

Insurance Domain Process Flows — ACORD Capability Model Reference

Generated on 2026-07-09 | Domain: Insurance | Framework: ACORD (Association for Cooperative Operations Research and Development)

ACORD Business Capability Model Reference

The ACORD (Association for Cooperative Operations Research and Development) Capability Model defines the standard business capabilities for insurance institutions. The table below lists all relevant capabilities across 10 Level-1 domains. Each process flow in this document is mapped to its relevant ACORD capability codes.

Product

Capability	Code	Description
Product Lifecycle Management	IN001	Design, develop, and manage insurance products across lifecycle from concept to retirement
Product Configuration & Rating	IN002	Configure product rules, rating algorithms, and coverage options
Product Filing & Compliance	IN003	Manage regulatory product filings, approvals, and compliance across jurisdictions
Product Performance Analytics	IN004	Monitor product profitability, loss ratios, and distribution performance

Distribution

Capability	Code	Description
Channel Management	IN005	Manage distribution channels including agents, brokers, bancassurance, and direct
Producer/Agent Lifecycle Management	IN006	Onboard, license, appoint, and manage producers and agents
Commission Management	IN007	Calculate, process, and disburse commissions across compensation structures
Lead & Campaign Management	IN008	Manage marketing campaigns, lead generation, and distribution analytics

Underwriting

Capability	Code	Description
New Business Submission	IN009	Receive, validate, and triage new business submissions from producers
Risk Assessment & Scoring	IN010	Assess risk using rules, models, and third-party data sources
Underwriting Decision	IN011	Make underwriting decisions with authority-based approval and referral workflows
Quote Generation & Bind	IN012	Generate quotes, bind coverage, and issue evidence of insurance

Policy

Capability	Code	Description
Policy Issuance & Administration	IN013	Issue policies, manage policy documents, and maintain in-force records
Policy Servicing & Adjustments	IN014	Process mid-term adjustments, endorsements, and policy changes
Renewal & Termination	IN015	Manage renewal lifecycle, non-renewal notices, cancellations, and reinstatements

Claims

Capability	Code	Description
First Notice of Loss	IN016	Capture claim notifications through multi-channel intake and triage
Claims Investigation & Evaluation	IN017	Investigate claims, gather evidence, assess liability, and estimate reserves
Claims Adjudication & Payment	IN018	Adjudicate claims, approve payments, and manage benefit disbursement
Subrogation & Recovery	IN019	Pursue subrogation, salvage, and third-party recoveries

Reinsurance

Capability	Code	Description
Treaty Management	IN020	Manage proportional and non-proportional treaty agreements and session schedules
Facultative Placement	IN021	Place facultative reinsurance for individual large or complex risks
Reinsurance Accounting & Bordereaux	IN022	Prepare premium and loss bordereaux, manage sessions, and reconcile recoveries

Financial & Actuarial

Capability	Code	Description
Actuarial Modeling & Pricing	IN023	Develop pricing models, rate indications, and actuarial assumptions
Reserve Estimation & Management	IN024	Estimate loss reserves, IBNR, and actuarial liabilities
Catastrophe Modeling	IN025	Model natural and man-made catastrophe exposure and accumulation risk

Customer

Capability	Code	Description
Customer Onboarding & KYC	IN026	Onboard customers with identity verification, AML screening, and due diligence
Customer Relationship Management	IN027	Manage customer interactions, loyalty programs, and cross-sell opportunities

Risk & Compliance

Capability	Code	Description
Enterprise Risk Management	IN028	Manage ERM framework, risk appetite, capital adequacy, and ORSA processes
Regulatory Compliance	IN029	Ensure compliance with Solvency II, NAIC, APRA, and other regulatory regimes
Internal Audit & Assurance	IN030	Conduct internal audits, control testing, and assurance activities

Enterprise & IT

Capability	Code	Description
Billing & Collections	IN031	Manage premium billing, payment processing, collections, and dispute resolution
IFRS 17 & Financial Accounting	IN032	Apply IFRS 17 accounting including CSM, PAA, GMM, VFA calculations
Data Governance & MDM	IN033	Govern data assets, manage master data, and ensure data quality
Information Security & Cybersecurity	IN034	Protect information assets, manage cyber risk, and ensure business continuity
Enterprise Services Management	IN035	Manage HR, finance, procurement, legal, and facilities operations
IT Operations & Digital Platforms	IN036	Operate IT infrastructure, cloud platforms, API management, and DevOps

