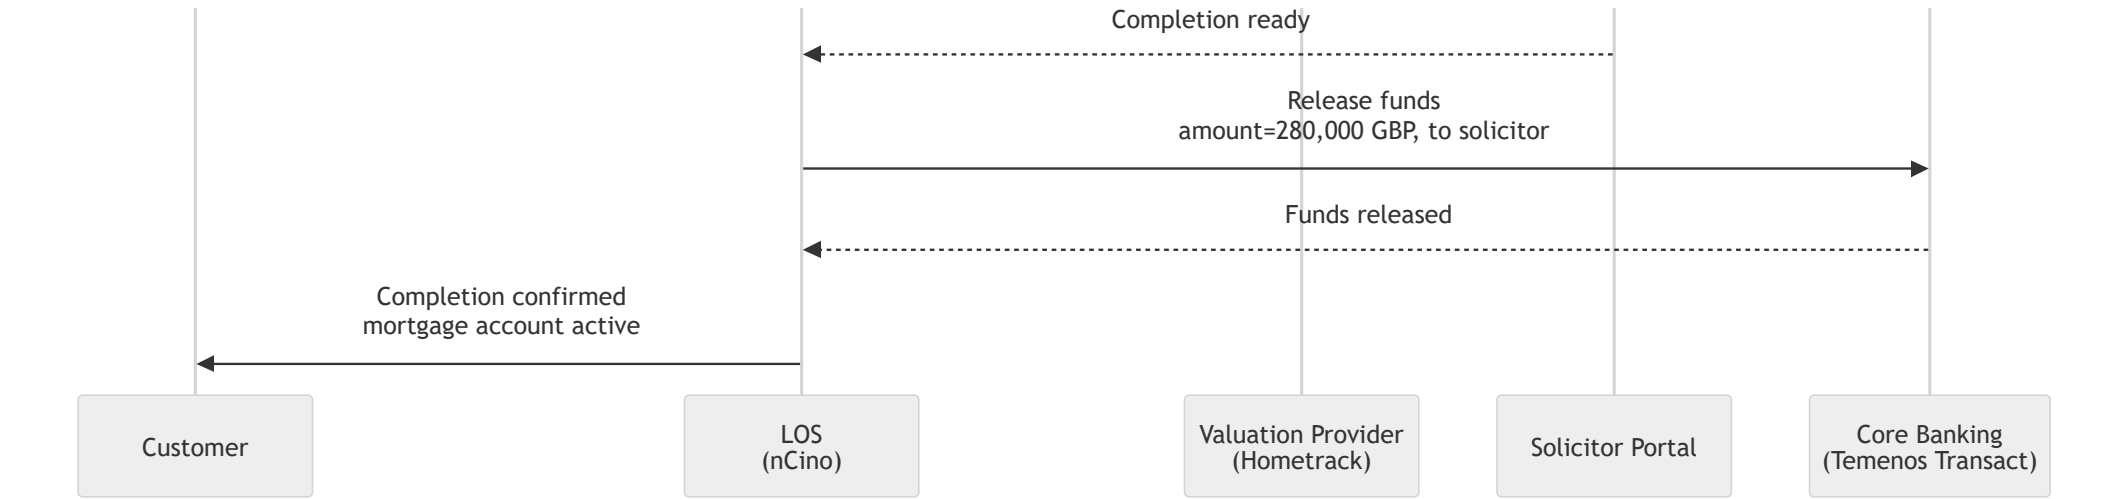

Description: Customer applies for mortgage. LOS manages document collection, valuation, solicitor coordination, offer issuance, completion.

Actors: Customer, Mortgage Advisor, Underwriter

Systems: LOS (nCino), Core Banking (Temenos Transact), Valuation Provider (Hometrack), Solicitor Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Mortgage Lending	DIP	DecisionInPrinciple	LOS (nCino)	LOS (nCino)	Internal	Internal	API-led (Real-time)	Simple
Mortgage Lending	Valuation	OrderValuation	LOS (nCino)	Valuation Provider (Hometrack)	nCino REST API	Hometrack API (SOAP)	Event-driven	Medium
Mortgage Lending	Solicitor	InstructSolicitor	LOS (nCino)	Solicitor Portal	nCino REST API	Solicitor API (REST)	Event-driven	Medium
Mortgage Lending	Funds	ReleaseFunds	LOS (nCino)	Core Banking (Temenos Transact)	nCino REST API (OAuth2)	Temenos REST API (API Key)	Event-driven	High
Mortgage Lending	Insurance	RequestInsuranceQuote	LOS (nCino)	Insurance Provider (Aviva)	nCino REST API	Aviva API (SOAP)	Event-driven	Medium
Mortgage Lending	Title	VerifyTitleDeeds	Solicitor Portal	Land Registry (UK LR)	Solicitor API (REST)	Land Registry API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

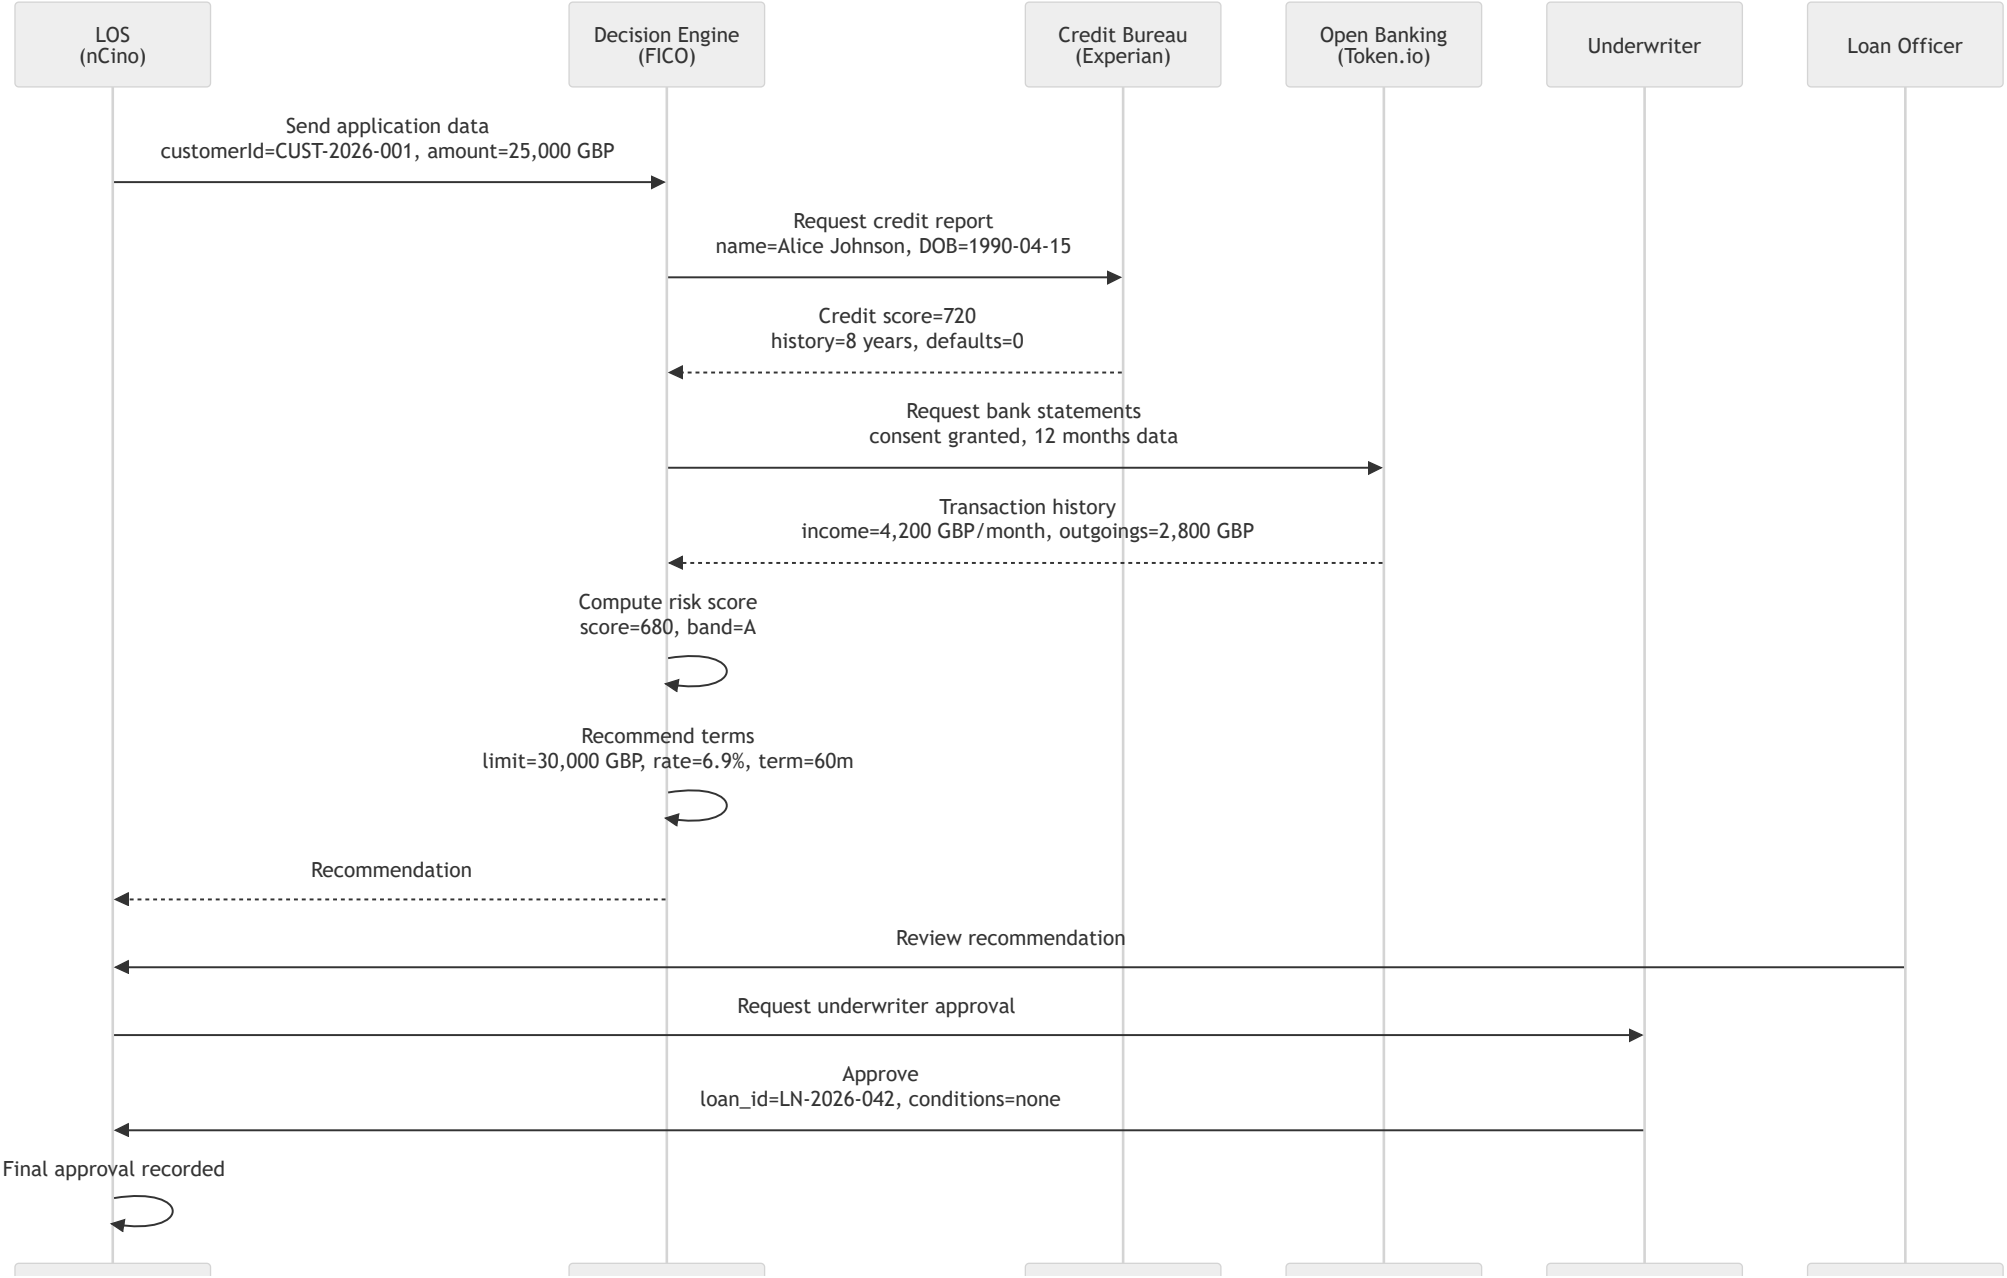

Flow	Entity	Acceptance Criterion	Expected Outcome
Mortgage Lending	DIP	Decision in Principle calculated based on submitted income and commitment data	DIP issued with provisional amount and term; declined DIP shows reason
Mortgage Lending	Valuation	Property valuation ordered from Hometrack with correct property details	Valuation report returned within 24hrs; automated valuation for LTV <80%
Mortgage Lending	Solicitor	Solicitor instructed via portal with all required case documents	Solicitor confirmation received; all title deed requests submitted
Mortgage Lending	Funds	Mortgage funds released to solicitor on completion	Funds transferred via CHAPS within 2 hours of completion request; tracking reference provided
Mortgage Lending	Insurance	Buildings insurance quote requested and received	Quote returned within 30 seconds; multiple quotes compared; waiver available for self-sourced
Mortgage Lending	Title	Title deeds verified with Land Registry	Title registered; charges confirmed; any existing mortgages noted

3.3 Credit Assessment & Scoring

Description: Credit analyst reviews score, bureau data, bank statement analysis. Decision engine computes risk score, recommends limit/terms. Underwriter approves.

Actors: Credit Risk Analyst, Loan Officer, Underwriter
Systems: LOS (nCino), Credit Bureau (Experian), Decision Engine (FICO), Open Banking API (Token.io)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Credit Assessment	Application Data	SendForScoring	LOS (nCino)	Decision Engine (FICO)	nCino REST API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Credit Assessment	Credit Report	GetCreditReport	Decision Engine (FICO)	Credit Bureau (Experian)	FICO Blaze API	Experian API (SOAP)	API-led (Real-time)	High
Credit Assessment	Bank Statements	GetTransactionData	Decision Engine (FICO)	Open Banking (Token.io)	FICO API	Token.io API (OAuth2)	API-led (Real-time)	High
Credit Assessment	Approval	ApproveUnderwriting	LOS (nCino)	Workflow (Pega)	nCino REST API (OAuth2)	Pega Workflow API (REST)	Event-driven	Medium
Credit Assessment	Fraud	IdentityFraudCheck	Decision Engine (FICO)	Fraud Detection (FICO Falcon)	FICO Blaze API	Falcon API (ISO 8583)	API-led (Real-time)	Medium
Credit Assessment	Decision	GenerateOfferLetter	LOS (nCino)	Document Generation (Adobe Sign)	nCino REST API	Adobe Sign API (REST)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Credit Assessment	Application Data	Application data sent from nCino to FICO decision engine	Data accepted by decision engine; missing mandatory fields cause rejection
Credit Assessment	Credit Report	Experian credit report retrieved with score, history, and default information	Full credit report returned; bureau downtime handled with cached score or manual fallback
Credit Assessment	Bank Statements	Transaction data retrieved via Open Banking API with customer consent	12 months data retrieved; consent refresh handled; data unavailable flagged
Credit Assessment	Approval	Underwriter approval recorded with conditions (if any)	Approval recorded in LOS; conditions tracked; approval valid for 90 days
Credit Assessment	Fraud	Identity fraud check completed as part of credit assessment	Fraud check integrated into composite score; high fraud flags trigger manual review
Credit Assessment	Decision	Offer letter generated and digitally signed	Offer letter generated with correct terms; digital signature applied; valid for 90 days

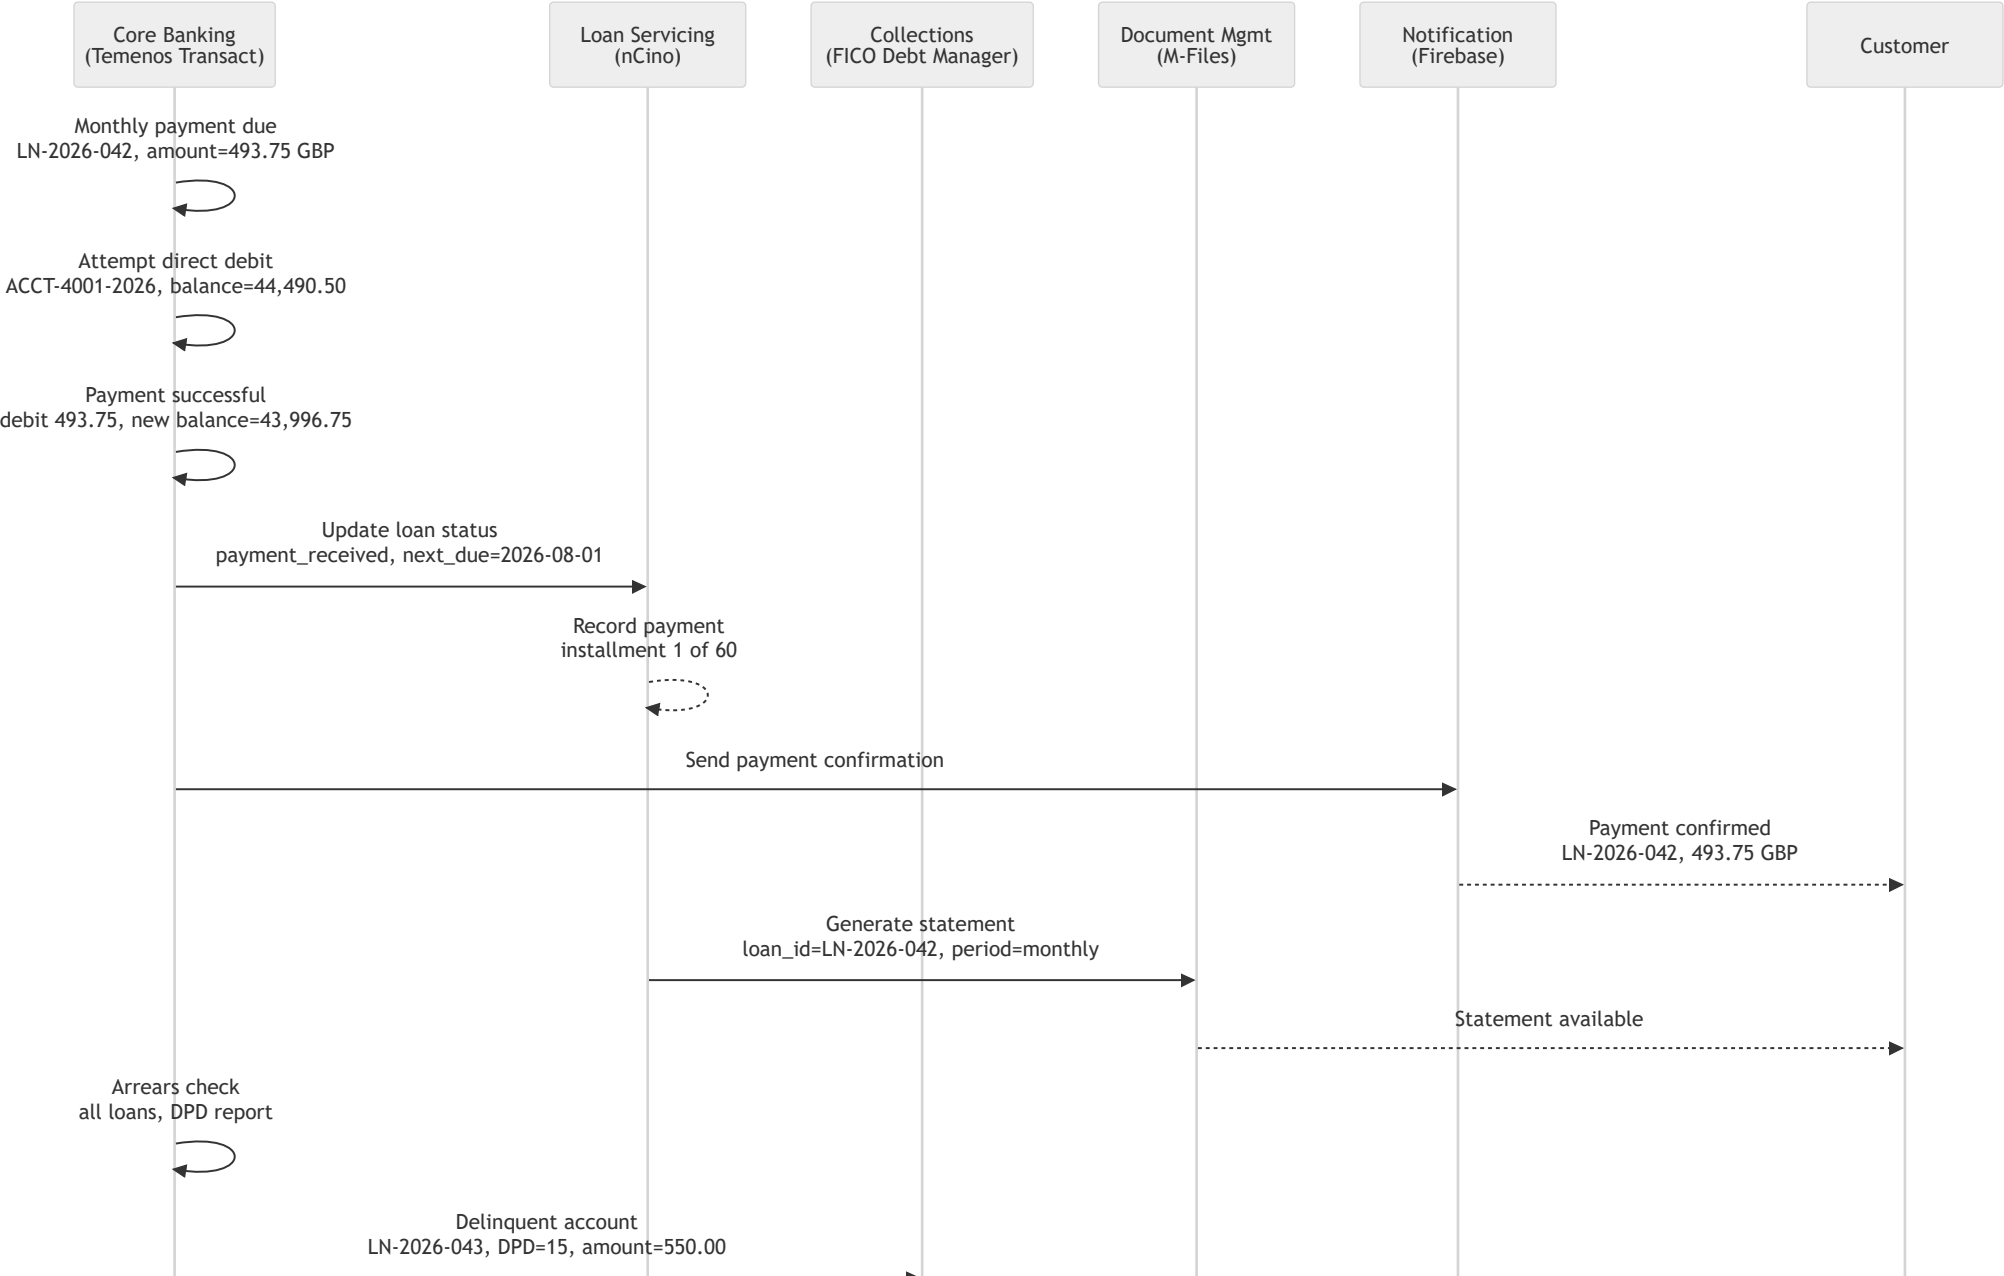

3.4 Loan Servicing & Collections

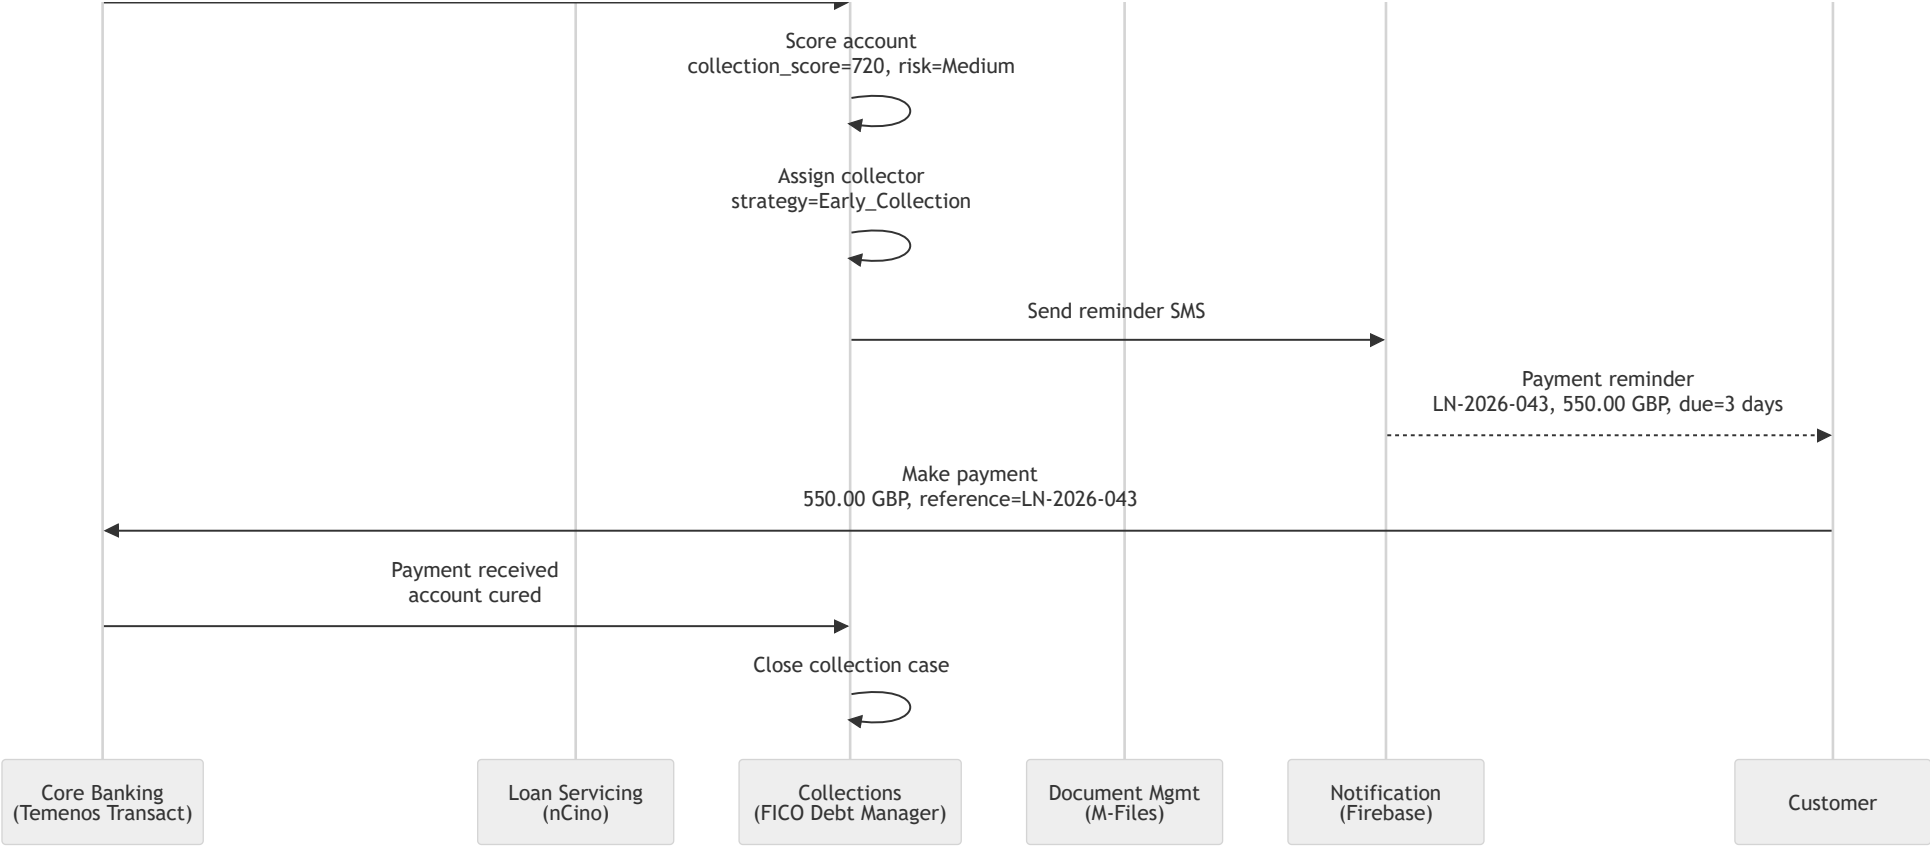

Description: Loan servicing team manages ongoing loan accounts - payment collection, arrears management, statement generation, and early-stage collections.

Actors: Customer, Loan Servicing Officer, Collections Officer

Systems: LOS (nCino), Core Banking (Temenos Transact), Collections System (FICO Debt Manager), Document Mgmt (M-Files), Notification Service (Firebase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Loan Servicing	Payment	ProcessMonthlyPayment	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Medium
Loan Servicing	Notification	SendPaymentConfirmation	Core Banking (Temenos Transact)	Notification Service (Firebase)	Temenos REST API	Firebase FCM API	Event-driven	Simple
Loan Servicing	Arrears	FlagDelinquentAccount	Core Banking (Temenos Transact)	Collections (FICO Debt Manager)	Temenos REST API	FICO API (SOAP)	Event-driven	Medium
Loan Servicing	Collections	AssignCollectionStrategy	Collections (FICO Debt Manager)	Collections (FICO Debt Manager)	Internal	Internal	API-led (Real-time)	Medium
Loan Servicing	Statement	GenerateLoanStatement	LOS (nCino)	Document Mgmt (M-Files)	nCino REST API	M-Files REST API (API Key)	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Loan Servicing	Payment	Monthly direct debit payment processed on due date	Payment debited on due date; loan balance reduced; next due date calculated
Loan Servicing	Notification	Payment confirmation sent to customer immediately	Confirmation includes amount, loan ID, remaining balance; delivered within 60 seconds
Loan Servicing	Arrears	Delinquent accounts flagged correctly based on DPD threshold	Accounts with DPD >0 flagged; severity assigned based on DPD bands; escalation triggered at 30 DPD
Loan Servicing	Collections	Collection strategy assigned based on risk score and DPD	Strategy determined by collection score; treatment plan customized; contact schedule set
Loan Servicing	Statement	Monthly loan statement generated and made available	Statement shows paymen

Flow	Entity	Acceptance Criterion	Expected Outcome
			ts, interest, outstanding balance; available in digital banking and document mgmt

4: Cards Management - BC071

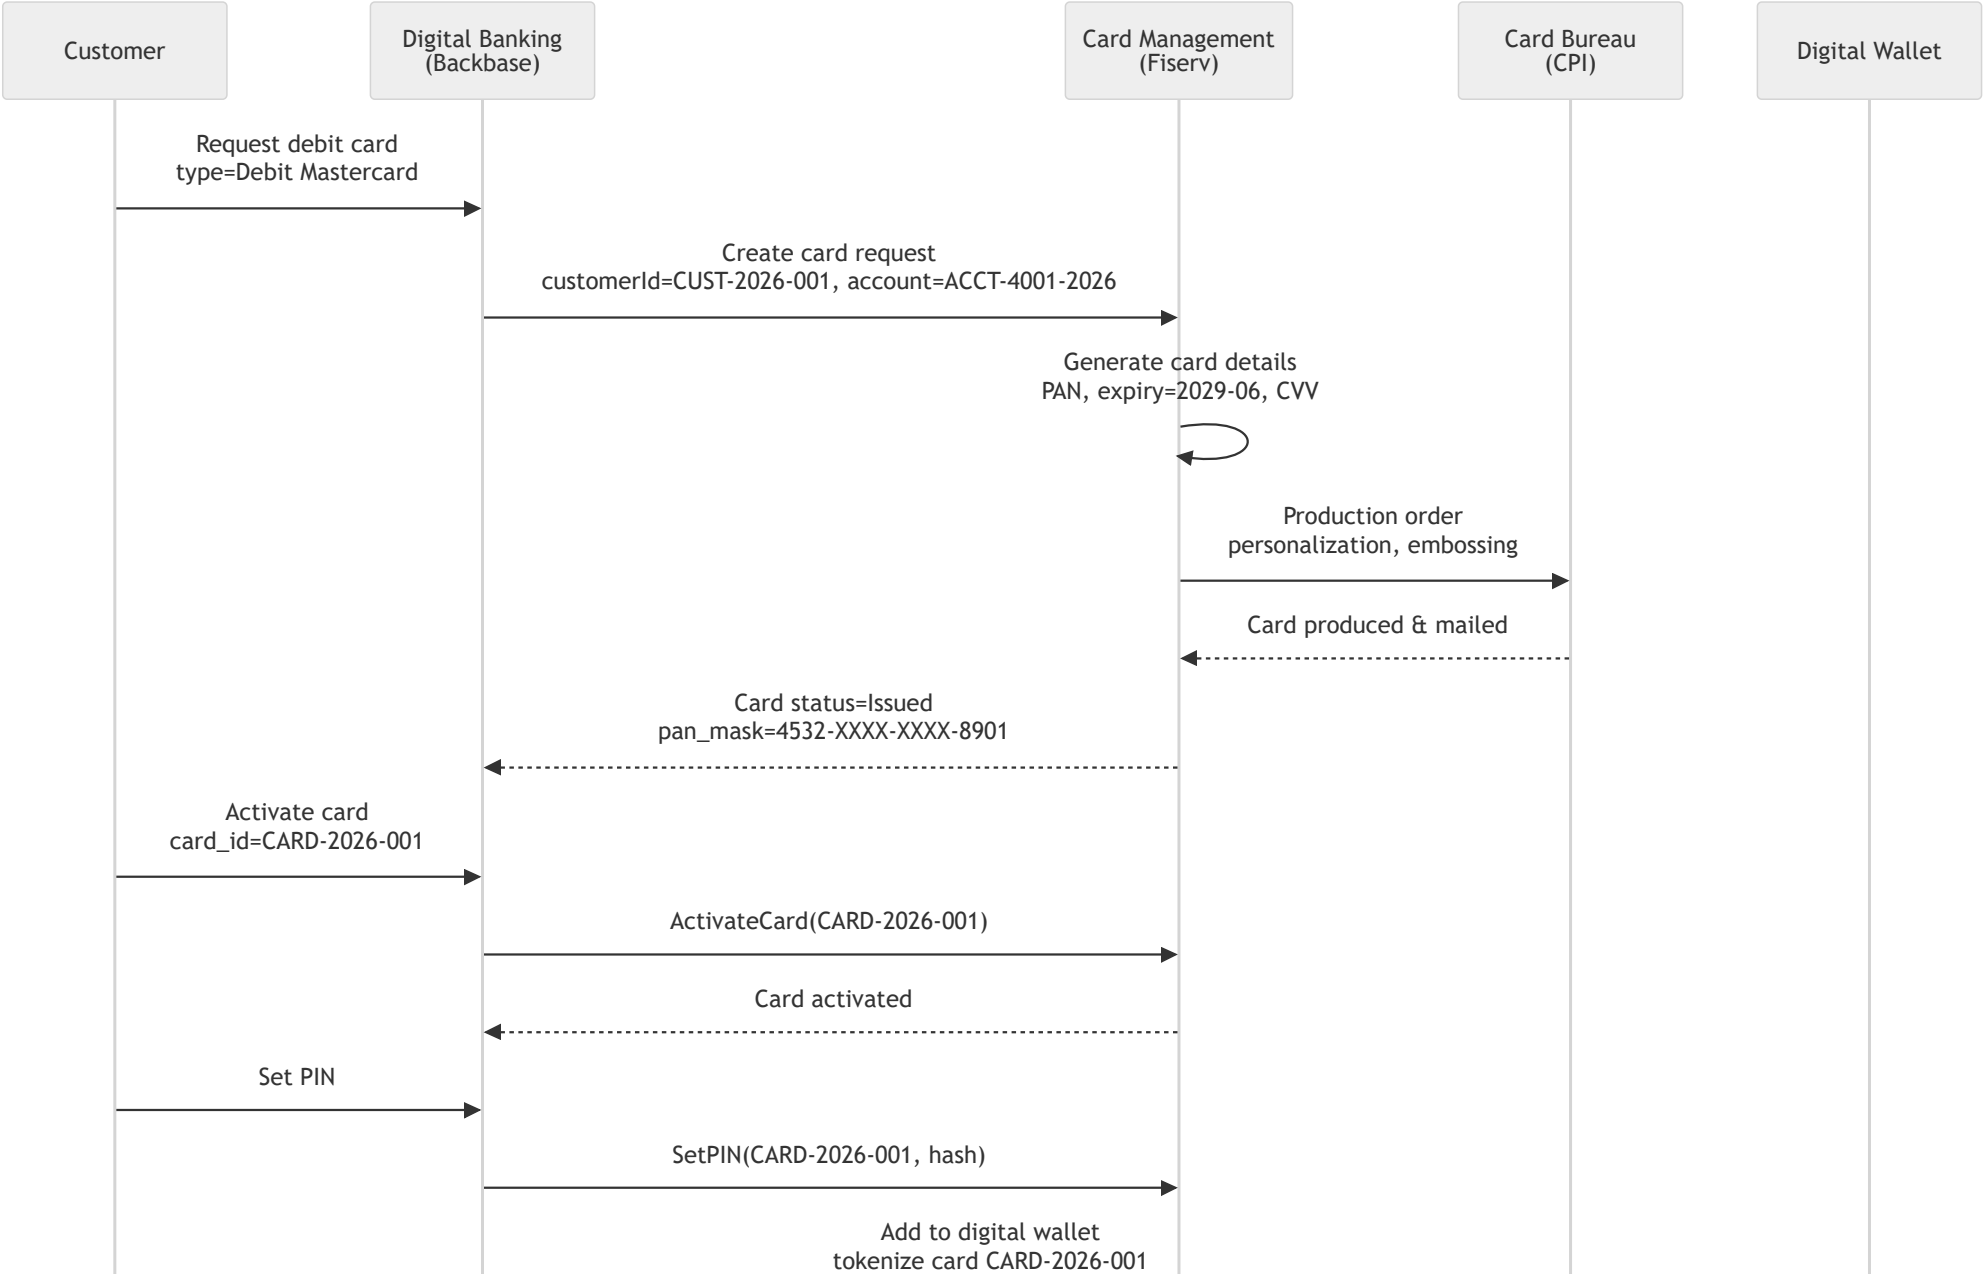

4.1 Card Issuance

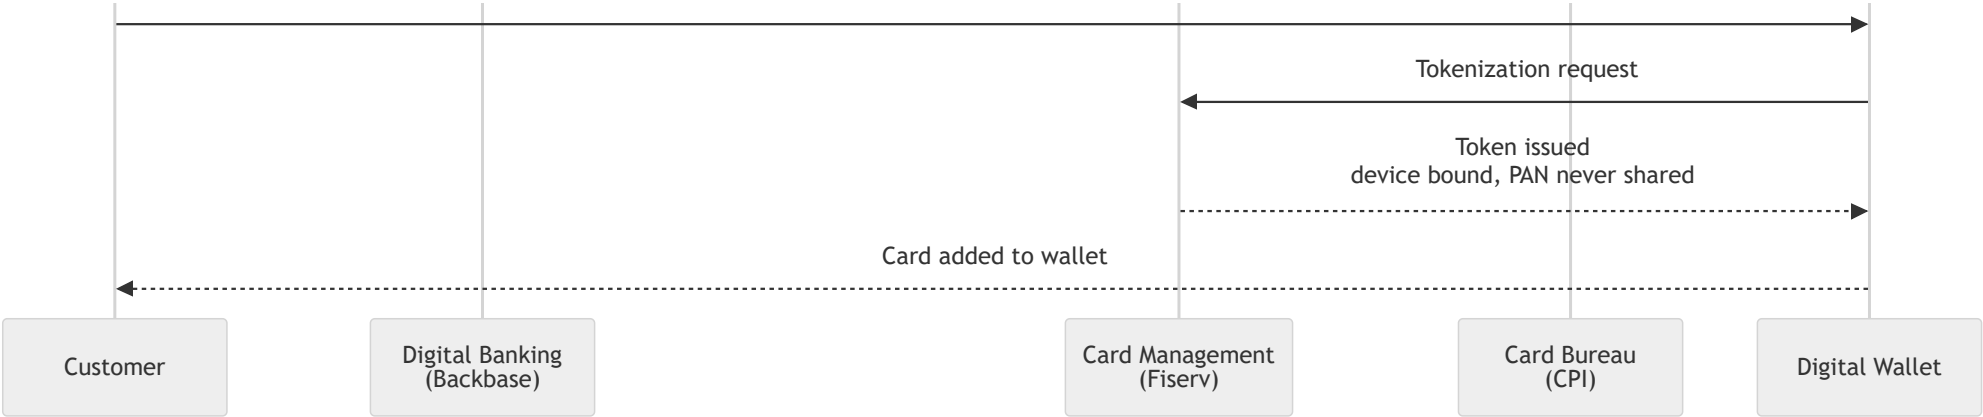

Description: Customer requests card. Card Mgmt system personalizes, orders production, activates card, sets PIN, enables digital wallet.

Actors: Customer, Card Operations

Systems: Card Management (Fiserv/FDR), Card Production Bureau (CPI), Digital Banking (Backbase), Digital Wallet (Apple Pay / Google Pay)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Issuance	Card Request	CreateCardRequest	Digital Banking (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Medium
Card Issuance	Production	OrderProduction	Card Management (Fiserv)	Card Bureau (CPI)	Fiserv API (ISO 8583)	CPI API (SFTP)	Batch (Scheduled)	High
Card Issuance	Activation	ActivateCard	Digital Banking (Backbase)	Card Management (Fiserv)	Backbase REST API	Fiserv API (SOAP)	API-led (Real-time)	Simple
Card Issuance	Tokenization	TokenizeCard	Digital Wallet (Apple Pay)	Card Management (Fiserv)	Apple Pay API	Fiserv Token API	API-led (Real-time)	High
Card Issuance	PIN	SendPINMailer	Card Management (Fiserv)	Card Bureau (CPI)	Fiserv API (ISO 8583)	CPI API (SFTP)	Batch (Scheduled)	Medium
Card Issuance	Notification	NotifyCardDispatched	Card Management (Fiserv)	Notification Service (Firebase)	Fiserv REST API	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Issuance	Card Request	Card creation request sent to Fiserv card management with correct customer and account	Card details generated (PAN, expiry, CVV); card ID returned
Card Issuance	Production	Production order file sent to CPI bureau for card personalization	File acknowledged by CPI; physical card dispatched within 3 business days
Card Issuance	Activation	Card activated by customer via digital banking or IVR	Card status changes from Issued to Active; activation timestamp logged
Card Issuance	Tokenization	Card tokenized for Apple Pay/Google Pay with device-bound token	Token issued; PAN never shared with wallet provider; token domain-restricted
Card Issuance	PIN	PIN mailer dispatched separately from card	PIN generated securely; mailer dispatched within 24 hours; PIN never in same envelope as card
Card Issuance	Notification	Customer notified when card is dispatched	Notification sent with tracking reference; estimated delivery date provided

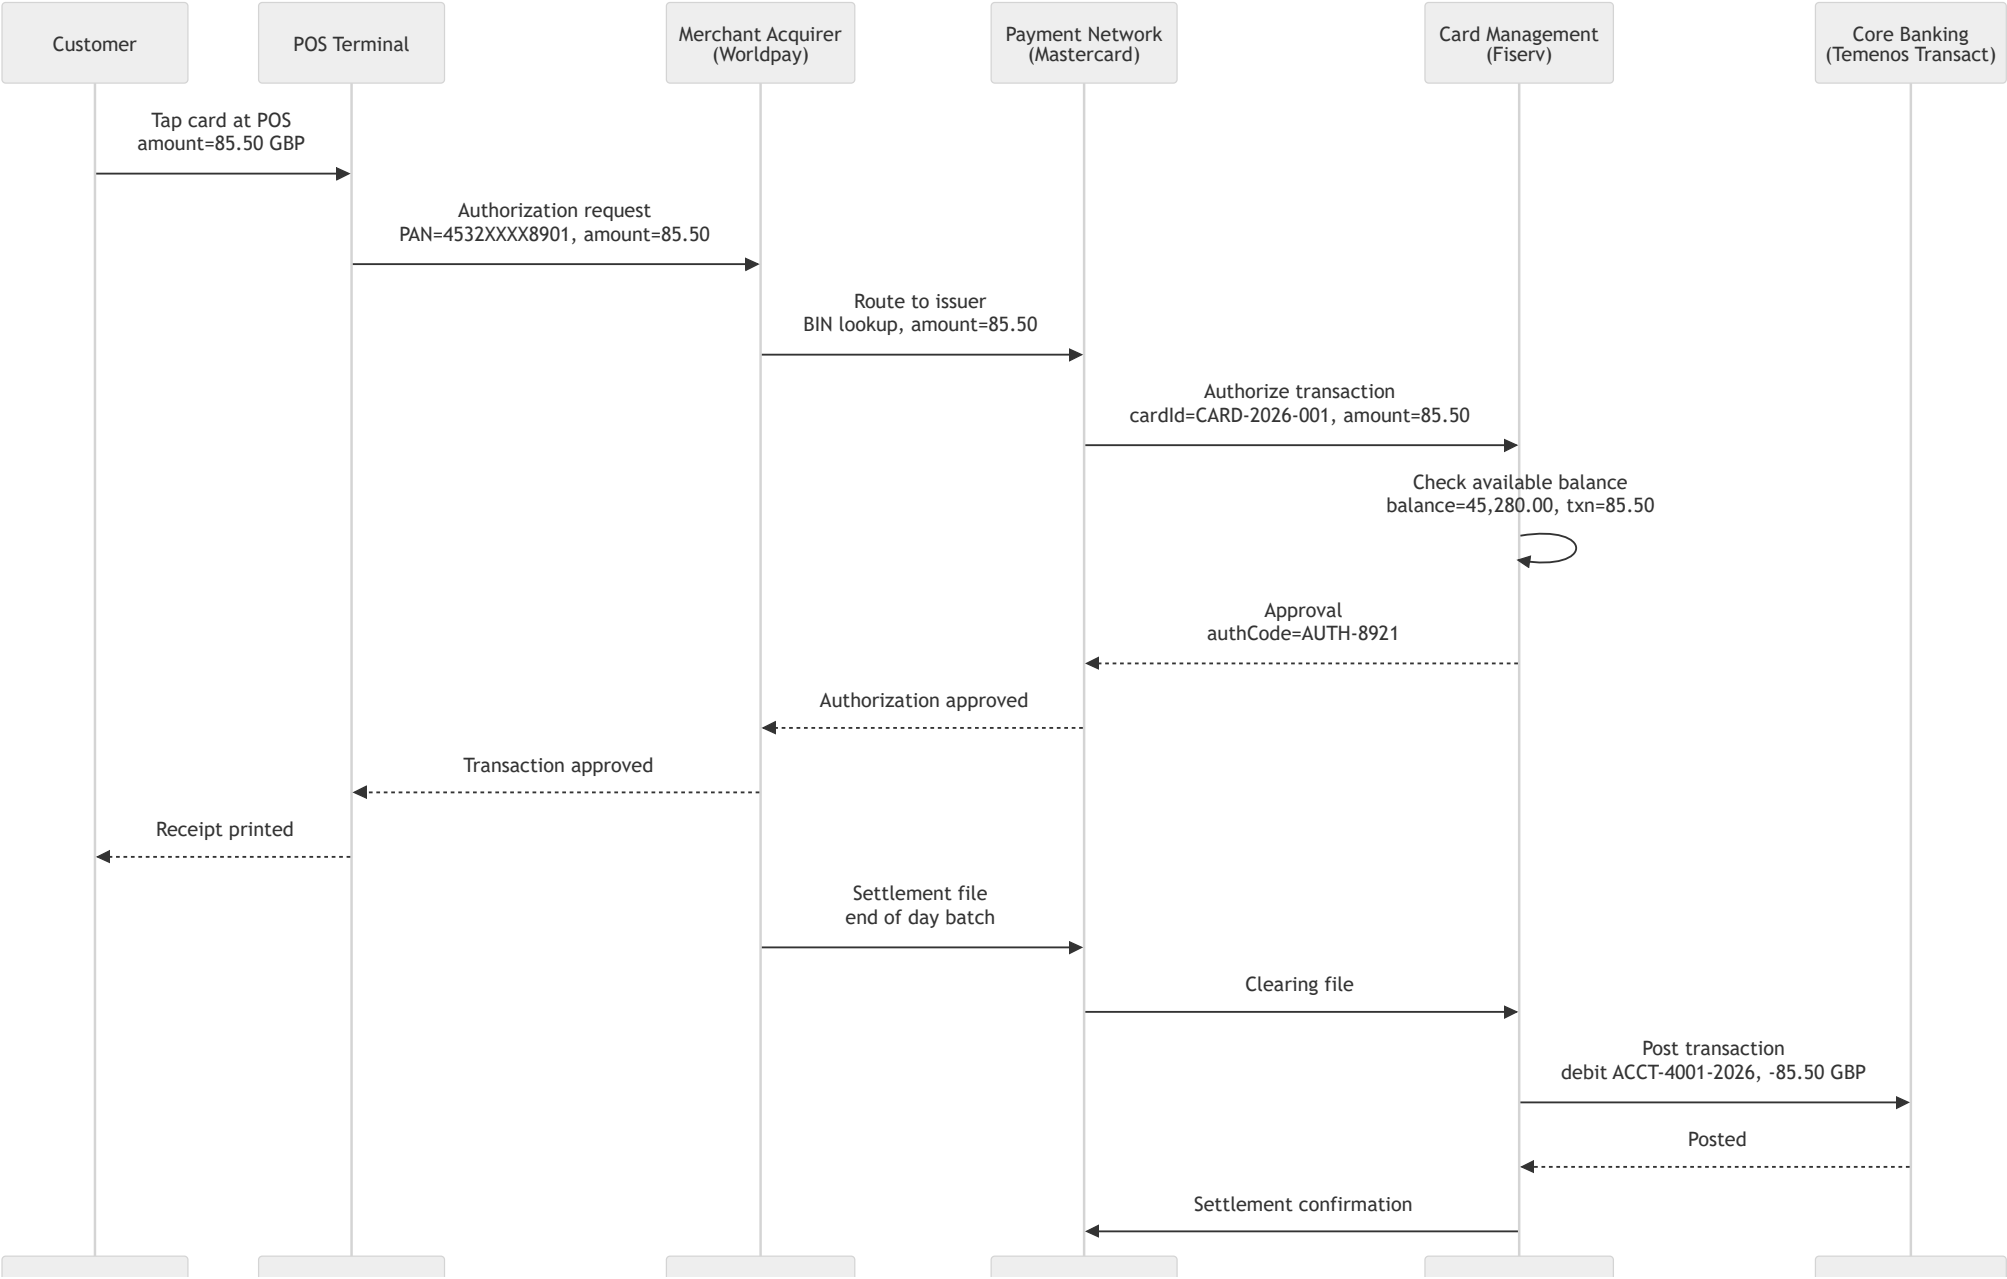

4.2 Card Transaction Processing

Description: Customer makes POS purchase. Authorization request flows from terminal → acquirer → network → issuer. Clearing and settlement follows.