1: Product Lifecycle Management — IN001 IN002 IN003 IN004

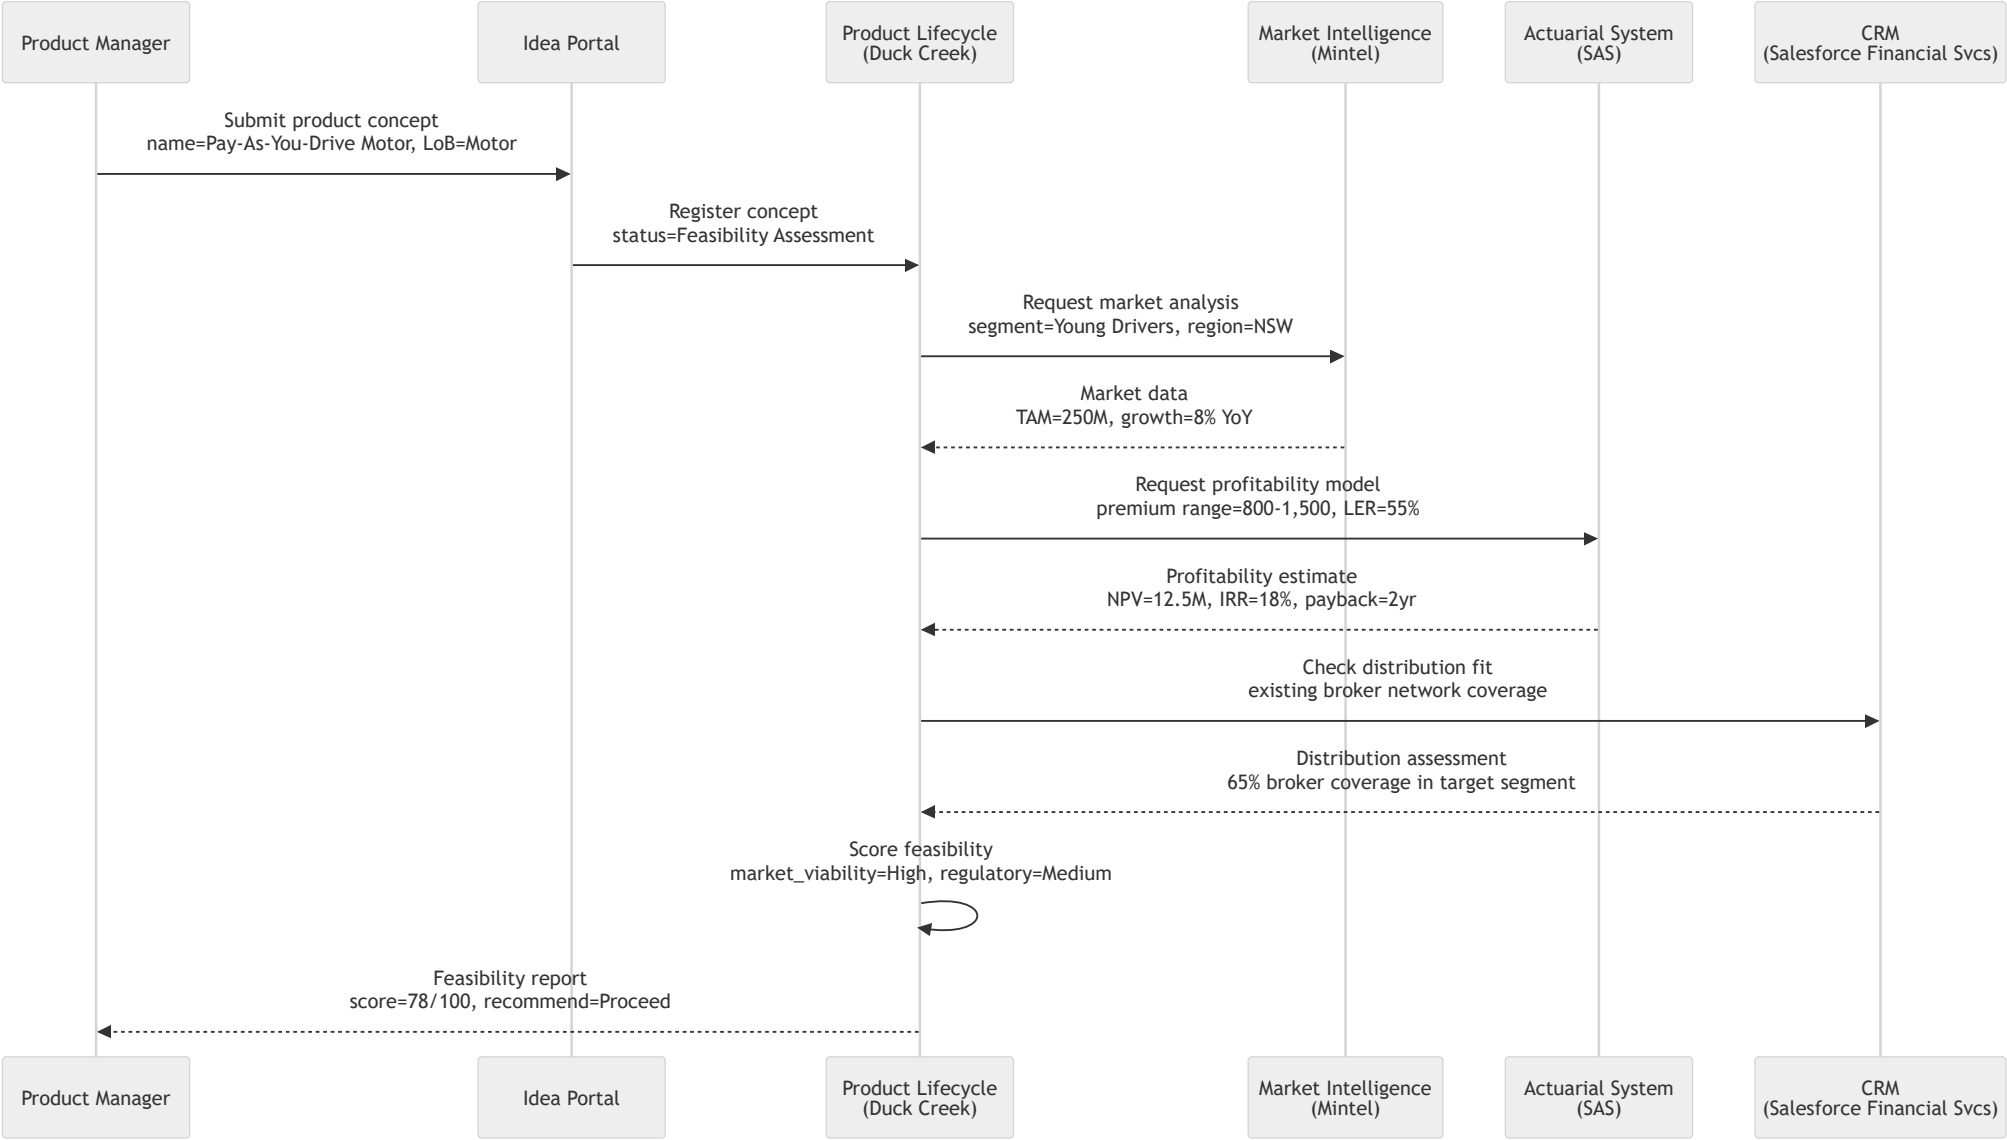

1.1 Product Concept & Feasibility

Description: Product manager submits new product concept. Feasibility assessment evaluates market demand, regulatory landscape, and profitability targets.

Actors: Product Manager, Actuary, Compliance Officer

Systems: Idea Portal, Product Lifecycle Mgmt (Duck Creek), Market Intelligence (Mintel), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Product Concept	Concept	SubmitProductConcept	Idea Portal	Product Lifecycle (Duck Creek)	Portal REST API	Duck Creek REST API (OAuth2)	API-led (Real-time)	Simple
Product Concept	Market	RequestMarketAnalysis	Product Lifecycle (Duck Creek)	Market Intelligence (Mintel)	Duck Creek REST API	Mintel API (REST)	API-led (Real-time)	Medium
Product Concept	Profitability	ModelProfitability	Product Lifecycle (Duck Creek)	Actuarial System (SAS)	Duck Creek REST API	SAS API (SOAP)	API-led (Real-time)	High
Product Concept	Distribution	AssessDistributionFit	Product Lifecycle (Duck Creek)	CRM (Salesforce Financial Services)	Duck Creek REST API	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium
Product Concept	Decision	RecordFeasibilityDecision	Product Lifecycle (Duck Creek)	Idea Portal	Duck Creek REST API	Portal REST API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Product Concept	Concept	Product concept submitted with all mandatory fields	Concept registered in Duck Creek with status 'Feasibility Assessment' and ID assigned
Product Concept	Market	Market analysis returned within 24 hours	Market size, growth rate, competitor share, and regulatory landscape populated
Product Concept	Profitability	Profitability model run with base assumptions	NPV positive, IRR > hurdle rate of 15%, payback period < 3 years
Product Concept	Distribution	Distribution channel assessment completed	Channel coverage score calculated; gap analysis for under-served channels
Product Concept	Decision	Feasibility score triggers proceed / revise / reject decision	Score >= 70 auto-proceeds; 50-70 requires HoD approval; <50 rejected