Actors: Customer, Merchant, Acquirer

Systems: Card Management (Fiserv/FDR), POS Terminal, Merchant Acquirer (Worldpay), Payment Network (Visa/Mastercard), Core Banking (Temenos Transact)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Transaction	Authorization	AuthorizeTransaction	POS Terminal	Merchant Acquirer (Worldpay)	POS Protocol (ISO 8583)	Worldpay Gateway API	API-led (Real-time)	High
Card Transaction	Routing	RouteToIssuer	Merchant Acquirer (Worldpay)	Payment Network (Mastercard)	Worldpay API (ISO 8583)	Mastercard Network (ISO 8583)	API-led (Real-time)	High
Card Transaction	Issuer Auth	AuthDecision	Payment Network (Mastercard)	Card Management (Fiserv)	Mastercard Interface	Fiserv API (ISO 8583)	API-led (Real-time)	Medium
Card Transaction	Settlement	SubmitSettlement	Merchant Acquirer (Worldpay)	Payment Network (Mastercard)	Worldpay Settlement API	Mastercard Settlement (ISO 20022)	Batch (Scheduled)	High
Card Transaction	Posting	PostCardTransaction	Card Management (Fiserv)	Core Banking (Temenos Transact)	Fiserv REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Card Transaction	FX	ConvertTransactionCurrency	Card Management (Fiserv)	FX Rate Service (Reuters)	Fiserv REST API	Reuters API (REST)	API-led (Real-time)	Medium
Card Transaction	Reward	CalculateRewardPoints	Card Management (Fiserv)	Rewards Engine (LoyaltyPlus)	Fiserv REST API	LoyaltyPlus API (REST)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Transaction	Authorization	POS authorization request sent and response received in <2 seconds	Auth approval code returned; declined transactions show reason code
Card Transaction	Routing	Transaction routed to correct issuer via Mastercard network BIN lookup	Route determined correctly; BIN table updated weekly
Card Transaction	Issuer Auth	Issuer validates available balance/funds and returns auth decision	Sufficient funds approve; insufficient funds decline; all decisions logged
Card Transaction	Settlement	End-of-day settlement file exchanged between acquirer, network, and issuer	Settlement file reconciled to zero; exceptions <0.1% of volume
Card Transaction	Posting	Card transaction posted to customer account in core banking	Transaction appears on statement; available balance updated; posting date = transaction date
Card Transaction	FX	Dynamic currency conversion applied for foreign transactions	Exchange rate displayed at POS; conversion rate within 1% of wholesale rate
Card Transaction	Reward	Reward points calculated and credited for qualifying transactions	Points calculated per card programme rules; points balance updated immediately

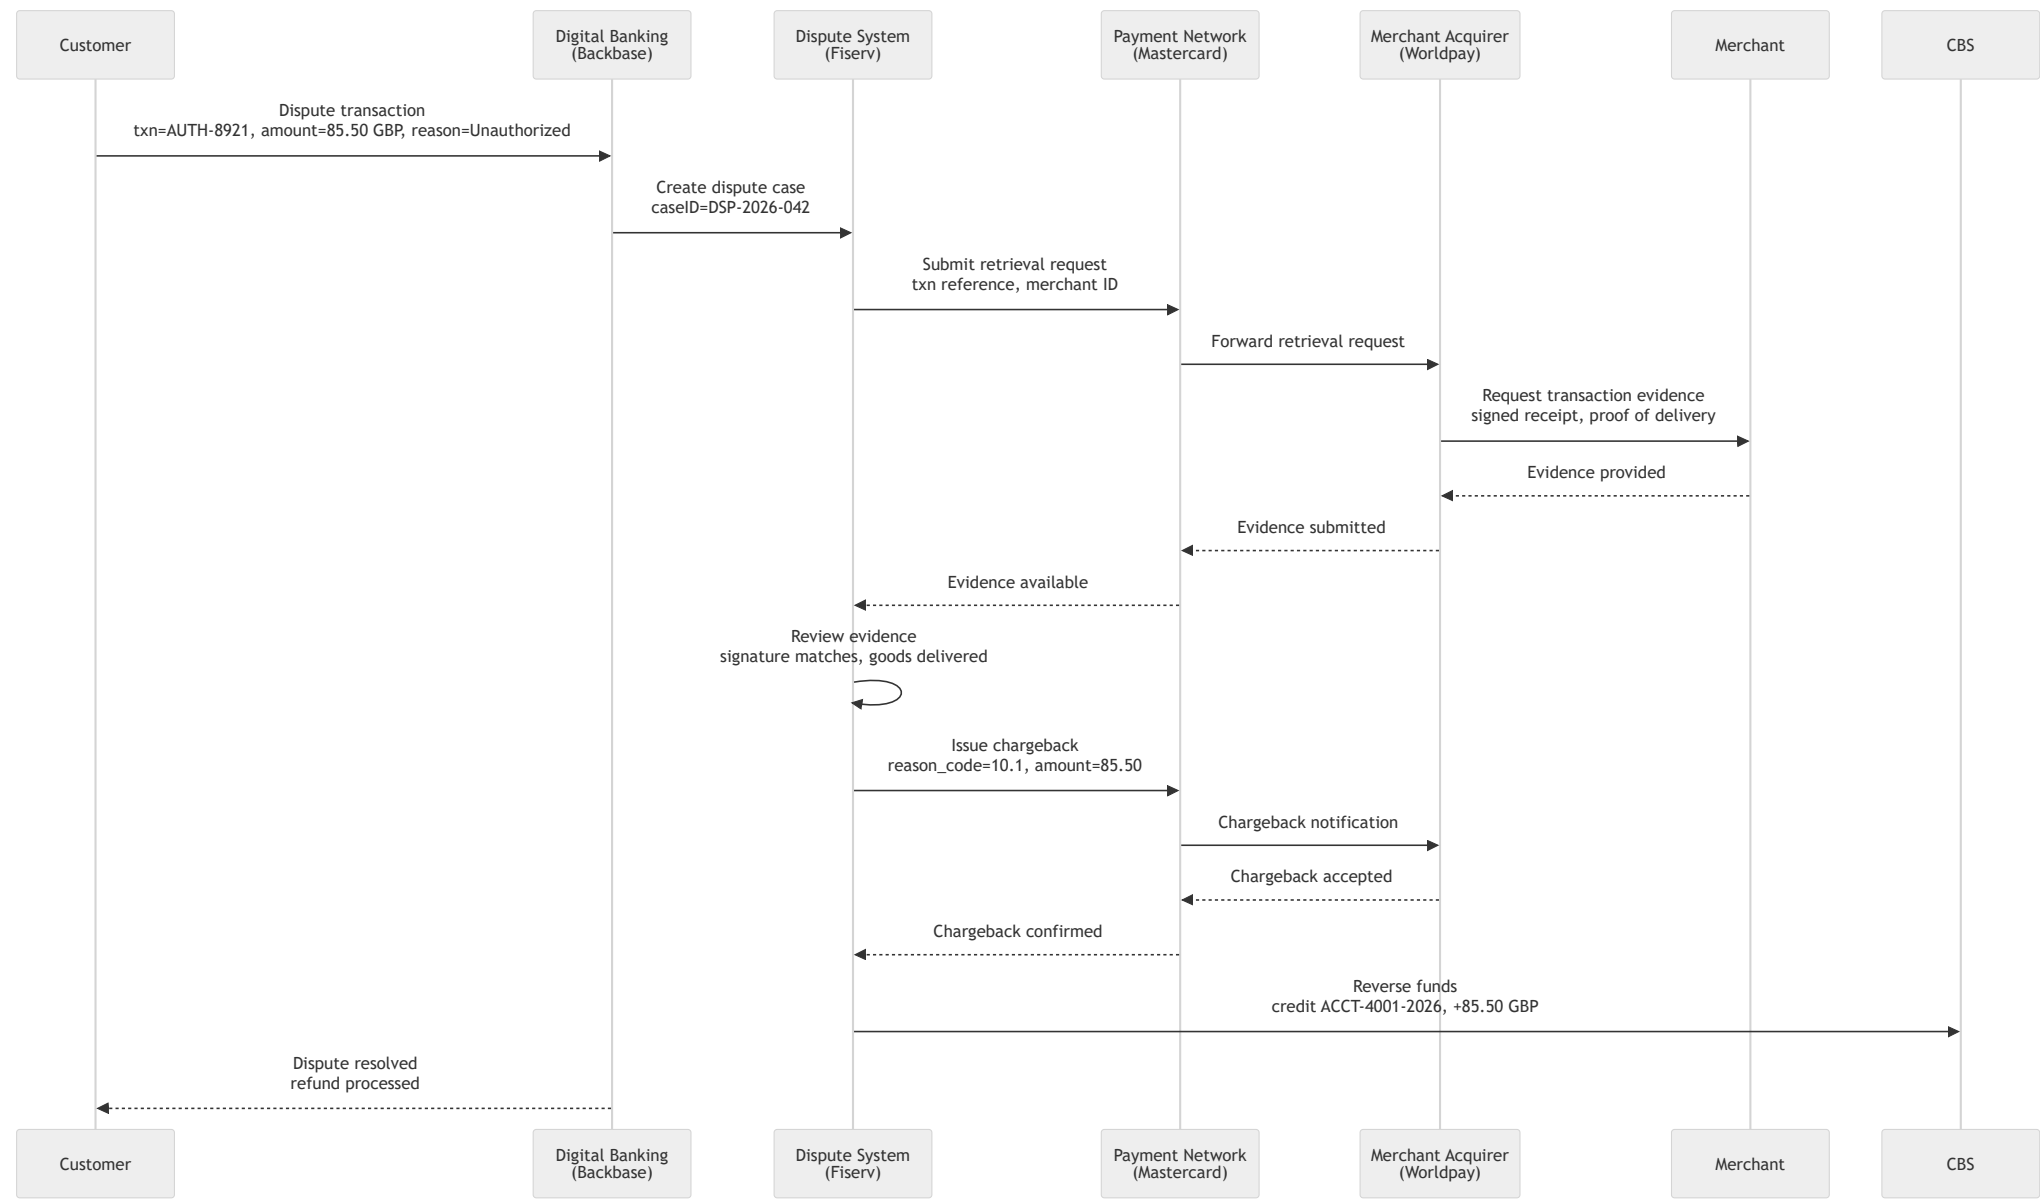

4.3 Card Dispute Management

Description: Customer disputes a transaction. Dispute system manages chargeback lifecycle: retrieval request, chargeback, pre-arbitration, and arbitration.

Actors: Customer, Card Operations, Merchant, Acquirer

Systems: Card Management (Fiserv/FDR), Dispute System (Fiserv), Payment Network (Mastercard), Merchant Acquirer (Worldpay)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Dispute	Case	CreateDisputeCase	Digital Banking (Backbase)	Dispute System (Fiserv)	Backbase REST API	Fiserv Dispute API (SOAP)	API-led (Real-time)	Medium
Card Dispute	Retrieval	SubmitRetrievalRequest	Dispute System (Fiserv)	Payment Network (Mastercard)	Fiserv API	Mastercard Dispute API (ISO 8583)	API-led (Real-time)	High
Card Dispute	Chargeback	IssueChargeback	Dispute System (Fiserv)	Payment Network (Mastercard)	Fiserv API	Mastercard Chargeback API	API-led (Real-time)	High
Card Dispute	Reversal	ReverseFunds	Dispute System (Fiserv)	Core Banking (Temenos Transact)	Fiserv REST API	Temenos REST API (API Key)	Event-driven	Medium
Card Dispute	Evidence	UploadDisputeEvidence	Digital Banking (Backbase)	Dispute System (Fiserv)	Backbase REST API	Fiserv Dispute API (SOAP)	API-led (Real-time)	Simple
Card Dispute	Notification	NotifyDisputeOutcome	Dispute System (Fiserv)	Notification Service (Firebase)	Fiserv REST API	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Dispute	Case	Dispute case created with all transaction details and reason codes	Case ID generated; mandatory fields validated; duplicate case detection active
Card Dispute	Retrieval	Retrieval request sent to acquirer via Mastercard dispute network	Acquirer acknowledges within 48hrs; evidence due within 10 calendar days
Card Dispute	Chargeback	Chargeback issued with correct reason code and amount	Chargeback accepted by network; funds provisionally reversed to cardholder
Card Dispute	Reversal	Funds reversed to customer account upon chargeback confirmation	Customer account credited; reversal appears on next statement
Card Dispute	Evidence	Customer can upload evidence directly via digital banking	Evidence attached to dispute case; max file size 10MB; accepted formats PDF/JPEG/PNG
Card Dispute	Notification	Customer notified of dispute outcome at each lifecycle stage	Notification sent on case creation, chargeback issuance, and final resolution

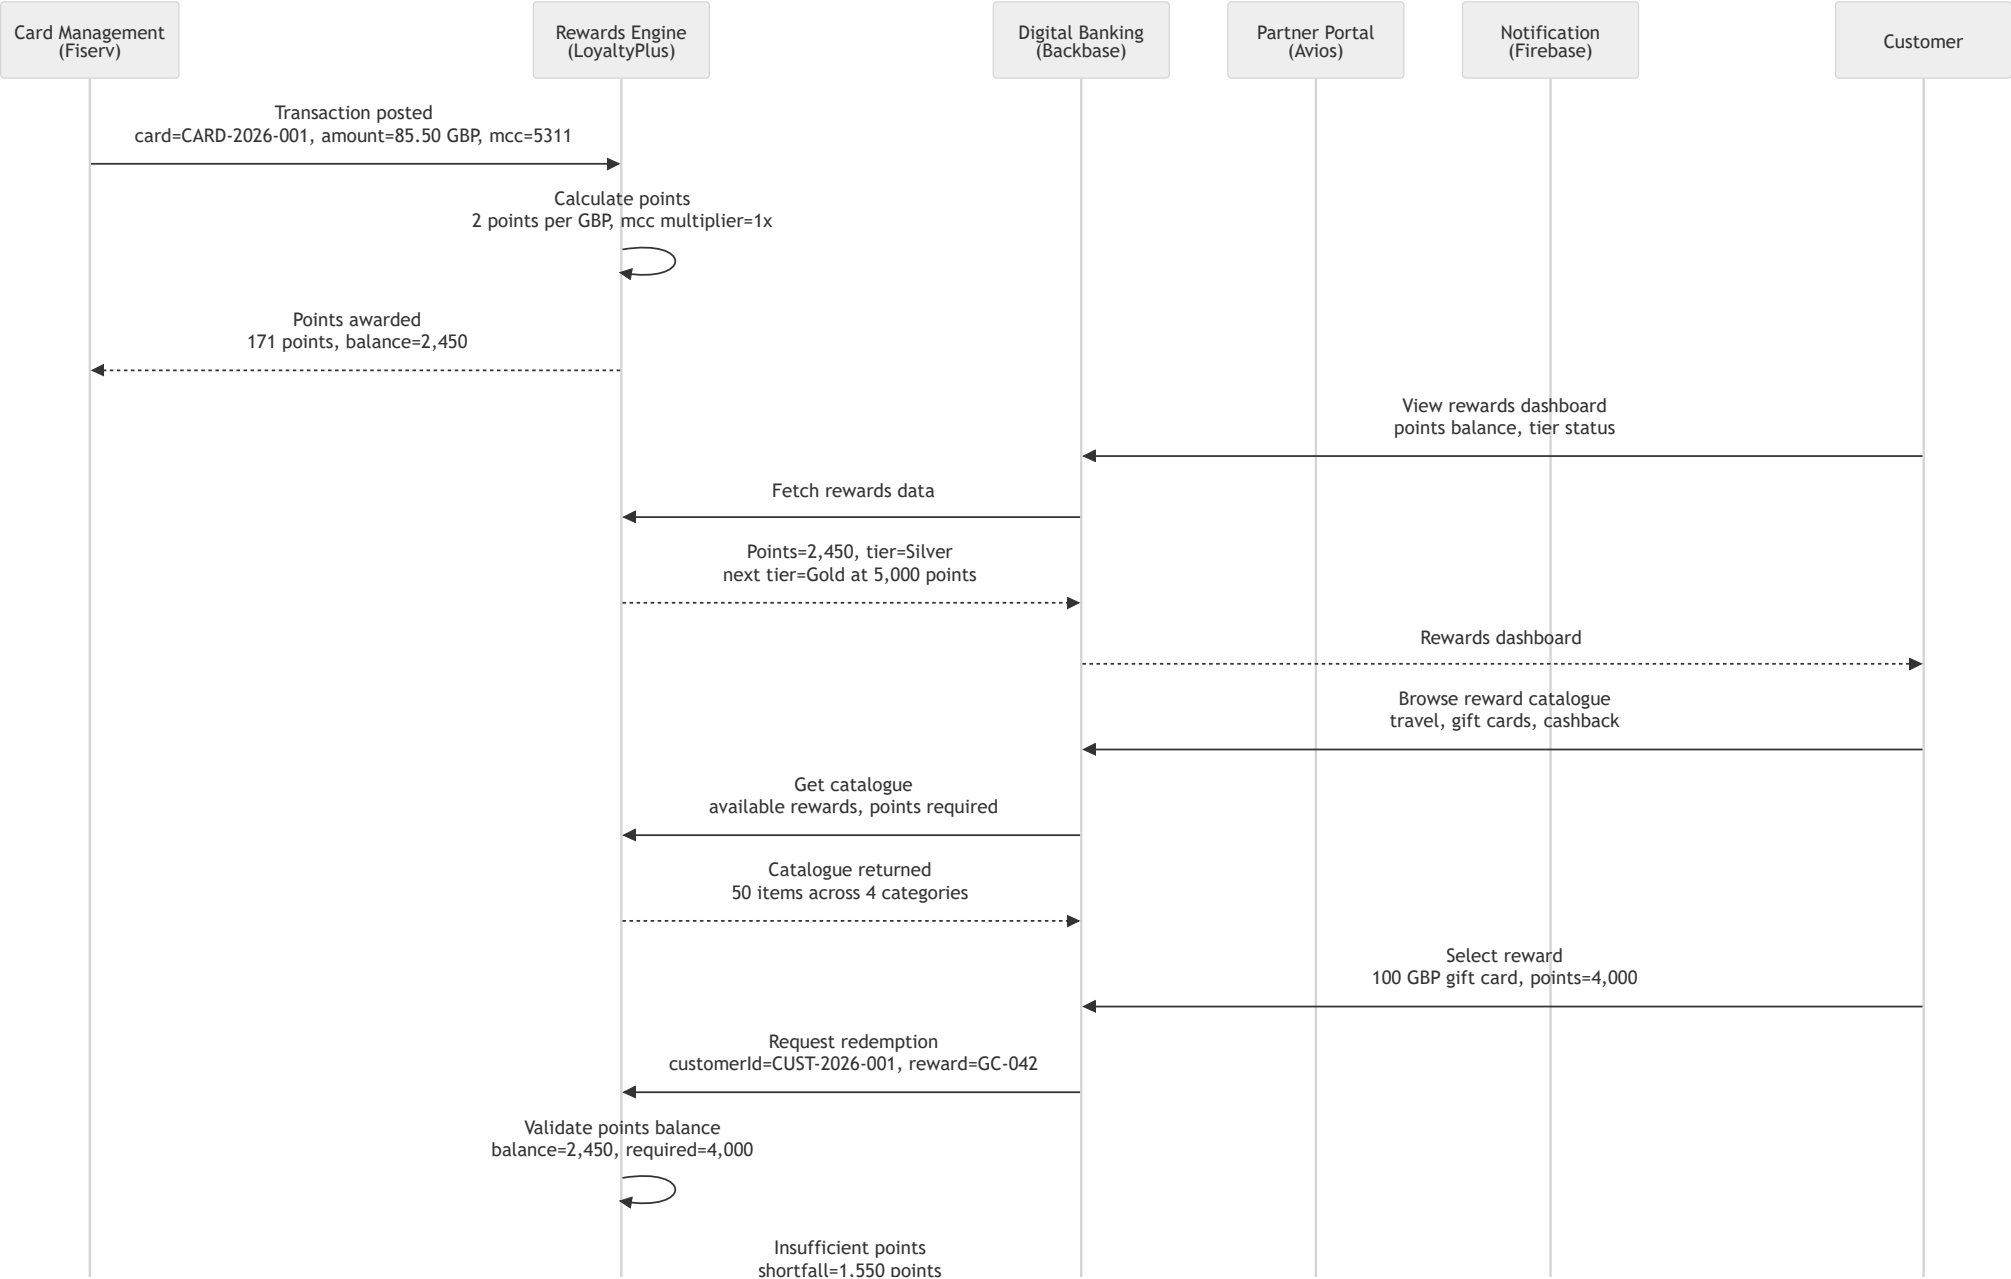

4.4 Card Rewards & Loyalty

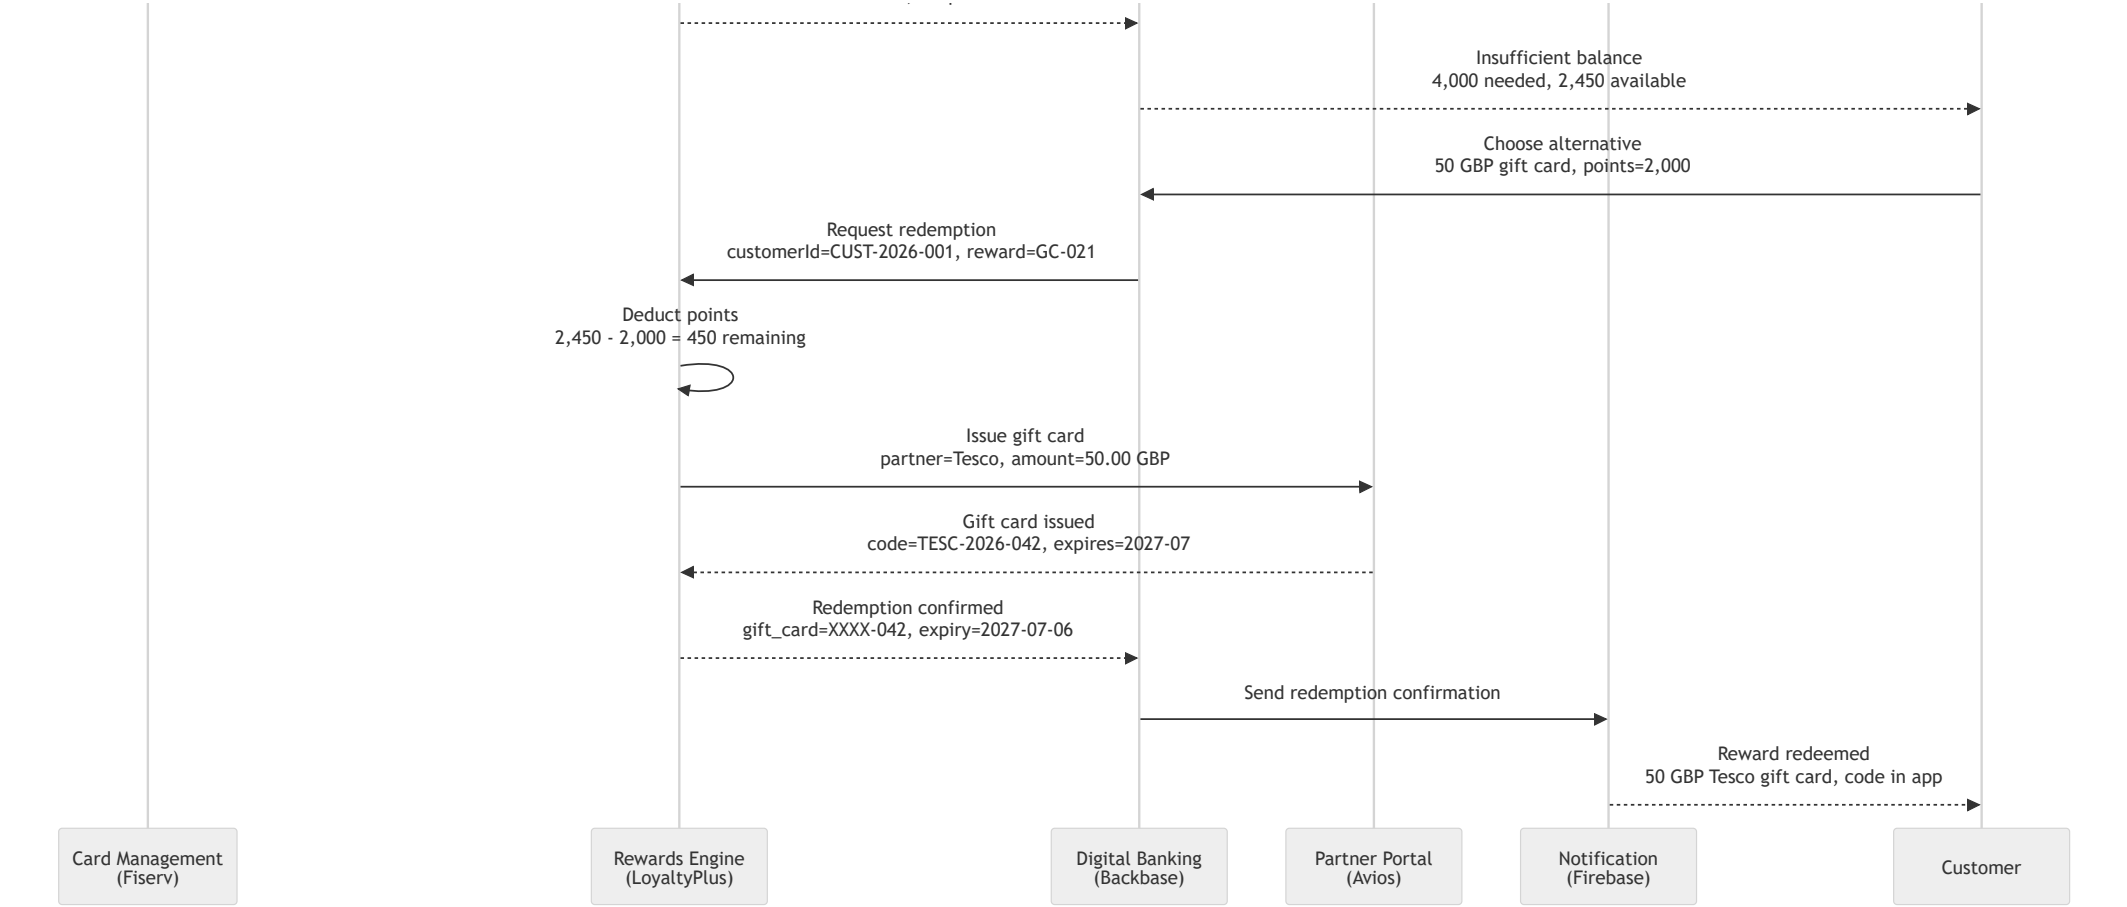

Description: Cardholder earns rewards on qualifying transactions. Rewards engine calculates points, manages redemption, and integrates with partner systems.

Actors: Customer, Card Operations, Marketing Manager

Systems: Card Management (Fiserv), Rewards Engine (LoyaltyPlus), Digital Banking (Backbase), Partner Portal (Avios), Notification Service (Firebase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Card Rewards	Earning	award_points	Card Management (Fiserv)	Rewards Engine (LoyaltyPlus)	Fiserv REST API	LoyaltyPlus API (REST)	Event-driven	Medium
Card Rewards	Dashboard	GetRewardsDashboard	Digital Banking (Backbase)	Rewards Engine (LoyaltyPlus)	Backbase REST API	LoyaltyPlus API (REST)	API-led (Real-time)	Simple
Card Rewards	Catalogue	GetRewardCatalogue	Digital Banking (Backbase)	Rewards Engine (LoyaltyPlus)	Backbase REST API	LoyaltyPlus API (REST)	API-led (Real-time)	Simple
Card Rewards	Redemption	RedeemReward	Digital Banking (Backbase)	Rewards Engine (LoyaltyPlus)	Backbase REST API	LoyaltyPlus API (REST)	API-led (Real-time)	Medium
Card Rewards	Partner	IssuePartnerReward	Rewards Engine (LoyaltyPlus)	Partner Portal (Avios)	LoyaltyPlus API	Avios API (SOAP)	API-led (Real-time)	High
Card Rewards	Notification	SendRedemptionConfirm	Digital Banking (Backbase)	Notification Service (Firebase)	Backbase REST API	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Card Rewards	Earning	Reward points calculated and awarded on qualifying transaction posting	Points calculated per card programme rules; points awarded within 60 seconds of posting
Card Rewards	Dashboard	Customer views rewards dashboard with points balance and tier	Dashboard loads within 2 seconds; points balance accurate; tier progress shown
Card Rewards	Catalogue	Reward catalogue returned with available items and points required	Catalogue filtered by eligibility; out-of-stock items hidden; regional availability enforced
Card Rewards	Redemption	Points redeemed for selected reward; sufficient balance validated	Sufficient points: redemption confirmed; insufficient points: clear shortfall message shown
Card Rewards	Partner	Partner reward issued via partner API for third-party fulfilment	Partner confirms fulfilment; gift card code returned; expiry date provided
Card Rewards	Notification	Redempti	Notification includes reward details, delivery method, and expected timeline

Flow	Entity	Acceptance Criterion	Expected Outcome
		on confirmation sent to customer	

5: Deposits & Savings Products - BC072 BC073

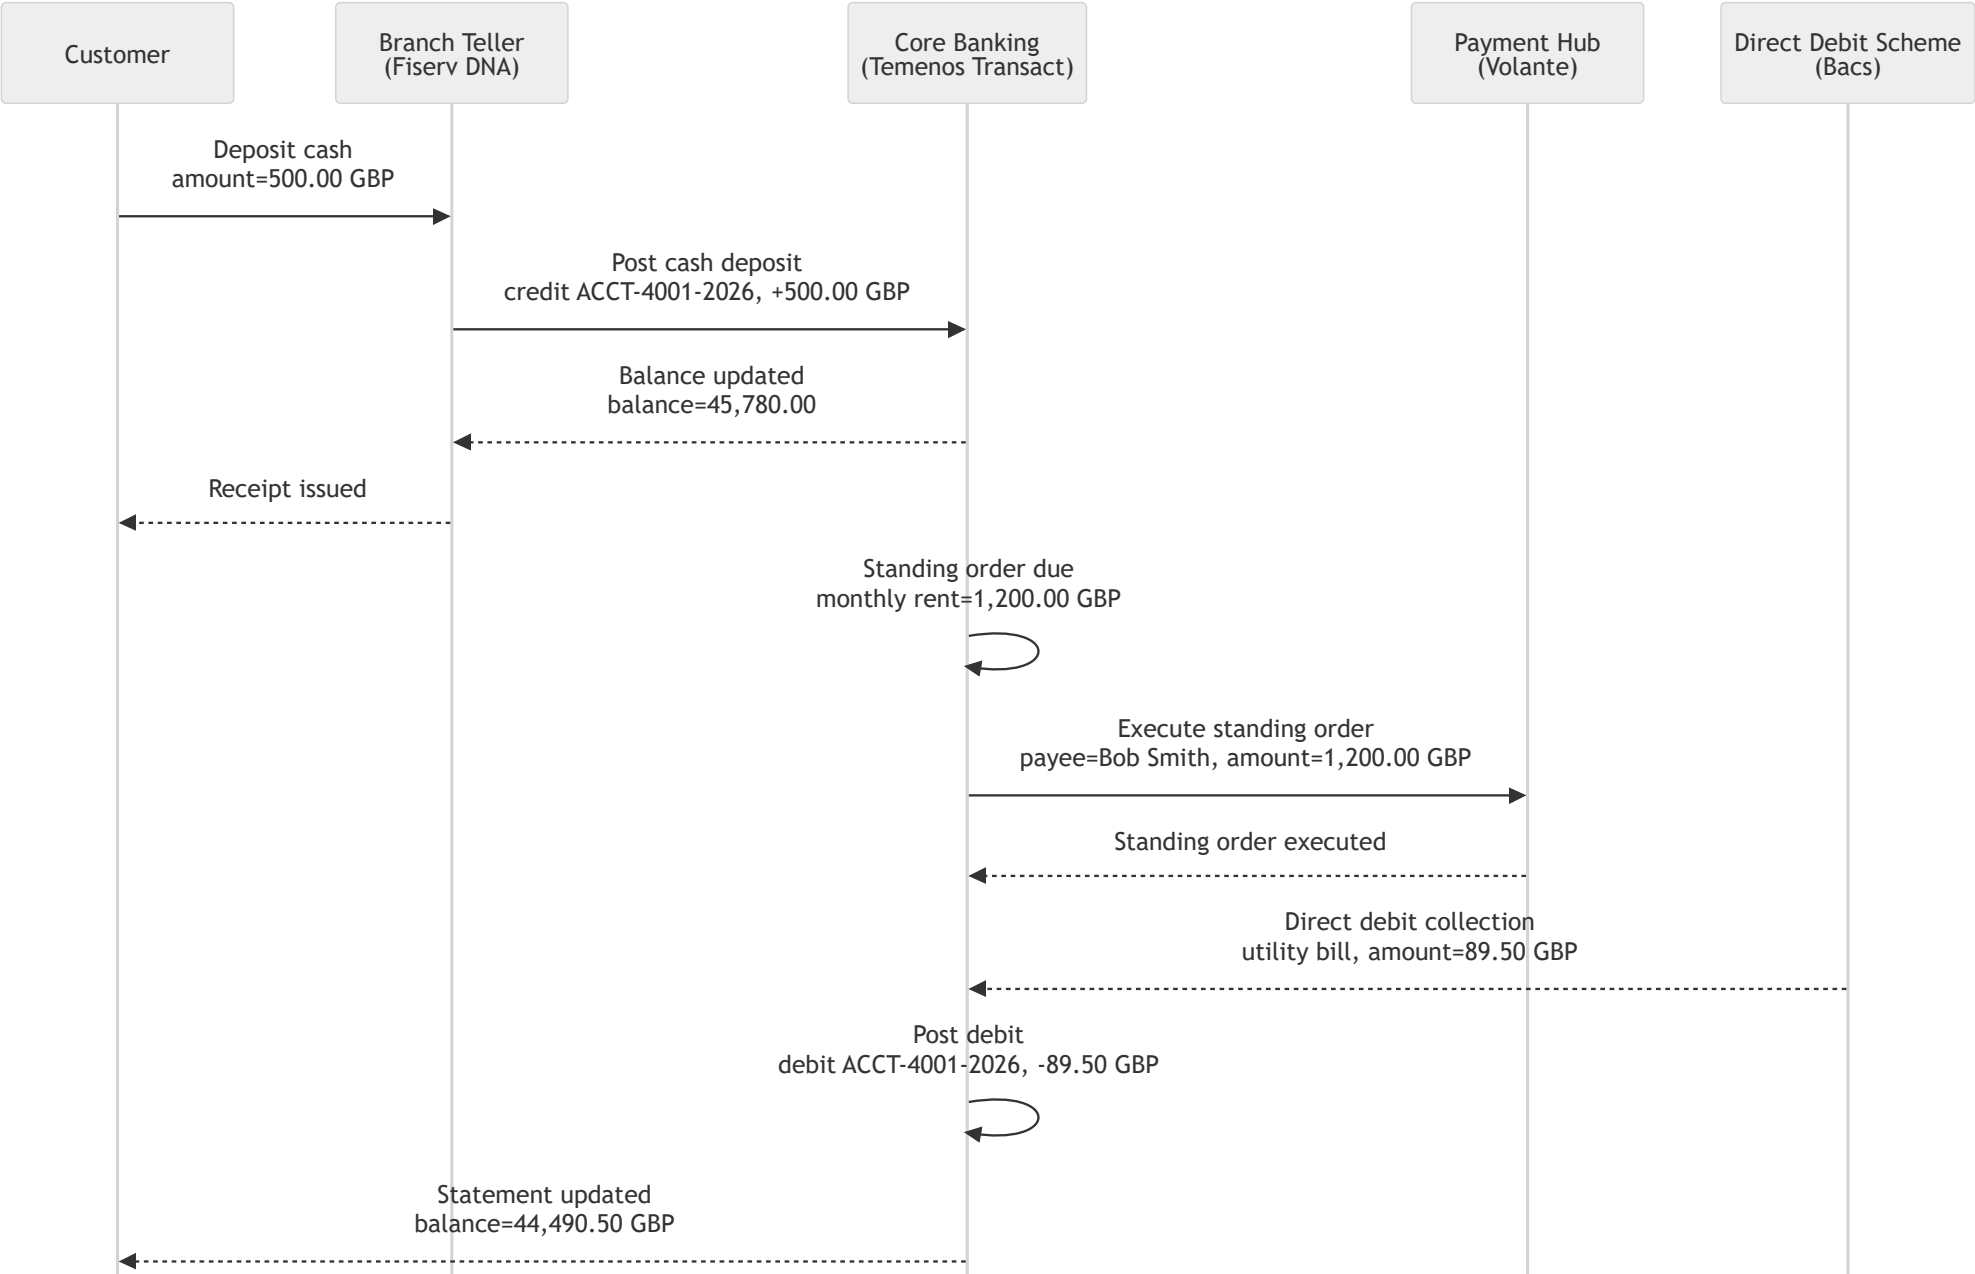

5.1 Account Operations (Current/Savings)

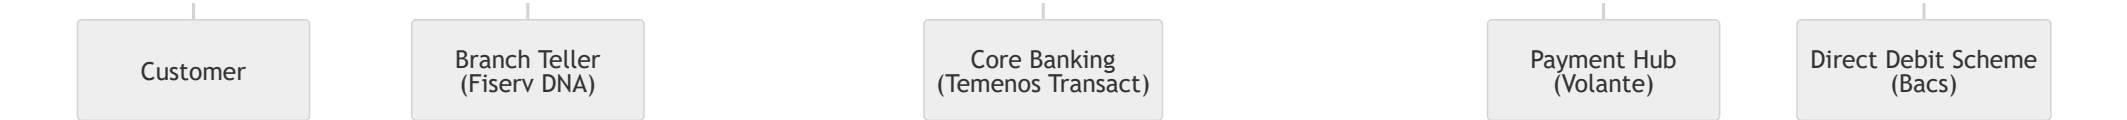

Description: Customer performs basic account operations — deposits, withdrawals, standing orders, direct debits. Systems process transactions and update ledgers.

Actors: Customer, Product Manager

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Payment Hub (Volante), Direct Debit Scheme (Bacs/SDD)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Account Operations	Cash Deposit	PostCashDeposit	Branch Teller (Fiserv DNA)	Core Banking (Temenos Transact)	Fiserv Teller API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Account Operations	Standing Order	ExecuteStandingOrder	Core Banking (Temenos Transact)	Payment Hub (Volante)	Temenos REST API	Volante API (ISO 20022)	API-led (Real-time)	Medium
Account Operations	Direct Debit	ProcessDirectDebit	Direct Debit Scheme (Bacs)	Core Banking (Temenos Transact)	Bacs API (ISO 20022)	Temenos REST API	Batch (Scheduled)	Medium
Account Operations	Fee	ApplyMonthlyFee	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Simple
Account Operations	Statement	GenerateMonthlyStatement	Core Banking (Temenos Transact)	Document Generation (Adobe Sign)	Temenos REST API	Adobe Sign API (REST)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Account Operations	Cash Deposit	Cash deposit posted to correct account with accurate amount	Balance updated immediately; receipt generated with transaction reference
Account Operations	Standing Order	Standing order executed on due date for correct amount and payee	Payment sent to payment hub; next run date calculated correctly
Account Operations	Direct Debit	Direct debit collection processed correctly via Bacs scheme	Account debited on due date; unsuccessful collections retried per scheme rules
Account Operations	Fee	Monthly account fee applied on correct schedule	Fee applied on last day of month; fee waiver rules checked; zero-fee accounts not charged
Account Operations	Statement	Monthly statement generated and made available digitally	Statement PDF generated; available in digital banking; notification sent

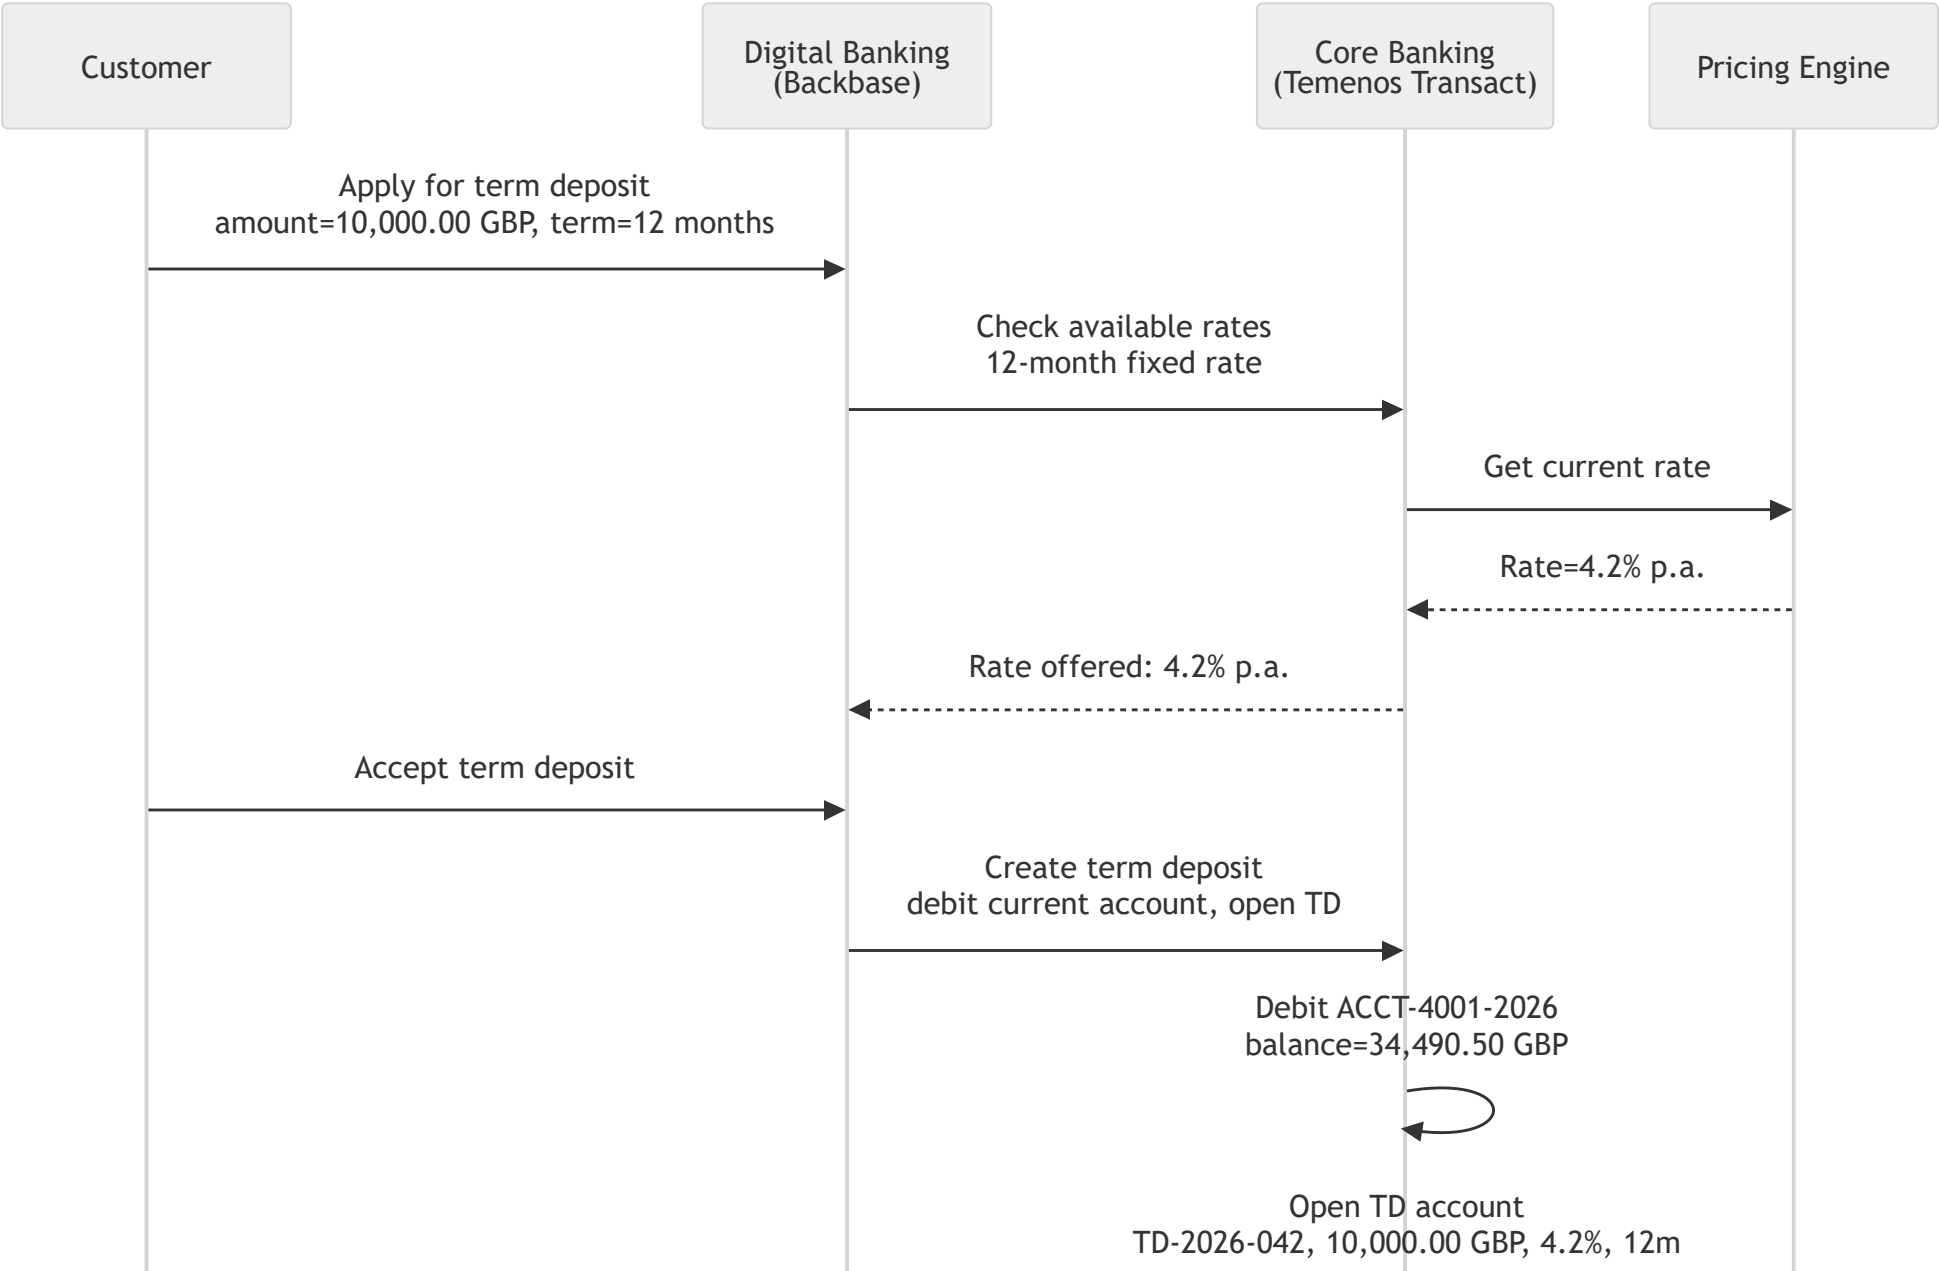

5.2 Term Deposits

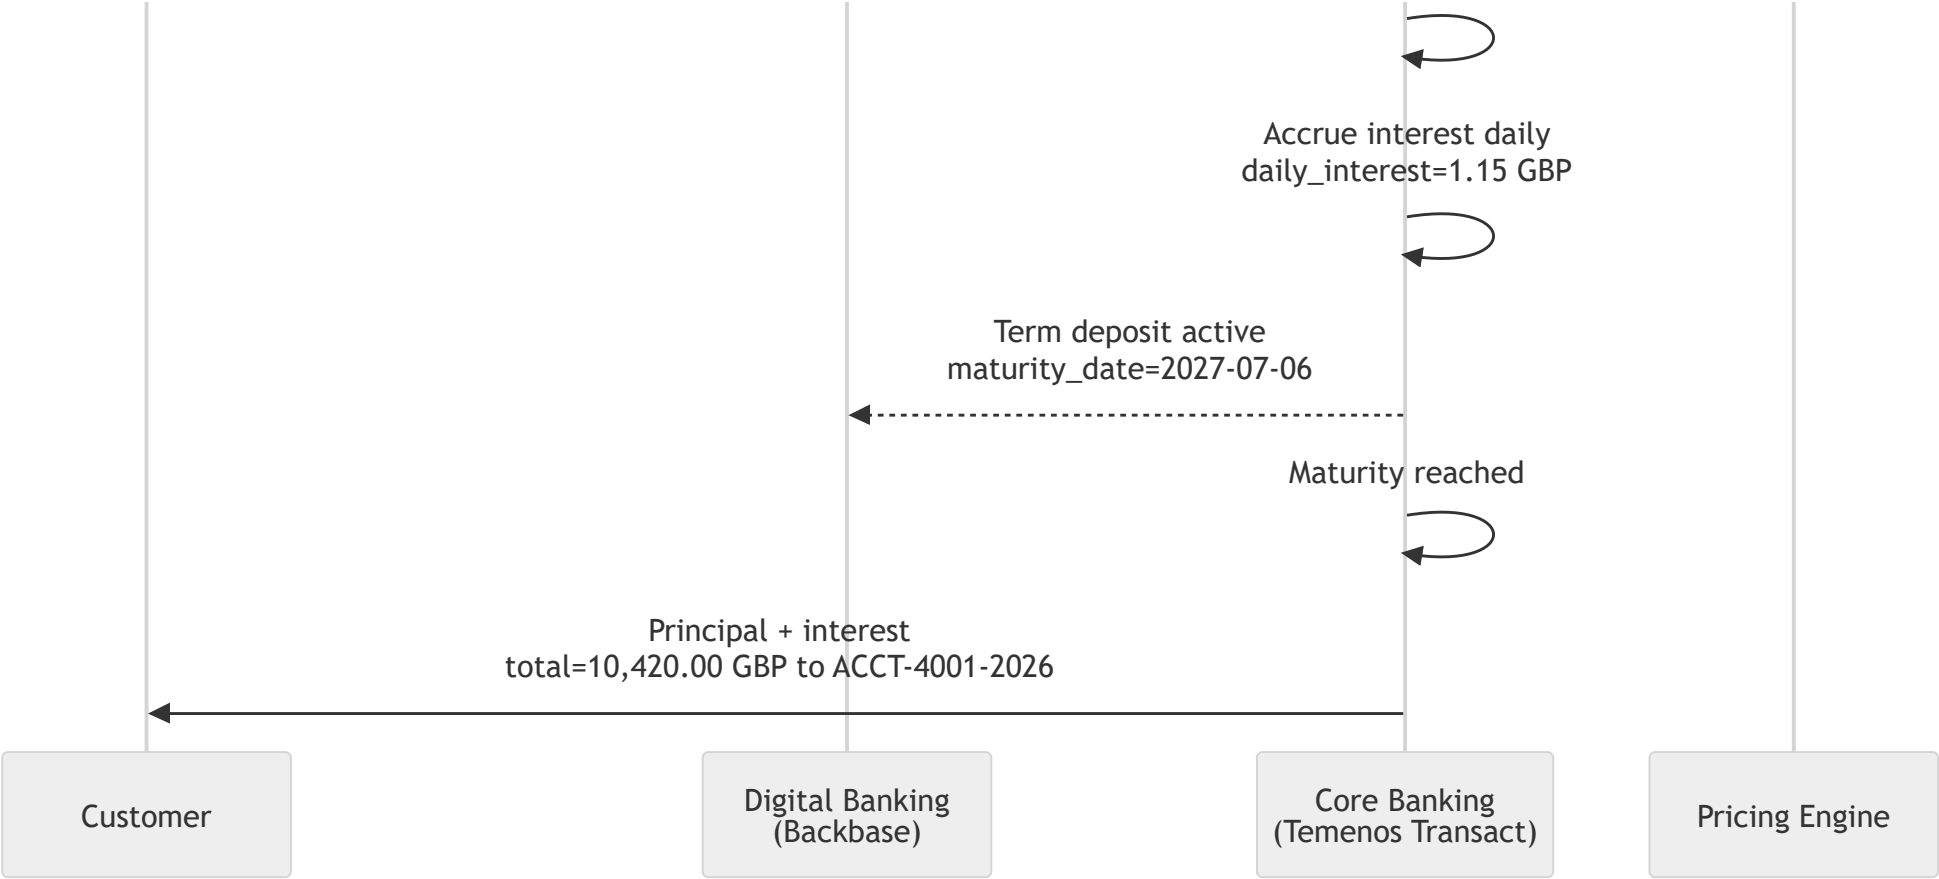

Description: Customer places term deposit. System applies interest rate, manages maturity, handles renewal/redemption.

Actors: Customer, Product Manager, Treasury

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Pricing Engine

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Term Deposit	Rate Quote	GetCurrentRate	Core Banking (Temenos Transact)	Pricing Engine	Temenos REST API	Pricing API (REST)	API-led (Real-time)	Simple
Term Deposit	Placement	CreateTermDeposit	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	API-led (Real-time)	Medium
Term Deposit	Maturity	ProcessMaturity	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Simple
Term Deposit	Break	ProcessEarlyBreakFee	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	API-led (Real-time)	Simple
Term Deposit	Renewal	ProcessAutoRenewal	Core Banking (Temenos Transact)	Notification Service (Firebase)	Temenos REST API	Firebase FCM API	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Term Deposit	Rate Quote	Current term deposit rate returned from pricing engine	Rate matches published product rate; rate guaranteed for quote validity period
Term Deposit	Placement	Term deposit account created with principal debited from current account	TD account opened with correct rate, term, and maturity date; principal debited
Term Deposit	Maturity	Principal plus interest credited at maturity; renewal option processed	Maturity proceeds credited on value date; auto-renewal terms applied if configured
Term Deposit	Break	Early break fee calculated and applied correctly	Break fee = interest penalty per T&Cs; remaining interest recalculated; net amount credited
Term Deposit	Renewal	Auto-renewal processed at maturity with current rate	Principal + interest reinvested; new rate applied; renewal confirmation sent

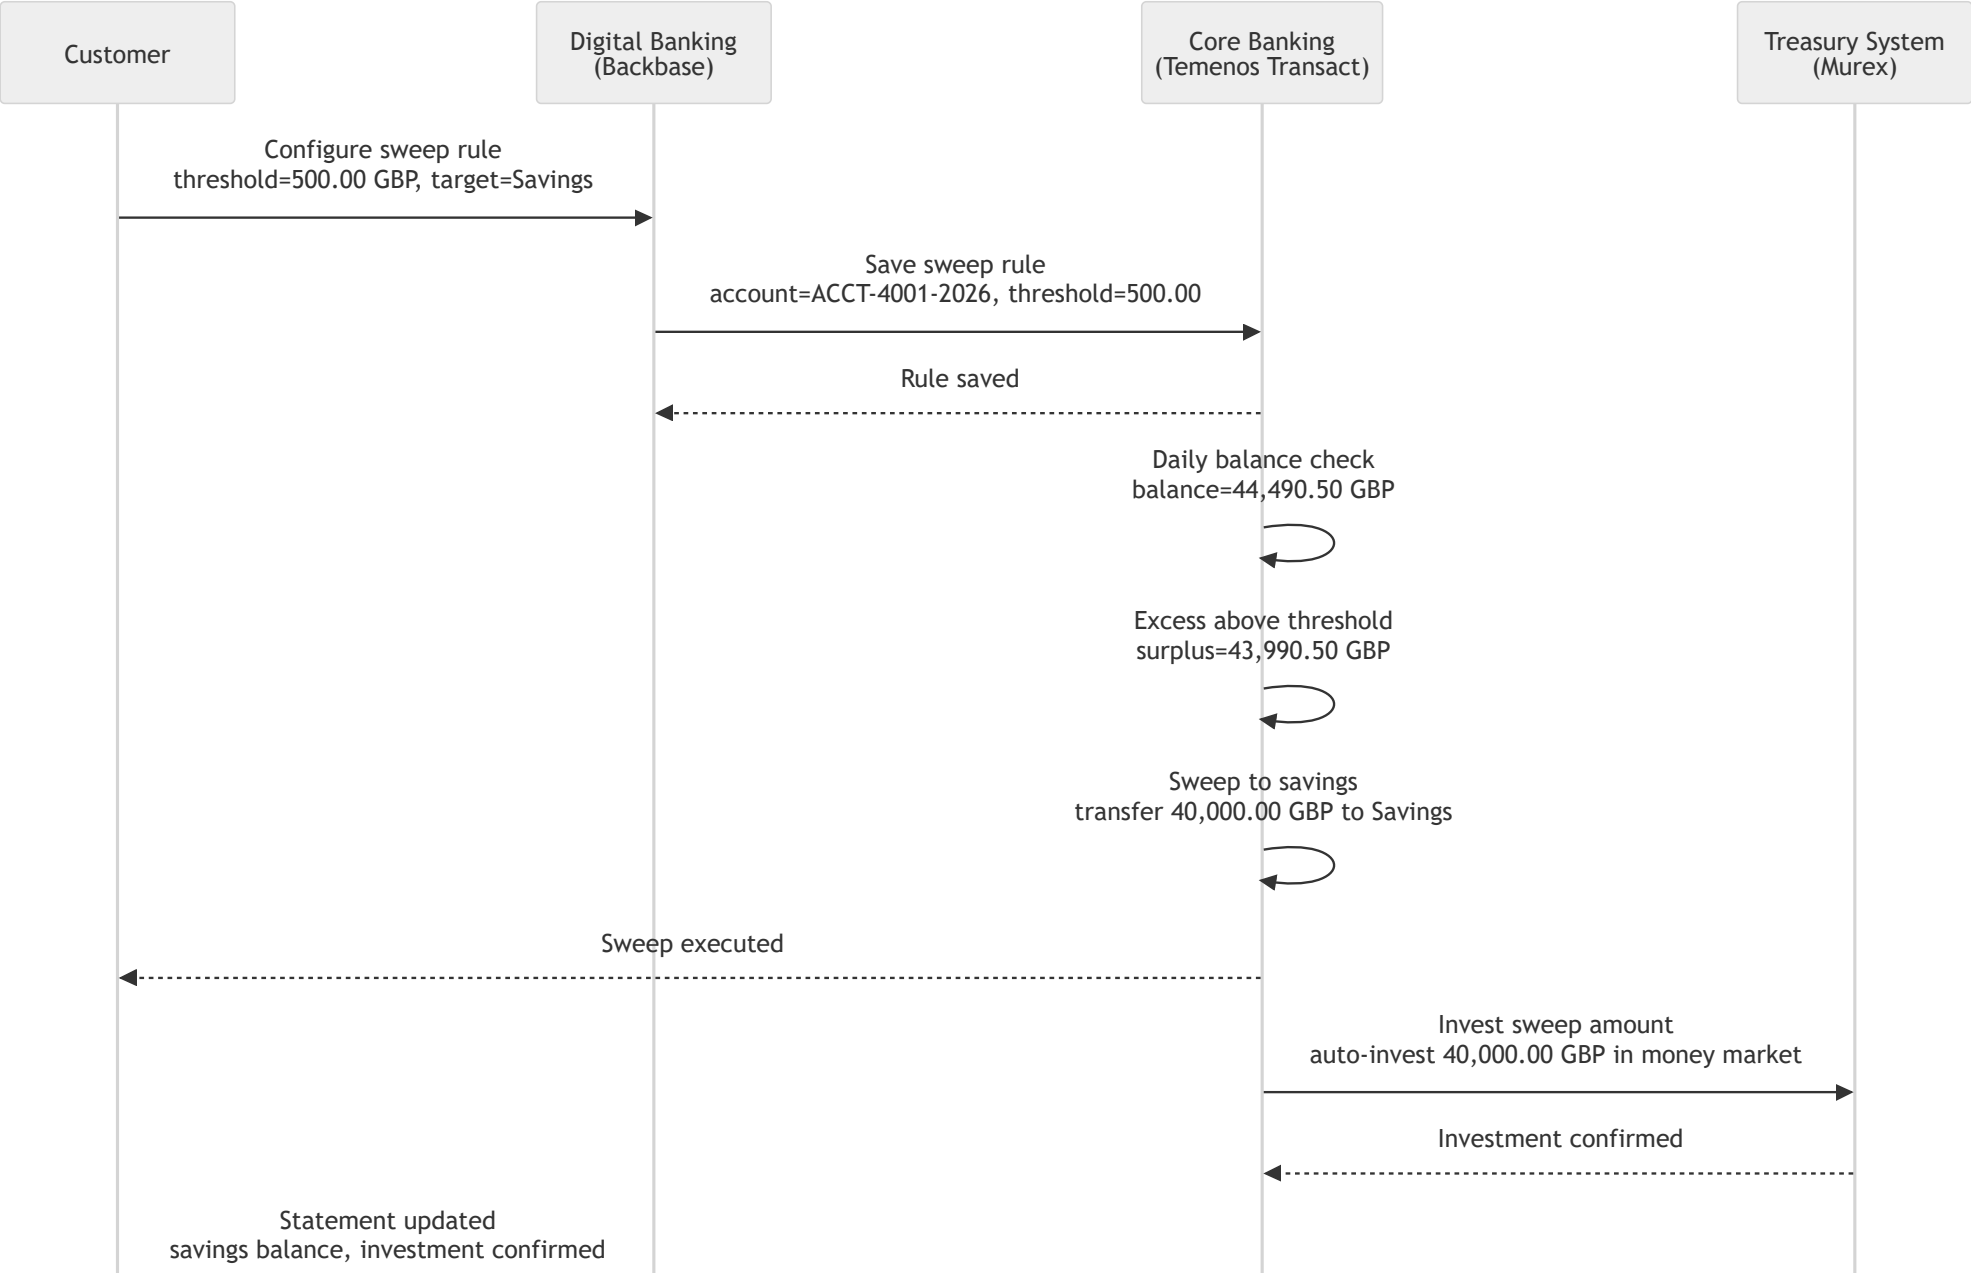

5.3 Sweep & Investment Products

Description: Customer sets up sweep rules between accounts. Excess funds swept to savings or investment product.

Actors: Customer, Treasury

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Treasury System (Murex)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Sweep Products	Rule	SaveSweepRule	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Sweep Products	Sweep	ExecuteSweep	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Medium
Sweep Products	Investment	AutoInvestSurplus	Core Banking (Temenos Transact)	Treasury System (Murex)	Temenos REST API	Murex API (SOAP)	API-led (Real-time)	Medium
Sweep Products	Reporting	GenerateSweepReport	Core Banking (Temenos Transact)	Treasury System (Murex)	Temenos REST API	Murex API (SOAP)	Batch (Scheduled)	Simple
Sweep Products	Tax	CalculateTaxOnInterest	Core Banking (Temenos Transact)	Tax Engine (Vertex)	Temenos REST API	Vertex API (SOAP)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Sweep Products	Rule	Sweep rule saved with correct threshold, source, and target accounts	Rule activated; sweep runs at next balance check cycle
Sweep Products	Sweep	Excess funds swept from source to target account per configured threshold	Funds transferred; both accounts updated; sweep amount = balance - threshold
Sweep Products	Investment	Swept funds auto-invested in money market fund via Murex treasury system	Investment confirmed; fund price and units recorded; NAV reported daily
Sweep Products	Reporting	Sweep activity report generated for treasury	Report includes all sweeps, amounts, timestamps; daily summary sent to treasury team
Sweep Products	Tax	Tax on interest calculated at correct rate	Tax calculated per account tax status; tax voucher generated; HMRC reporting filed

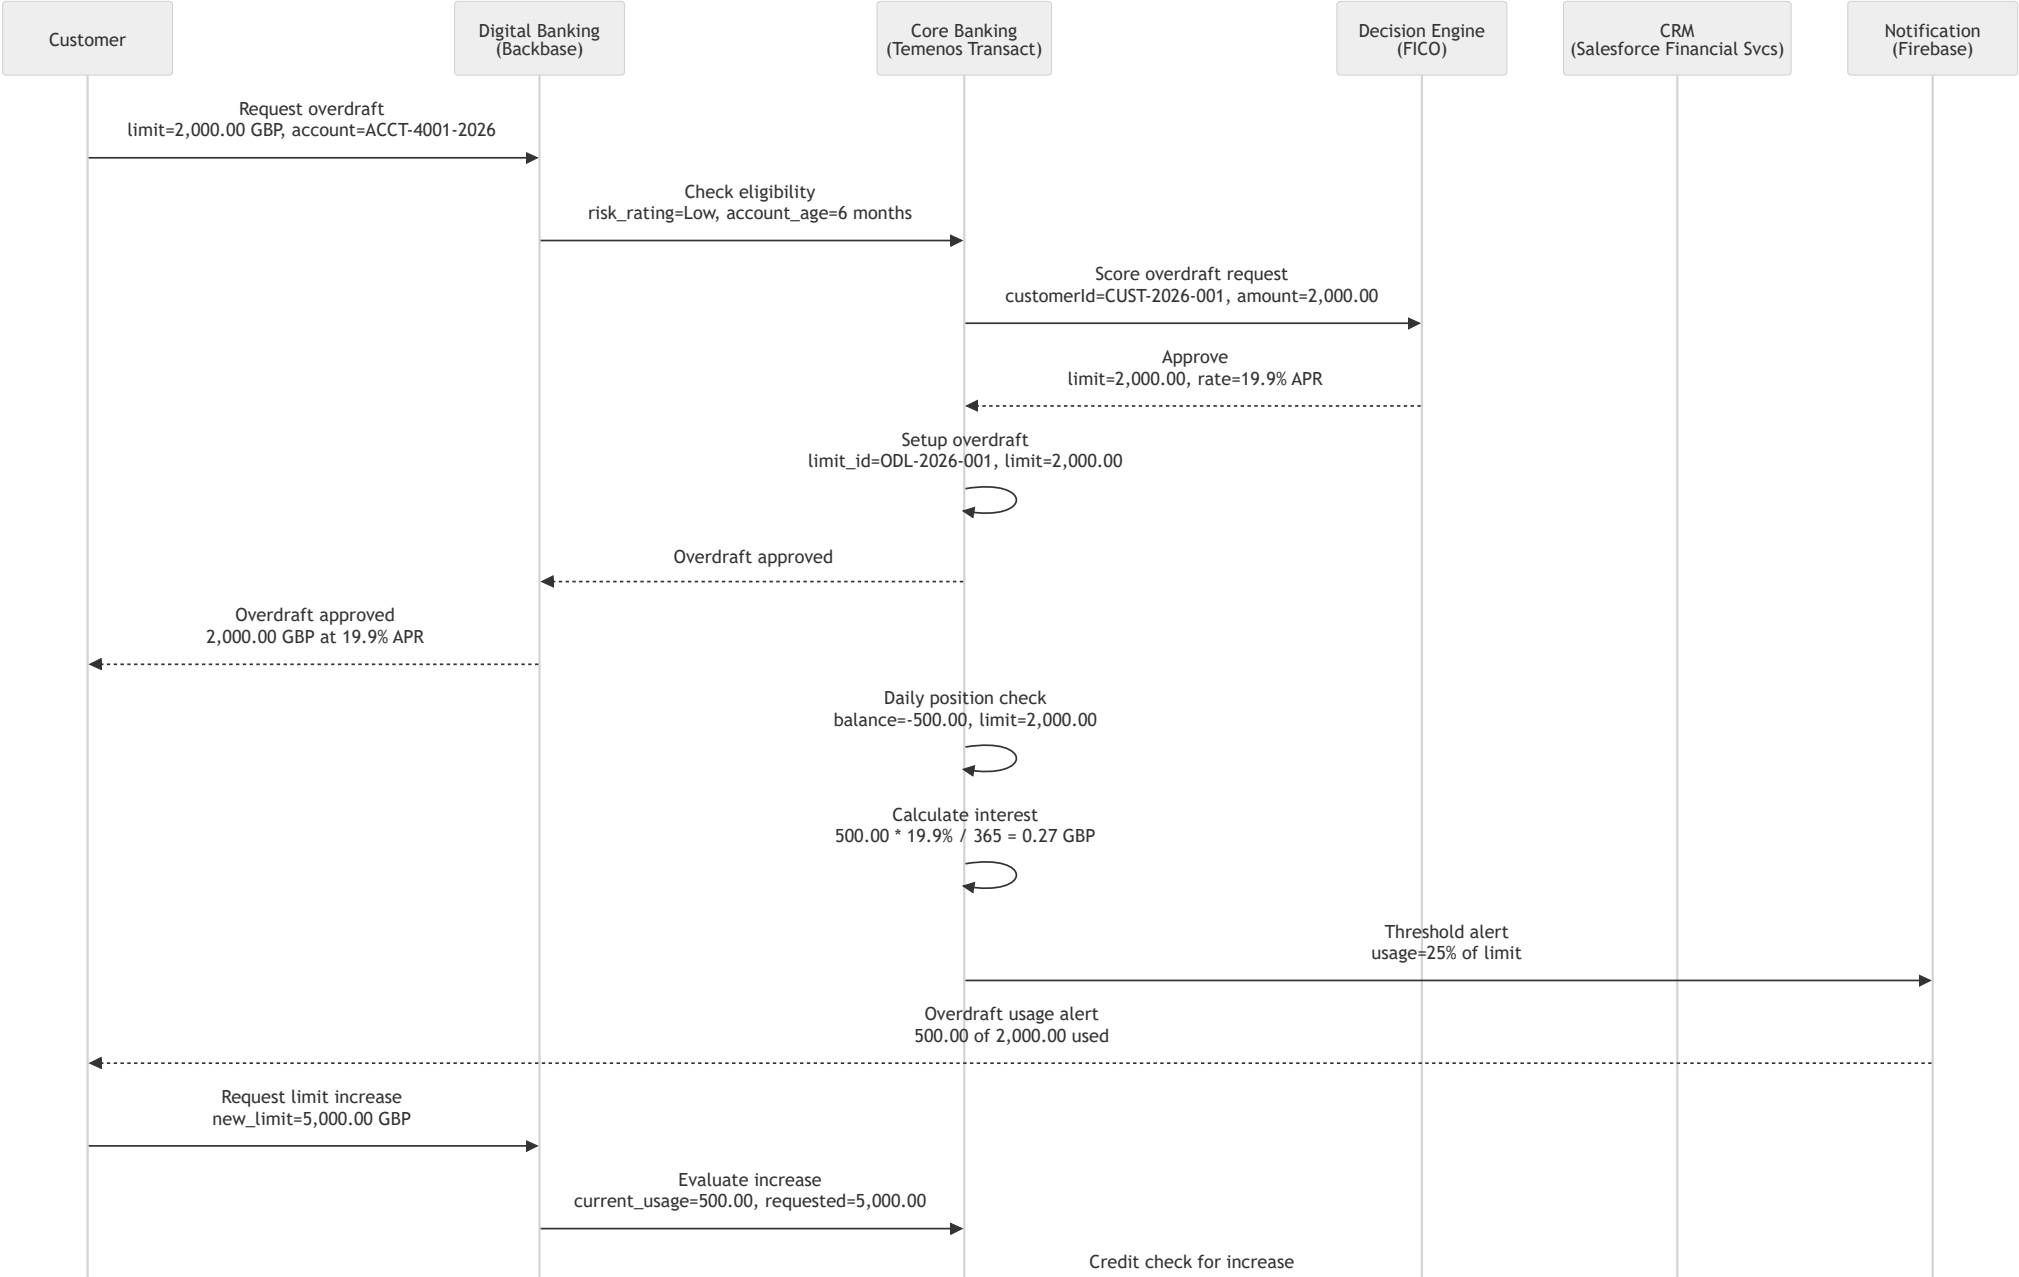

5.4 Overdraft Management

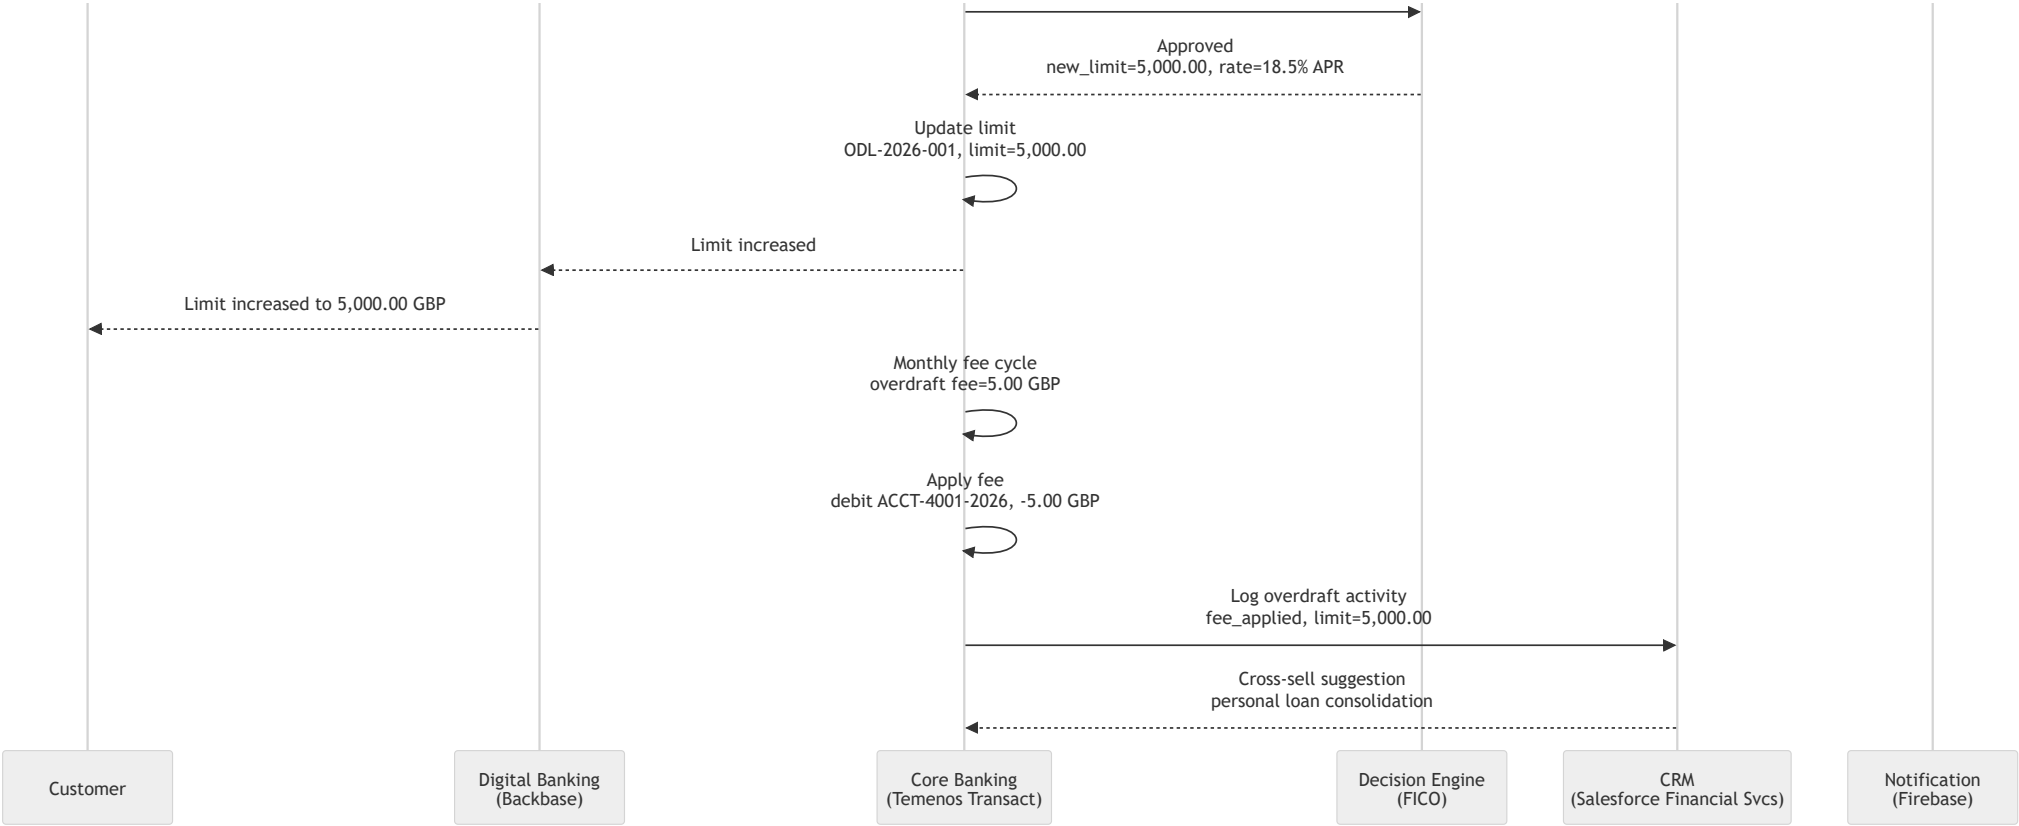

Description: Customer manages overdraft facility. System monitors usage, applies interest, sends alerts, handles limit increase requests and fee processing.

Actors: Customer, Product Manager, Risk Analyst

Systems: Core Banking (Temenos Transact), Digital Banking (Backbase), Decision Engine (FICO), Notification Service (Firebase), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Overdraft	Setup	SetupOverdraftLimit	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Overdraft	Scoring	ScoreOverdraftRequest	Core Banking (Temenos Transact)	Decision Engine (FICO)	Temenos REST API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Overdraft	Alert	SendUsageAlert	Core Banking (Temenos Transact)	Notification Service (Firebase)	Temenos REST API	Firebase FCM API	Event-driven	Simple
Overdraft	Increase	ProcessLimitIncrease	Digital Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Overdraft	Fee	ApplyOverdraftFee	Core Banking (Temenos Transact)	Core Banking (Temenos Transact)	Internal	Internal	Batch (Scheduled)	Simple
Overdraft	CrossSell	GetCrossSellOffer	Core Banking (Temenos Transact)	CRM (Salesforce Financial Services)	Temenos REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Overdraft	Setup	Customer requests overdraft; eligibility checked and limit set	Eligibility verified; limit <= risk-based max; overdraft activated immediately
Overdraft	Scoring	Credit score-based decision for overdraft approval	Score threshold determines approval; auto-approved for scores >680; manual review <680
Overdraft	Alert	Customer notified when overdraft usage crosses thresholds (25%, 50%, 75%, 90%)	Alert sent within 5 minutes of crossing threshold; contains usage details and interest info
Overdraft	Increase	Limit increase processed after re-scoring	Increase approved within customer risk profile; new limit effective immediately
Overdraft	Fee	Monthly overdraft fee applied on correct schedule	Fee applied; fee waived if balance positive for 80% of month; fee amount per published schedule
Overdraft	CrossSell	Cros	Relevant offer displayed; consolidation loan offered for persistent overdraft >60 days

Flow	Entity	Acceptance Criterion	Expected Outcome
		s-sell offer generated based on overdraft usage patterns	

6: Risk & Compliance - BC012 BC013

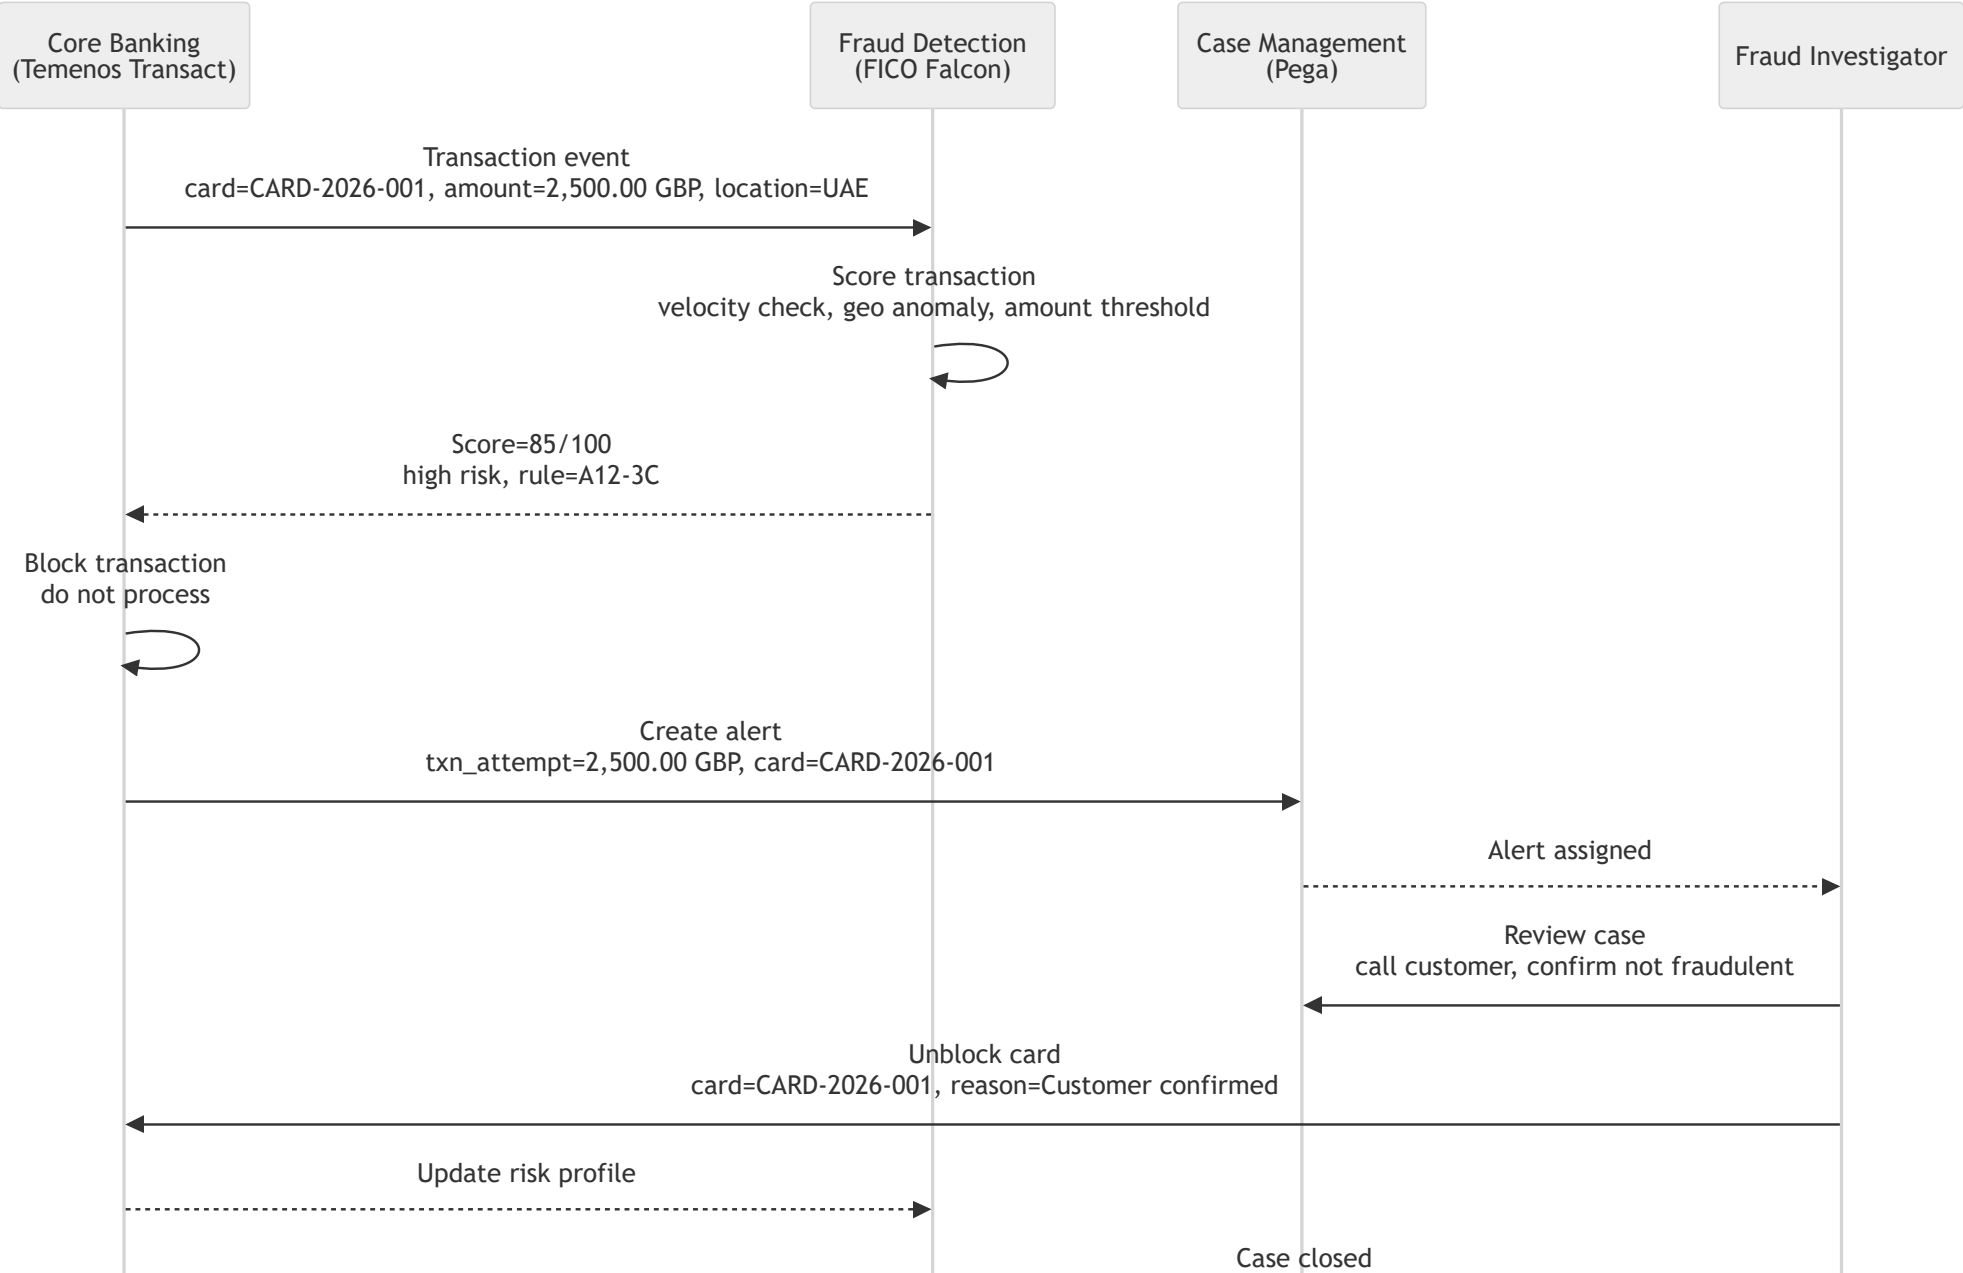

6.1 Fraud Detection & Prevention

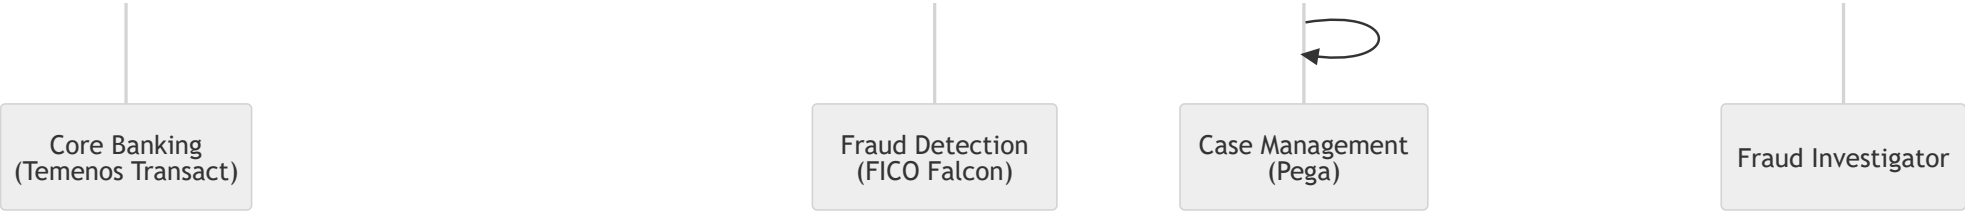

Description: Transactions monitored in real-time. Fraud detection system scores transactions, triggers alerts, blocks suspicious activity, escalates to investigators.

Actors: Fraud Investigator, Risk Analyst

Systems: Fraud Detection (FICO Falcon), Core Banking (Temenos Transact), Case Management (Pega)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Fraud Detection	Transaction	SendTransactionEvent	Core Banking (Temenos Transact)	Fraud Detection (FICO Falcon)	Temenos REST API	Falcon API (ISO 8583)	API-led (Real-time)	High
Fraud Detection	Alert	CreateFraudAlert	Core Banking (Temenos Transact)	Case Management (Pega)	Temenos REST API	Pega REST API (OAuth2)	Event-driven	Medium
Fraud Detection	Unblock	UnblockCard	Case Management (Pega)	Core Banking (Temenos Transact)	Pega REST API (OAuth2)	Temenos REST API	API-led (Real-time)	Simple
Fraud Detection	Rule	UpdateFraudRuleSet	Fraud Detection (FICO Falcon)	Fraud Detection (FICO Falcon)	Internal	Internal	Batch (Scheduled)	Medium
Fraud Detection	Report	GenerateFraudDashboard	Case Management (Pega)	BI Platform (Tableau)	Pega REST API (OAuth2)	Tableau REST API	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Fraud Detection	Transaction	Transaction event sent to FICO Falcon for scoring in real-time	Score returned in <100ms; high-risk transactions blocked before completion
Fraud Detection	Alert	Pega case created for transactions exceeding fraud threshold	Alert created with all context; assigned to investigator queue; SLA 30 minutes for high risk
Fraud Detection	Unblock	Card unblocked by fraud investigator after customer confirms authenticity	Card status restored to Active within 60 seconds of investigator action
Fraud Detection	Rule	Fraud detection rules updated from central rule repository	New rules active within 5 minutes; version history maintained; rollback capability exists
Fraud Detection	Report	Fraud dashboard updated with real-time metrics	Dashboard refreshes every 60 seconds; alert counts, score distribution, false positive rate visible

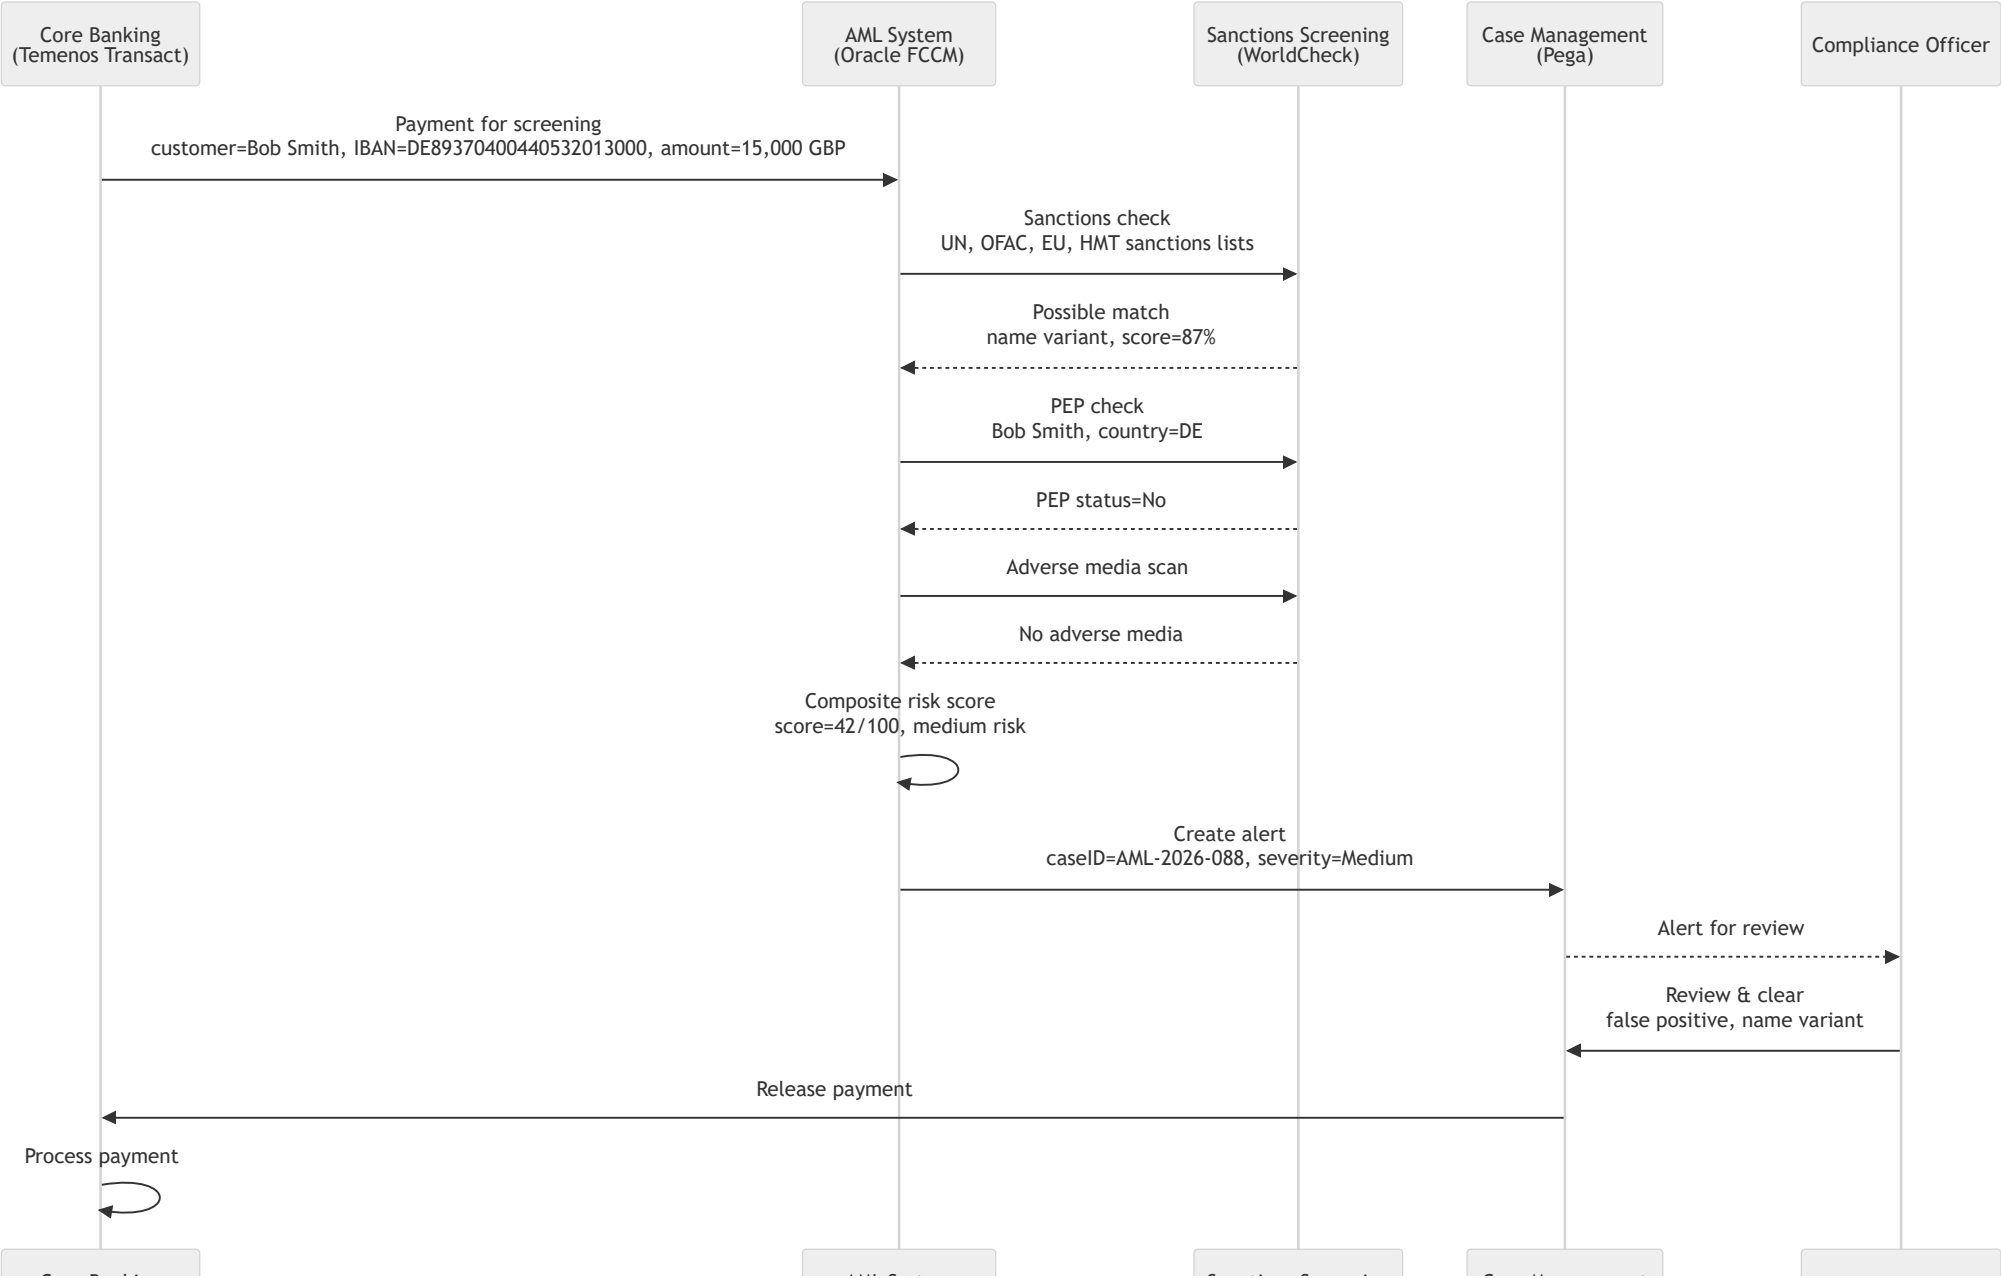

6.2 AML/Sanctions Screening

Description: Customer and transaction screening against sanctions lists, PEP databases, adverse media. Alerts generated for compliance review.

Actors: Compliance Officer, Risk Analyst

Systems: AML System (Oracle FCCM), Sanctions Screening (WorldCheck), Case Management (Pega), Core Banking (Temenos Transact)

Sequence Diagram

Core Banking
(Temenos Transact)

AML System
(Oracle FCCM)

Sanctions Screening
(WorldCheck)

Case management
(Pega)

Compliance Officer

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
AML Screening	Payment	ScreenPayment	Core Banking (Temenos Transact)	AML System (Oracle FCCM)	Temenos REST API	Oracle FCCM API (SOAP)	API-led (Real-time)	High
AML Screening	Sanctions	CheckSanctionsLists	AML System (Oracle FCCM)	Sanctions Screening (WorldCheck)	Oracle FCCM API	WorldCheck API (SOAP)	API-led (Real-time)	High
AML Screening	Alert	CreateAMLAAlert	AML System (Oracle FCCM)	Case Management (Pega)	Oracle FCCM API	Pega REST API (OAuth2)	Event-driven	Medium
AML Screening	Release	ReleasePayment	Case Management (Pega)	Core Banking (Temenos Transact)	Pega REST API (OAuth2)	Temenos REST API	API-led (Real-time)	Simple
AML Screening	List	UpdateSanctionsLists	Sanctions Screening (WorldCheck)	AML System (Oracle FCCM)	WorldCheck API (SOAP)	Oracle FCCM API (SOAP)	Batch (Scheduled)	Medium
AML Screening	SAR	SubmitSuspiciousActivityReport	Case Management (Pega)	Regulator Portal (NCA)	Pega REST API (OAuth2)	NCA Gateway (SFTP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
AML Screening	Payment	Payment sent to Oracle FCCM for AML screening before processing	Payment held in pending state; released only after compliance clearance
AML Screening	Sanctions	Payment checked against UN, OFAC, EU, and HMT sanctions lists	Clear matches >=90% blocked; false positive process allows compliance override
AML Screening	Alert	AML alert created in Pega for compliance officer review	Alert with risk score and match details; SLA for review: 24 hours for medium risk
AML Screening	Release	Payment released by compliance officer after false positive determination	Payment processed within 60 seconds of release; audit trail of release decision logged
AML Screening	List	Sanctions lists updated within 24 hours of regulatory release	List version tracked; update applied without system restart; audit of list changes maintained
AML Screening	SAR	SAR report submitted to NCA within required timeframe	SAR submitted within 24 hours of determination; reference number received; archive copy retained

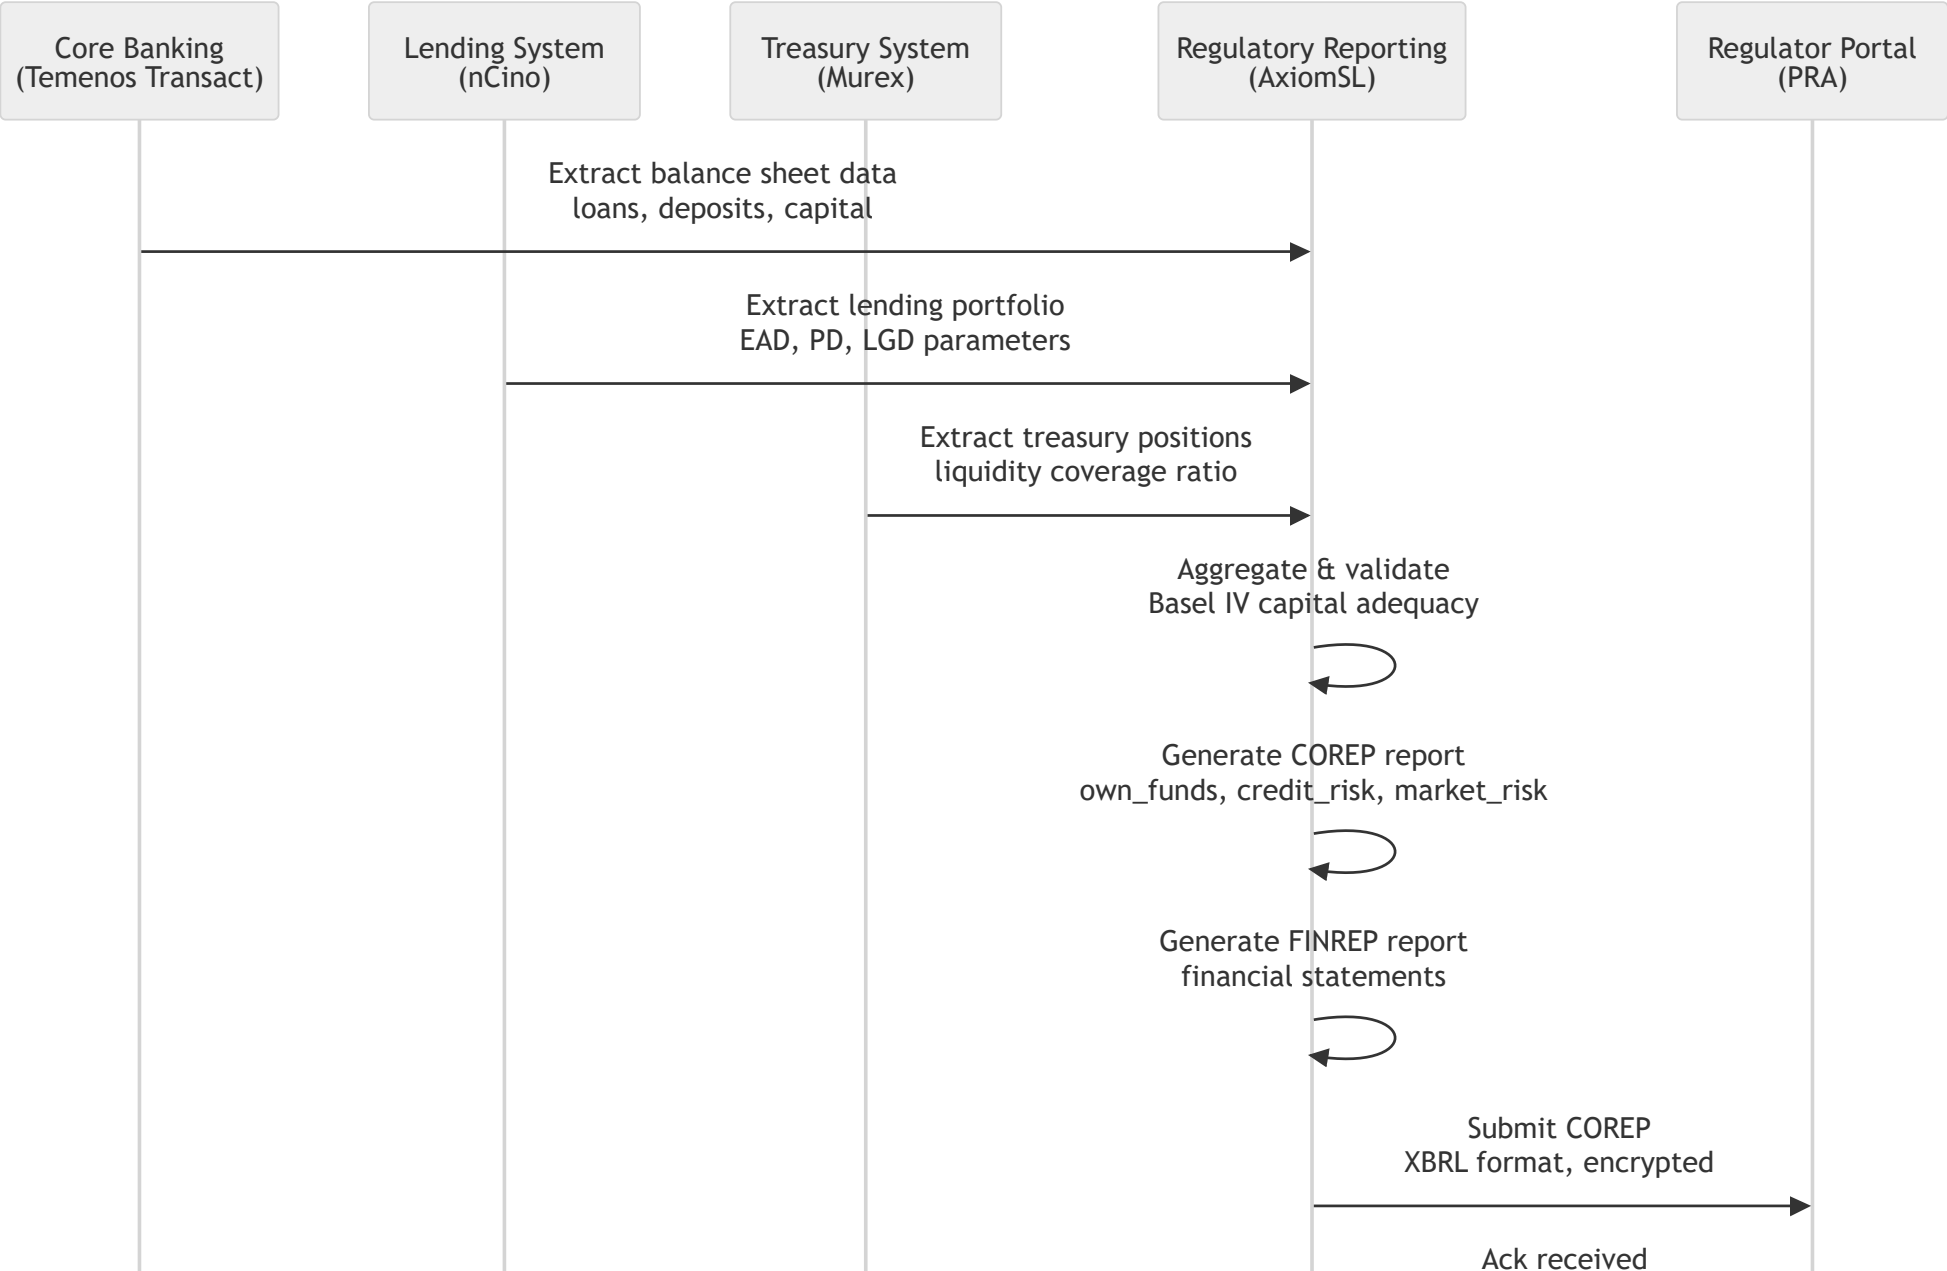

6.3 Regulatory Reporting

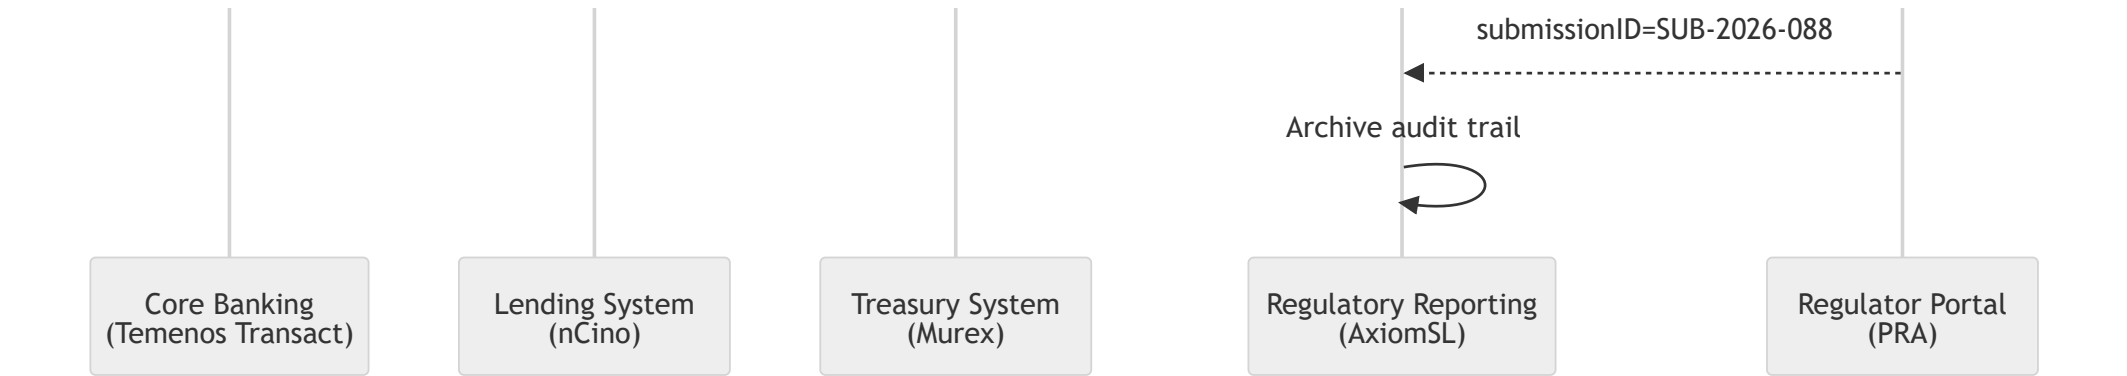

Description: Bank generates regulatory reports (COREP, FINREP, Basel IV, PSD2). Data extracted from source systems, transformed, validated, submitted to regulators.

Actors: Compliance Officer, Finance Manager

Systems: Regulatory Reporting (AxiomSL), Core Banking (Temenos Transact), Lending System (nCino), Treasury System (Murex), Regulator Portal (PRA/ECB)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Regulatory Reporting	Balance Sheet	ExtractBalanceSheet	Core Banking (Temenos Transact)	Regulatory Reporting (AxiomSL)	Temenos ODBC	AxiomSL JDBC	Batch (ETL)	Medium
Regulatory Reporting	Lending Data	ExtractLendingPortfolio	Lending System (nCino)	Regulatory Reporting (AxiomSL)	nCino REST API	AxiomSL REST API	Batch (ETL)	Medium
Regulatory Reporting	Treasury Data	ExtractTreasuryPositions	Treasury System (Murex)	Regulatory Reporting (AxiomSL)	Murex API (SFTP)	AxiomSL SFTP	Batch (Scheduled)	High
Regulatory Reporting	Submission	SubmitToRegulator	Regulatory Reporting (AxiomSL)	Regulator Portal (PRA)	AxiomSL XBRL	PRA Gateway (SFTP)	Batch (Scheduled)	High
Regulatory Reporting	Validation	ValidateReportData	Regulatory Reporting (AxiomSL)	Data Quality Tool (Informatica)	AxiomSL REST API	Informatica API (REST)	Batch (ETL)	Medium
Regulatory Reporting	SignOff	DigitalSignReport	Regulatory Reporting (AxiomSL)	Digital Signature (DocuSign)	AxiomSL REST API	DocuSign API (REST)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Regulatory Reporting	Balance Sheet	Balance sheet data extracted from Temenos Transact to AxiomSL	Extract completed for all entities; data validated against GL; discrepancies <0.01%
Regulatory Reporting	Lending Data	Lending portfolio data (EAD, PD, LGD) extracted from nCino	All active loans included; risk parameters match source system
Regulatory Reporting	Treasury Data	Treasury position data extracted from Murex for liquidity reporting	LCR and NSFR calculated correctly; intraday positions included
Regulatory Reporting	Submission	COREP/FINREP reports submitted to regulator via XBRL	Regulator acknowledgment received; submission timestamp logged; retry on failure with backoff
Regulatory Reporting	Validation	Report data validated against data quality rules	All data quality rules passed; failure rate <1%; invalid data flagged and quarantinedd>
Regulatory Reporting	SignOff	Report digitally signed by authorized signatory	Digital signature applied; signatory verified; signing chain auditable

7: Channels & Digital Banking - BC001 BC003 BC002

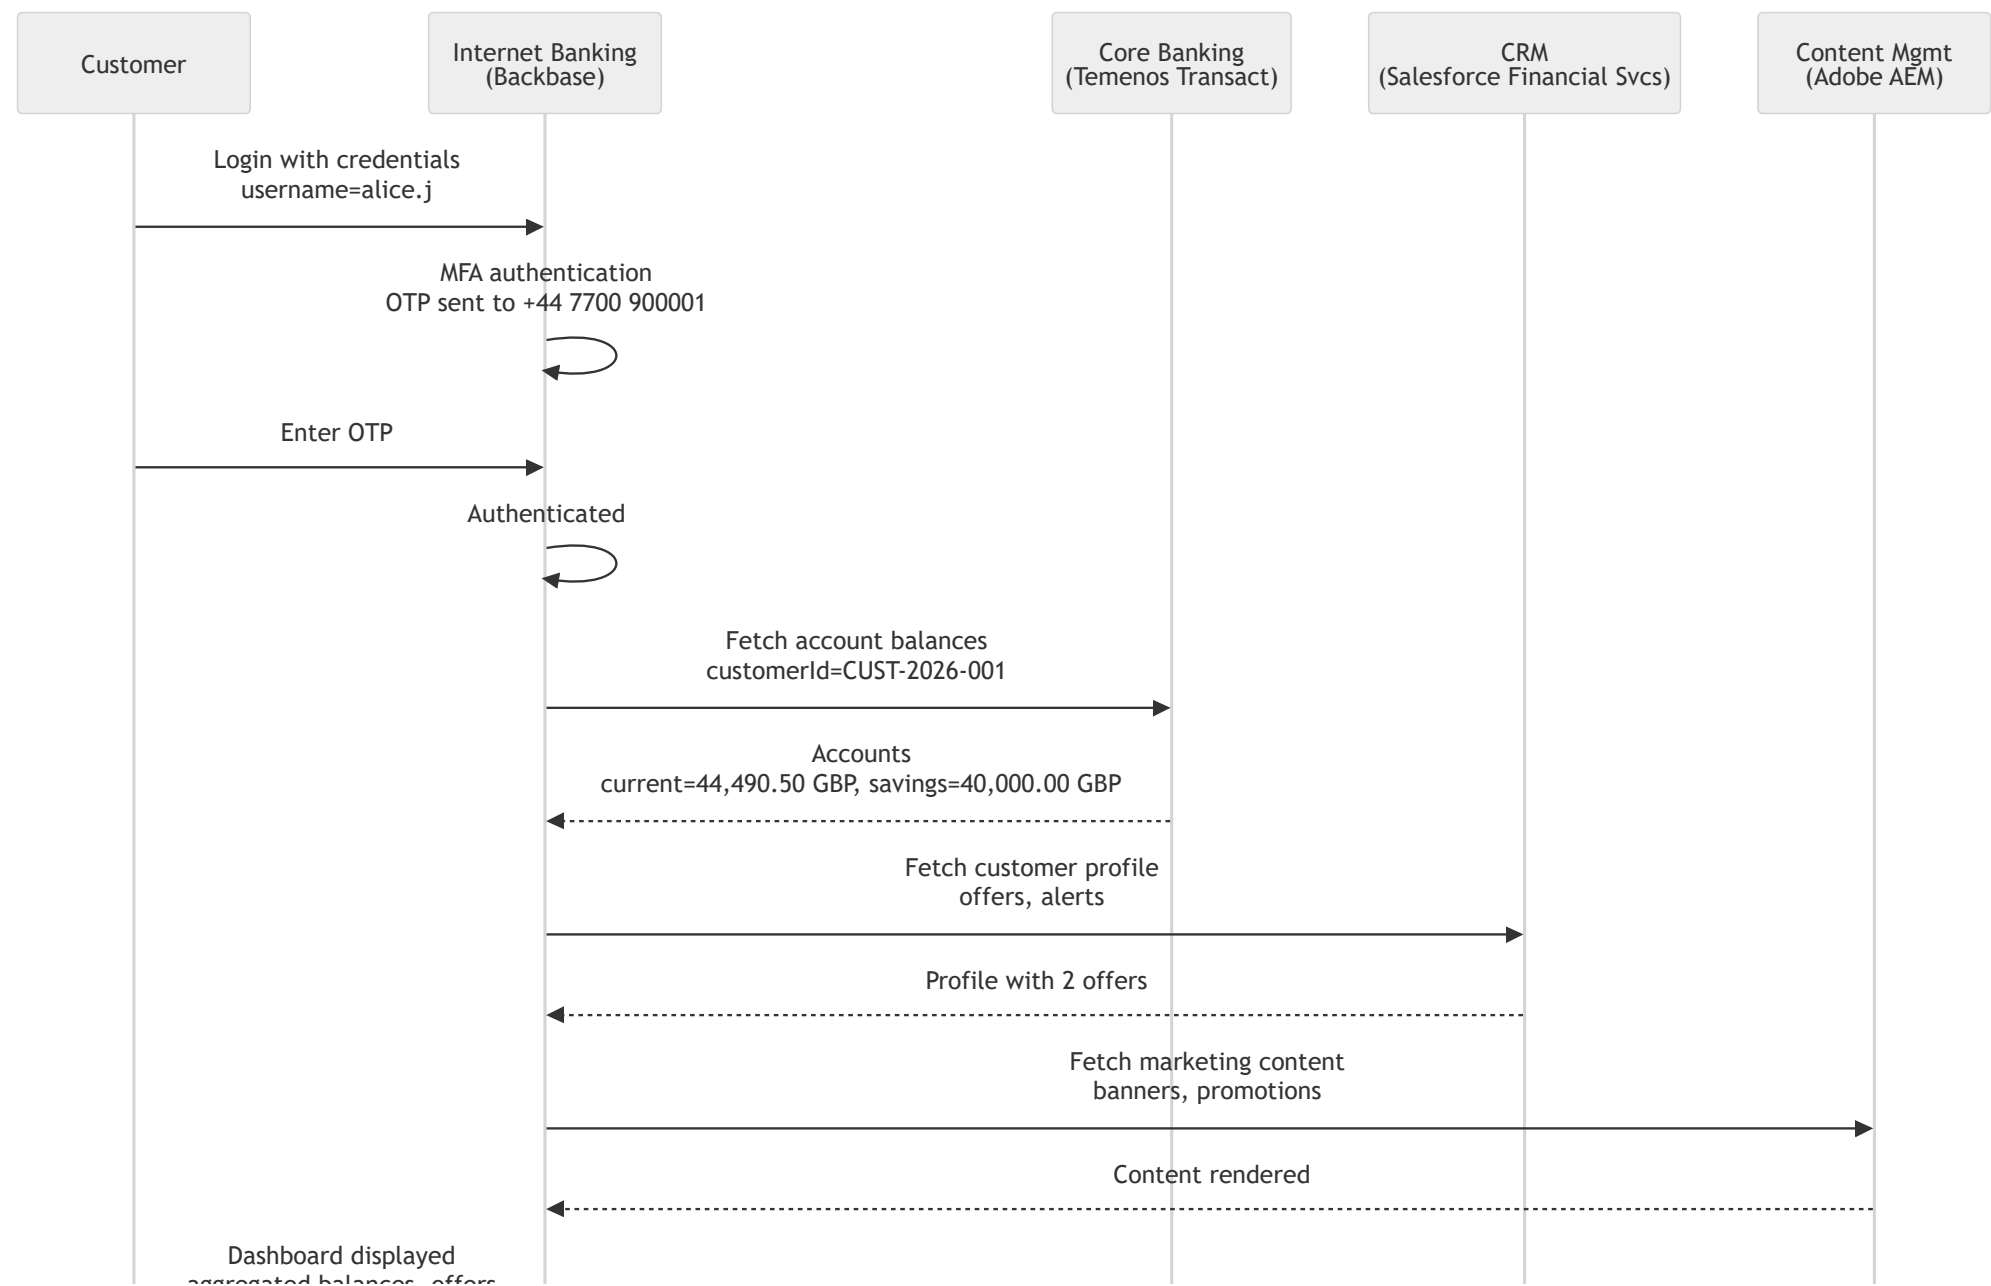

7.1 Internet Banking

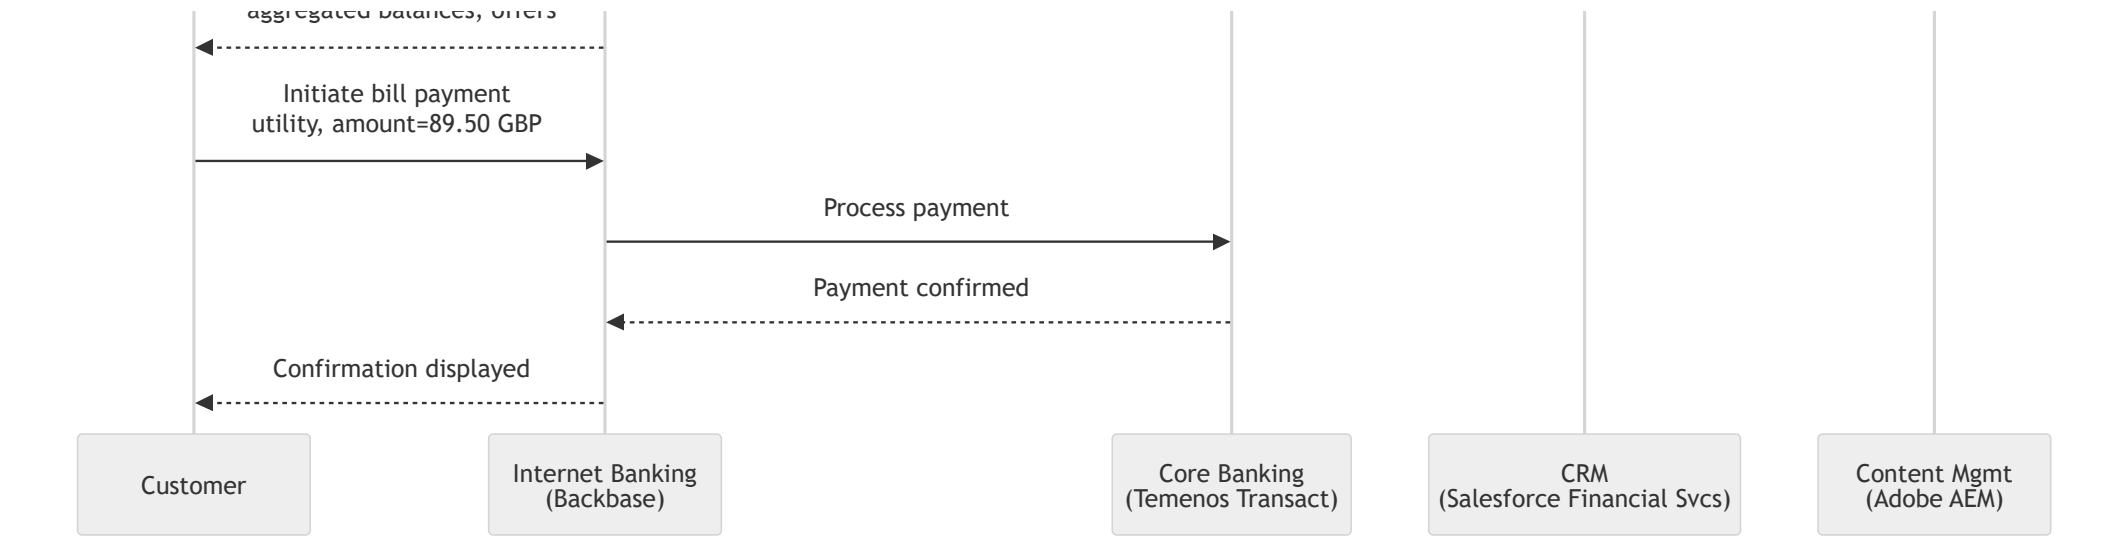

Description: Customer logs in, views dashboard, performs banking activities. System authenticates, presents consolidated view, processes requests.

Actors: Customer, Digital Team

Systems: Internet Banking (Backbase), Core Banking (Temenos Transact), CRM (Salesforce Financial Services), Content Management (Adobe AEM), Analytics (Google Analytics)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Internet Banking	Authentication	AuthenticateUser	Internet Banking (Backbase)	Internet Banking (Backbase)	Internal	Internal	API-led (Real-time)	Simple
Internet Banking	Balances	FetchAccountBalances	Internet Banking (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Internet Banking	Profile	GetCustomerProfile	Internet Banking (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Internet Banking	Content	FetchMarketingContent	Internet Banking (Backbase)	Content Mgmt (Adobe AEM)	Backbase REST API	AEM REST API	API-led (Real-time)	Simple
Internet Banking	Analytics	TrackUserBehavior	Internet Banking (Backbase)	Analytics (Google Analytics)	Backbase REST API	GA4 API (REST)	Event-driven	Simple
Internet Banking	Search	IndexSearchResults	Internet Banking (Backbase)	Search Engine (Elasticsearch)	Backbase REST API	Elasticsearch REST API	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Internet Banking	Authentication	User authenticated via MFA (OTP) with correct credentials	Valid credentials -> access granted; invalid OTP -> locked after 3 attempts
Internet Banking	Balances	Account balances fetched from Temenos for all customer accounts	All accounts displayed; balances updated to real-time; masking for inactive accounts
Internet Banking	Profile	Customer profile and offers retrieved from Salesforce CRM	Personalized offers displayed; profile data matches CRM source
Internet Banking	Content	Marketing content fetched from Adobe AEM CMS	Content rendered correctly; A/B variants served per customer segment
Internet Banking	Analytics	User behavior tracked and sent to analytics platform	Page views, clicks, and session duration recorded; privacy-compliant data anonymization applied
Internet Banking	Search	Search results indexed by Elasticsearch with fuzzy matching	Search returns results within 500ms; typos corrected; most relevant results ranked first

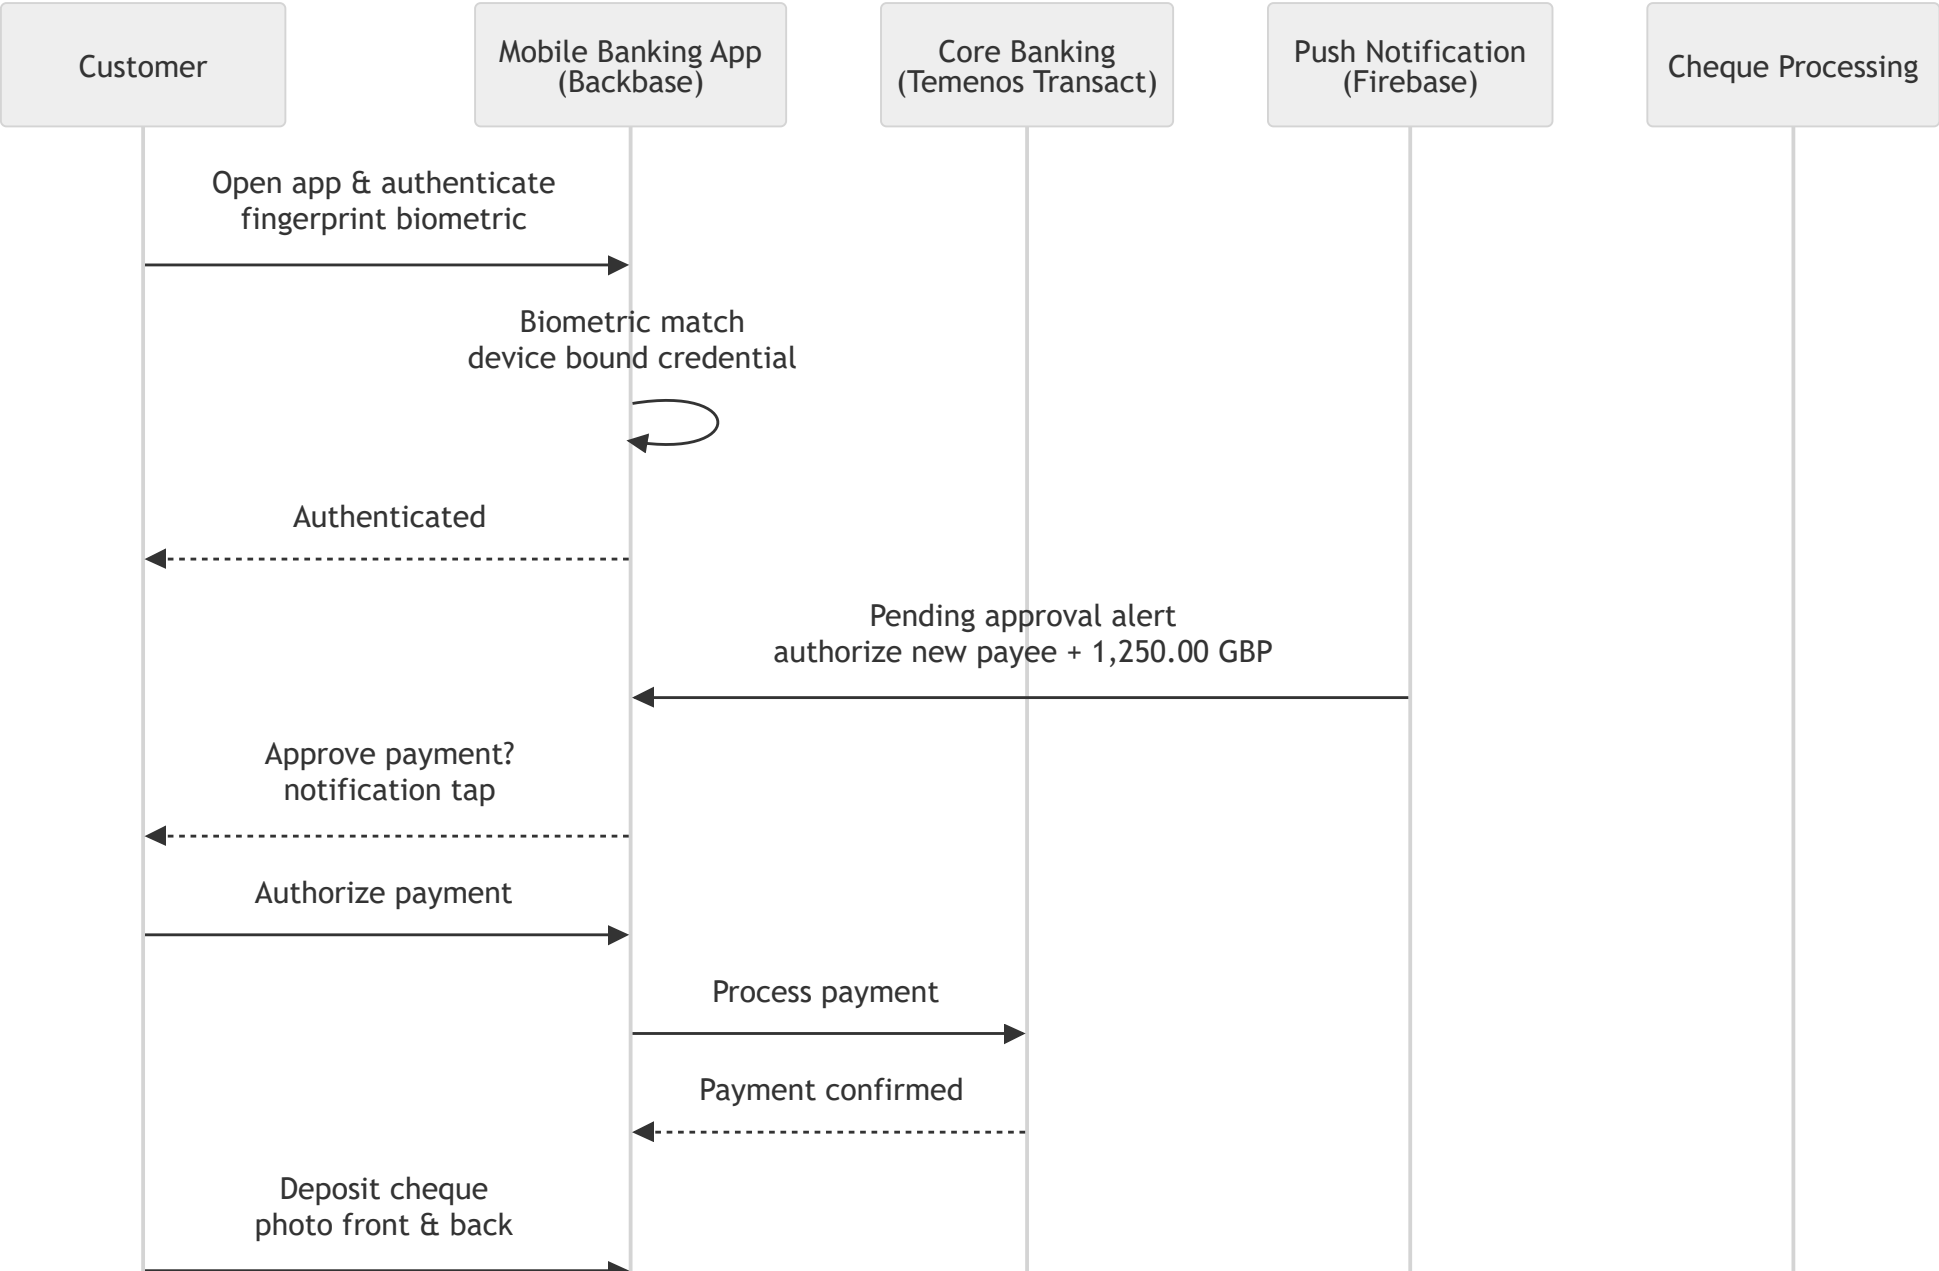

7.2 Mobile Banking

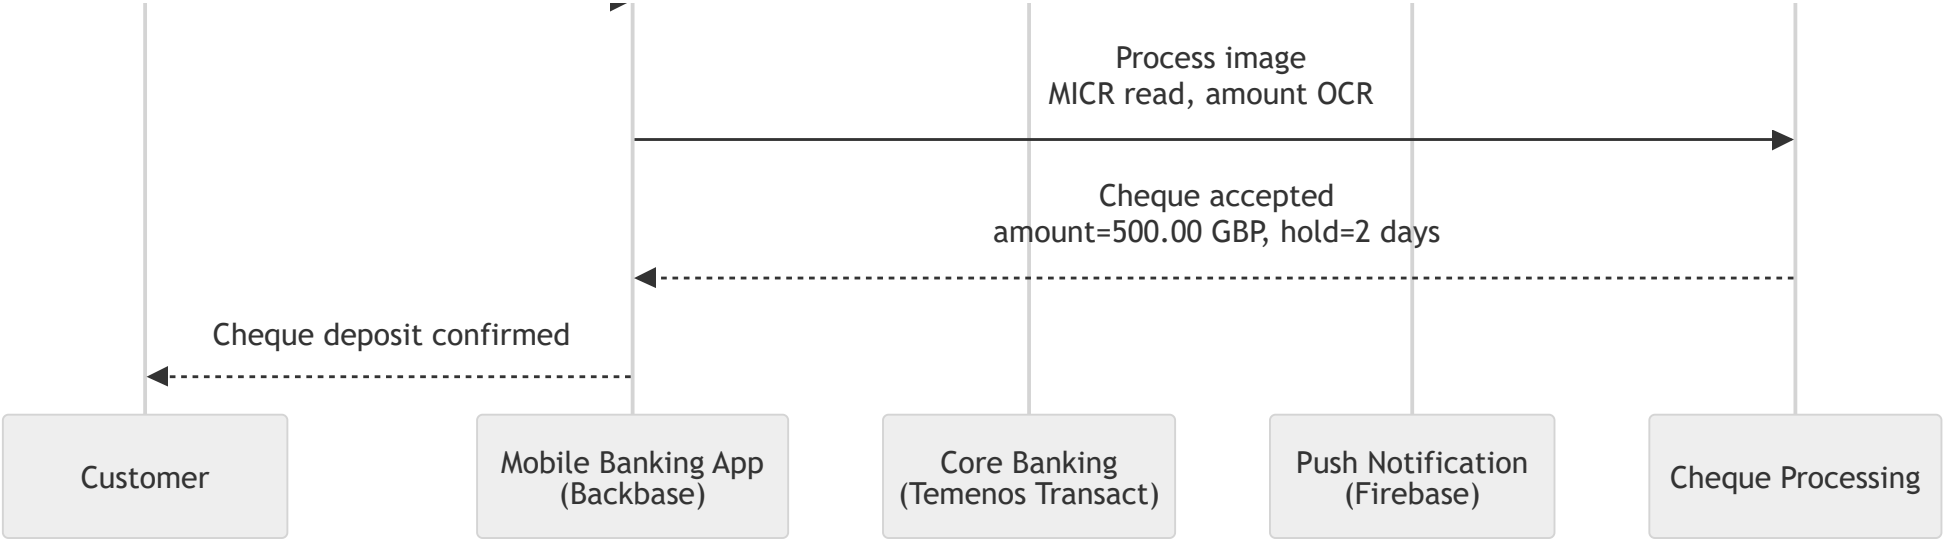

Description: Customer uses mobile app. Biometric authentication, push notifications, mobile check deposit, card management.

Actors: Customer, Digital Team

Systems: Mobile App (Backbase), Core Banking (Temenos Transact), Push Notification (Firebase/APNs), Cheque Processing

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Mobile Banking	Authentication	BiometricAuth	Mobile Banking App (Backbase)	Mobile Banking App (Backbase)	Device Biometric API	Internal	API-led (Real-time)	Simple
Mobile Banking	Notification	SendPushAlert	Push Notification (Firebase)	Mobile Banking App (Backbase)	Firebase Cloud Messaging	Backbase Mobile SDK	Event-driven	Simple
Mobile Banking	Payment	AuthorizePayment	Mobile Banking App (Backbase)	Core Banking (Temenos Transact)	Backbase REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Mobile Banking	Cheque Deposit	ProcessChequeImage	Mobile Banking App (Backbase)	Cheque Processing	Backbase REST API	Cheque API (Image)	API-led (Real-time)	Medium
Mobile Banking	Location	GetNearbyBranches	Mobile Banking App (Backbase)	Location Service (Google Maps)	Backbase Mobile SDK	Google Maps API (REST)	API-led (Real-time)	Simple
Mobile Banking	Feedback	SubmitAppFeedback	Mobile Banking App (Backbase)	CRM (Salesforce Financial Services)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Mobile Banking	Authentication	Biometric authentication (fingerprint/face) matches device-bound credential	Authentication completes <1 second; biometric mismatch shows PIN fallback
Mobile Banking	Notification	Push notification sent via Firebase for pending payment approval	Notification delivered within 5 seconds; tap opens correct approval screen
Mobile Banking	Payment	Payment authorized and processed via mobile approval flow	Payment confirmed; transaction appears in history; notification sent
Mobile Banking	Cheque Deposit	Cheque image processed with MICR read and amount OCR	MICR and OCR accuracy >99%; cheque accepted with 2-day hold applied
Mobile Banking	Location	Nearby branches retrieved based on device GPS location	Branches sorted by distance; opening hours displayed; directions link provided
Mobile Banking	Feedback	App feedback submitted and stored in CRM	Feedback linked to customer record; rating captured; feedback routed to product team

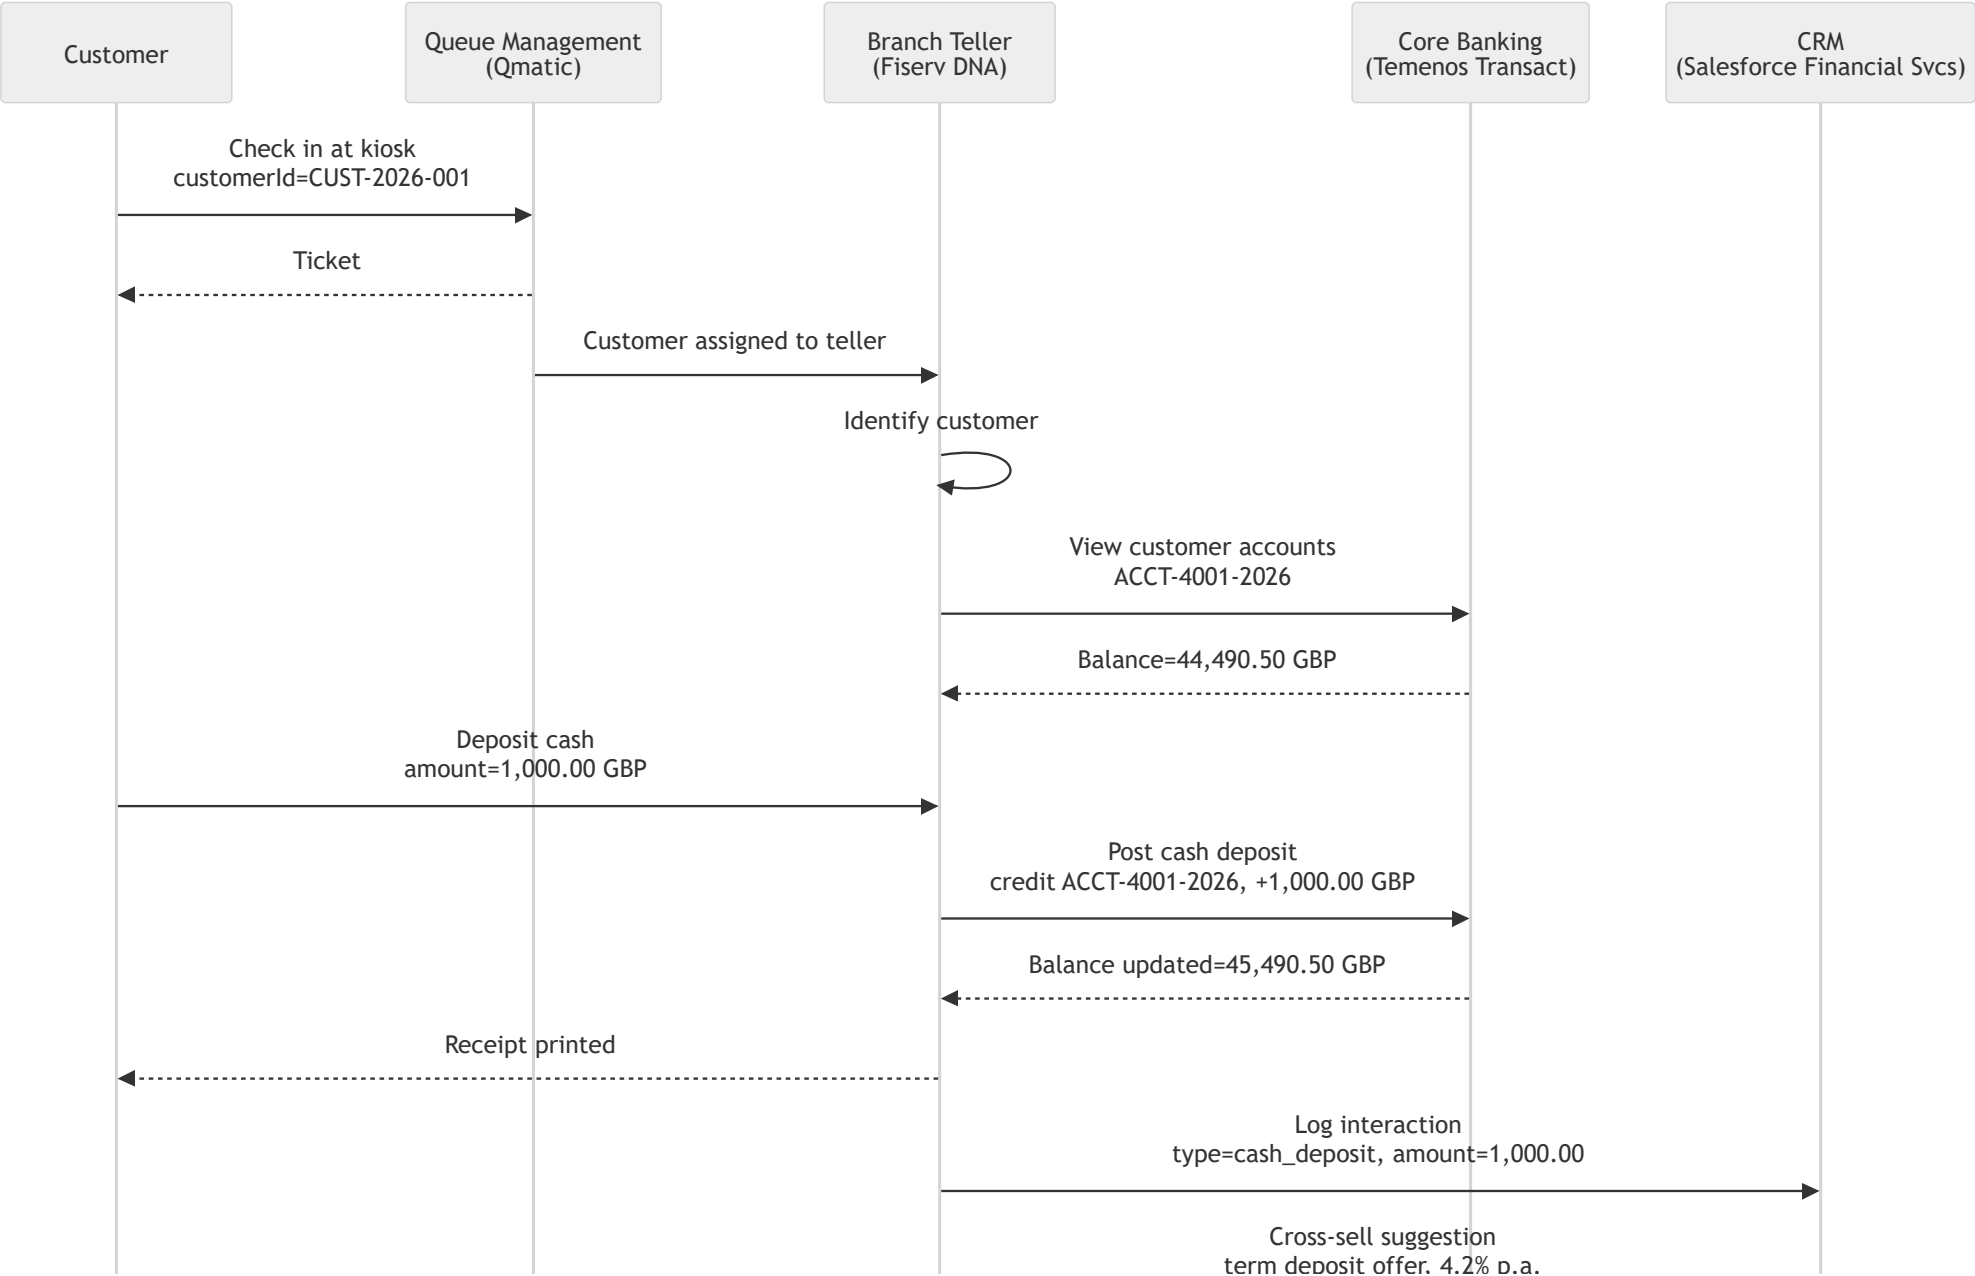

7.3 Branch Banking (Teller)

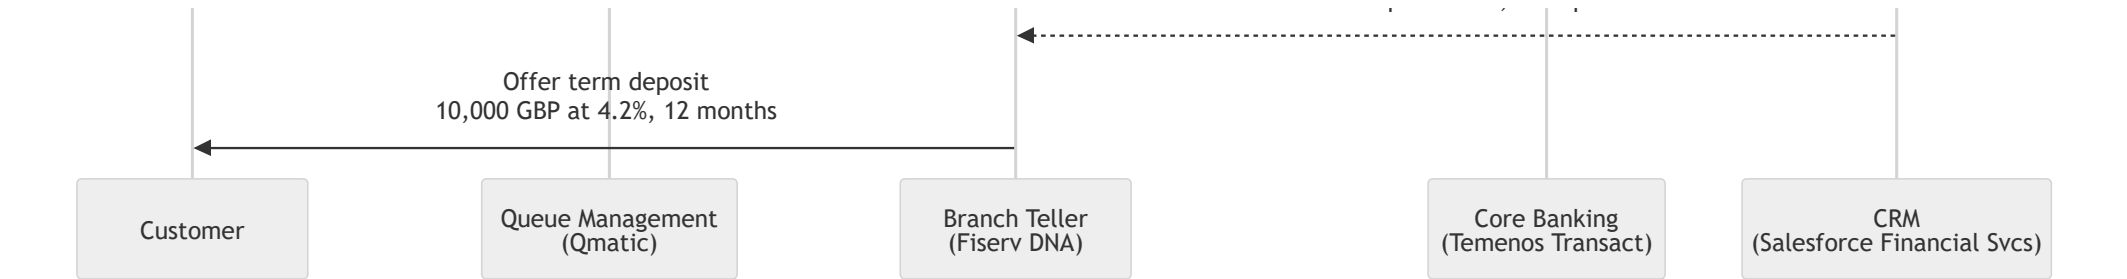

Description: Customer visits branch. Teller processes cash/cheque transactions. Branch system integrates with core banking for real-time balance and transaction posting.

Actors: Customer, Branch Staff, Teller

Systems: Branch Teller (Fiserv DNA), Queue Management (Qmatic), Core Banking (Temenos Transact), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Branch Banking	Queue	CheckInCustomer	Queue Management (Qmatic)	Branch Teller (Fiserv DNA)	Qmatic API	Fiserv Teller API (REST)	Event-driven	Simple
Branch Banking	Transaction	PostCashDeposit	Branch Teller (Fiserv DNA)	Core Banking (Temenos Transact)	Fiserv Teller API	Temenos REST API (API Key)	API-led (Real-time)	Simple
Branch Banking	Interaction	LogCustomerInteraction	Branch Teller (Fiserv DNA)	CRM (Salesforce Financial Services)	Fiserv REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Branch Banking	Cross-Sell	GetCrossSellOffer	Branch Teller (Fiserv DNA)	CRM (Salesforce Financial Services)	Fiserv REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium
Branch Banking	Appointment	BookAppointment	Queue Management (Qmatic)	CRM (Salesforce Financial Services)	Qmatic API	Salesforce REST API (OAuth2)	Event-driven	Simple
Branch Banking	Cash	ReconcileTellerCash	Branch Teller (Fiserv DNA)	Core Banking (Temenos Transact)	Fiserv Teller API	Temenos REST API (API Key)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Branch Banking	Queue	Customer checked in at Qmatic kiosk and assigned to next available teller	Ticket issued; estimated wait time displayed; teller assignment within <5 minutes
Branch Banking	Transaction	Cash deposit posted to customer account in real-time via teller system	Balance updated; receipt generated with transaction reference; teller cash drawer reconciled
Branch Banking	Interaction	Customer interaction logged in Salesforce CRM with type and amount	Interaction record created; customer 360 view updated
Branch Banking	Cross-Sell	CRM returns cross-sell suggestion based on customer profile and transaction	Offer displayed to teller within 1 second; offer accepted/rejected tracked
Branch Banking	Appointment	Customer appointment booked and synced with teller schedule	Appointment slot confirmed; reminder sent 24 hours b

Flow	Entity	Acceptance Criterion	Expected Outcome
			efore; wait time minimized
Branch Banking	Cash	Teller cash position reconciled at end of shift	Cash difference <0.01% of total; discrepancies flagged; supervisor sign-off required

8: Finance, Treasury & Settlement - BC010 BC014 BC061 BC062

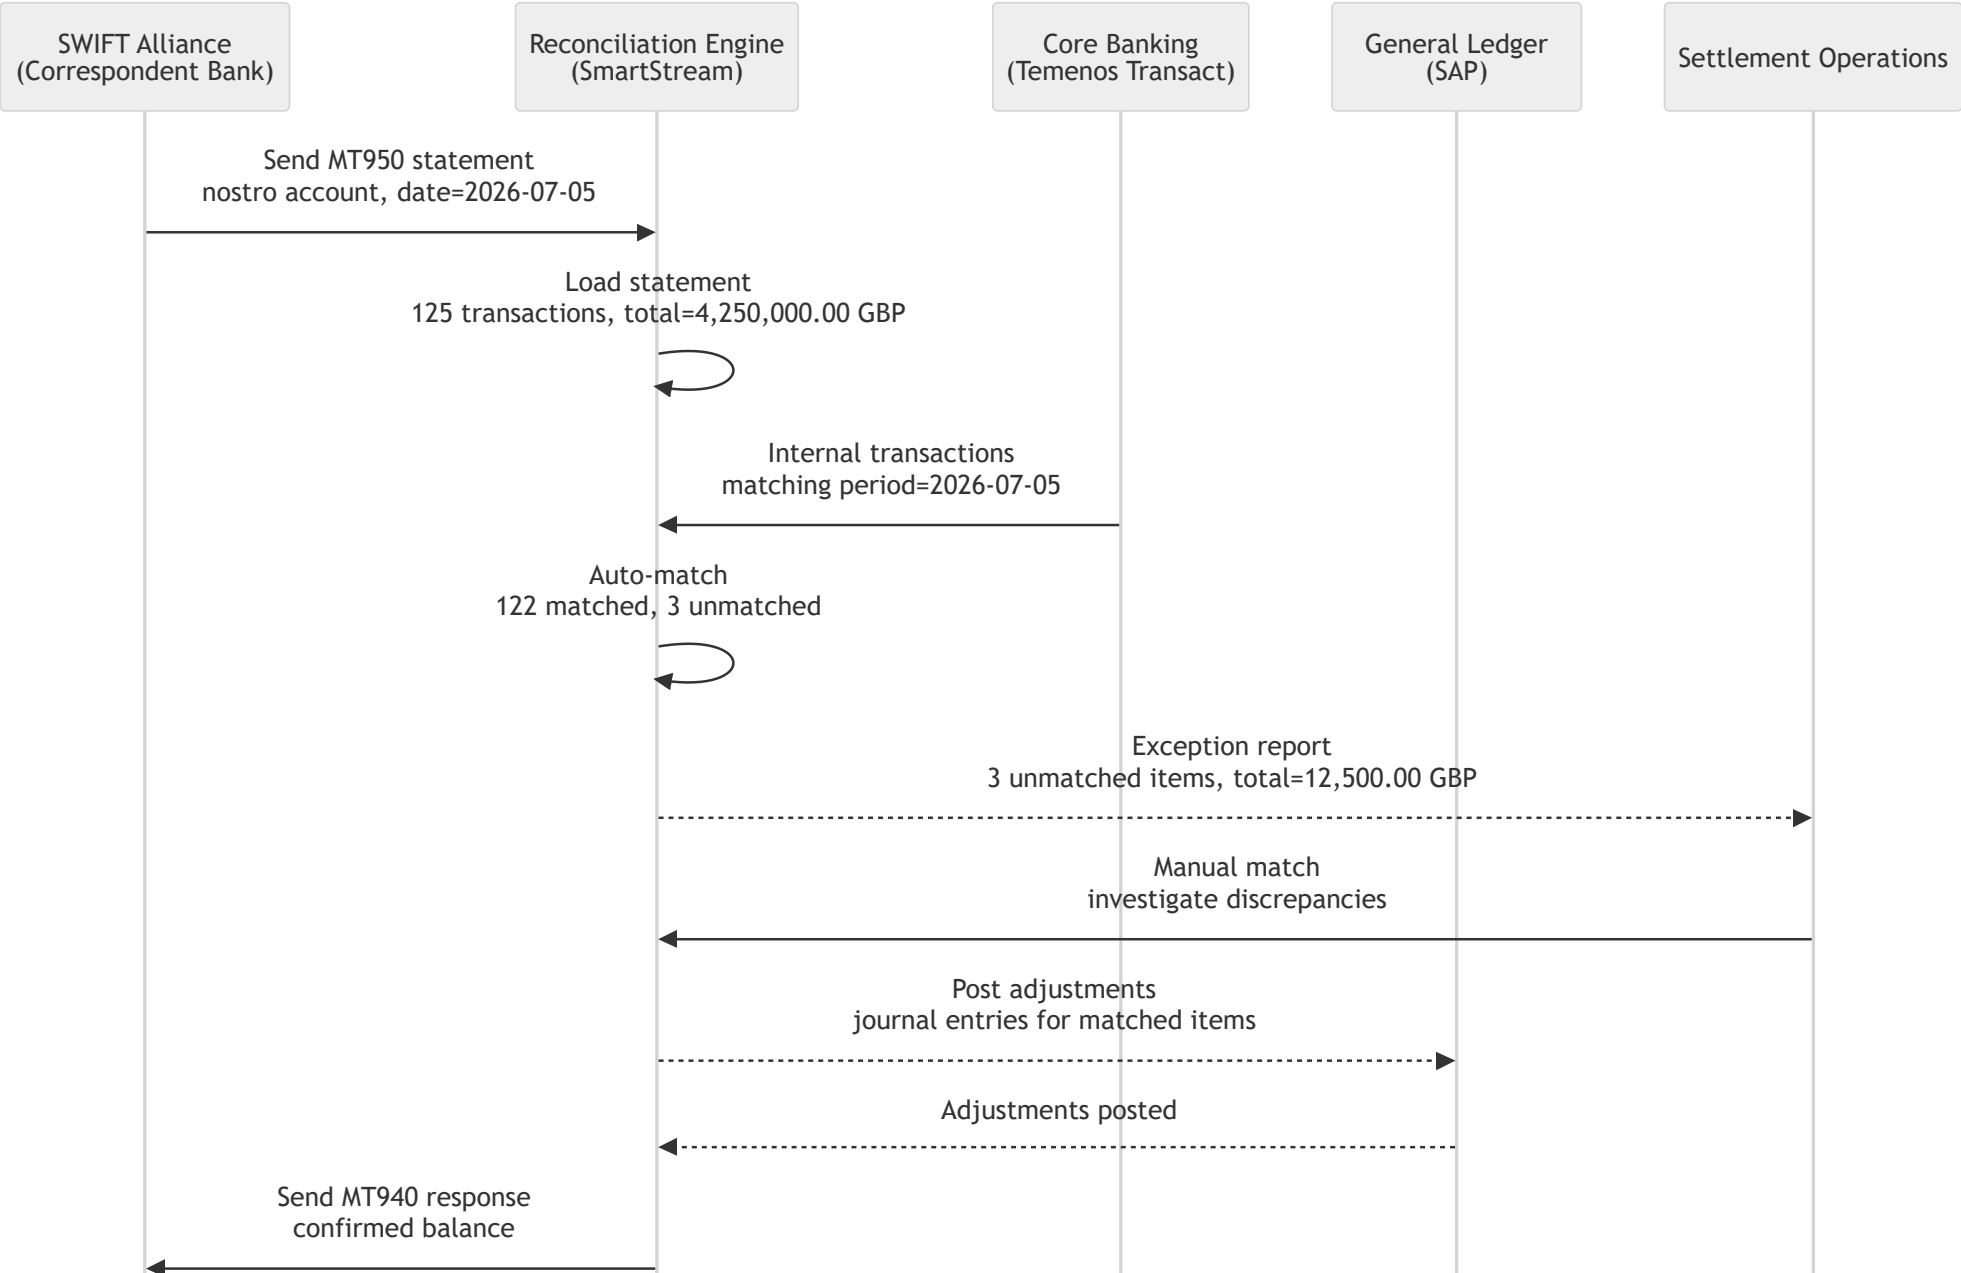

8.1 Nostro/Vostro Reconciliation

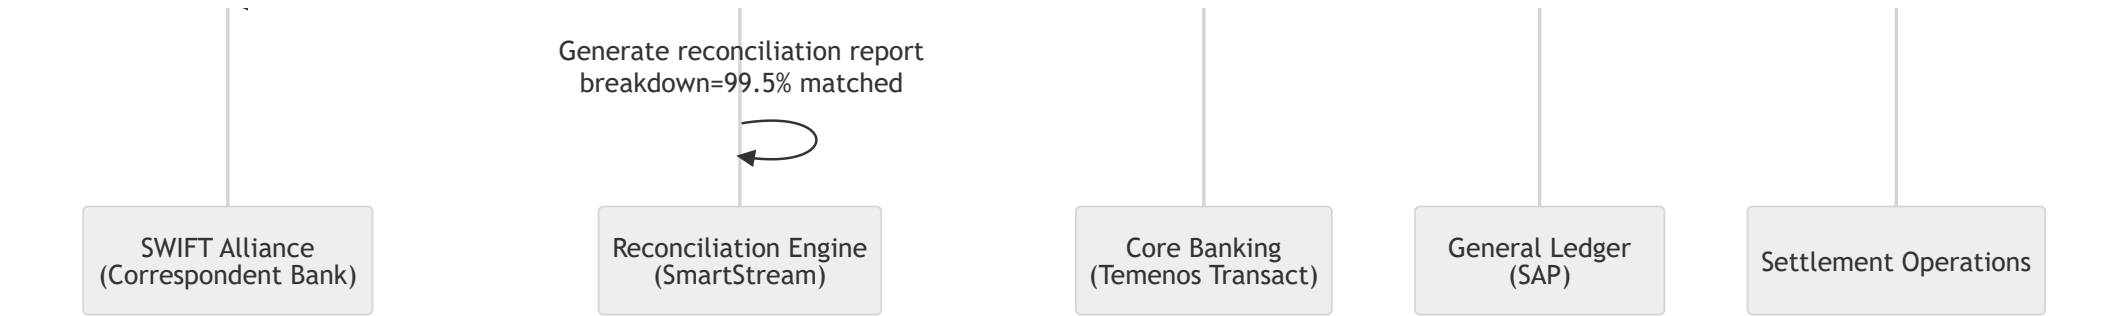

Description: Bank reconciles nostro (domestic bank's accounts held at foreign banks) and vostro (foreign bank's accounts held at domestic bank) positions daily.

Actors: Settlement Operations, Finance Manager

Systems: SWIFT Alliance Gateway, Reconciliation Engine (SmartStream/Duco), Core Banking (Temenos Transact), General Ledger (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Nostro Reconciliation	Statement	ReceiveMT950	SWIFT Alliance (Correspondent)	Reconciliation Engine (SmartStream)	SWIFT MT950	SmartStream API (REST)	Batch (Scheduled)	High
Nostro Reconciliation	Transactions	LoadInternalTxns	Core Banking (Temenos Transact)	Reconciliation Engine (SmartStream)	Temenos ODBC	SmartStream JDBC	Batch (ETL)	Medium
Nostro Reconciliation	Adjustments	PostAdjustments	Reconciliation Engine (SmartStream)	General Ledger (SAP)	SmartStream REST API	SAP API (SOAP)	Event-driven	Medium
Nostro Reconciliation	Response	SendMT940	Reconciliation Engine (SmartStream)	SWIFT Alliance (Correspondent)	SmartStream API	SWIFT MT940	Batch (Scheduled)	Medium
Nostro Reconciliation	Reporting	GenerateAgedBreakReport	Reconciliation Engine (SmartStream)	General Ledger (SAP)	SmartStream REST API	SAP API (SOAP)	Batch (Scheduled)	Medium
Nostro Reconciliation	Alert	SendBreakAlert	Reconciliation Engine (SmartStream)	Notification Service (Firebase)	SmartStream REST API	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Nostro Reconciliation	Statement	SWIFT MT950 statement received from correspondent bank and loaded	Statement parsed correctly; all 125 transactions loaded; unmatched items <5%
Nostro Reconciliation	Transactions	Internal transactions loaded from Temenos for matching period	All internal txns loaded; date range matches statement period
Nostro Reconciliation	Adjustments	Unmatched items manually reviewed and adjustment journals posted to SAP GL	Adjustment entries posted; GL impact correctly calculated; audit trail maintained
Nostro Reconciliation	Response	MT940 response sent to correspondent bank with confirmed balance	Balance confirmed within tolerance; discrepancies escalated to treasury
Nostro Reconciliation	Reporting	Aged break report generated with items >30 days highlighted	Report generated daily; aged items tracked and escalated; break aging trend visible
Nostro Reconciliation	Alert	Alert sent to operations team when break exceeds threshold	Alert sent within 5 minutes of break detection; threshold configurable per currency

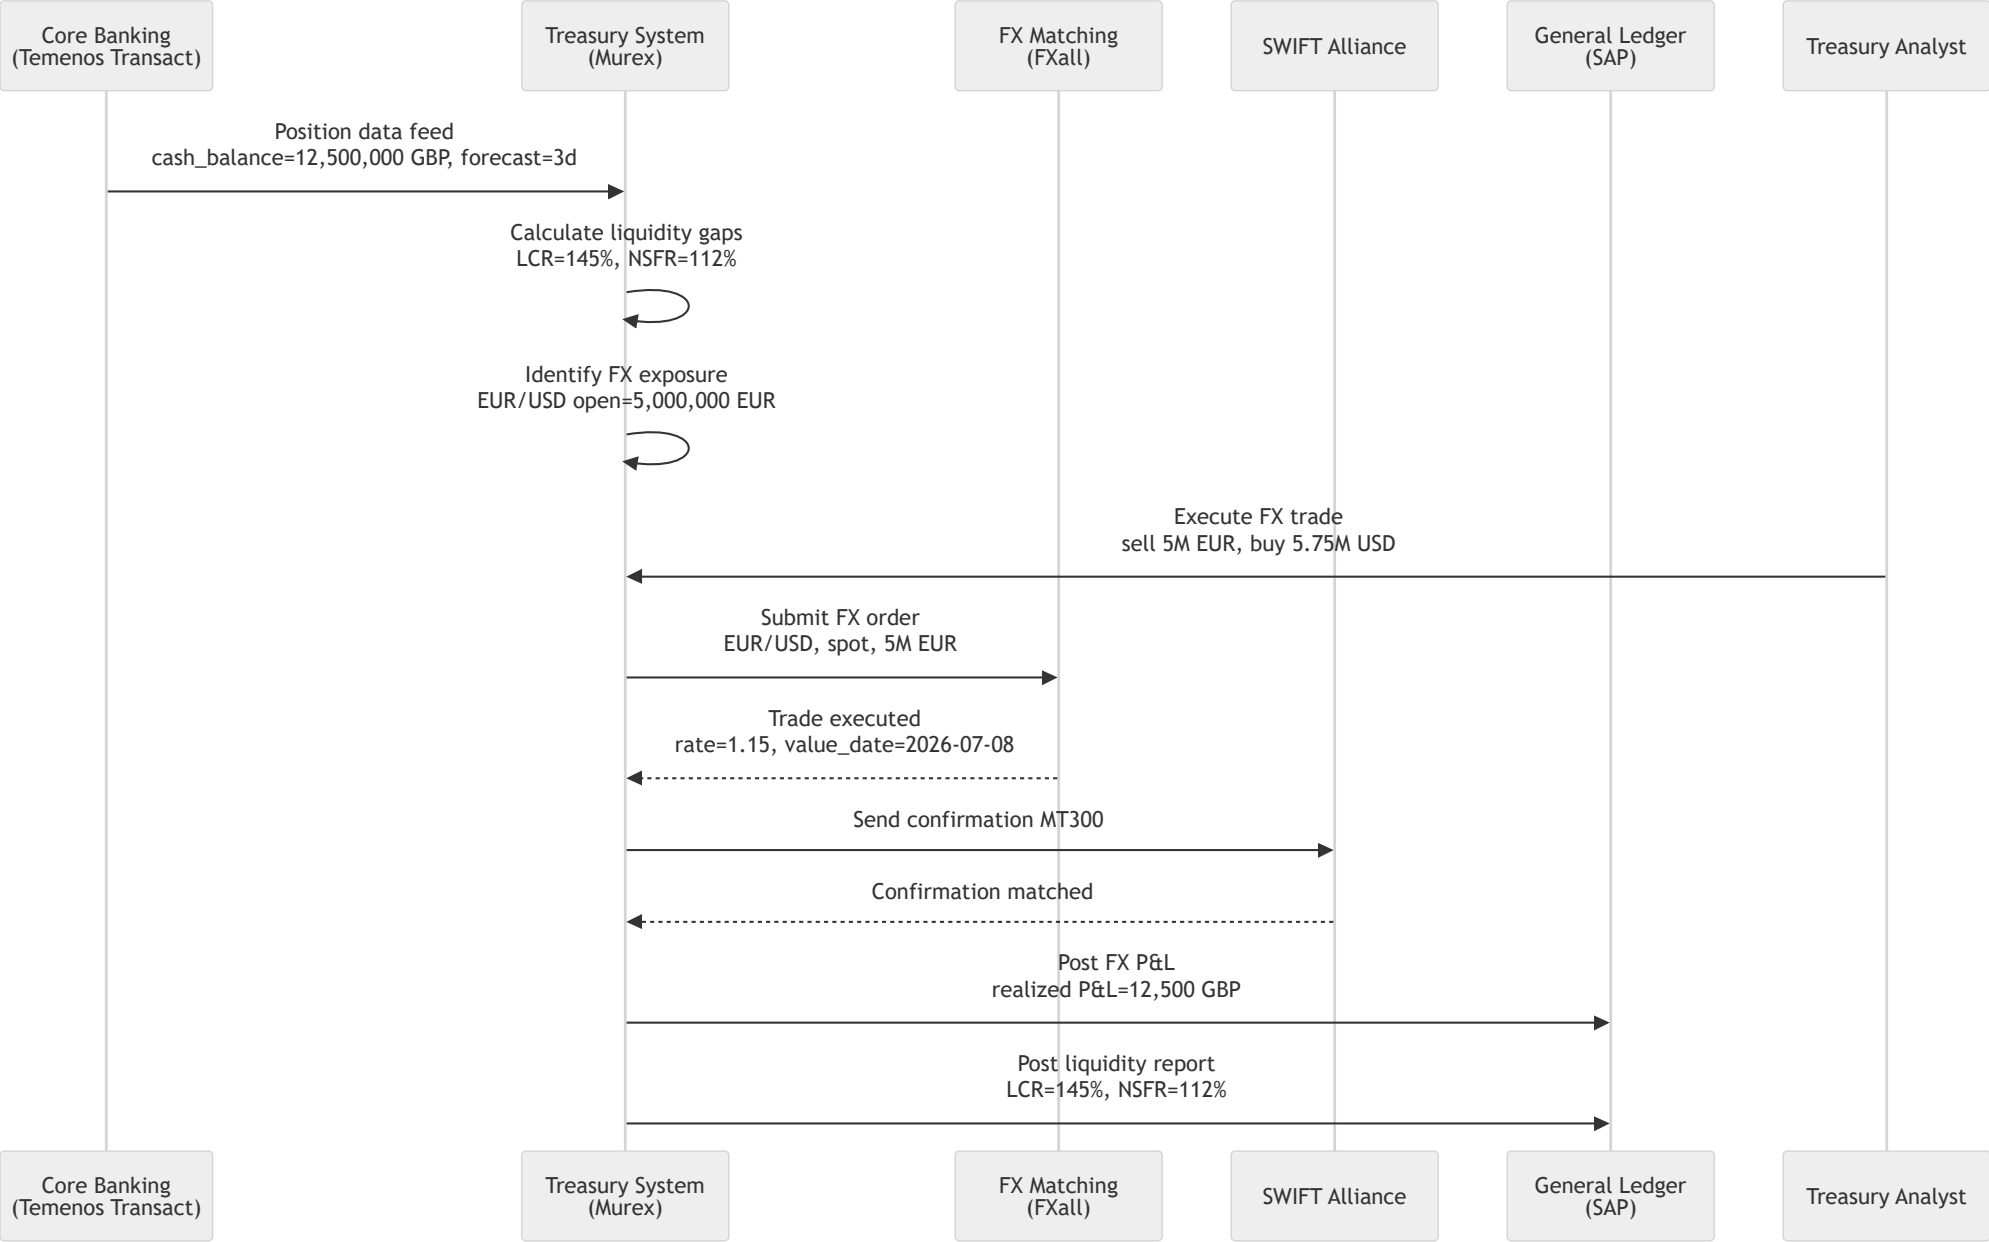

8.2 Treasury & Liquidity Management

Description: Treasury monitors liquidity position, executes money market trades, manages FX exposure, ensures regulatory liquidity ratios met.

Actors: Treasury Analyst, Finance Manager

Systems: Treasury System (Murex), Core Banking (Temenos Transact), FX Matching Platform (FXall), SWIFT Alliance, General Ledger (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Treasury Management	Position	ReceivePositionData	Core Banking (Temenos Transact)	Treasury System (Murex)	Temenos REST API	Murex API (REST)	Event-driven	Medium
Treasury Management	FX Trade	ExecuteFXOrder	Treasury System (Murex)	FX Matching (FXall)	Murex API	FXall API (FIX)	API-led (Real-time)	High
Treasury Management	Confirmation	SendMT300	Treasury System (Murex)	SWIFT Alliance	Murex API (MT300)	SWIFT Alliance	API-led (Real-time)	Medium
Treasury Management	Liquidity	PostLiquidityReport	Treasury System (Murex)	General Ledger (SAP)	Murex API (REST)	SAP API (SOAP)	Batch (Scheduled)	Medium
Treasury Management	Forecast	GenerateLiquidityForecast	Treasury System (Murex)	Core Banking (Temenos Transact)	Murex API (REST)	Temenos REST API (API Key)	API-led (Real-time)	Medium
Treasury Management	Hedge	ExecuteFXHedge	Treasury System (Murex)	FX Matching (FXall)	Murex API	FXall API (FIX)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Treasury Management	Position	Cash position data received from Temenos Transact into Murex	Position updated in real-time; forecast horizon configurable (1-30 days)
Treasury Management	FX Trade	FX order submitted to FXall and executed at quoted rate	Trade executed within 10 seconds; rate within 0.1% of quoted; confirmation received
Treasury Management	Confirmation	SWIFT MT300 confirmation sent and matched with counterparty	Confirmation matched; unmatched confirmations escalated within 1 hour
Treasury Management	Liquidity	LCR and NSFR liquidity ratios calculated and posted to SAP GL	Ratios within regulatory limits; breach alert generated if below threshold
Treasury Management	Forecast	Liquidity forecast generated with 30-day forward view	Forecast accuracy within 95%; cash flow waterfall visible; what-if scenarios supported
Treasury Management	Hedge	FX hedge executed to mitigate open currency exposure	Hedge covers 100% of projected exposure; hedge effectiveness tested monthly

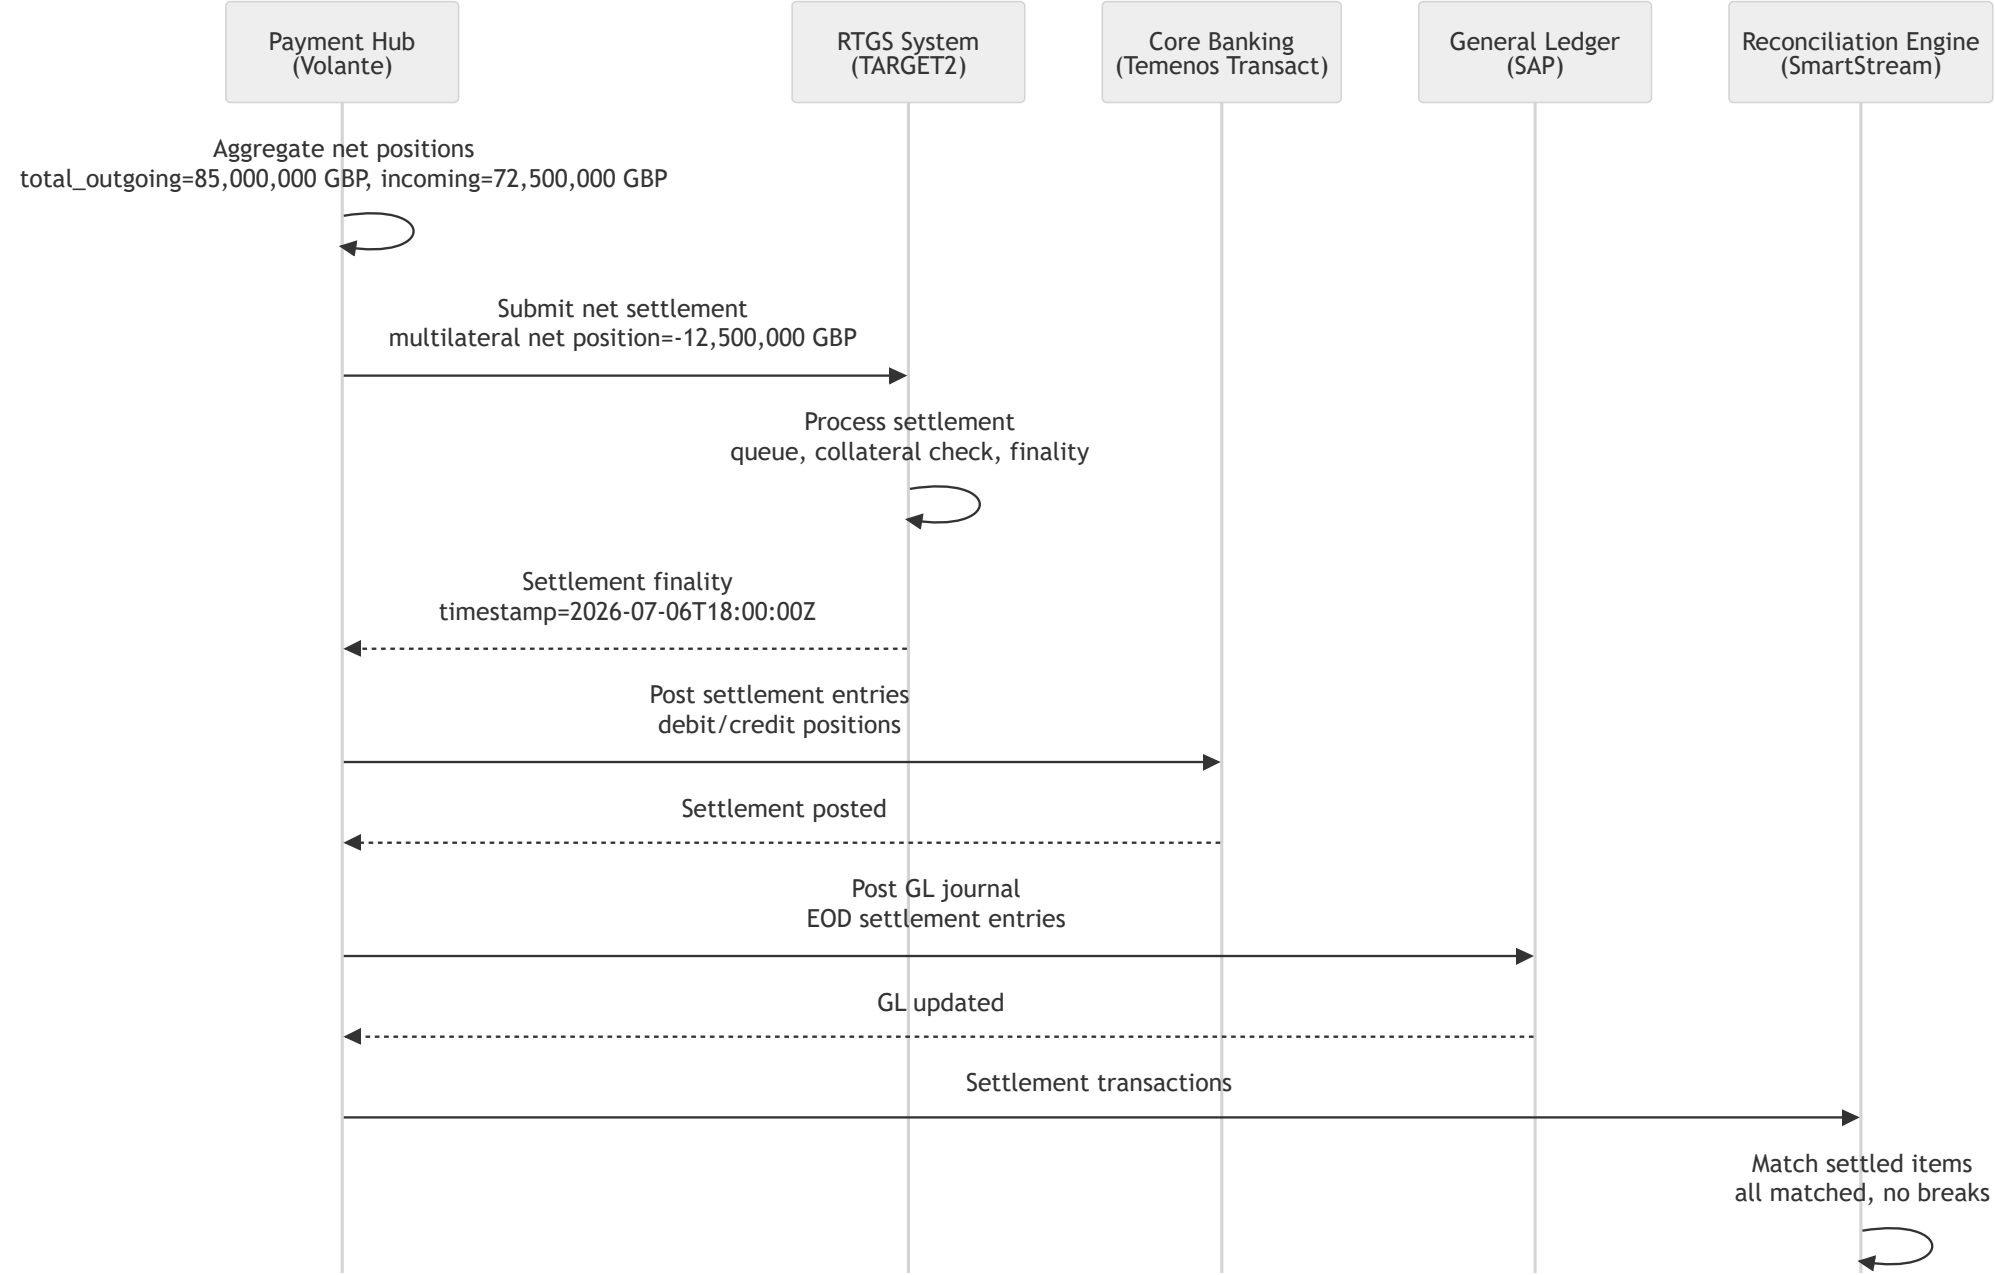

8.3 End-of-Day Settlement

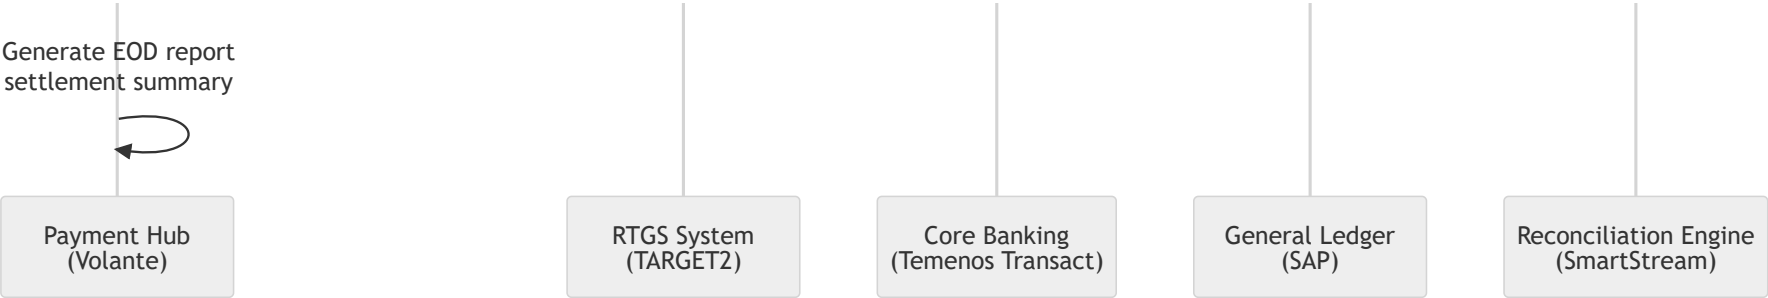

Description: Bank settles all payment obligations, net positions submitted to RTGS, finality achieved, GL updated.

Actors: Settlement Operations, Treasury

Systems: Payment Hub (Volante), RTGS System (TARGET2/Bank of England), Core Banking (Temenos Transact), General Ledger (SAP), Reconciliation Engine (SmartStream)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
EOD Settlement	Net Position	SubmitNetSettlement	Payment Hub (Volante)	RTGS System (TARGET2)	Volante API (ISO 20022)	TARGET2 API (ISO 20022)	Batch (Scheduled)	High
EOD Settlement	Posting	PostSettlementEntries	Payment Hub (Volante)	Core Banking (Temenos Transact)	Volante REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
EOD Settlement	GL	PostGLJournal	Payment Hub (Volante)	General Ledger (SAP)	Volante REST API	SAP API (SOAP)	API-led (Real-time)	Medium
EOD Settlement	Matching	MatchSettledItems	Payment Hub (Volante)	Reconciliation Engine (SmartStream)	Volante REST API	SmartStream API (REST)	Event-driven	Simple
EOD Settlement	Reporting	GenerateSettlementReport	Payment Hub (Volante)	Regulatory Reporting (AxiomSL)	Volante REST API	AxiomSL REST API	Batch (Scheduled)	Medium
EOD Settlement	Audit	LogSettlementAudit	Payment Hub (Volante)	Audit System (LogRhythm)	Volante REST API	LogRhythm API (SIEM)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
EOD Settlement	Net Position	Multilateral net position calculated and submitted to TARGET2 RTGS	Net position calculated correctly; submission before cut-off time
EOD Settlement	Posting	Settlement entries posted to Temenos core banking	All entries posted; debit/credit match net position; rejected entries investigated
EOD Settlement	GL	End-of-day GL journal posted in SAP	GL balanced; suspense accounts zero; variances <0.001%
EOD Settlement	Matching	Settled transactions matched by SmartStream reconciliation engine	100% matched; any breaks investigated and resolved before next day opening
EOD Settlement	Reporting	Settlement report generated with full audit trail	Report includes all transaction

Flow	Entity	Acceptance Criterion	Expected Outcome
			s; settlement status for each; exception summary provided
EOD Settlement	Audit	Settlement audit log sent to SIEM system for compliance	All EOD events logged; tamper-proof audit trail maintained; retention period 7 years

9: Trade Finance - BC063

Trade finance operations covering letter of credit issuance, bank guarantees, and invoice financing. Supports international trade with documentary credit instruments.

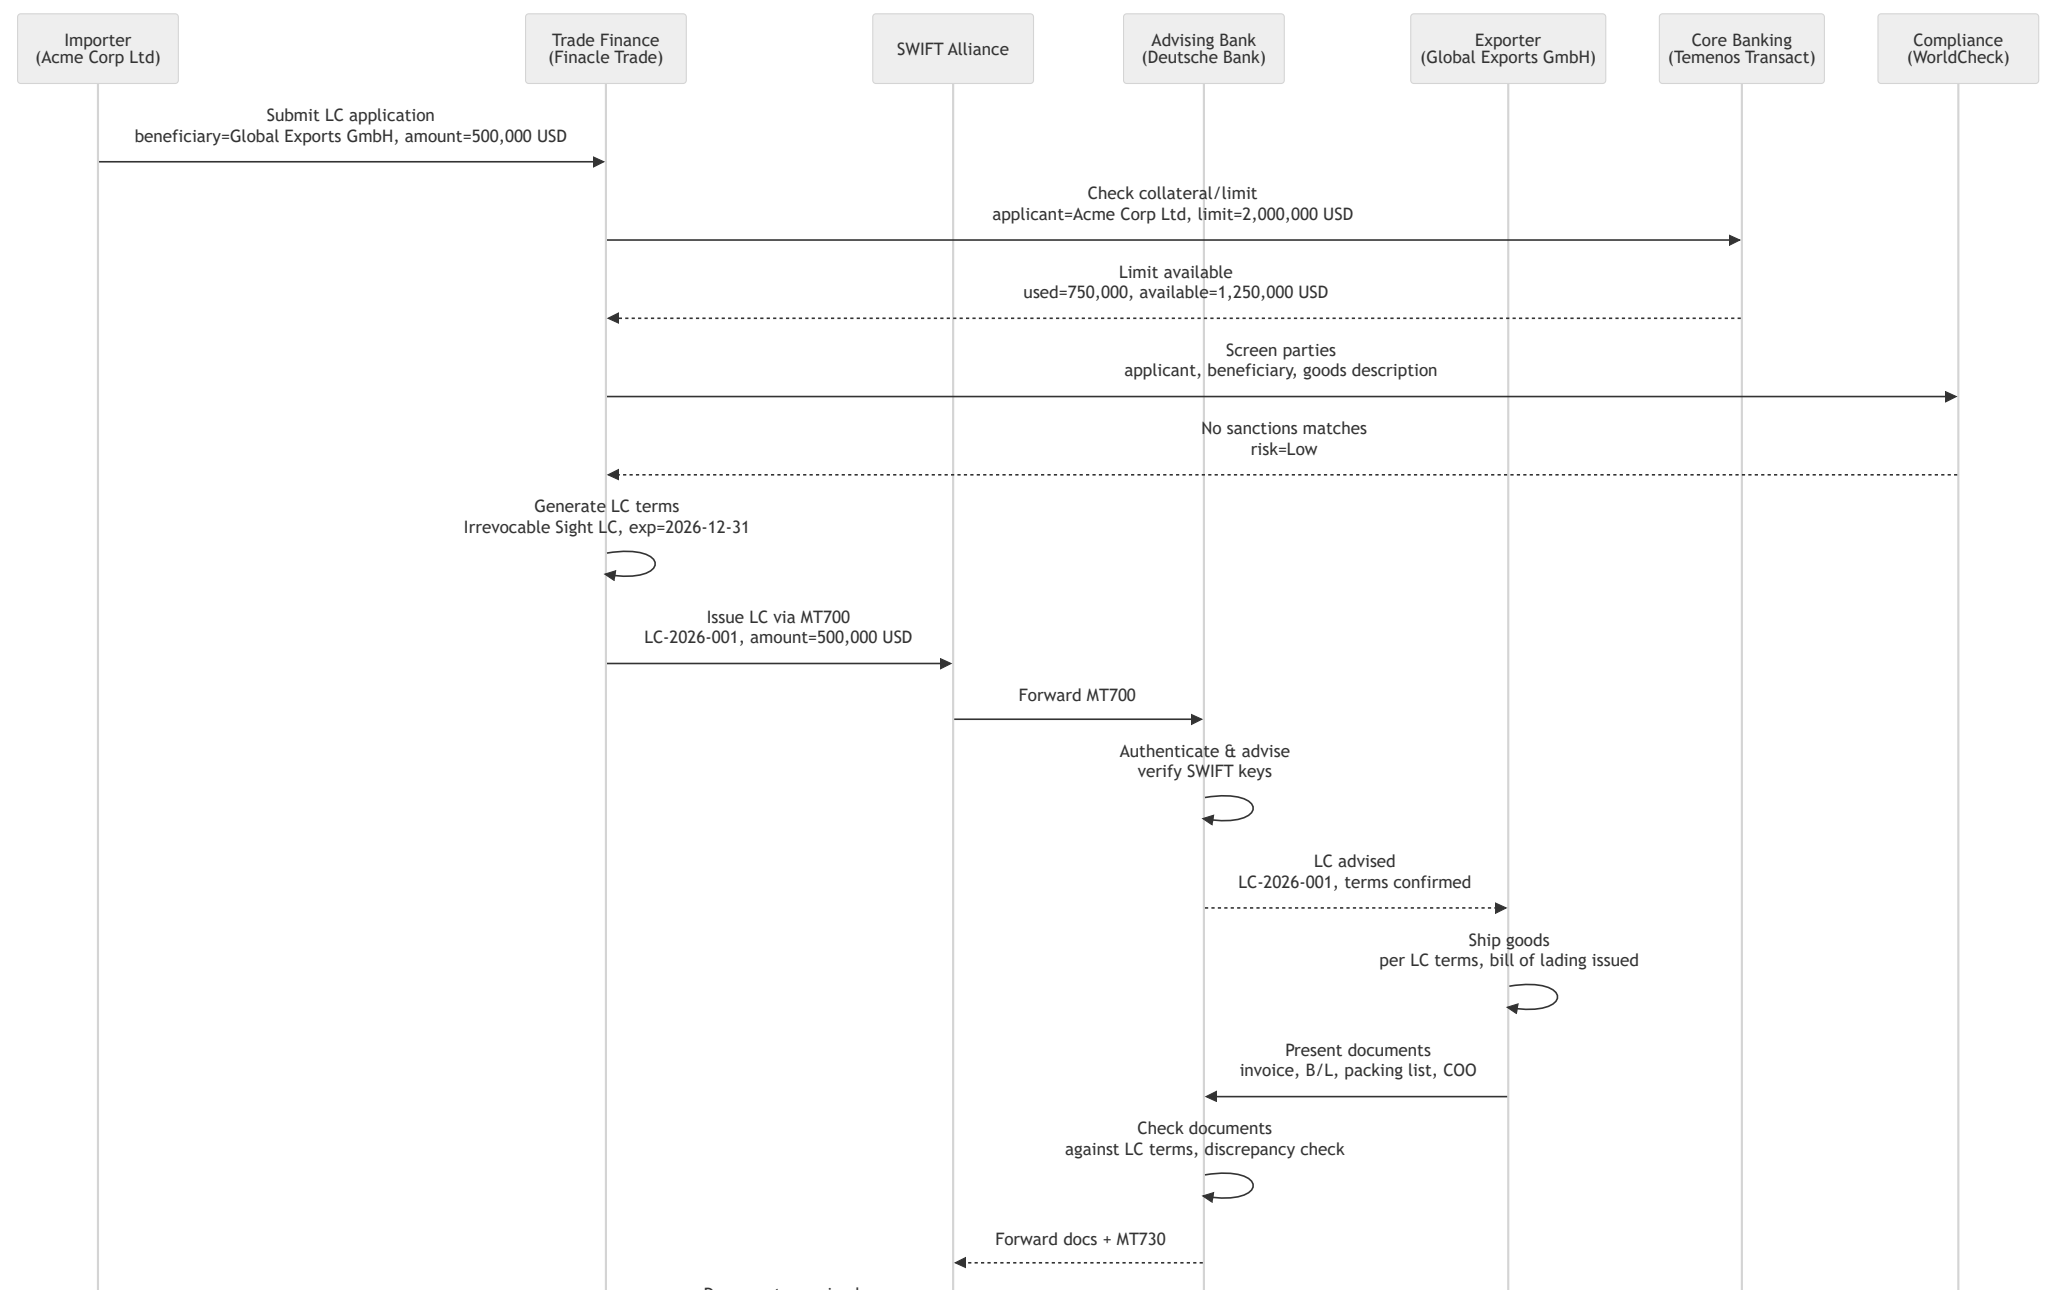

9.1 Letter of Credit Issuance

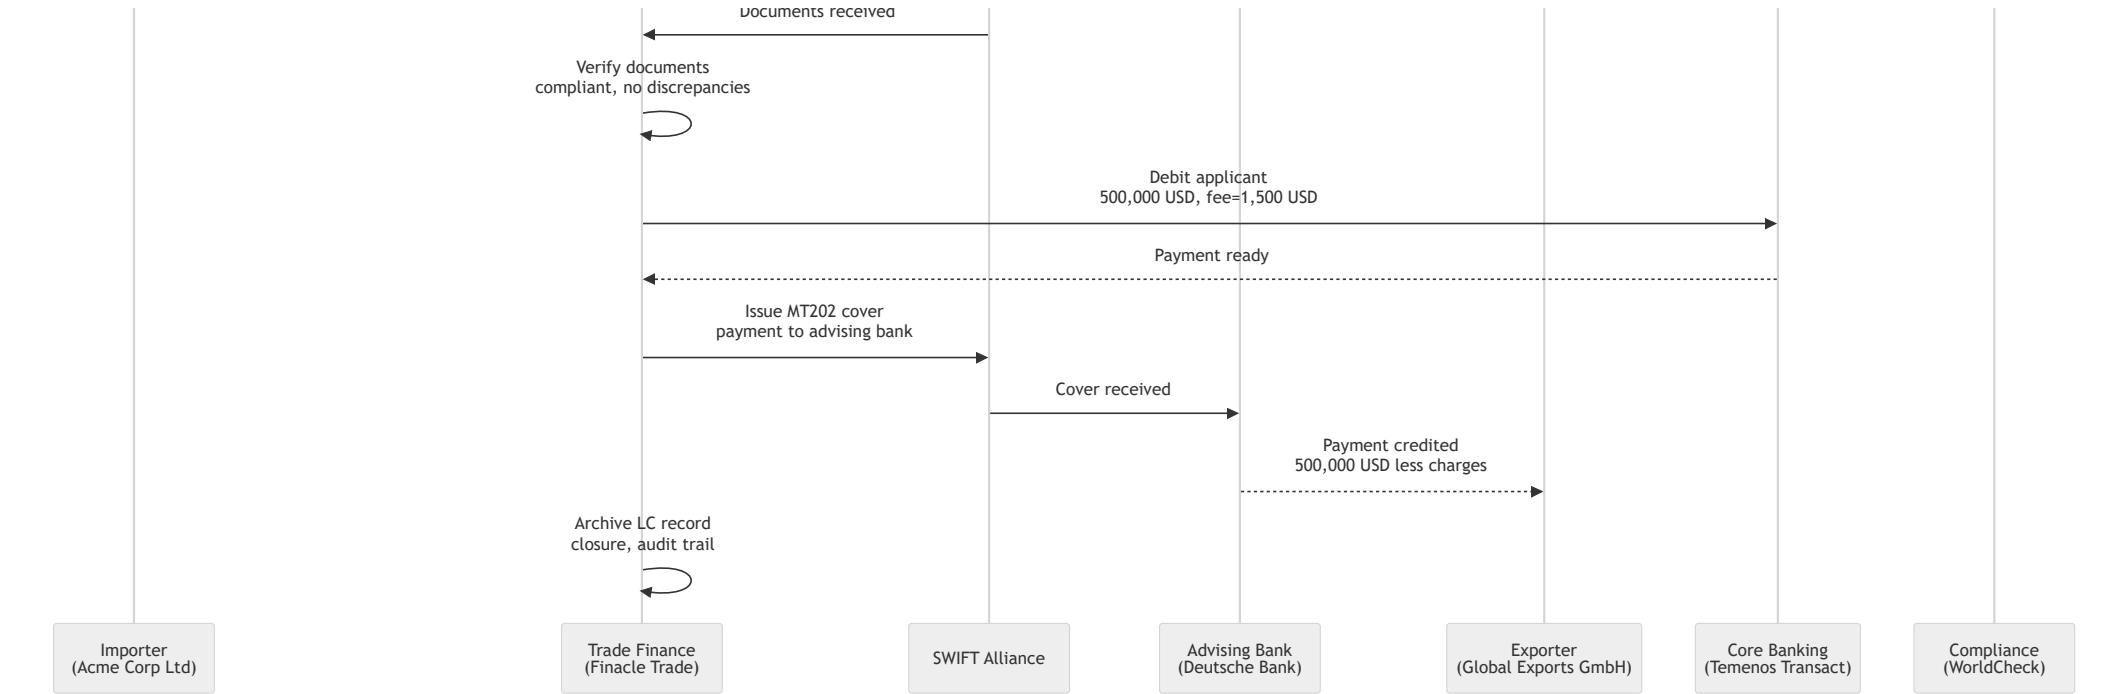

Description: Importer applies for LC. Bank issues LC via SWIFT MT700 to advising bank. Exporter ships goods, presents documents, bank checks compliance and pays.

Actors: Customer (Importer), Trade Operations Officer, Compliance Officer

Systems: Trade Finance System (Finacle Trade), SWIFT Alliance Gateway, Core Banking (Temenos Transact), Compliance (WorldCheck), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
LC Issuance	Application	SubmitLCApplication	Importer Portal (Finacle Trade)	Trade Finance System (Finacle Trade)	Finacle Web Portal	Finacle Trade API	API-led (Real-time)	Medium
LC Issuance	Limit	CheckCustomerLimit	Trade Finance System (Finacle Trade)	Core Banking (Temenos Transact)	Finacle REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
LC Issuance	Compliance	ScreenTradeParties	Trade Finance System (Finacle Trade)	Compliance (WorldCheck)	Finacle REST API	WorldCheck API (SOAP)	API-led (Real-time)	High
LC Issuance	SWIFT	IssueMT700	Trade Finance System (Finacle Trade)	SWIFT Alliance Gateway	Finacle Trade API (MT)	SWIFT Alliance (MT700)	API-led (Real-time)	High
LC Issuance	Payment	ProcessLCPayment	Trade Finance System (Finacle Trade)	Core Banking (Temenos Transact)	Finacle REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
LC Issuance	Archive	ArchiveLC	Trade Finance System (Finacle Trade)	Document Mgmt (M-Files)	Finacle REST API	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
LC Issuance	Application	LC application submitted with all required fields and supporting documents	Application validated; limit checked; incomplete applications rejected with clear errors
LC Issuance	Limit	Customer limit checked and sufficient for LC face value plus margin	Limit reserved; available limit reduced; margin requirement of 10-30% verified
LC Issuance	Compliance	All trade parties screened against sanctions and PEP lists	Parties screened; high-risk jurisdictions flagged; enhanced due diligence triggered if required
LC Issuance	SWIFT	SWIFT MT700 message issued and sent to advising bank	MT700 authenticated by SWIFT; UETR assigned; advising bank acknowledges within 24hrs
LC Issuance	Payment	Payment processed on compliant document presentation	Documents verified compliant; payment made within agreed tenor; discrepancies handled per UCP600
LC Issuance	Archive	LC record archived with full document set and audit trail	All documents indexed; audit trail complete; retention period 7 years post-expiry

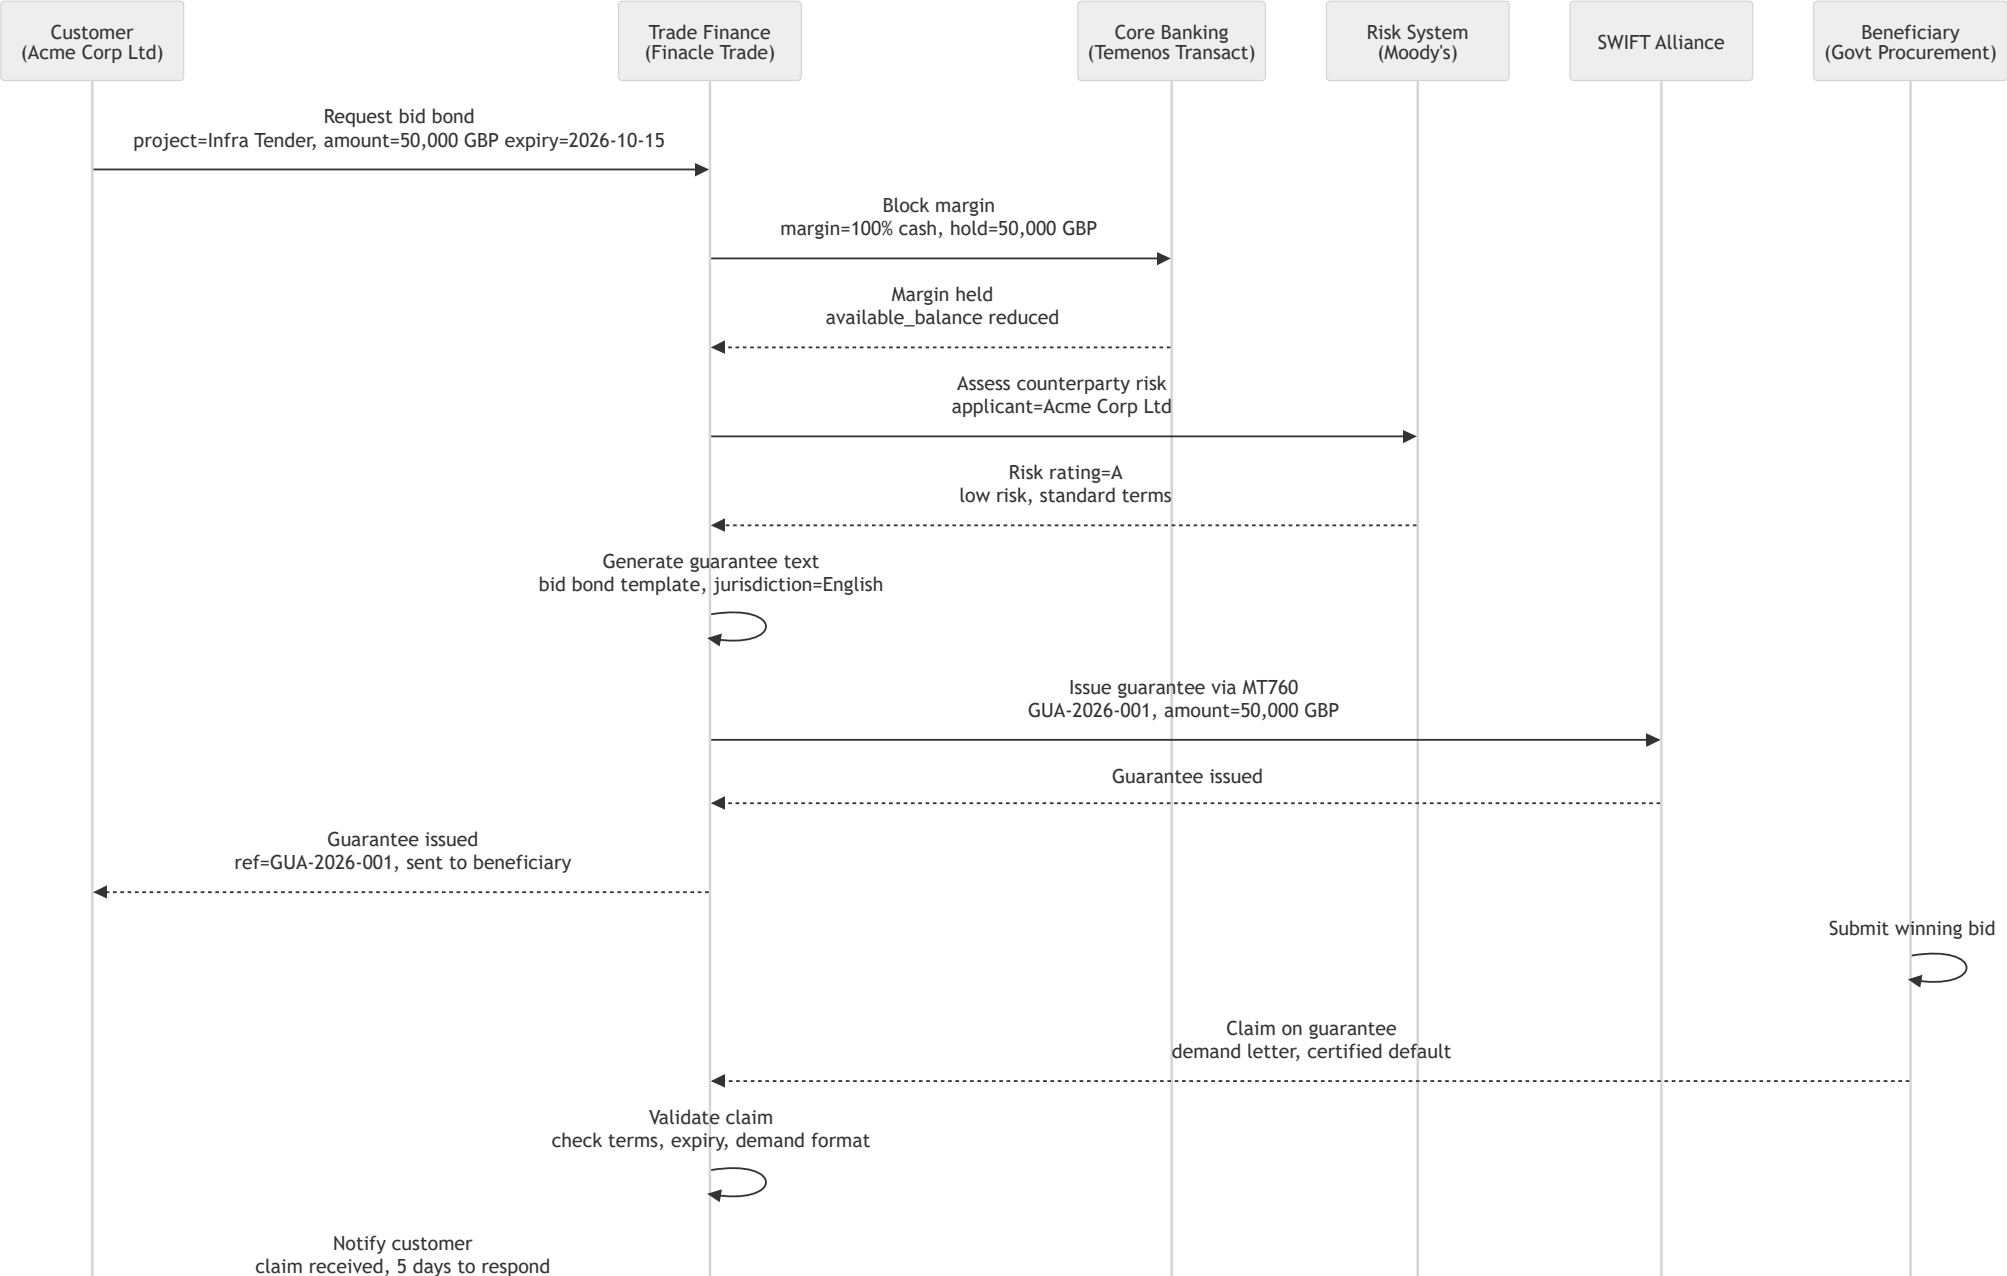

9.2 Bank Guarantee Issuance

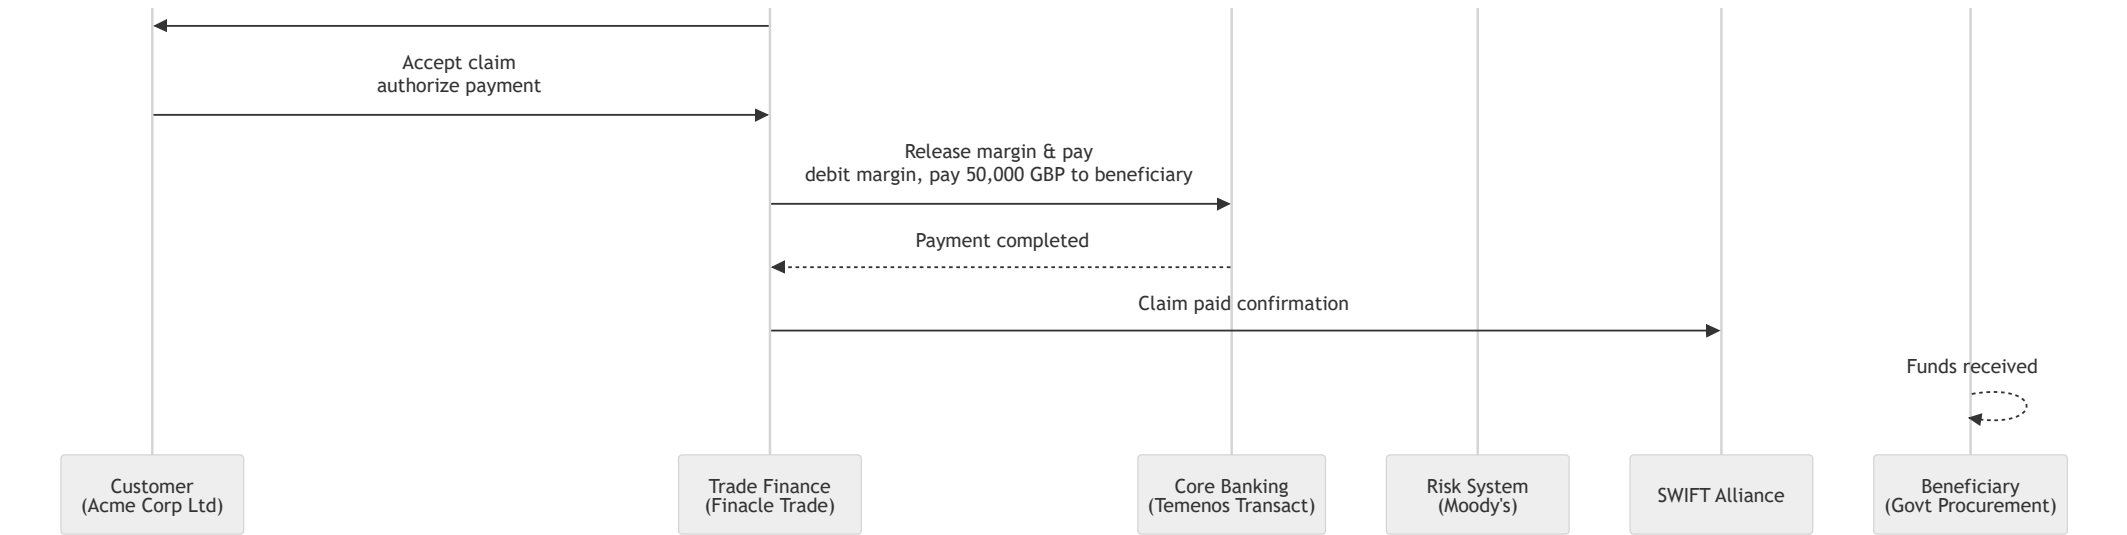

Description: Customer requests bank guarantee for a contract bid. Bank issues guarantee to beneficiary, manages margin/collateral, handles claim and expiry.

Actors: Customer (Corporate), Trade Operations, Risk Analyst

Systems: Trade Finance System (Finacle Trade), SWIFT Alliance Gateway, Core Banking (Temenos Transact), Risk System (Moody's), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Guarantee	Request	RequestGuarantee	Customer Portal (Finacle Trade)	Trade Finance System (Finacle Trade)	Finacle Web Portal	Finacle Trade API	API-led (Real-time)	Simple
Guarantee	Margin	BlockCashMargin	Trade Finance System (Finacle Trade)	Core Banking (Temenos Transact)	Finacle REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Guarantee	Risk	AssessCounterpartyRisk	Trade Finance System (Finacle Trade)	Risk System (Moody's)	Finacle REST API	Moody's Risk Analyst API (SOAP)	API-led (Real-time)	Medium
Guarantee	SWIFT	IssueMT760	Trade Finance System (Finacle Trade)	SWIFT Alliance Gateway	Finacle Trade API (MT)	SWIFT Alliance (MT760)	API-led (Real-time)	High
Guarantee	Claim	ProcessGuaranteeClaim	Trade Finance System (Finacle Trade)	Core Banking (Temenos Transact)	Finacle REST API	Temenos REST API (API Key)	Event-driven	High

Acceptance Criteria

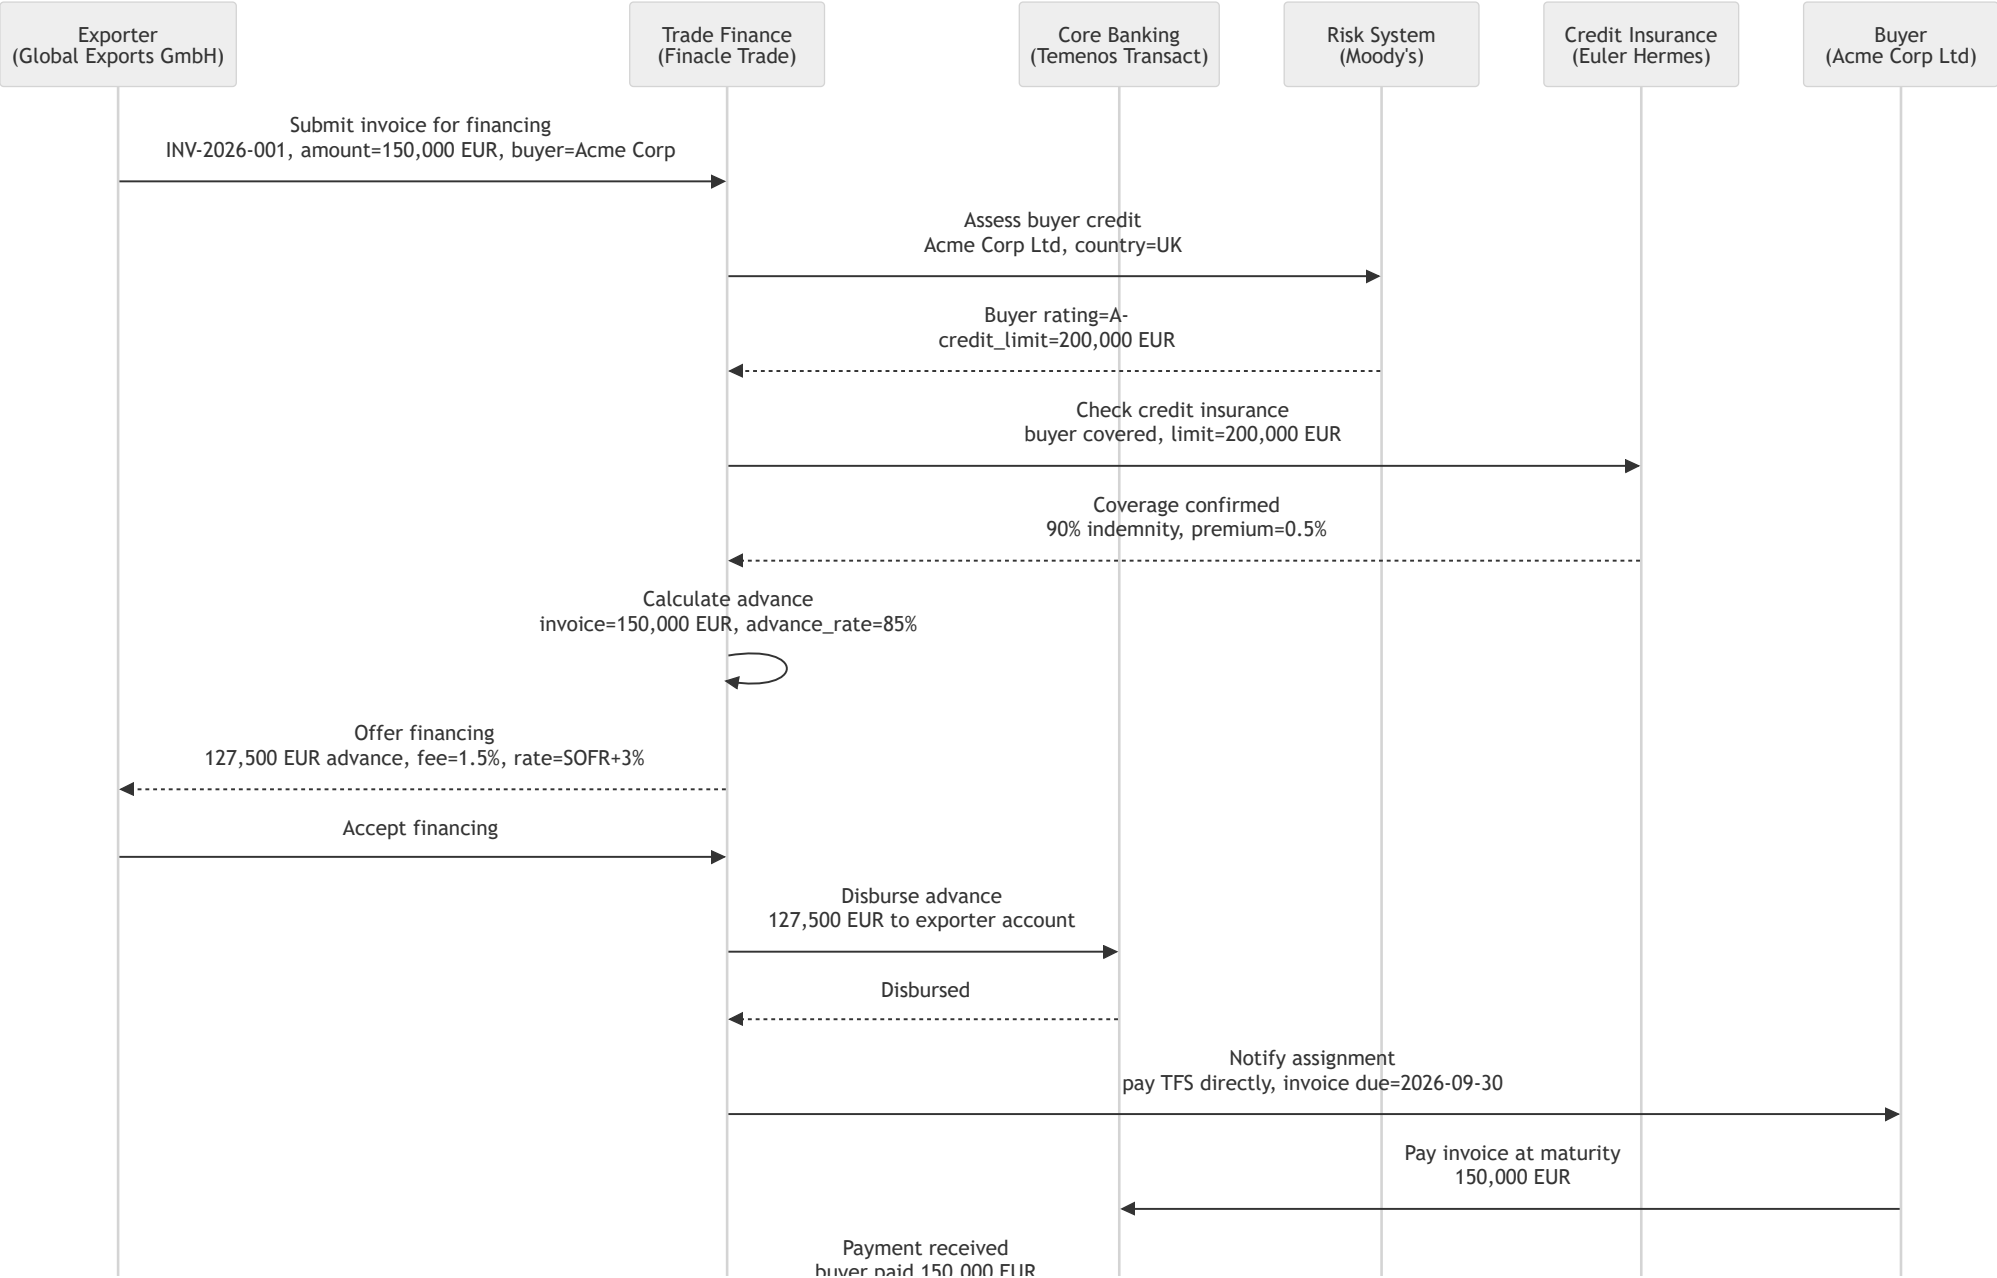

Flow	Entity	Acceptance Criterion	Expected Outcome
Guarantee	Request	Guarantee request submitted with all required details	Application validated; guarantee type and template selected; terms confirmed
Guarantee	Margin	Cash margin blocked in customer account for guarantee value	Margin successfully held; funds ear-marked; margin release triggered on expiry
Guarantee	Risk	Counterparty risk assessed and risk rating determined	Risk rating assigned; rated A-E; rating determines margin % and pricing
Guarantee	SWIFT	SWIFT MT760 message issued to beneficiary bank	MT760 authenticated; beneficiary bank notified; guarantee registered
Guarantee	Claim	Claim processed correctly per guarantee terms	Claim validated against terms; payment made only if demand compliant; customer notified

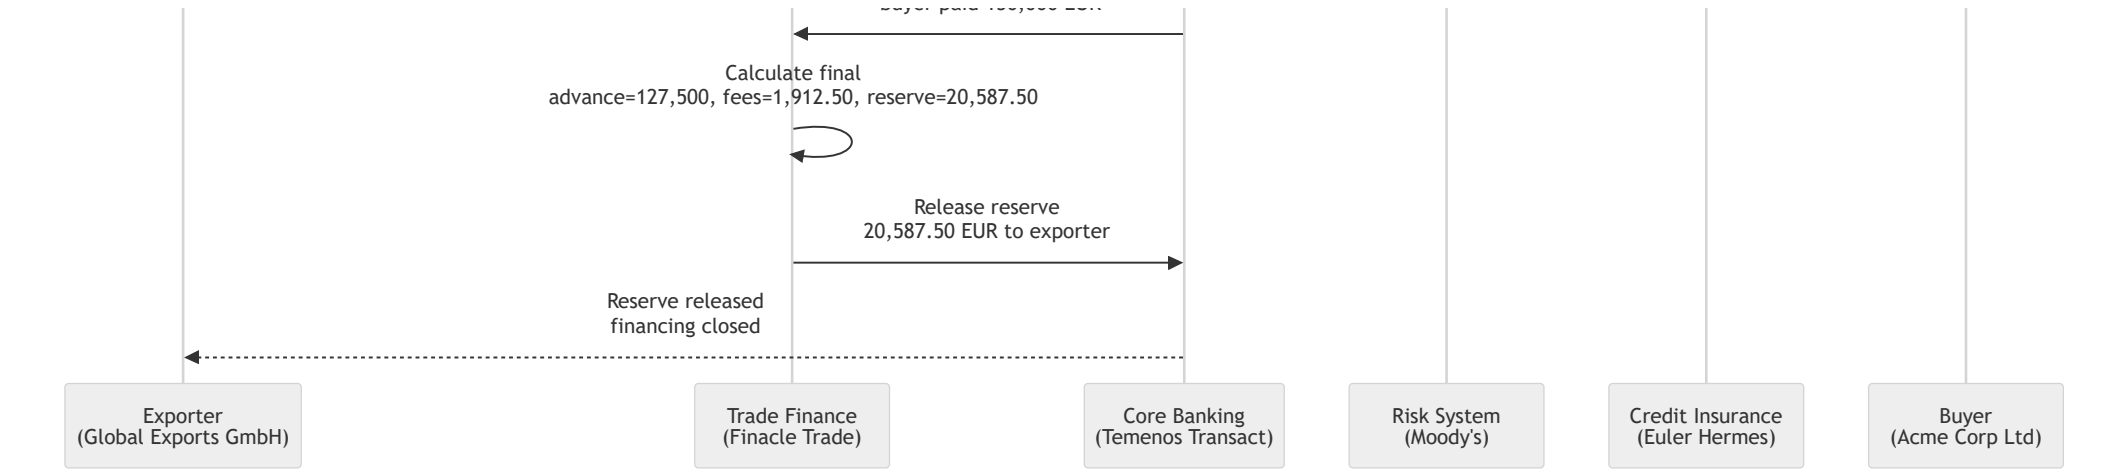

9.3 Invoice Financing

Description: Exporter requests financing against unpaid invoices. Bank evaluates invoices, advances funds, manages collection from buyer.

Actors: Customer (Exporter), Trade Operations Officer, Risk Analyst
Systems: Trade Finance System (Finacle Trade), Core Banking (Temenos Transact), Risk System (Moody's), Receivables Platform (TradeIX), Credit Insurance (Euler Hermes)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Invoice Financing	Submission	SubmitInvoiceForFinancing	Exporter Portal (Finacle Trade)	Trade Finance System (Finacle Trade)	Finacle Web Portal	Finacle Trade API	API-led (Real-time)	Simple
Invoice Financing	Credit Assessment	AssessBuyerCredit	Trade Finance System (Finacle Trade)	Risk System (Moody's)	Finacle REST API	Moody's Risk Analyst API (SOAP)	API-led (Real-time)	Medium
Invoice Financing	Insurance	CheckCreditInsurance	Trade Finance System (Finacle Trade)	Credit Insurance (Euler Hermes)	Finacle REST API	Euler Hermes API (SOAP)	API-led (Real-time)	Medium
Invoice Financing	Advance	DisburseAdvance	Trade Finance System (Finacle Trade)	Core Banking (Temenos Transact)	Finacle REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Invoice Financing	Collection	ProcessCollection	Core Banking (Temenos Transact)	Trade Finance System (Finacle Trade)	Temenos REST API	Finacle REST API	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Invoice Financing	Submission	Valid invoice submitted with proof of delivery and assignment clause	Invoice validated against buyer; duplicate checks performed; fraud checks passed
Invoice Financing	Credit Assessment	Buyer credit assessed and facility limit checked	Buyer within insured limit; credit rating determines advance rate; excess requires approval
Invoice Financing	Insurance	Credit insurance policy checked and coverage confirmed for buyer	Coverage in force; indemnity % confirmed; premium calculated and quoted
Invoice Financing	Advance	Advance disbursed to exporter account per agreed terms	Funds credited within 2 hours; advance rate applied correctly; fees deducted upfront
Invoice Financing	Collection	Maturity proceeds collected and reserve remitted to exporter	Payment from buyer received; reserve calculated correctly; all fees accounted

10: Wealth Management - BC074 BC075

Wealth management services covering portfolio management, financial advisory, and asset allocation. Integration with market data, custody, and reporting systems.

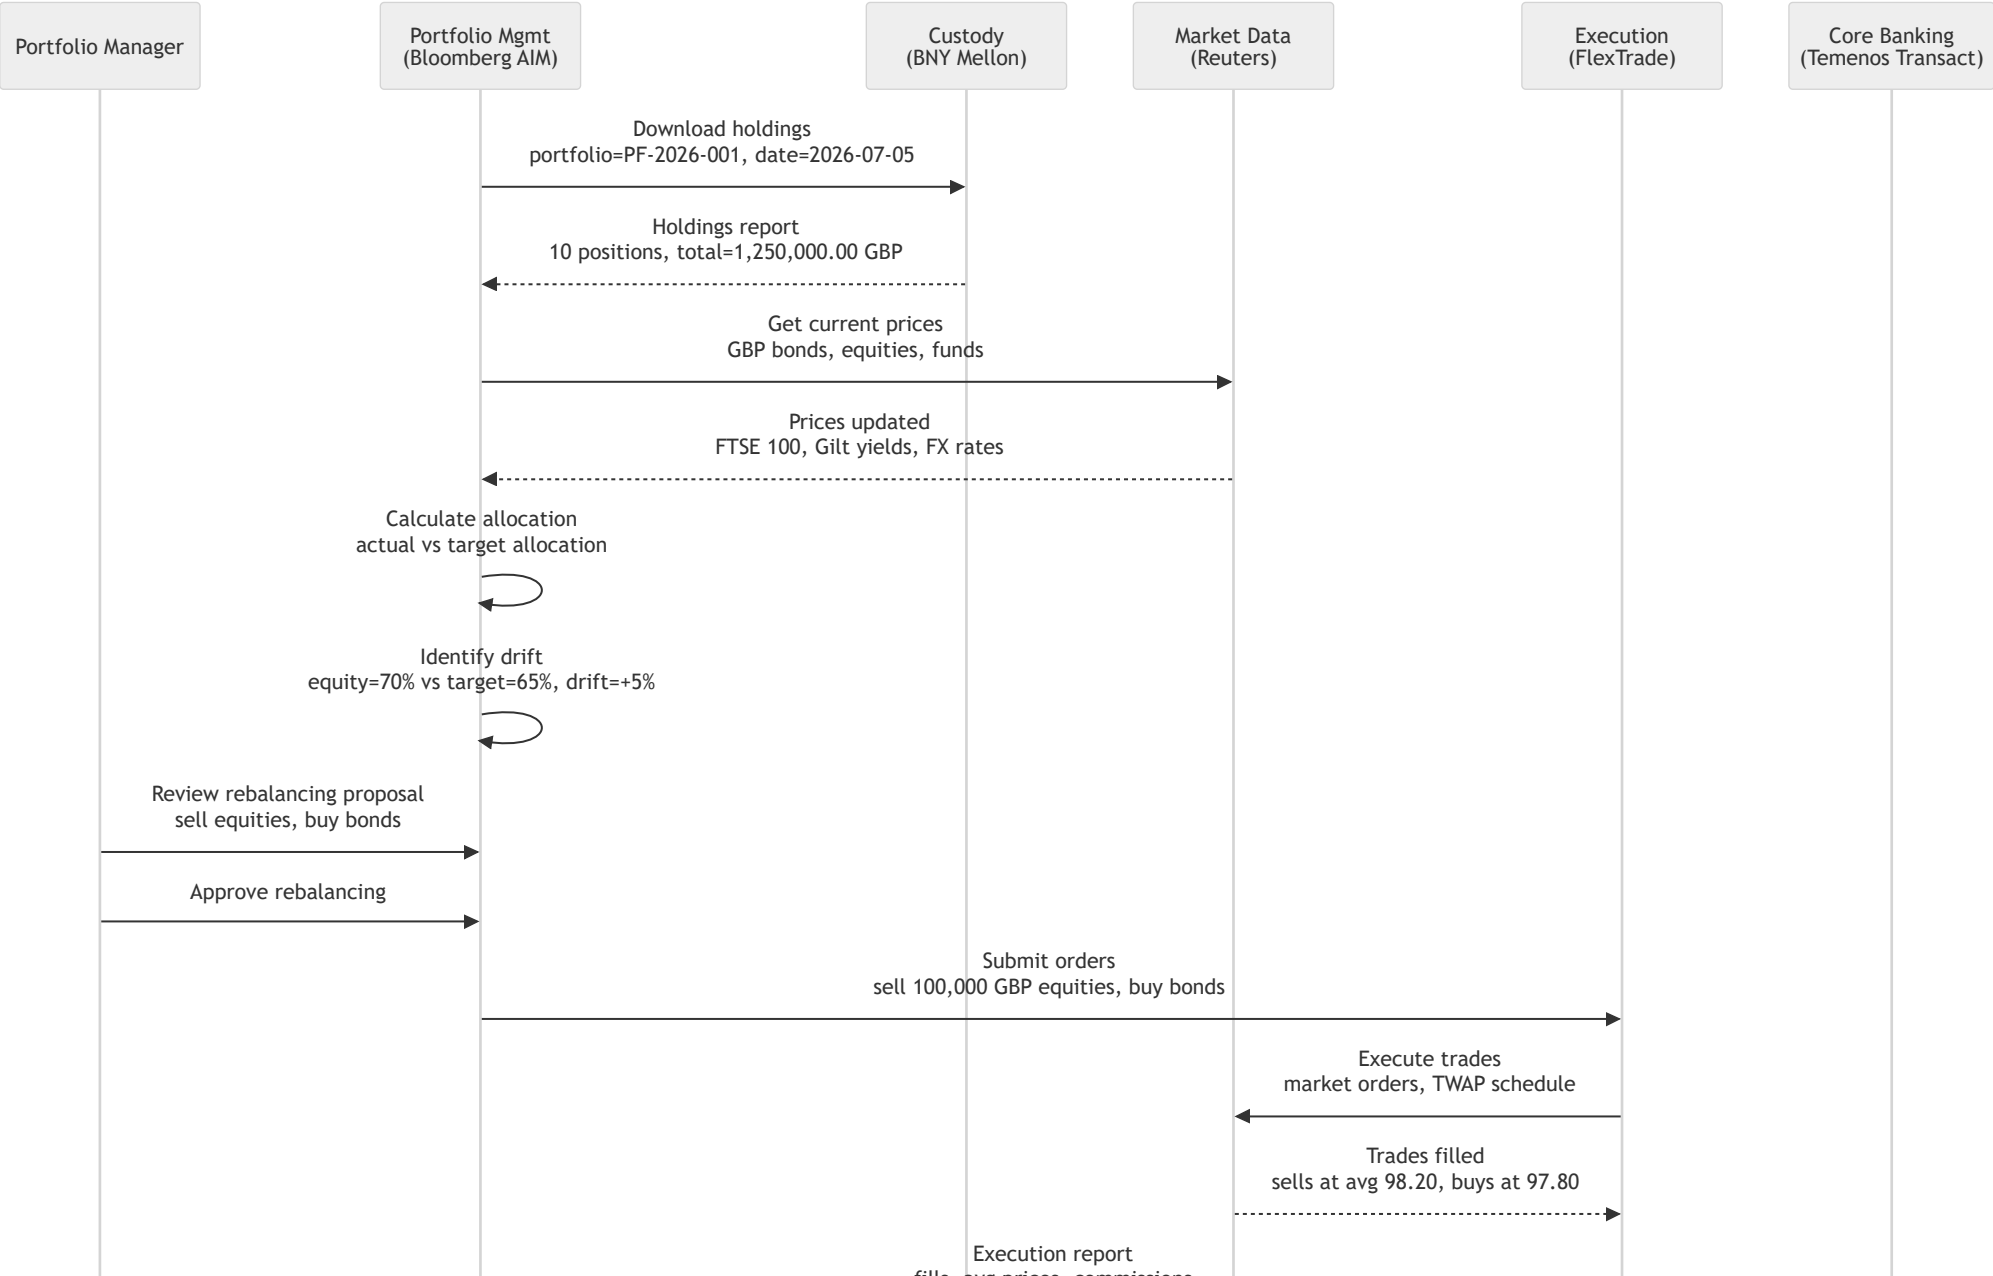

10.1 Portfolio Management & Rebalancing

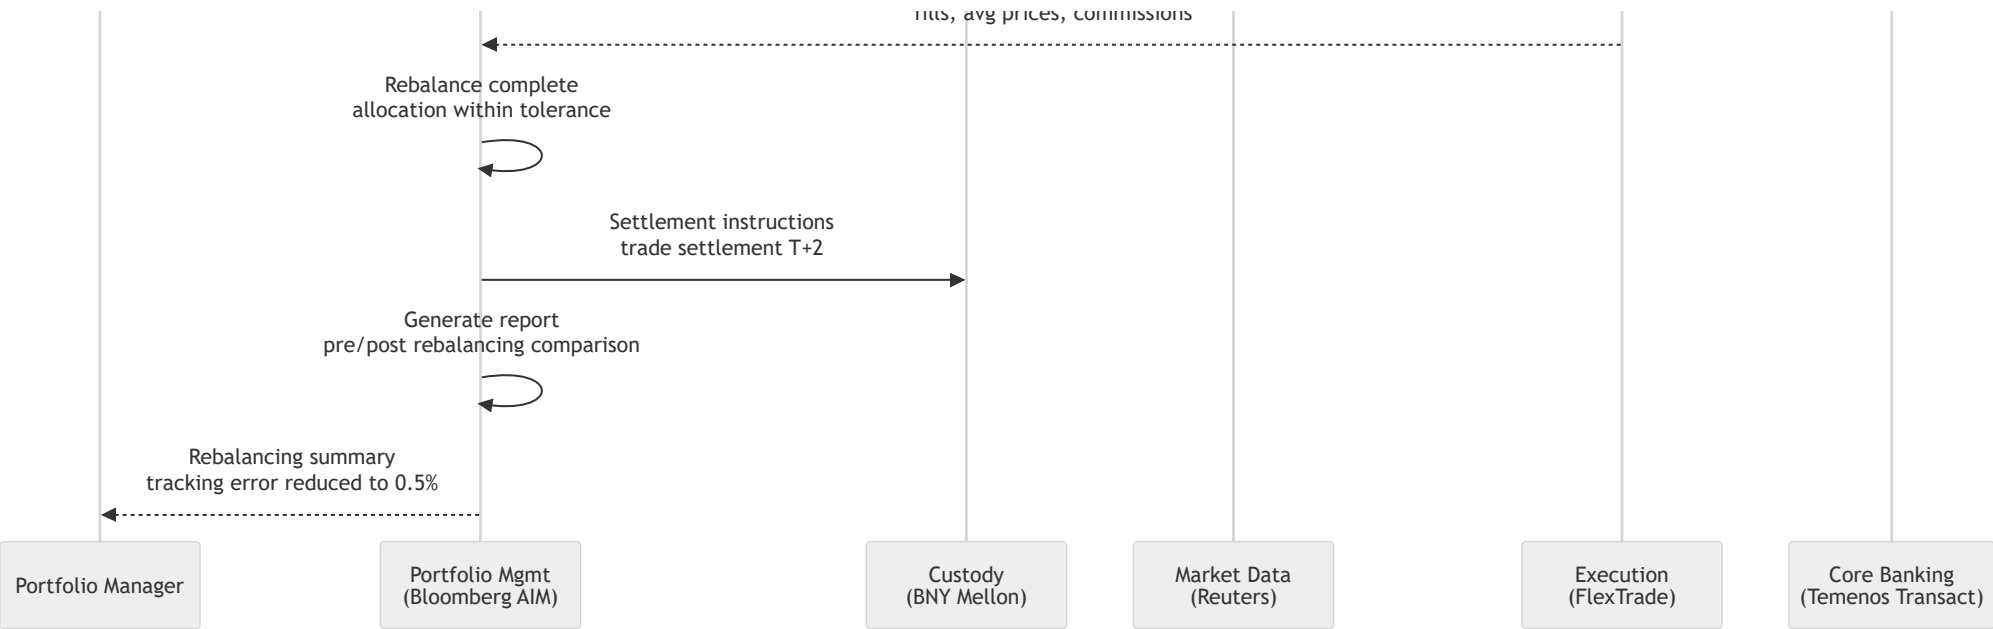

Description: Wealth manager reviews portfolio performance against benchmarks. System executes rebalancing trades, generates performance reports, monitors risk.

Actors: Portfolio Manager, Wealth Advisor, Client

Systems: Portfolio Management (Bloomberg AIM), Custody System (BNY Mellon), Market Data (Reuters), Execution Mgmt (FlexTrade), Core Banking (Temenos Transact)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Portfolio Mgmt	Holdings	DownloadHoldings	Portfolio Mgmt (Bloomberg AIM)	Custody (BNY Mellon)	Bloomberg AIM API	BNY Mellon API (SFTP)	Batch (Scheduled)	High
Portfolio Mgmt	Pricing	GetMarketPrices	Portfolio Mgmt (Bloomberg AIM)	Market Data (Reuters)	Bloomberg AIM API	Reuters API (REST)	API-led (Real-time)	Medium
Portfolio Mgmt	Rebalancing	ExecuteRebalancing	Portfolio Mgmt (Bloomberg AIM)	Execution Mgmt (FlexTrade)	Bloomberg AIM FIX	FlexTrade FIX	API-led (Real-time)	High
Portfolio Mgmt	Settlement	SendSettlementInstructions	Portfolio Mgmt (Bloomberg AIM)	Custody (BNY Mellon)	Bloomberg AIM API	BNY Mellon API (SFTP)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Portfolio Mgmt	Holdings	Daily holdings downloaded from custody and reconciled	All positions reconciled; price variances >0.5% flagged; failed downloads retried
Portfolio Mgmt	Pricing	Market prices retrieved for all instruments in portfolio	Prices within 30 minutes of market open; stale prices flagged; estimated prices used as fallback
Portfolio Mgmt	Rebalancing	Portfolio rebalanced to target allocation within tolerance bands	Drift >3% triggers rebalancing; execution within 1% of target; tracking error <=0.5%
Portfolio Mgmt	Settlement	Settlement instructions sent to custodian for executed trades	Instructions match execution; T+2 settlement; failed trades investigated within 1 hour

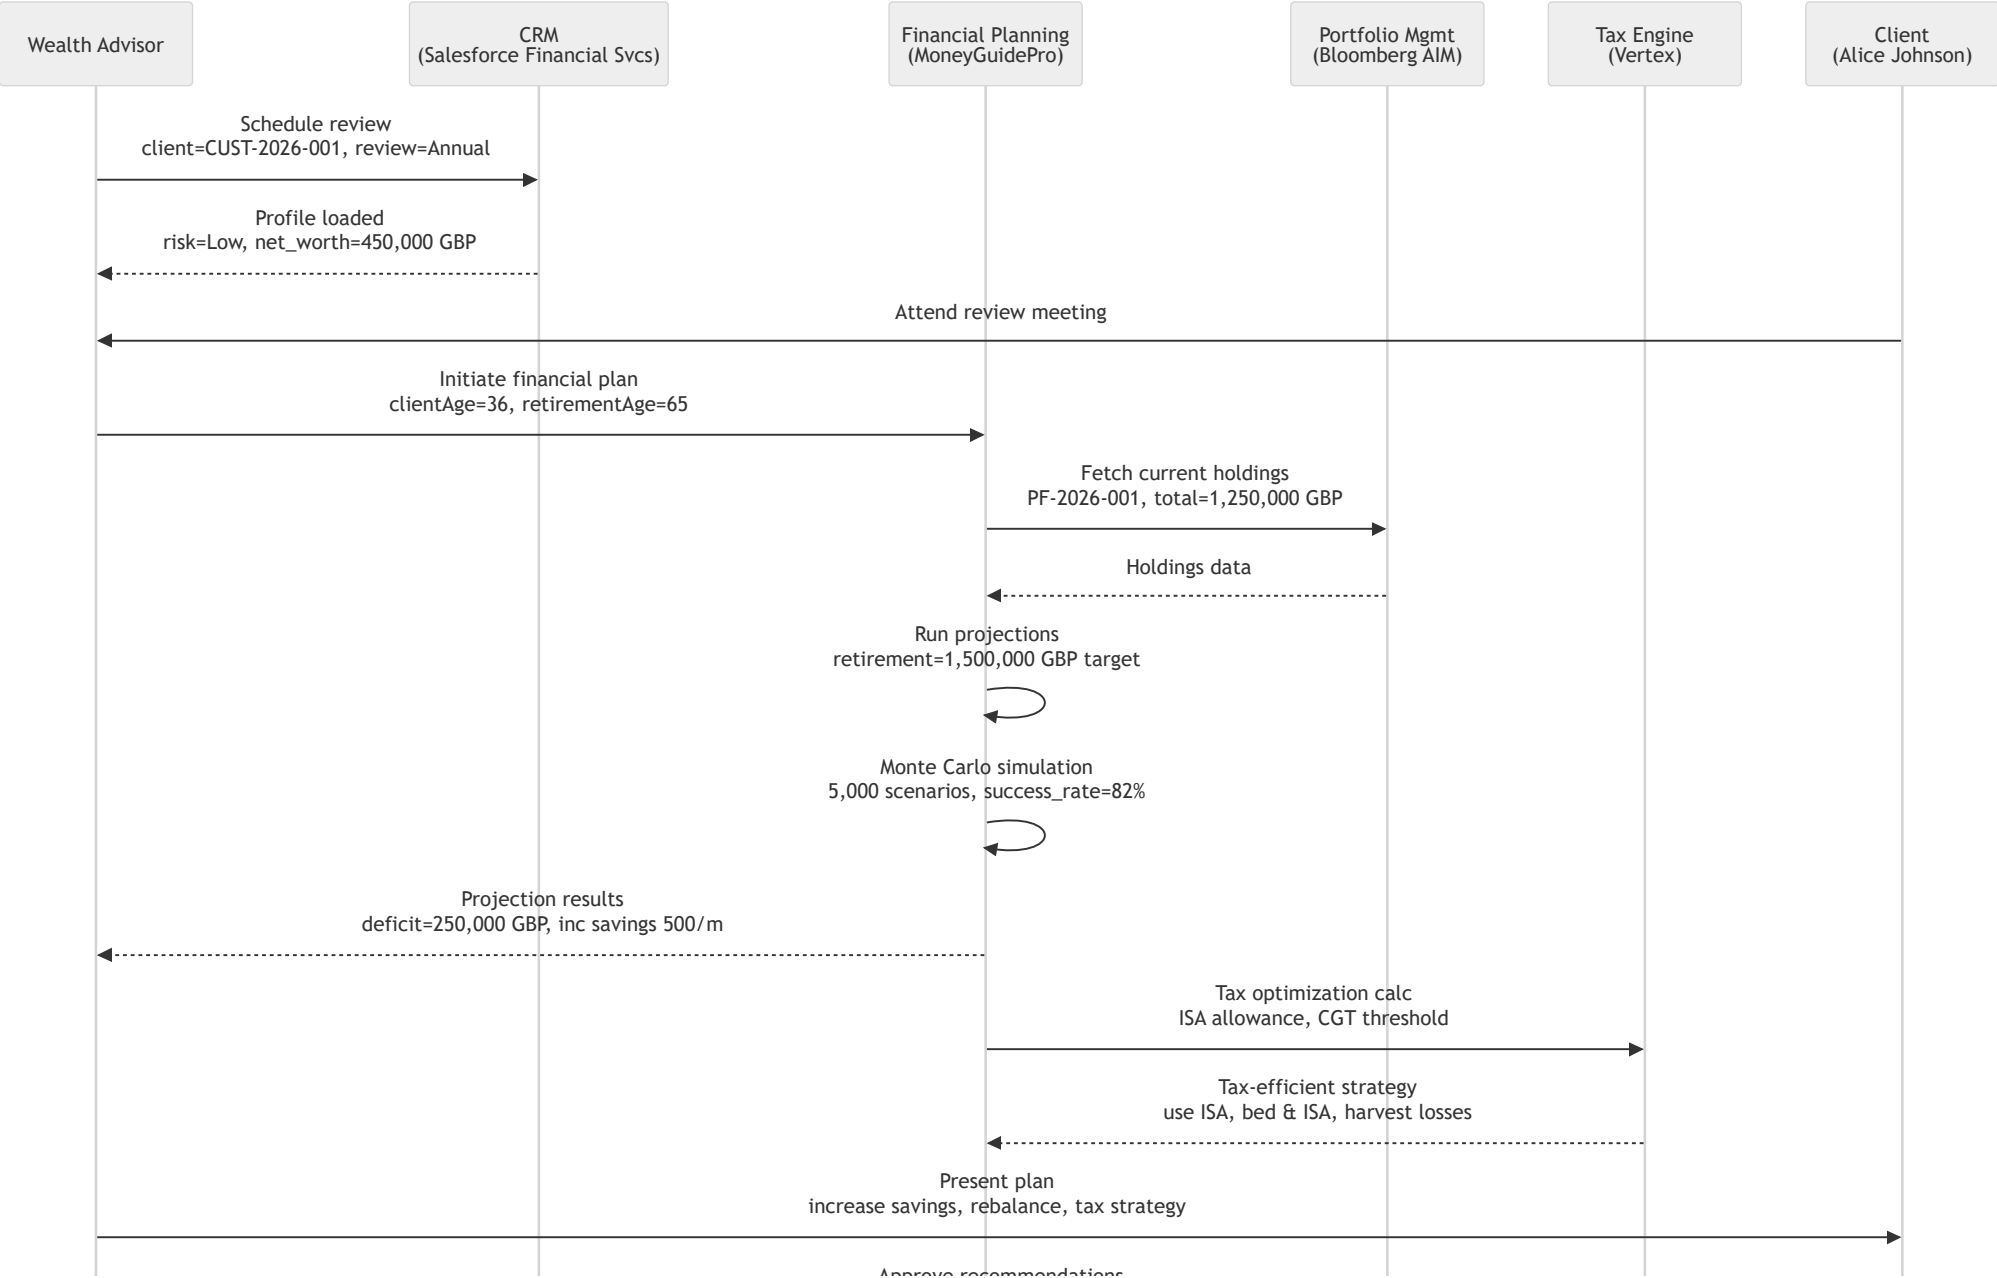

10.2 Financial Advisory & Planning

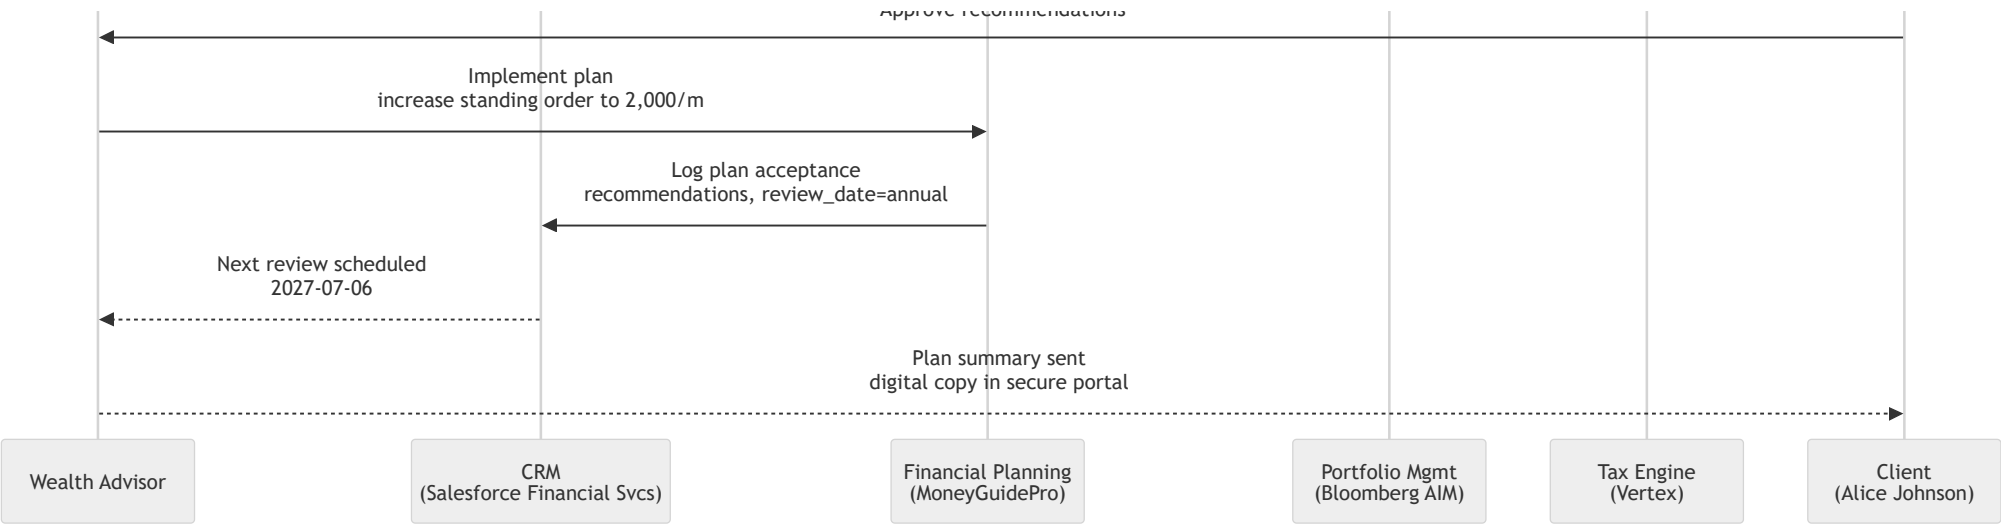

Description: Wealth advisor meets client, reviews financial goals, builds financial plan. System runs projections, tax optimization, retirement modeling.

Actors: Wealth Advisor, Client

Systems: Financial Planning (MoneyGuidePro/Advisor360), CRM (Salesforce Financial Services), Portfolio Mgmt (Bloomberg AIM), Document Mgmt (M-Files), Tax Engine (Vertex)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Financial Advisory	Planning	InitiateFinancialPlan	Wealth Advisor Portal (Advisor360)	Financial Planning (MoneyGuidePro)	Advisor360 API	MoneyGuidePro API (SOAP)	API-led (Real-time)	Medium
Financial Advisory	Holdings	FetchCurrentHoldings	Financial Planning (MoneyGuidePro)	Portfolio Mgmt (Bloomberg AIM)	MoneyGuidePro API	Bloomberg AIM API (REST)	API-led (Real-time)	Medium
Financial Advisory	Tax Calc	CalculateTaxStrategy	Financial Planning (MoneyGuidePro)	Tax Engine (Vertex)	MoneyGuidePro API	Vertex API (SOAP)	API-led (Real-time)	High
Financial Advisory	CRM	LogPlanAcceptance	Financial Planning (MoneyGuidePro)	CRM (Salesforce Financial Services)	MoneyGuidePro API	Salesforce REST API (OAuth2)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Financial Advisory	Planning	Financial plan created with client goals, risk profile, and time horizon	Plan includes retirement projection, education funding, and cash flow analysis
Financial Advisory	Holdings	Current holdings fetched from portfolio management and included in plan	Holdings accurately reflected; unrealized gains calculated; asset allocation shown
Financial Advisory	Tax Calc	Tax optimization recommendations generated based on client tax position	ISA allowance utilization; CGT harvesting; bed & ISA; pension contribution calc
Financial Advisory	CRM	Plan acceptance recorded and next review scheduled in CRM	Plan status=Accepted; next review date set; recommendations tracked for follow-up

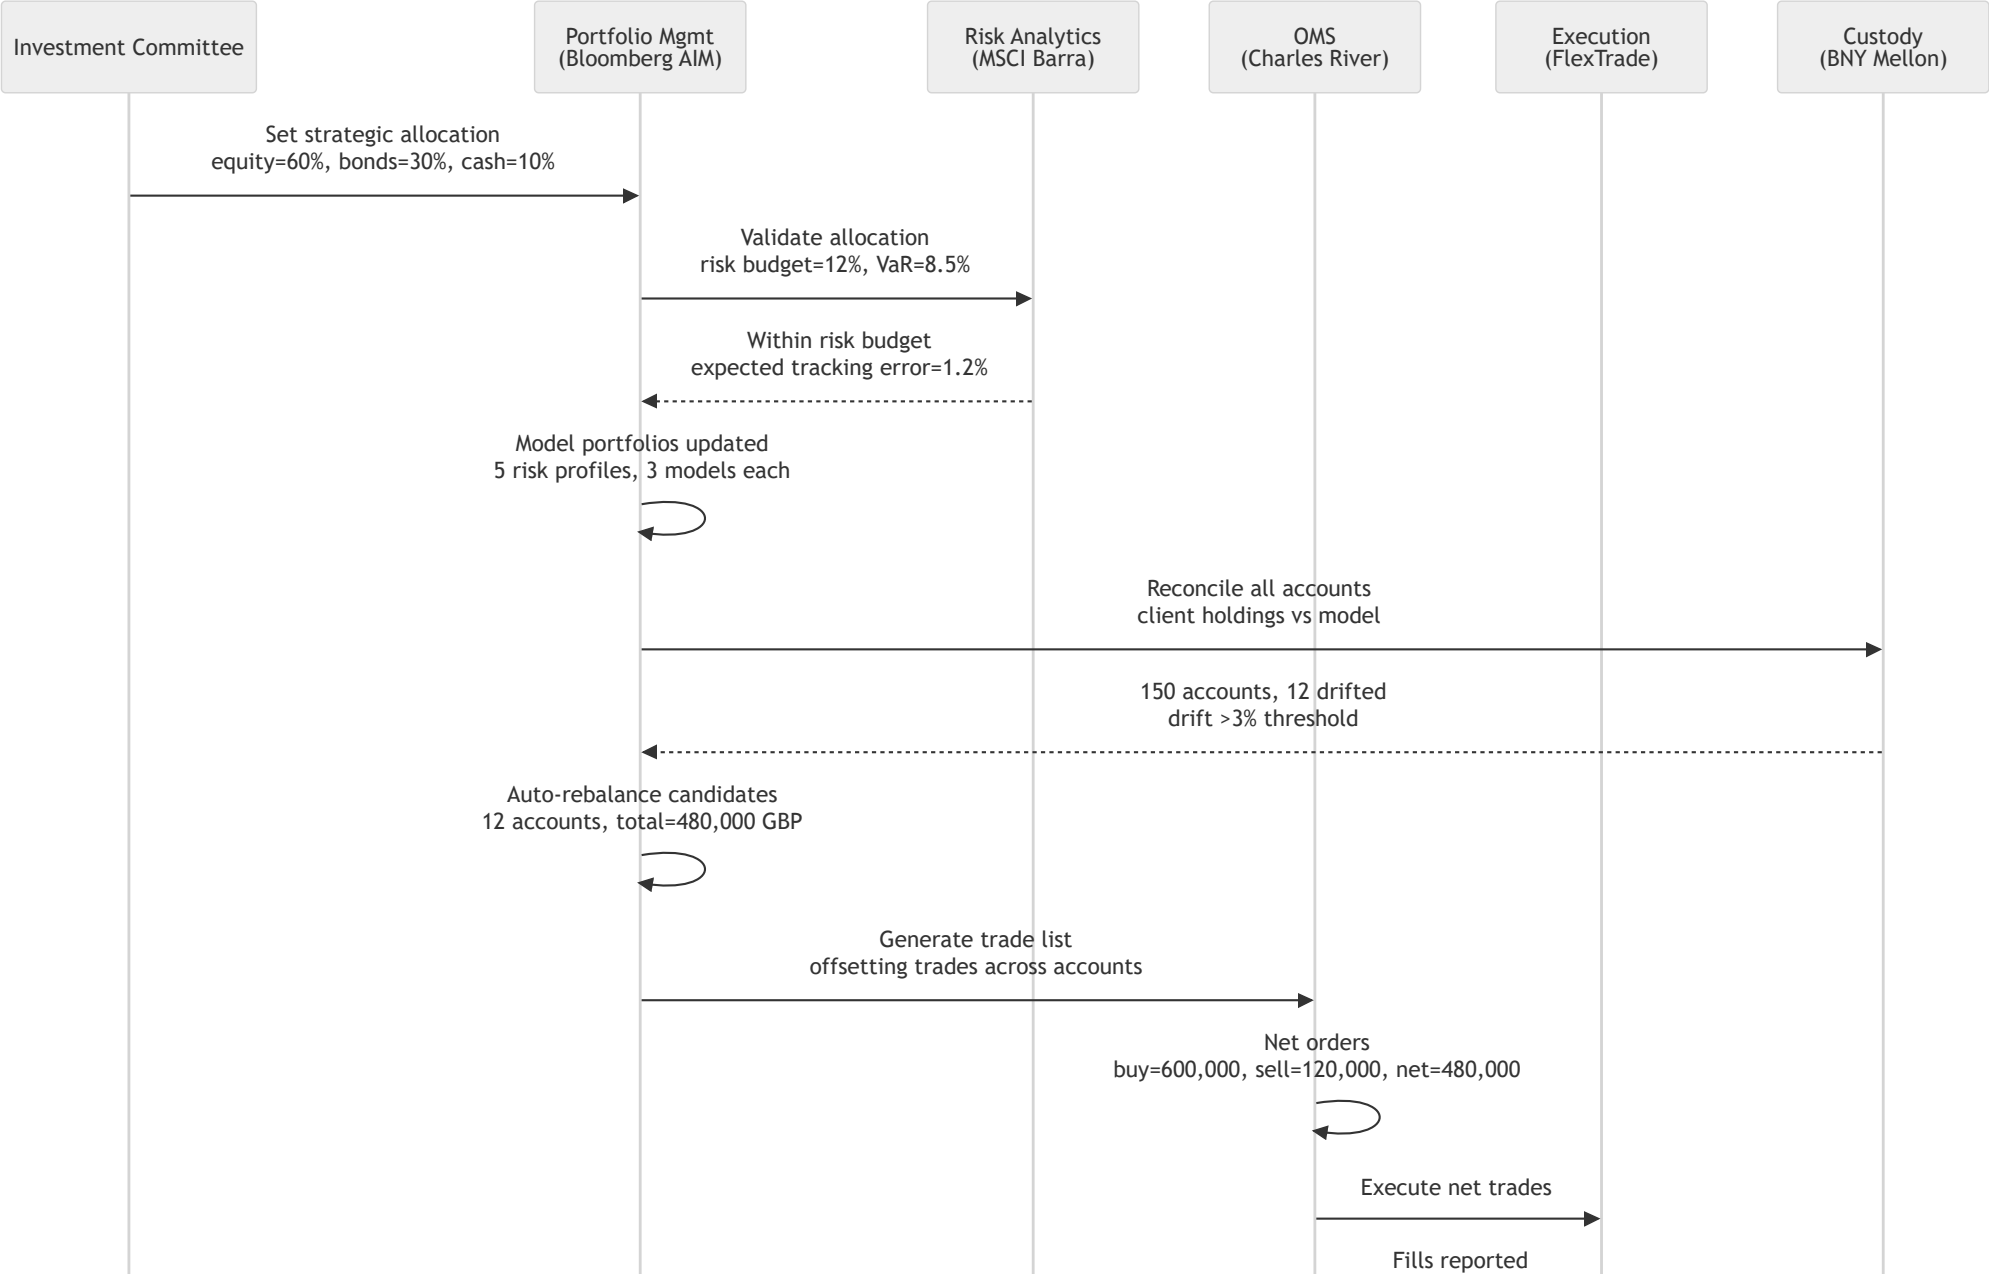

10.3 Asset Allocation & Rebalancing Automation

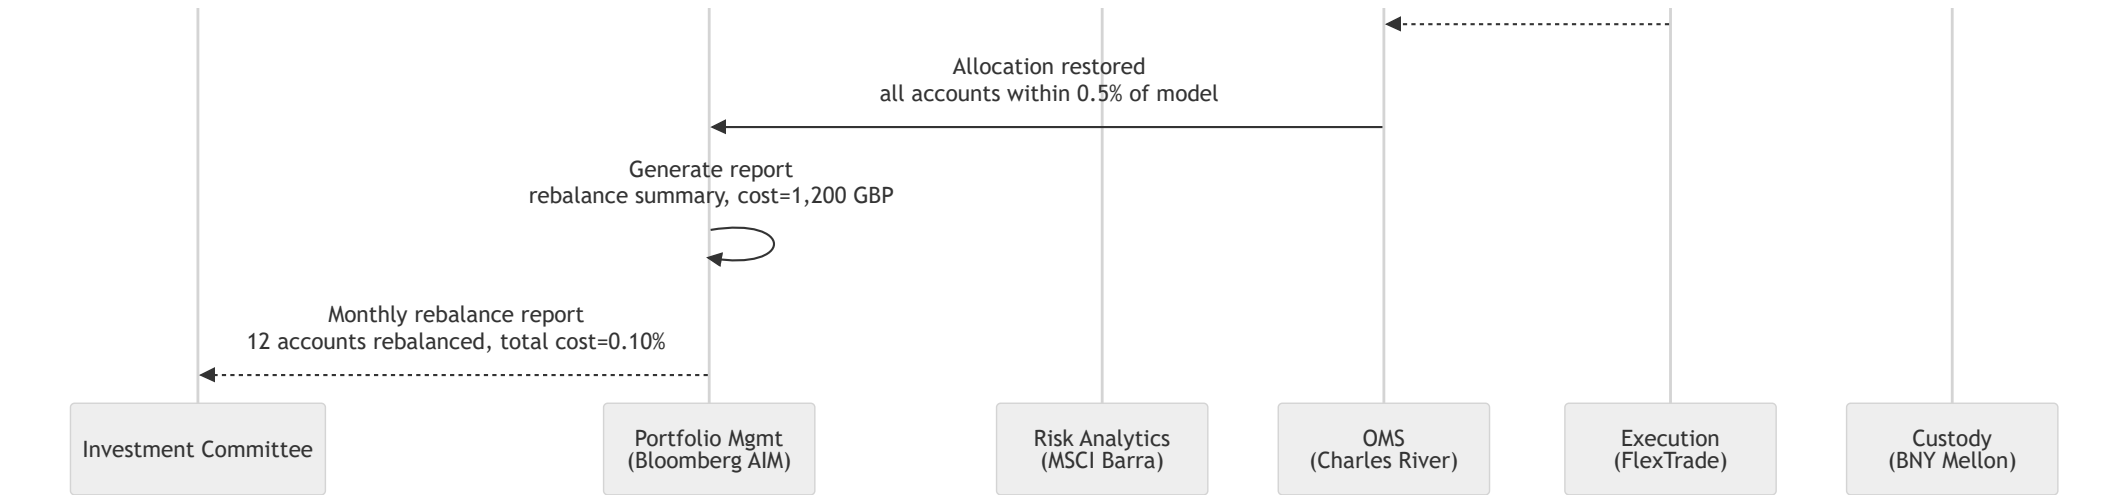

Description: Automated model portfolio management. System monitors allocation drift, executes threshold-based rebalancing, handles cash flows and dividend reinvestment.

Actors: Investment Committee, Portfolio Manager, Client

Systems: Portfolio Mgmt (Bloomberg AIM), Risk Analytics (MSCI Barra), Execution Mgmt (FlexTrade), OMS (Charles River), Custody (BNY Mellon)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Asset Allocation	SAA	SetStrategicAllocation	Investment Committee Portal	Portfolio Mgmt (Bloomberg AIM)	Bloomberg AIM API	Bloomberg AIM API	API-led (Real-time)	Simple
Asset Allocation	Risk Validation	ValidateRiskBudget	Portfolio Mgmt (Bloomberg AIM)	Risk Analytics (MSCI Barra)	Bloomberg AIM API	MSCI Barra API (SOAP)	Batch (Scheduled)	High
Asset Allocation	Rebalancing	AutoRebalancePortfolios	Portfolio Mgmt (Bloomberg AIM)	OMS (Charles River)	Bloomberg AIM FIX	Charles River FIX	Batch (Scheduled)	High
Asset Allocation	Execution	ExecuteNetTrades	OMS (Charles River)	Execution Mgmt (FlexTrade)	Charles River FIX	FlexTrade FIX	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Asset Allocation	SAA	Strategic asset allocation set by investment committee per risk profile	SAA recorded; bands around each asset class; rebalancing thresholds defined
Asset Allocation	Risk Validation	Proposed allocation validated against risk budget	VaR within limit; tracking error vs benchmark below threshold; stress tests passed
Asset Allocation	Rebalancing	Accounts with drift >threshold ident	Drift calculated daily; auto-rebalance within 1% of model; full or threshold rebalance selectable

Flow	Entity	Acceptance Criterion	Expected Outcome
		ified and auto-rebalanced	
Asset Allocation	Execution	Net trades executed efficiently across all rebalancing accounts	Netting optimized; execution cost <15bps; T+2 settlement confirmed

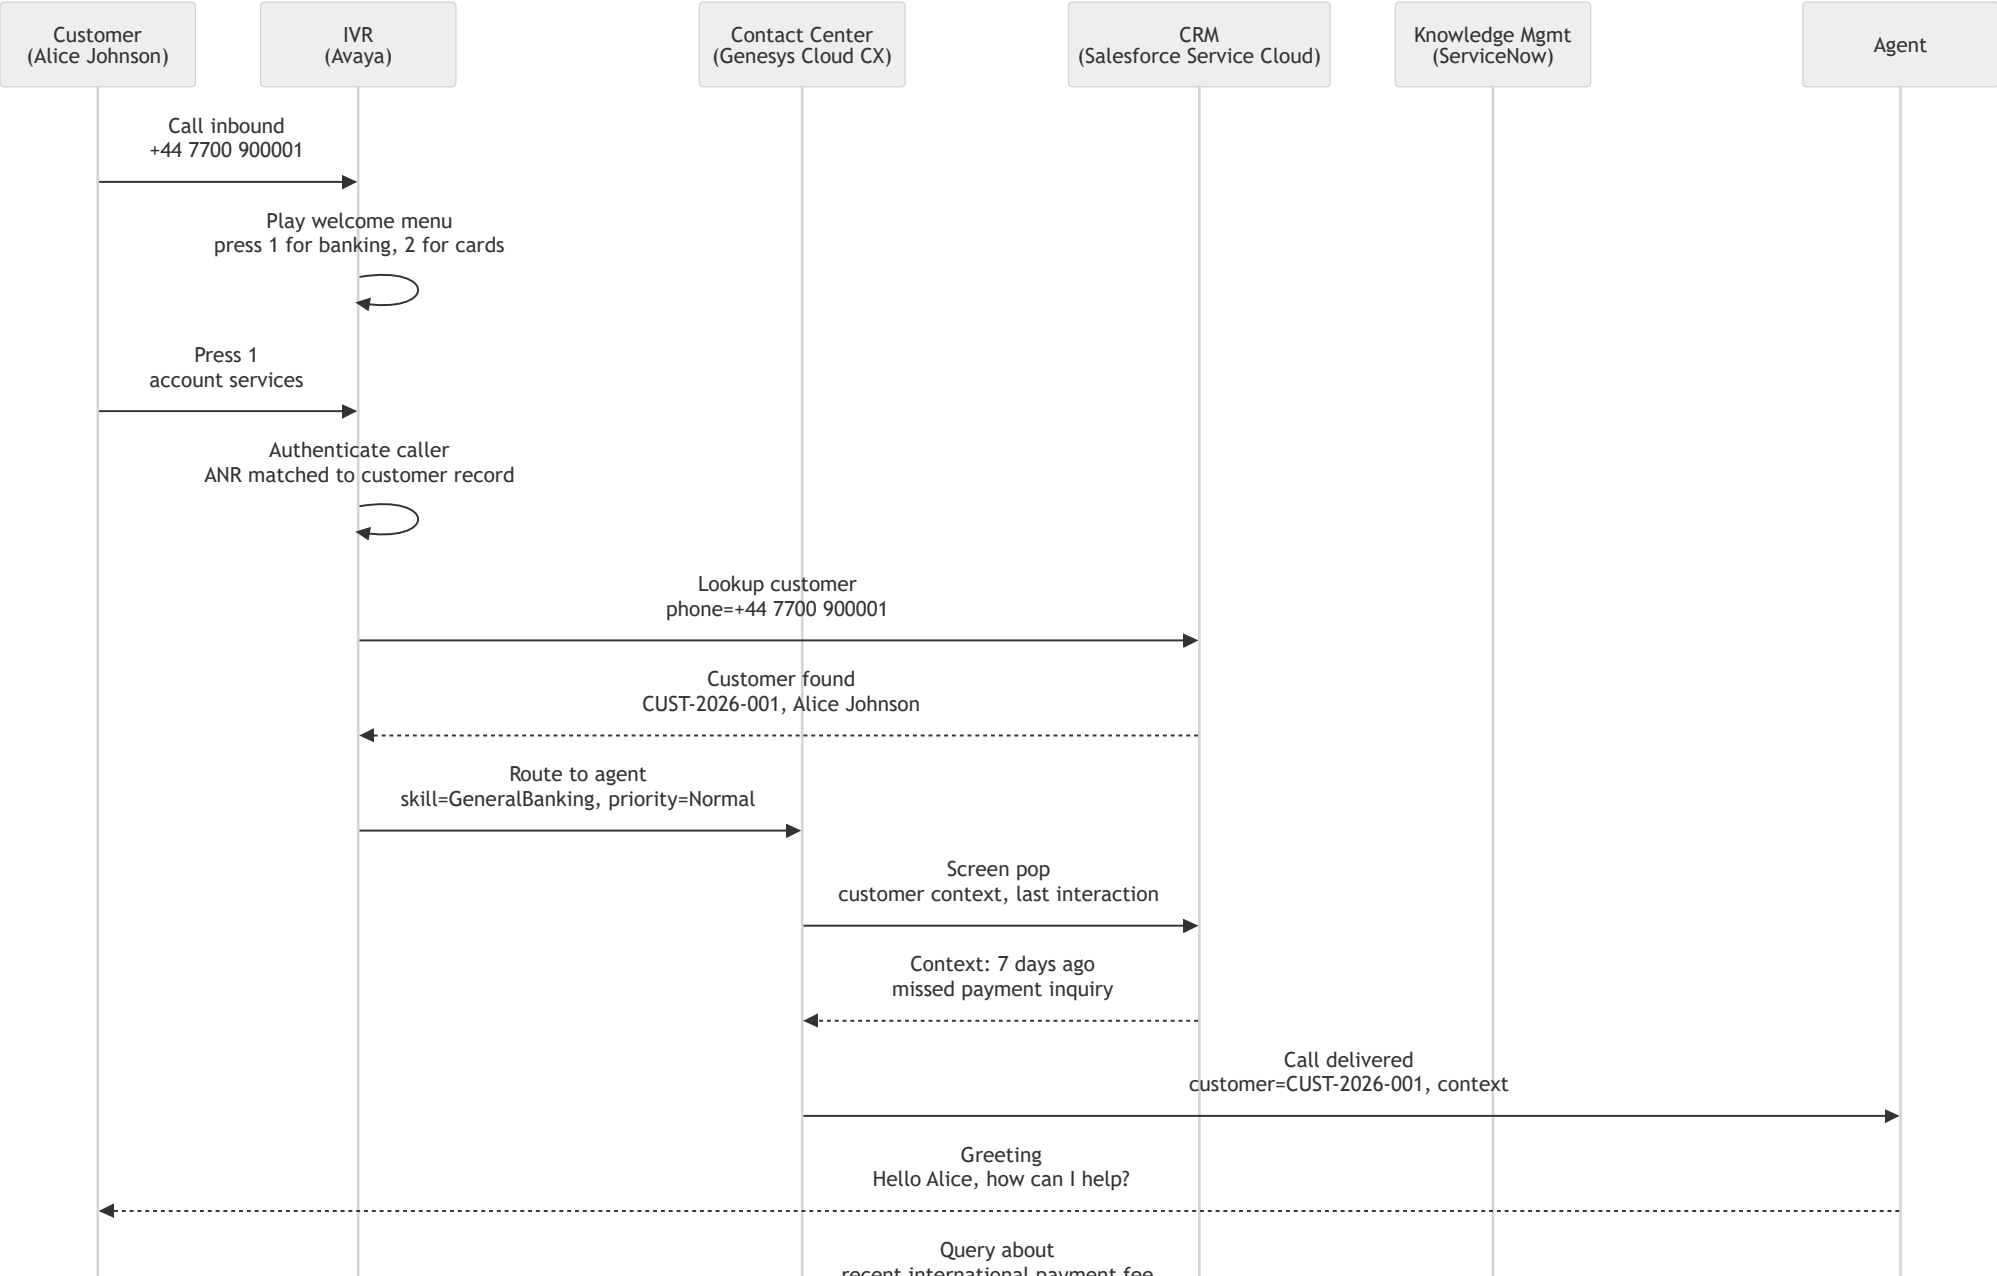

11: Contact Center - BC002 BC034

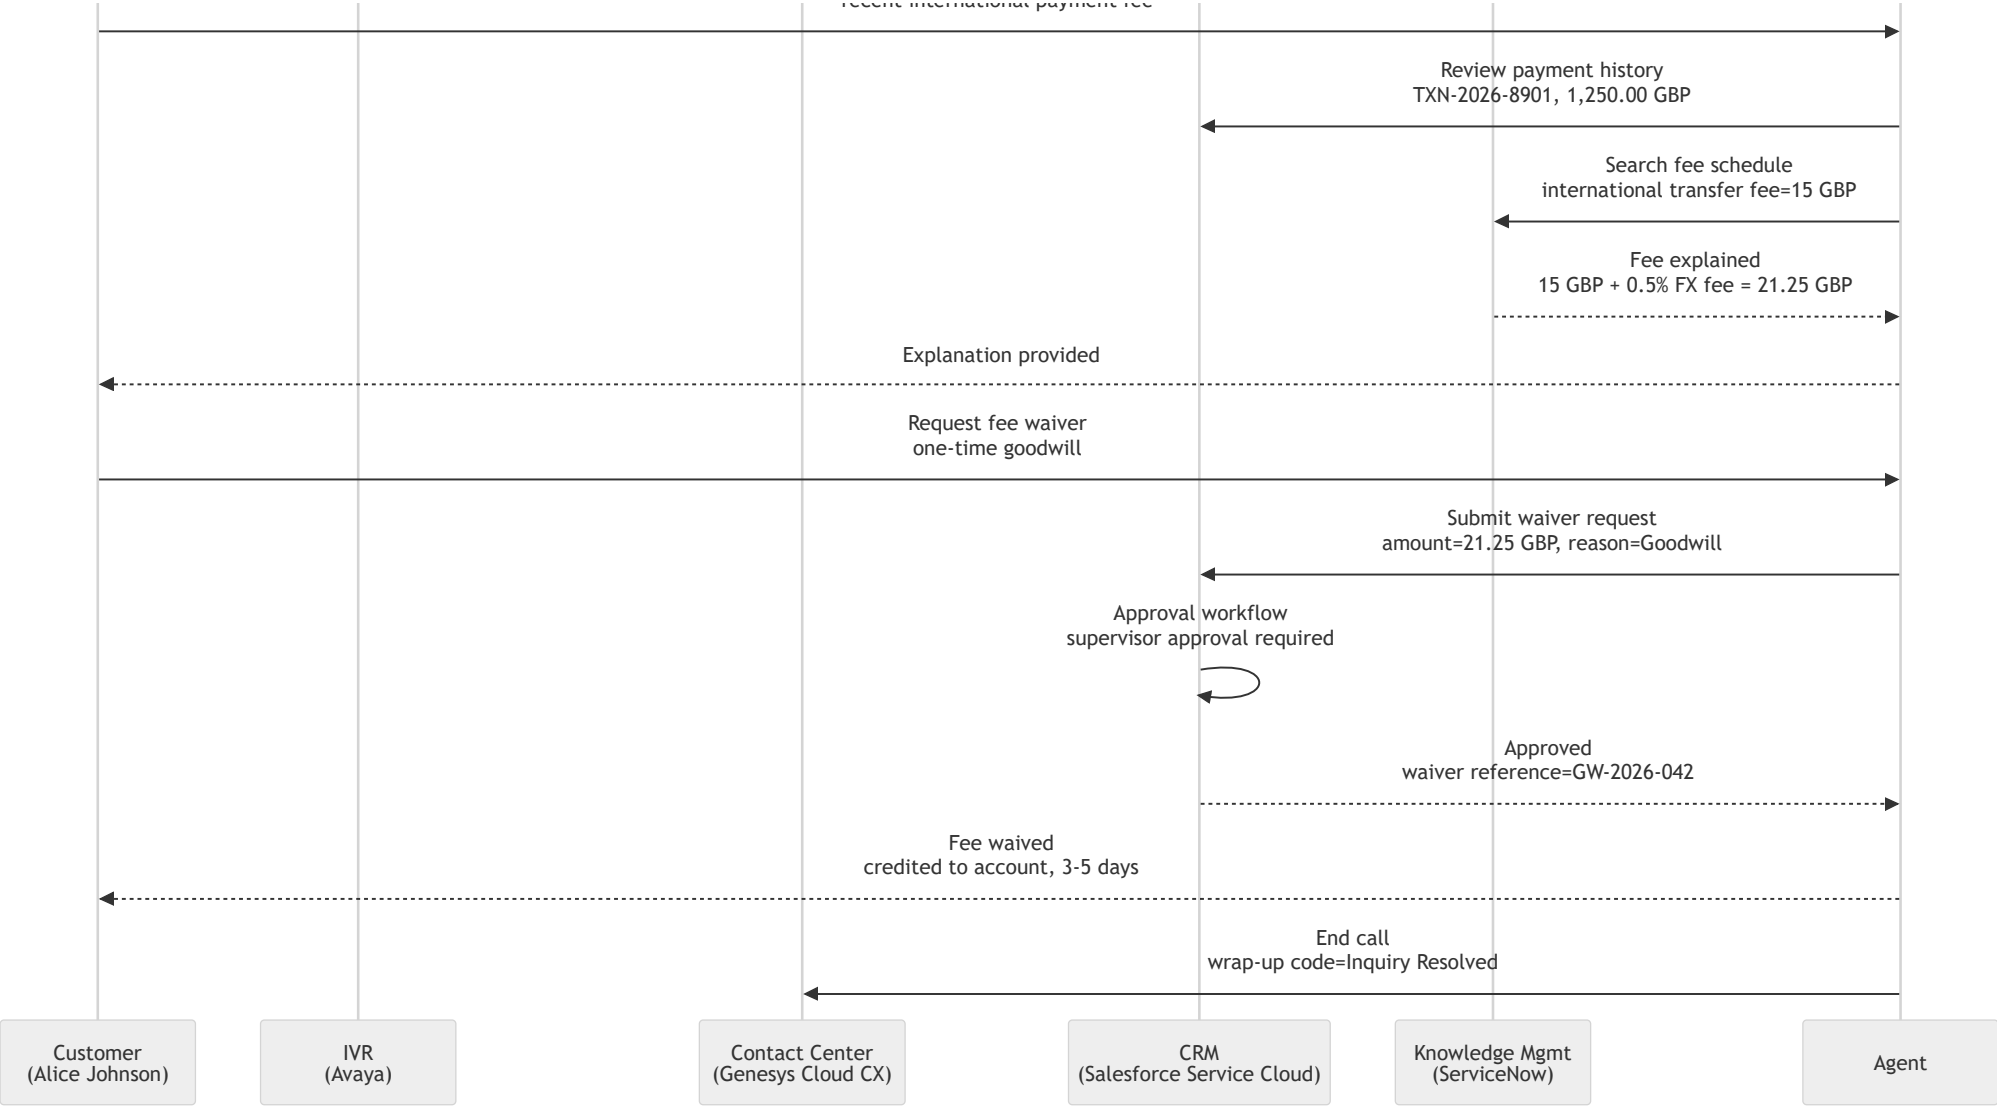

Omnichannel contact center operations. Voice, email, chat, and social media interactions managed through IVR, CTI, and CRM integration with knowledge management.

11.1 Omnichannel Customer Service

- Description:** Customer contacts via phone. IVR authenticates, routes to agent. Agent handles query with CRM context, knowledge articles, and follow-up actions.
- Actors:** Customer, Contact Center Agent, Supervisor
- Systems:** Contact Center (Genesys Cloud CX), CRM (Salesforce Service Cloud), IVR System (Avaya), Knowledge Mgmt (ServiceNow), Voice Biometrics (Nuance)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Omnichannel	IVR	AuthenticateCaller	IVR (Avaya)	CRM (Salesforce Service Cloud)	Avaya CTI API	Salesforce CTI (Open CTI)	API-led (Real-time)	Medium
Omnichannel	Routing	RouteToAgent	IVR (Avaya)	Contact Center (Genesys Cloud CX)	Avaya API	Genesys API (REST)	API-led (Real-time)	High
Omnichannel	Screen Pop	DeliverCustomerContext	Contact Center (Genesys Cloud CX)	CRM (Salesforce Service Cloud)	Genesys Cloud CX API	Salesforce REST API (OAuth2)	Event-driven	Medium
Omnichannel	Knowledge	SearchKnowledgeBase	Contact Center (Genesys Cloud CX)	Knowledge Mgmt (ServiceNow)	Genesys API	ServiceNow API (REST)	API-led (Real-time)	Simple
Omnichannel	Waiver	ProcessFeeWaiver	CRM (Salesforce Service Cloud)	Core Banking (Temenos Transact)	Salesforce REST API (OAuth2)	Temenos REST API (API Key)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Omnichannel	IVR	Caller authenticated via ANR matching to customer record in CRM	Authenticated within 3 seconds; unrecognized callers routed to verification flow
Omnichannel	Routing	Call routed to agent with appropriate skill set and availability	Routed within 5 seconds; skill-based routing honors priority; queue position displayed
Omnichannel	Screen Pop	Agent receives screen pop with customer context before answer	Customer name, account, last interaction, risk flag displayed; context loads in <1 second
Omnichannel	Knowledge	Agent retrieves relevant knowledge articles during call	Search returns top 5 articles; articles relevance >80%; outdated articles flagged
Omnichannel	Waiver	Fee waiver processed and approved through supervisor workflow	Waiver approved/declined within workflow SLA; credited to account; notification sent to customer

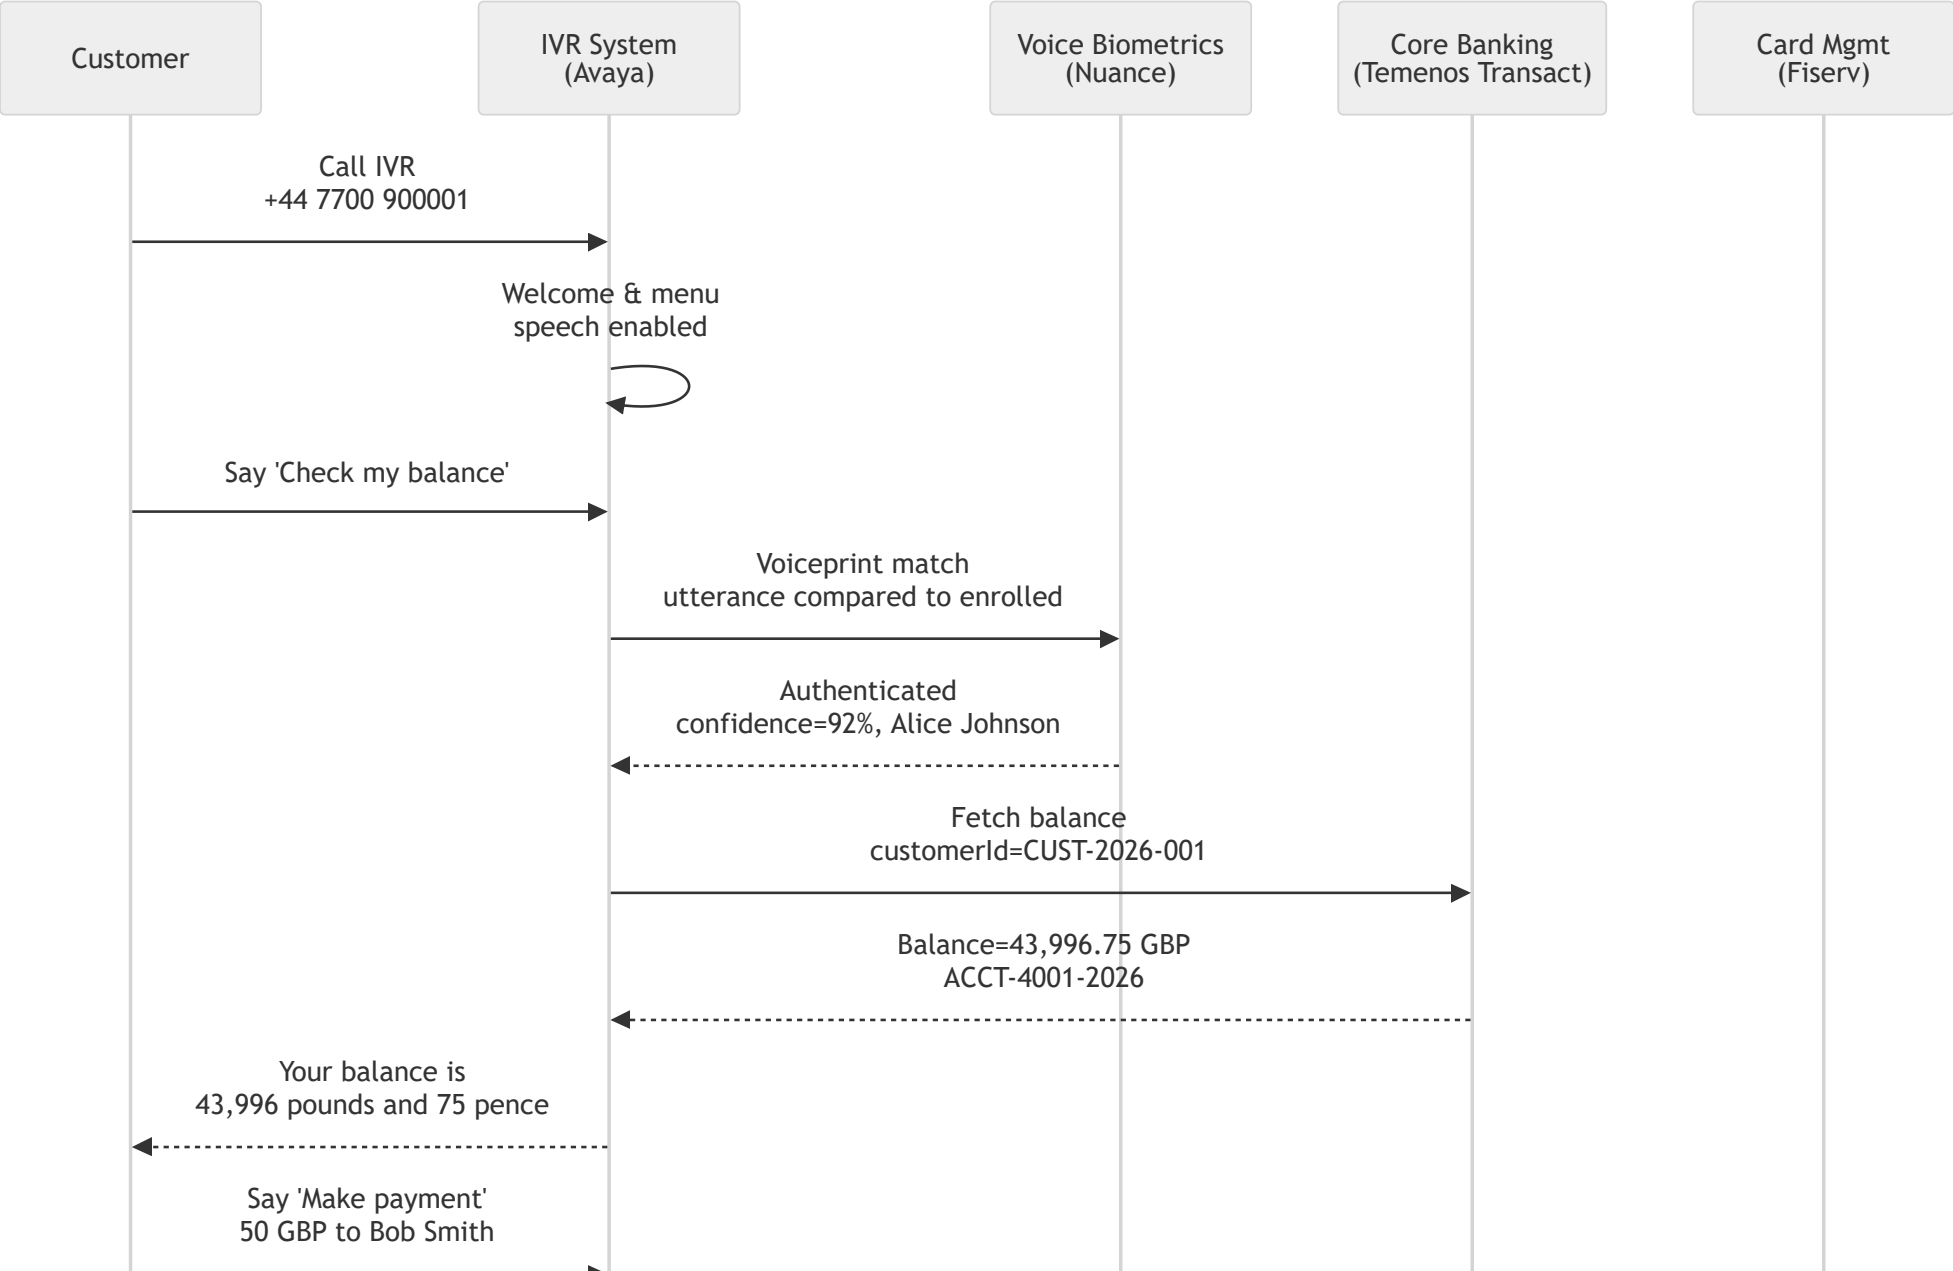

11.2 IVR Self-Service & Automation

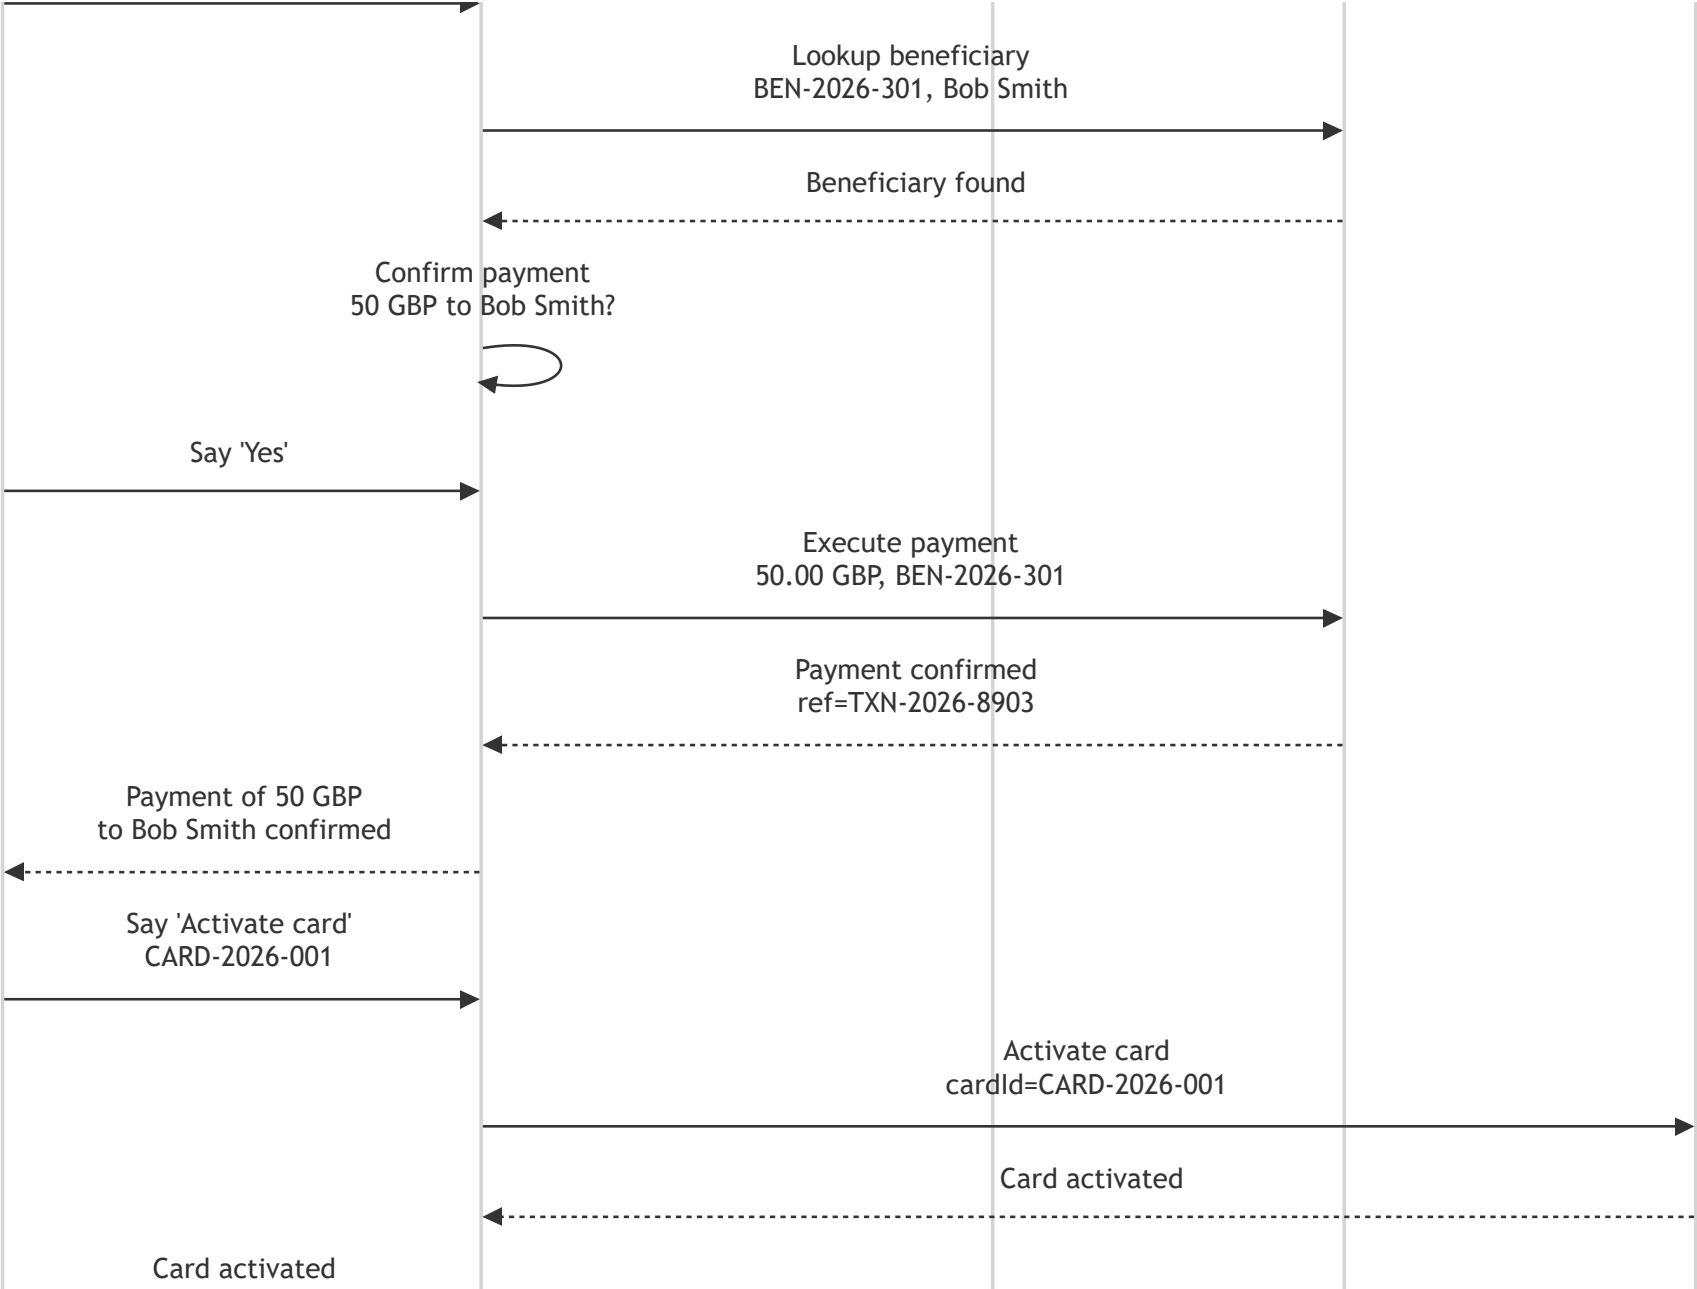

Description: Customer interacts with automated IVR to perform transactions - balance inquiry, card activation, payment, password reset - without agent intervention.

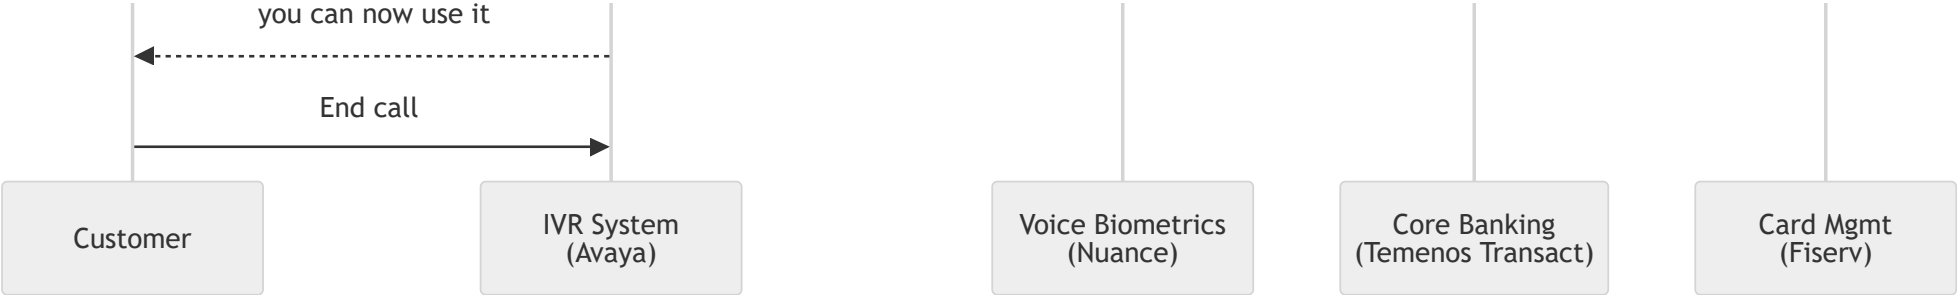

Actors: Customer, IVR Administrator

Systems: IVR System (Avaya/Genesys), Core Banking (Temenos Transact), Card Management (Fiserv), Authentication (Nuance Voice Biometrics), Speech Analytics (CallMiner)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
IVR Self-Service	Auth	VoiceBiometricAuth	IVR System (Avaya)	Voice Biometrics (Nuance)	Avaya VXML	Nuance API (SOAP)	API-led (Real-time)	High
IVR Self-Service	Balance	CheckAccountBalance	IVR System (Avaya)	Core Banking (Temenos Transact)	Avaya REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
IVR Self-Service	Payment	ExecuteIVRPayment	IVR System (Avaya)	Core Banking (Temenos Transact)	Avaya REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
IVR Self-Service	Card Activation	ActivateCardIVR	IVR System (Avaya)	Card Management (Fiserv)	Avaya REST API	Fiserv API (SOAP)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
IVR Self-Service	Auth	Voice biometrics authenticates customer with >=90% confidence	Enrolled customers authenticated in <5 seconds; low confidence fallback to PIN; impostor detection active
IVR Self-Service	Balance	Account balance read out accurately via text-to-speech	Balance matches core system; multiple accounts offered for selection; masking for security
IVR Self-Service	Payment	Payment executed via IVR with verbal confirmation and 2FA	Payment confirmed with amount and payee; SMS confirmation sent; same-day cut-off enforced
IVR Self-Service	Card Activation	Card activated via IVR with activation code verification	Card status changes to Active within 5 seconds; SMS confirmation sent; activation logged

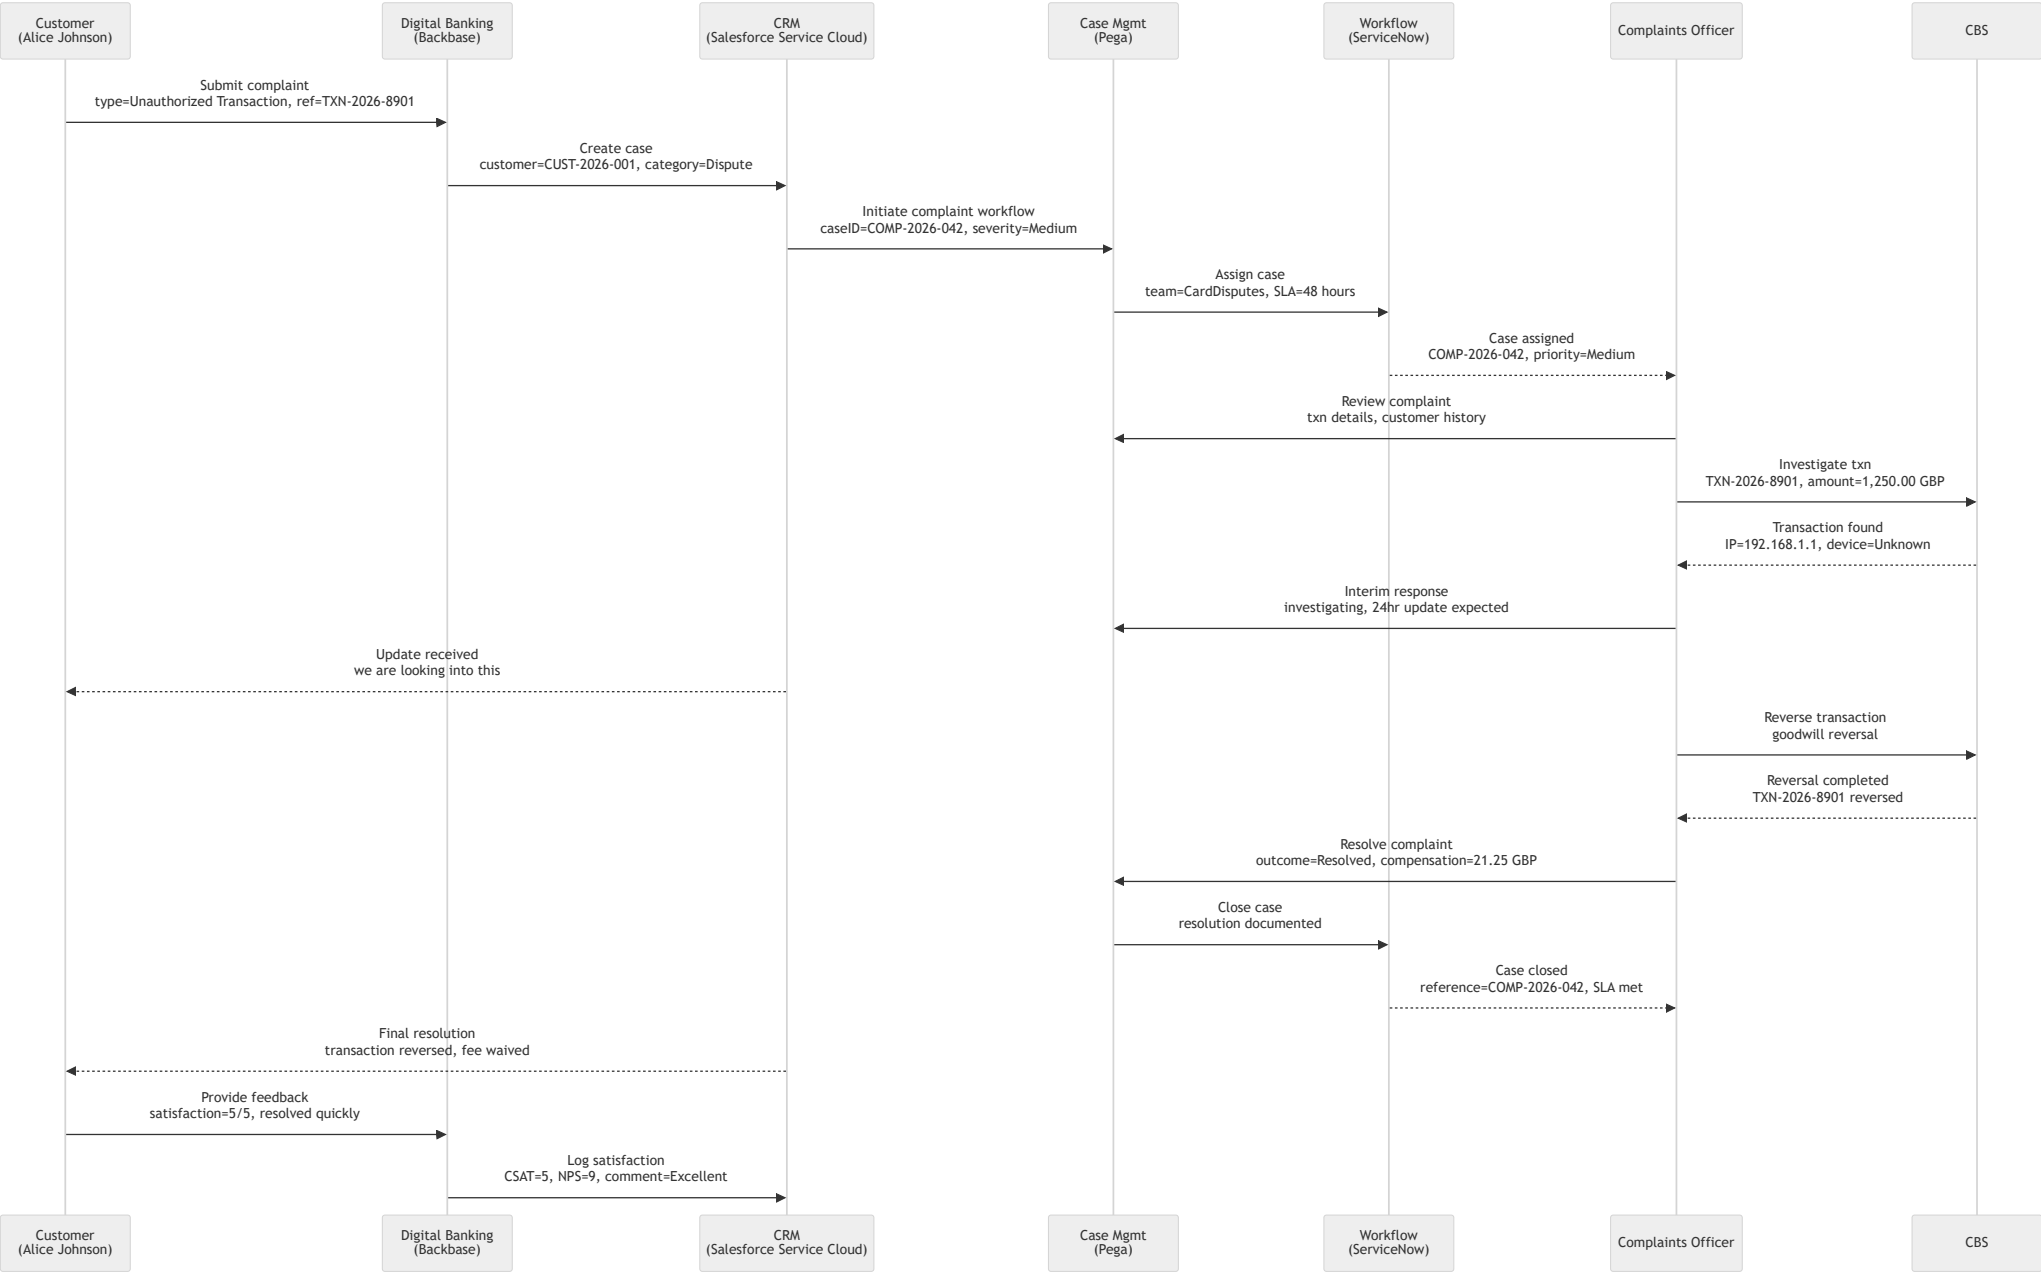

11.3 Complaints & Case Management

Description: Customer submits complaint via digital channel. System creates case, routes to team, tracks resolution SLA, manages escalation, captures feedback.

Actors: Customer, Complaints Officer, Supervisor, Ombudsman

Systems: CRM (Salesforce Service Cloud), Case Management (Pega), Workflow (ServiceNow), Digital Banking (Backbase), Quality Mgmt (CallMiner)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Complaints	Case Creation	CreateComplaintCase	Digital Banking (Backbase)	CRM (Salesforce Service Cloud)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium
Complaints	Workflow	AssignComplaintWorkflow	CRM (Salesforce Service Cloud)	Case Management (Pega)	Salesforce REST API (OAuth2)	Pega REST API (OAuth2)	Event-driven	Medium
Complaints	Resolution	ProcessComplaintResolution	Case Management (Pega)	Core Banking (Temenos Transact)	Pega REST API (OAuth2)	Temenos REST API (API Key)	Event-driven	Medium
Complaints	Satisfaction	CaptureCustomerFeedback	Digital Banking (Backbase)	CRM (Salesforce Service Cloud)	Backbase REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple

Acceptance Criteria

d>Resolution action completed within SLA; customer updated at each milestone

Flow	Entity	Acceptance Criterion	Expected Outcome
Complaints	Case Creation	Complaint case created with correct category, severity, and customer context	Case ID generated; category mapped to internal workflow; duplicate detection run
Complaints	Workflow	Case assigned to correct team with SLA tracking	Team assignment based on category; SLA timer started; escalation path defined
Complaints	Resolution	Resolution within SLA; customer communication sent at each stage; compensation logged	
Complaints	Satisfaction	Customer satisfaction feedback captured post-resolution	CSAT and NPS captured; feedback routed to quality team; trends tracked monthly

12: Collections & Recovery - BC077

End-to-end collections and recovery lifecycle. Early-stage collection campaigns, late-stage recovery, restructuring and forbearance, and charged-off account management.

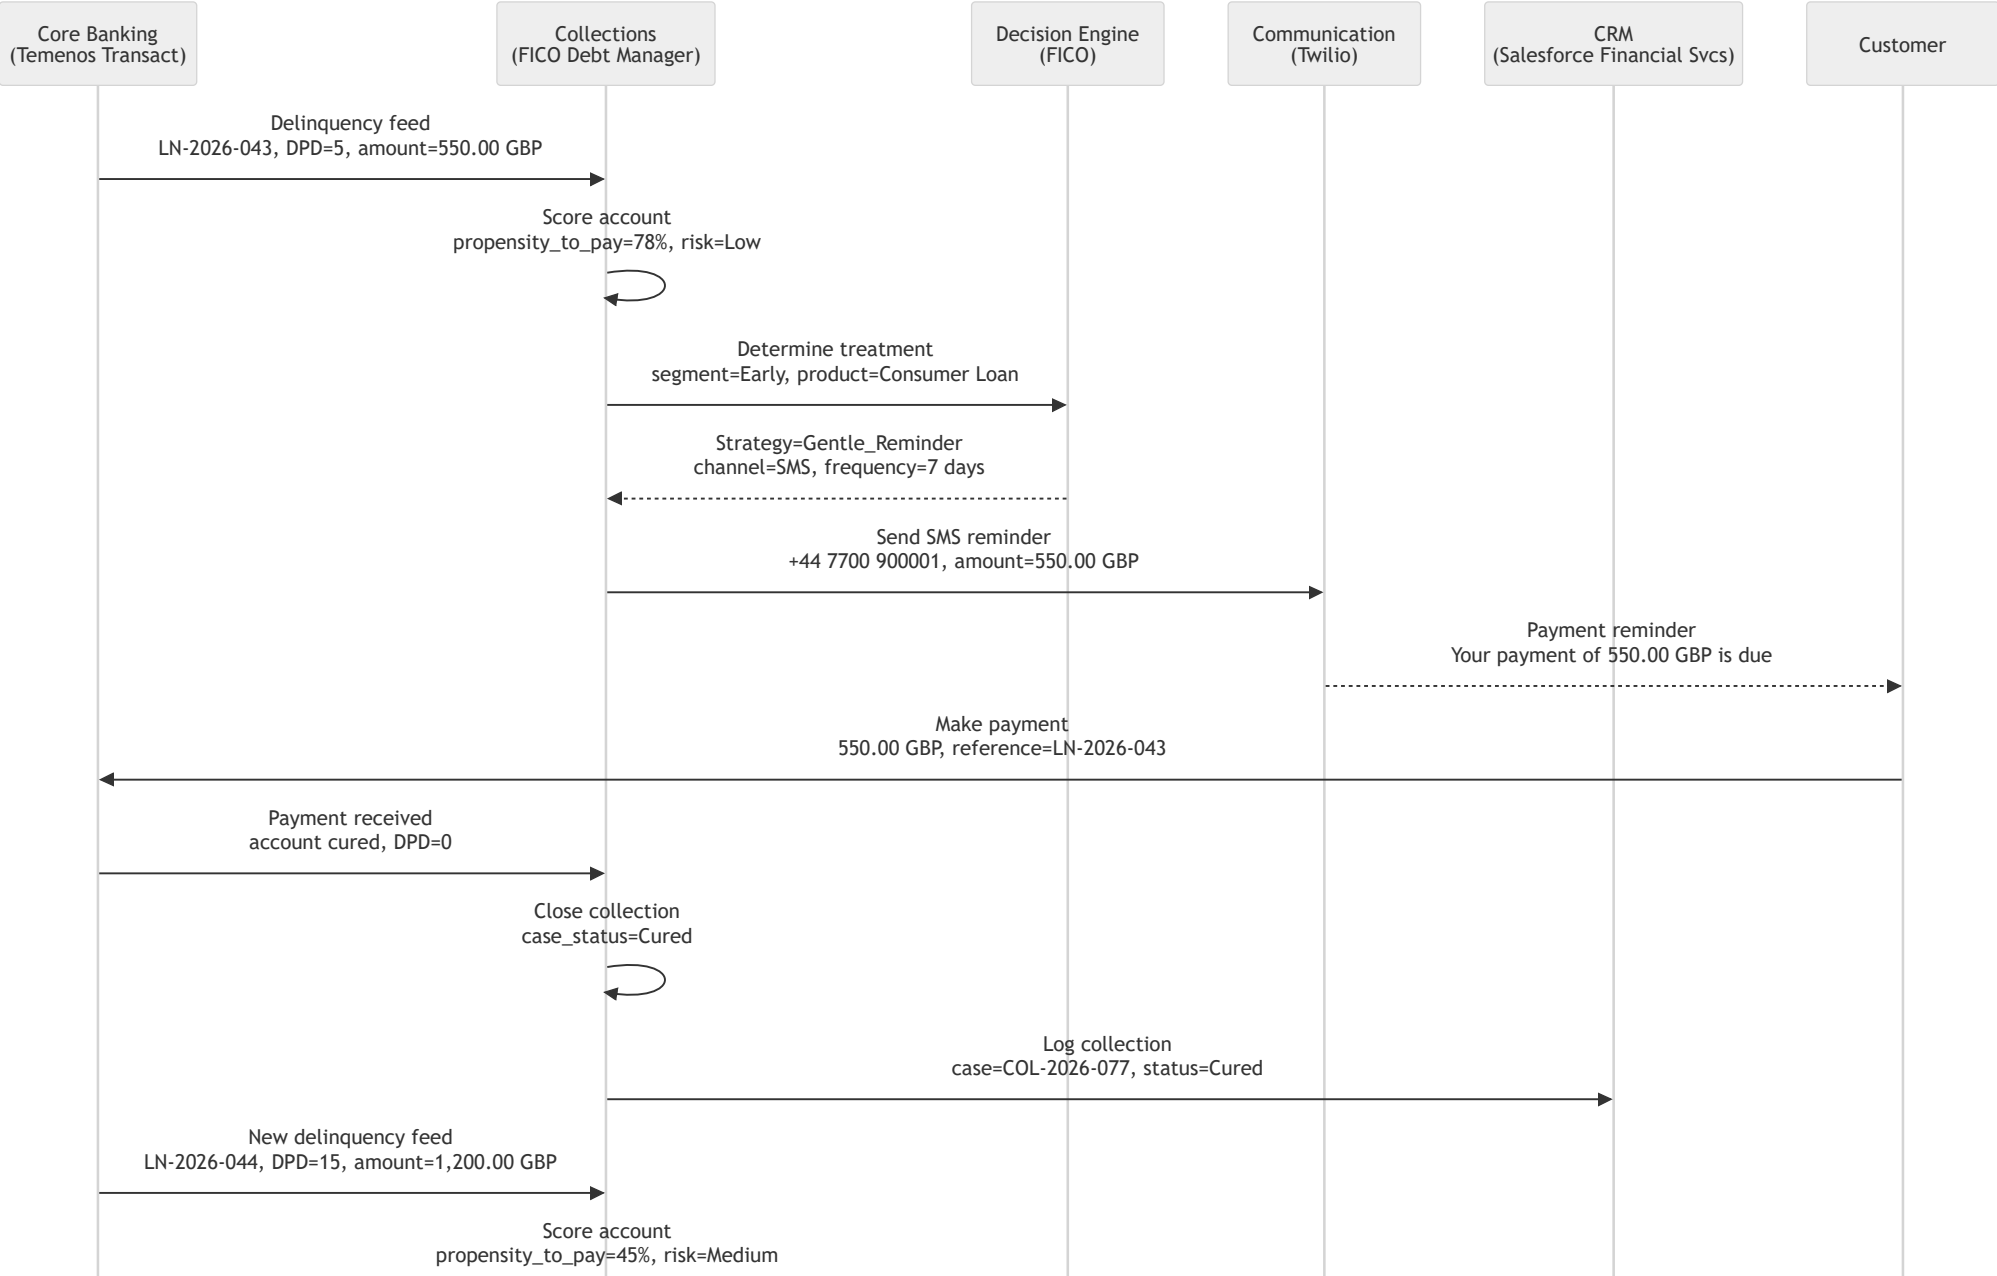

12.1 Early Collections & Delinquency Management

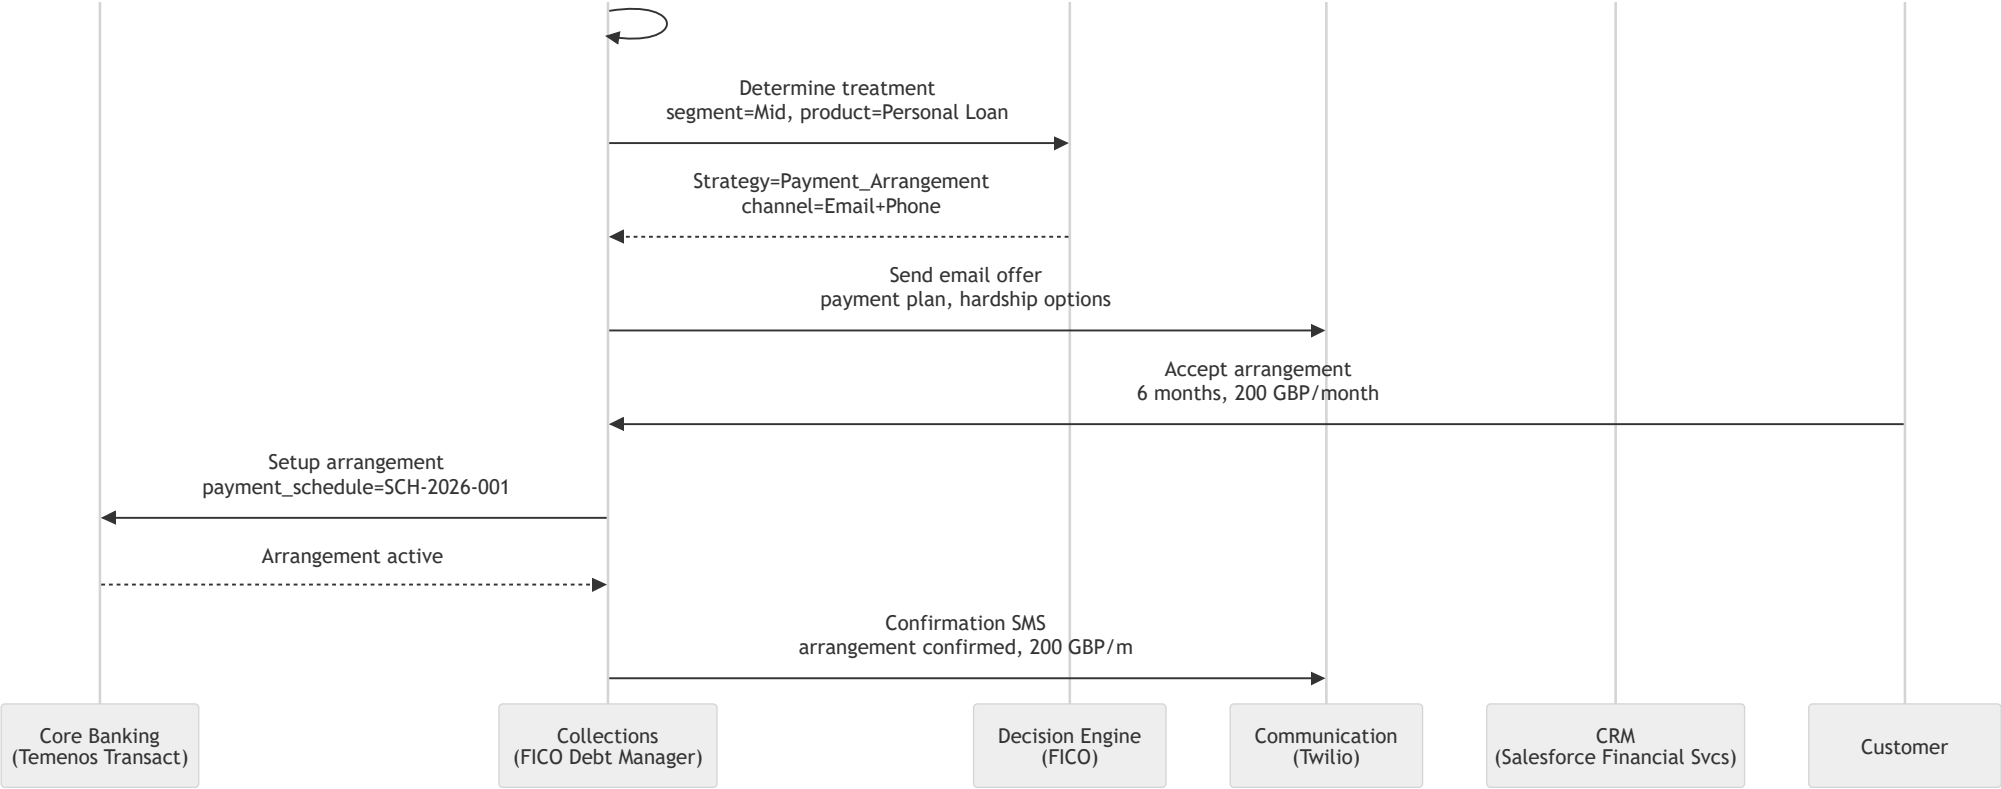

Description: Accounts become past due. Collections system applies treatment strategies, automated outreach via SMS/email, payment arrangement offers, and self-service cure.

Actors: Collections Officer, Customer, Risk Analyst

Systems: Collections System (FICO Debt Manager), Core Banking (Temenos Transact), Communication Engine (Twilio), CRM (Salesforce Financial Services), Decision Engine (FICO)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Early Collections	Delinquency	ReceiveDelinquencyFeed	Core Banking (Temenos Transact)	Collections (FICO Debt Manager)	Temenos REST API	FICO API (SOAP)	Batch (Scheduled)	Medium
Early Collections	Treatment	DetermineTreatmentStrategy	Collections (FICO Debt Manager)	Decision Engine (FICO)	FICO API	FICO Blaze API (REST)	API-led (Real-time)	Medium
Early Collections	Outreach	SendPaymentReminder	Collections (FICO Debt Manager)	Communication (Twilio)	FICO REST API	Twilio SMS/Email API	Batch (Scheduled)	Simple
Early Collections	Arrangement	SetupPaymentArrangement	Collections (FICO Debt Manager)	Core Banking (Temenos Transact)	FICO REST API	Temenos REST API (API Key)	API-led (Real-time)	Medium
Early Collections	Logging	LogCollectionActivity	Collections (FICO Debt Manager)	CRM (Salesforce Financial Services)	FICO REST API	Salesforce REST API (OAuth2)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Early Collections	Delinquency	Delinquent accounts scored and segmented by risk and propensity	Accounts scored within 1 hour of delinquency detection; segment determines strategy
Early Collections	Treatment	Treatment strategy assigned based on risk score and product type	Strategy applied; channel and frequency set; strategy effectiveness tracked by cohort
Early Collections	Outreach	Automated outreach sent via appropriate channel (SMS/email/phone)	Message delivered; open/read rate tracked; opt-out honored; regulatory compliance maintained
Early Collections	Arrangement	Payment arrangement setup correctly with schedule and amount	Arrangement recorded in core banking; payments deducted automatically; cure tracked
Early Collections	Logging	Collection activity logged to CRM for customer 360 view	Activity visible to all teams; contact history maintained; Do Not Contact list checked

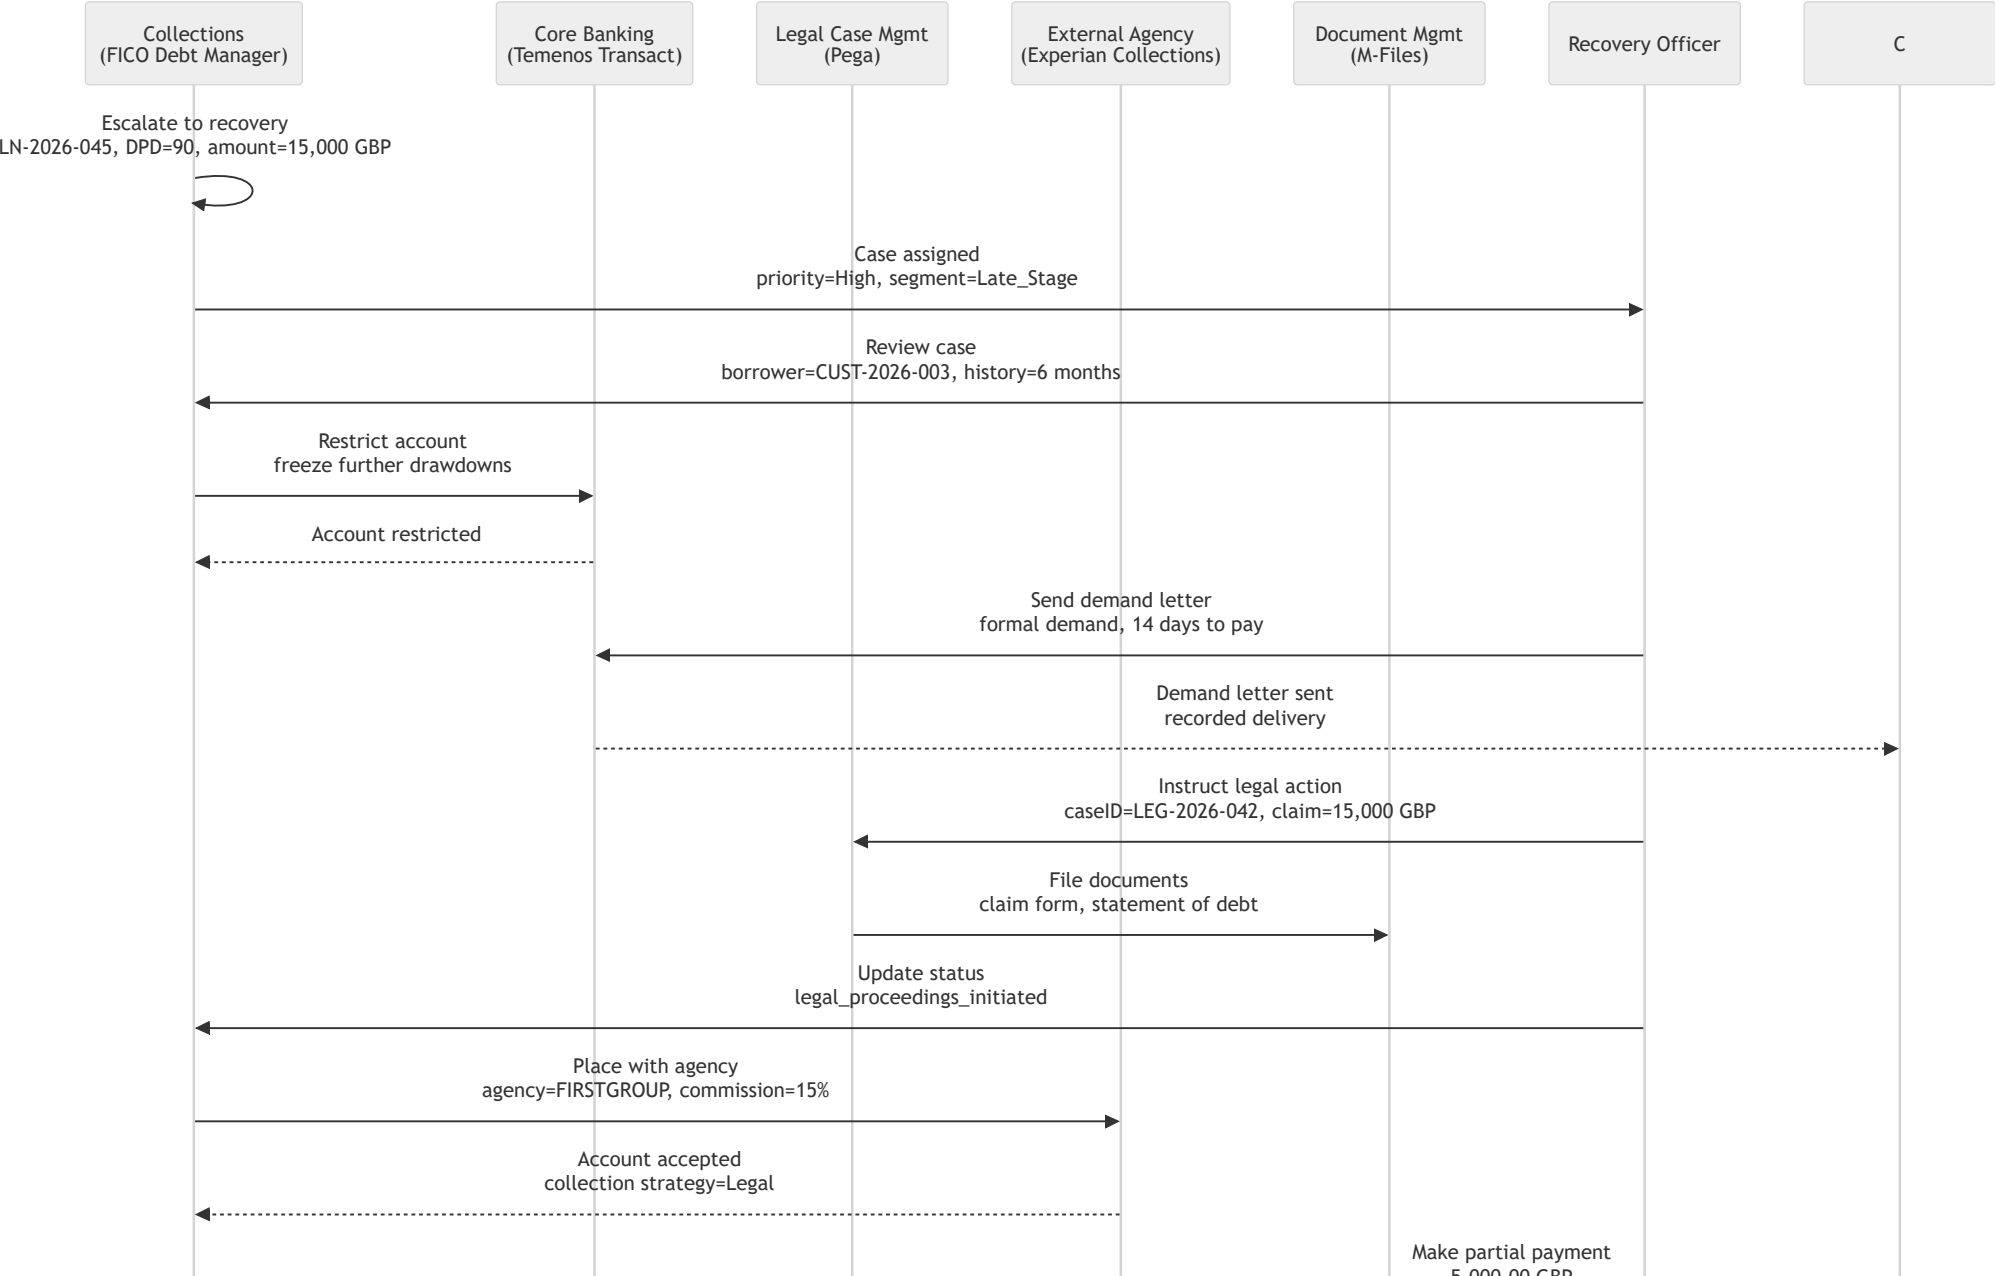

12.2 Late-Stage Recovery & Legal

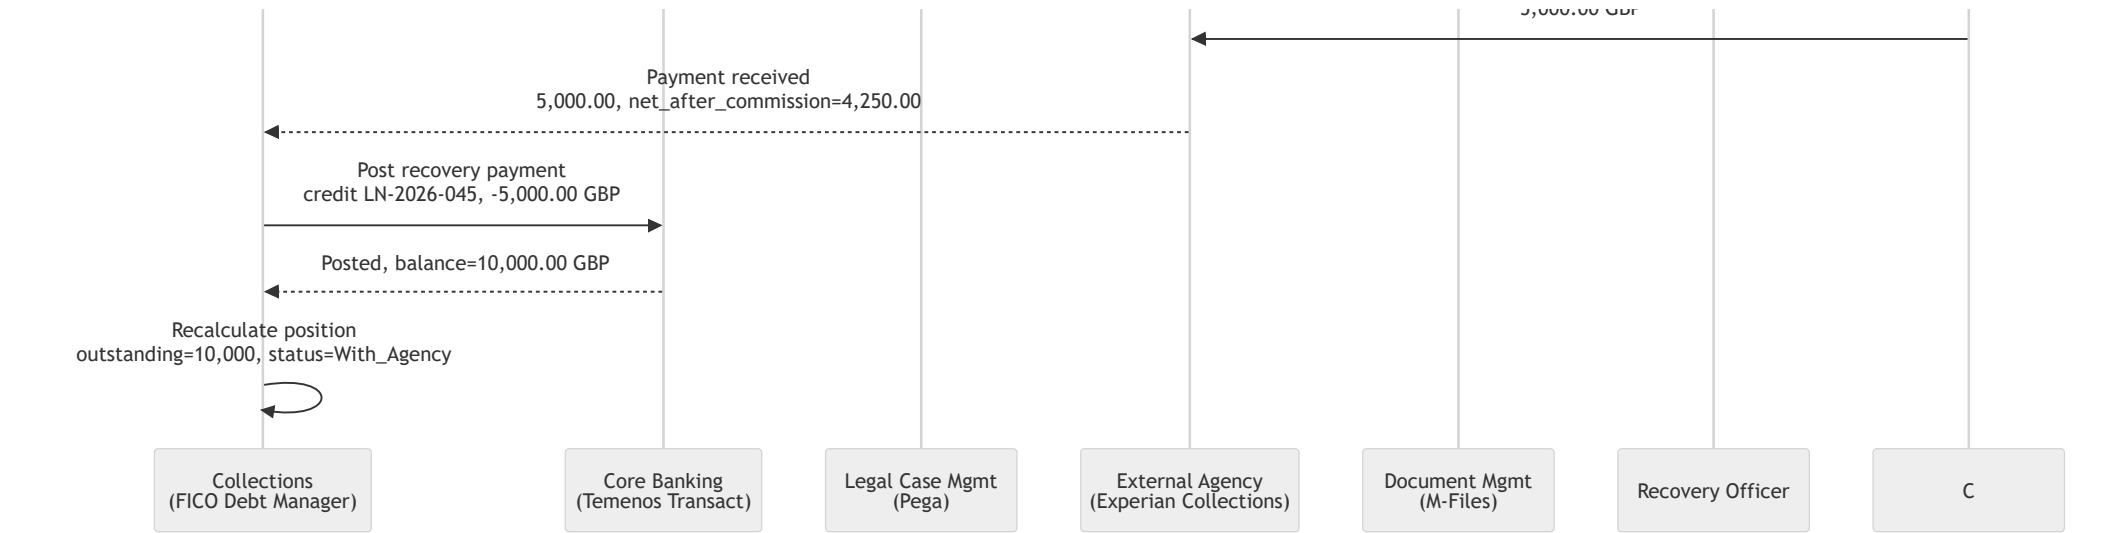

Description: Accounts in advanced delinquency. Collections system escalates to recovery team, manages litigation, agency placement, asset repossession, and charged-off account management.

Actors: Recovery Officer, Collections Manager, Legal Counsel, External Agency

Systems: Collections System (FICO Debt Manager), Legal Case Mgmt (Pega), Agency Portal (Experian Collections), Core Banking (Temenos Transact), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Late Recovery	Escalation	EscalateToRecovery	Collections (FICO Debt Manager)	Collections (FICO Debt Manager)	Internal	Internal	Event-driven	Medium
Late Recovery	Legal	InstructLegalProceedings	Collections (FICO Debt Manager)	Legal Case Mgmt (Pega)	FICO REST API	Pega REST API (OAuth2)	Event-driven	High
Late Recovery	Agency	PlaceWithExternalAgency	Collections (FICO Debt Manager)	Agency Portal (Experian Collections)	FICO API	Experian API (SOAP)	API-led (Real-time)	High
Late Recovery	Payment	PostRecoveryPayment	Collections (FICO Debt Manager)	Core Banking (Temenos Transact)	FICO REST API	Temenos REST API (API Key)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Late Recovery	Escalation	Account escalated to recovery team at correct DPD threshold with full history	Escalation triggered at DPD>=90; full payment/contact history included; priority assigned
Late Recovery	Legal	Legal proceedings initiated with proper documentation and court filing	Claim filed within 5 working days of instruction; all evidence attached; court fee accounted
Late Recovery	Agency	Account placed with external agency with correct commission structure	Agency accepts within 24hrs; data shared securely; regulatory compliance maintained
Late Recovery	Payment	Recovery payment posted correctly net of agency commission/fees	Payment allocated correctly; commission deducted per agreement; balance updated

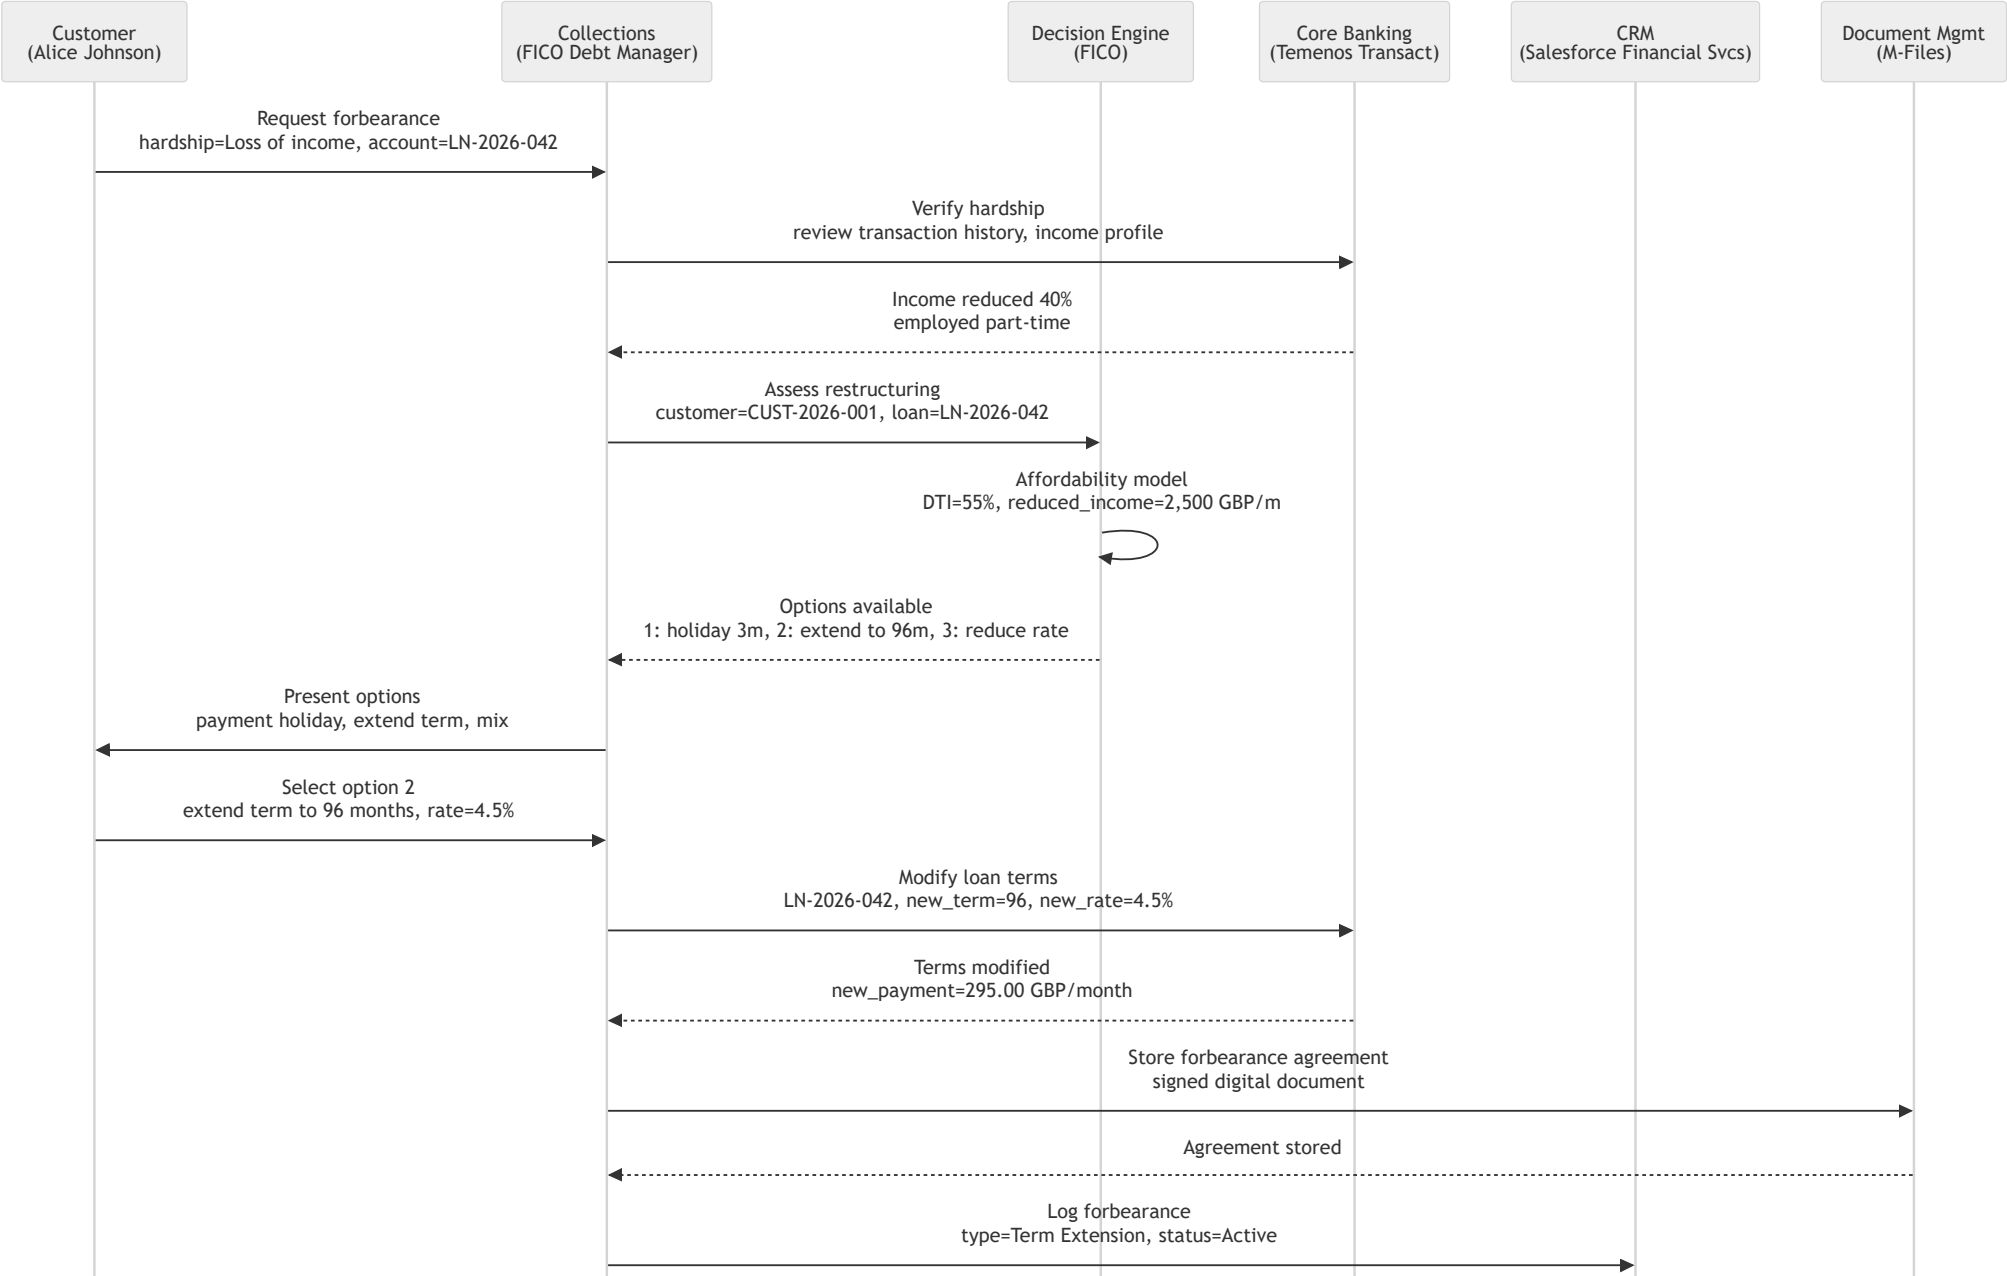

12.3 Restructuring & Forbearance

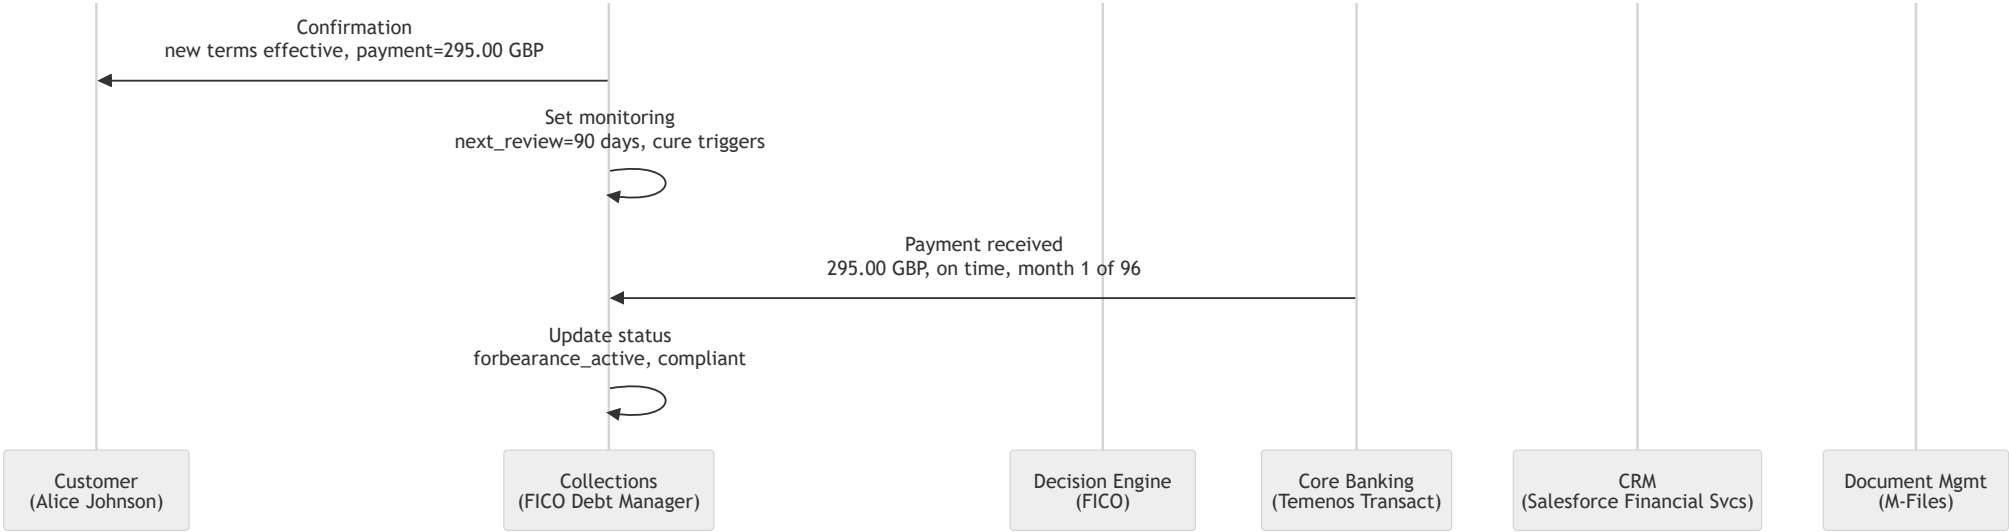

Description: Customer facing financial difficulty requests forbearance. Bank assesses eligibility, offers restructuring options (payment holiday, term extension, rate reduction), monitors cure.

Actors: Customer, Collections Officer, Credit Risk Analyst, Underwriter

Systems: Collections System (FICO Debt Manager), Decision Engine (FICO), Core Banking (Temenos Transact), CRM (Salesforce Financial Services), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Restructuring	Request	RequestForbearance	Customer Portal (Digital Banking)	Collections (FICO Debt Manager)	Backbase REST API	FICO API (SOAP)	API-led (Real-time)	Medium
Restructuring	Assessment	AssessRestructuringOptions	Collections (FICO Debt Manager)	Decision Engine (FICO)	FICO API	FICO Blaze API (REST)	API-led (Real-time)	High
Restructuring	Modification	ModifyLoanTerms	Collections (FICO Debt Manager)	Core Banking (Temenos Transact)	FICO REST API	Temenos REST API (API Key)	API-led (Real-time)	High
Restructuring	Documentation	StoreForbearanceAgreement	Collections (FICO Debt Manager)	Document Mgmt (M-Files)	FICO REST API	M-Files REST API (API Key)	Event-driven	Simple
Restructuring	Monitoring	MonitorForbearanceCompliance	Collections (FICO Debt Manager)	Collections (FICO Debt Manager)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Restructuring	Request	Customer submits forbearance request with hardship details via digital channel	Request acknowledged within 24hrs; hardship evidence submitted; income/expense collected
Restructuring	Assessment	Restructuring options assessed based on affordability and risk model	Options generated: payment holiday, term extension, rate reduction; DTI model accurate
Restructuring	Modification	Loan terms modified in core banking with correct repayment schedule	All terms updated; new schedule generated; system prevents overlapping forbearance
Restructuring	Documentation	Forbearance agreement stored with digital signature	Document signed and stored; terms visible to customer; regulatory disclosure provided
Restructuring	Monitoring	Forbearance compliance monitored monthly; cure triggers defined	Payments tracked; missed payment triggers re-evaluation; cure resets loan to original terms