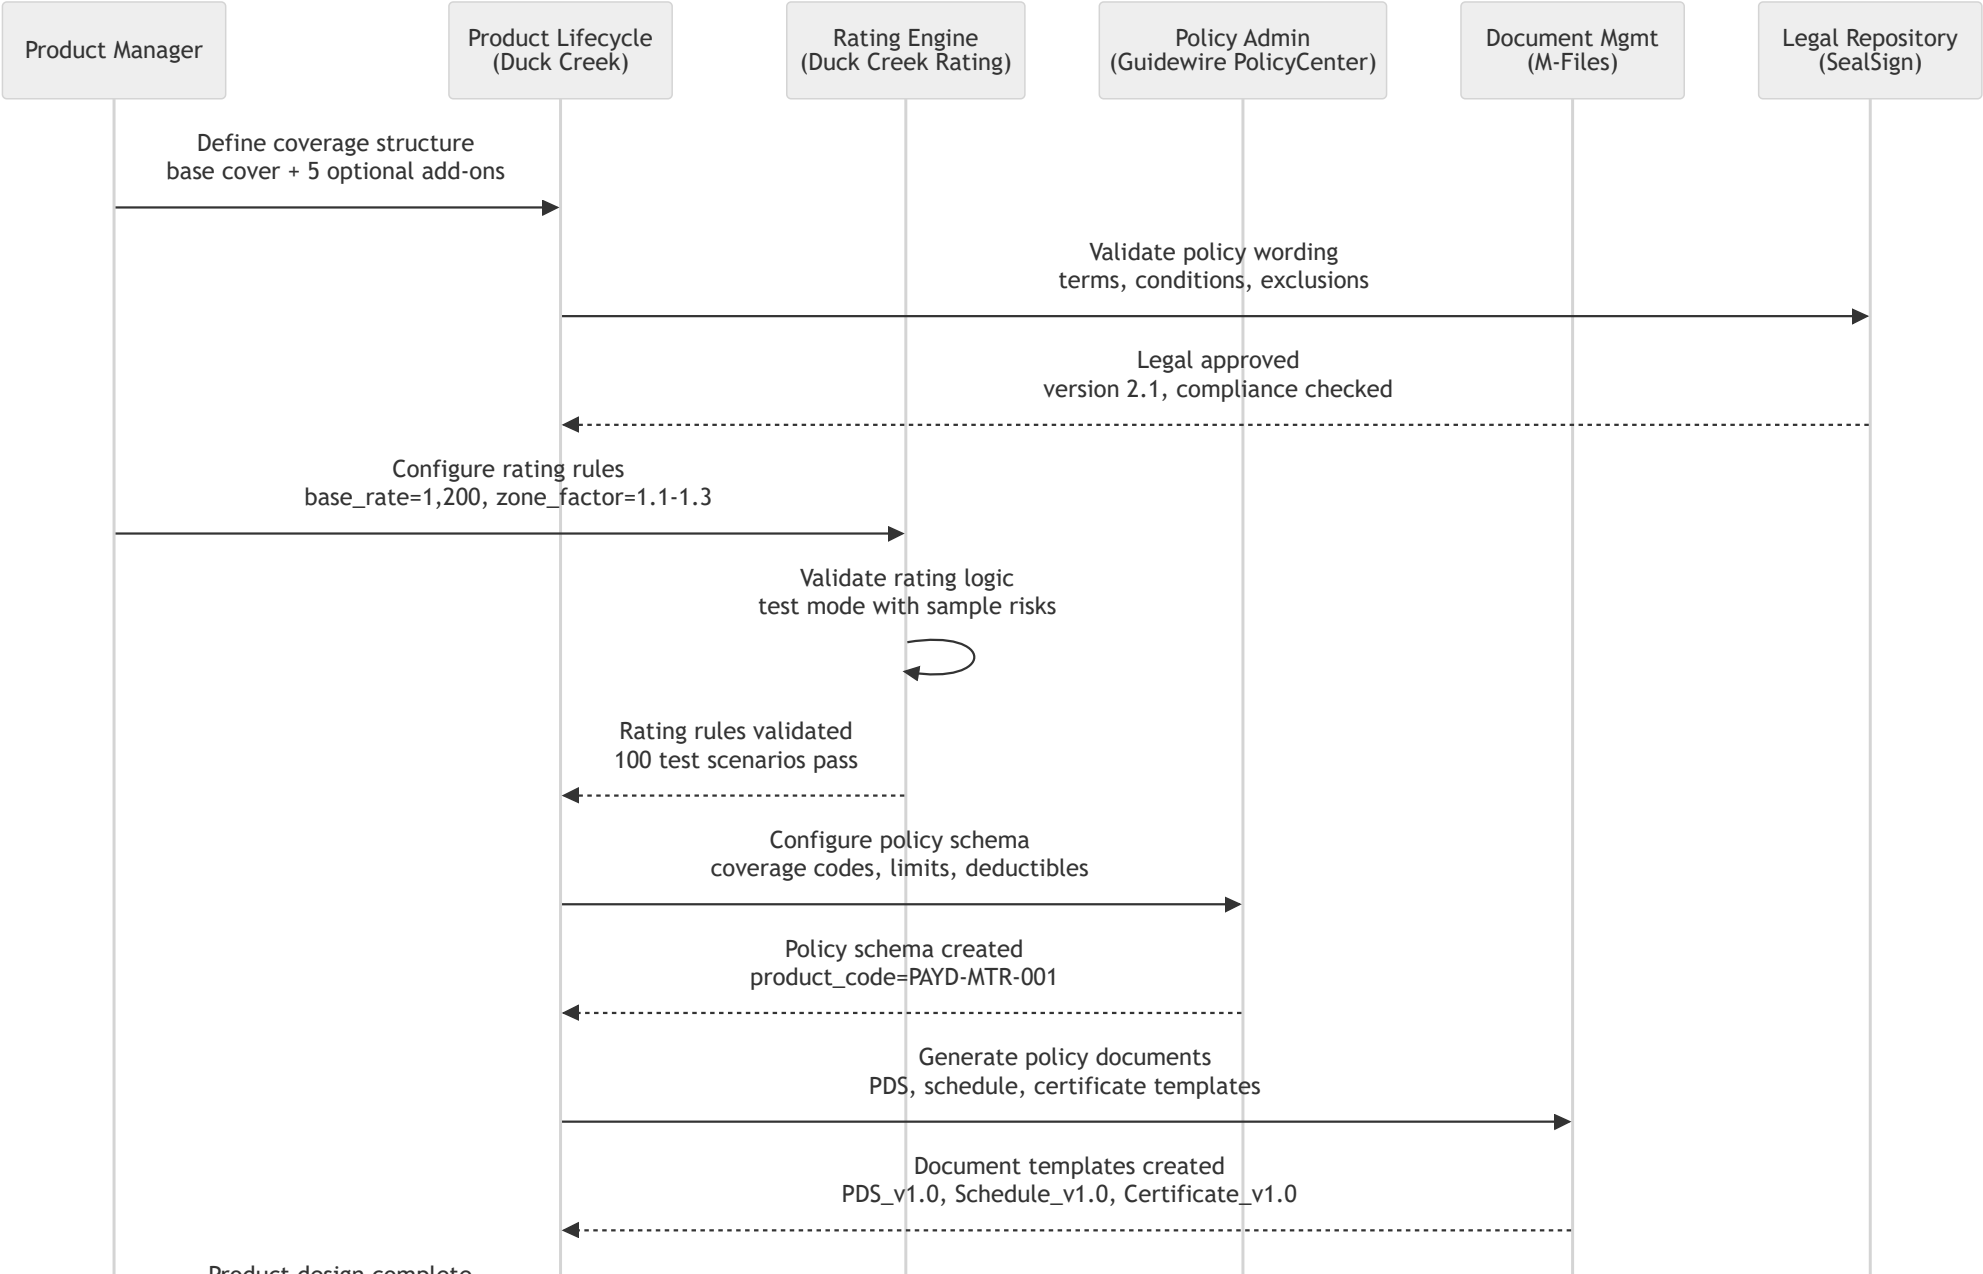

1.2 Product Design & Coverage Development

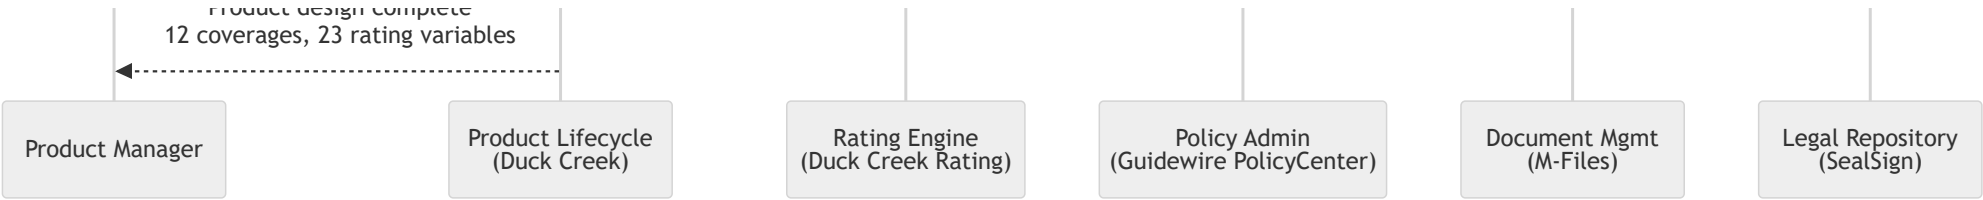

Description: Product team designs coverage details, policy terms, conditions, exclusions, and configures rating rules in the product administration system.

Actors: Product Manager, Actuary, Legal Counsel

Systems: Product Lifecycle Mgmt (Duck Creek), Rating Engine (Duck Creek Rating), Policy Admin (Guidewire PolicyCenter), Document Mgmt (M-Files), Legal Repository (SealSign)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Product Design	Coverage	DefineCoverageStructure	Product Lifecycle (Duck Creek)	Product Lifecycle (Duck Creek)	Internal	Internal	API-led (Real-time)	Medium
Product Design	Legal	ValidatePolicyWording	Product Lifecycle (Duck Creek)	Legal Repository (SealSign)	Duck Creek REST API	SealSign API (REST)	API-led (Real-time)	Simple
Product Design	Rating	ConfigureRatingRules	Product Lifecycle (Duck Creek)	Rating Engine (Duck Creek Rating)	Duck Creek REST API	Duck Creek Rating API (REST)	API-led (Real-time)	High
Product Design	Policy	ConfigurePolicySchema	Product Lifecycle (Duck Creek)	Policy Admin (Guidewire PolicyCenter)	Duck Creek REST API	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Product Design	Document	GeneratePolicyDocuments	Product Lifecycle (Duck Creek)	Document Mgmt (M-Files)	Duck Creek REST API	M-Files REST API (API Key)	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Product Design	Coverage	Coverage structure defined with base and optional add-ons	All coverage codes created; limits and deductibles configured; relationship rules enforced
Product Design	Legal	Policy wording legally approved and version-controlled	Wording version recorded; compliance checked against regulatory requirements; approval timestamped
Product Design	Rating	Rating rules validated against 100+ test scenarios	All scenarios pass with expected premium output; rating engine response time < 500ms
Product Design	Policy	Policy schema configured in policy admin system	Schema contains all coverages, limits, deductibles; data model aligns with product definition
Product Design	Document	Policy document templates generated from approved wording	All document types generated; template version aligned with legal-approved wording version

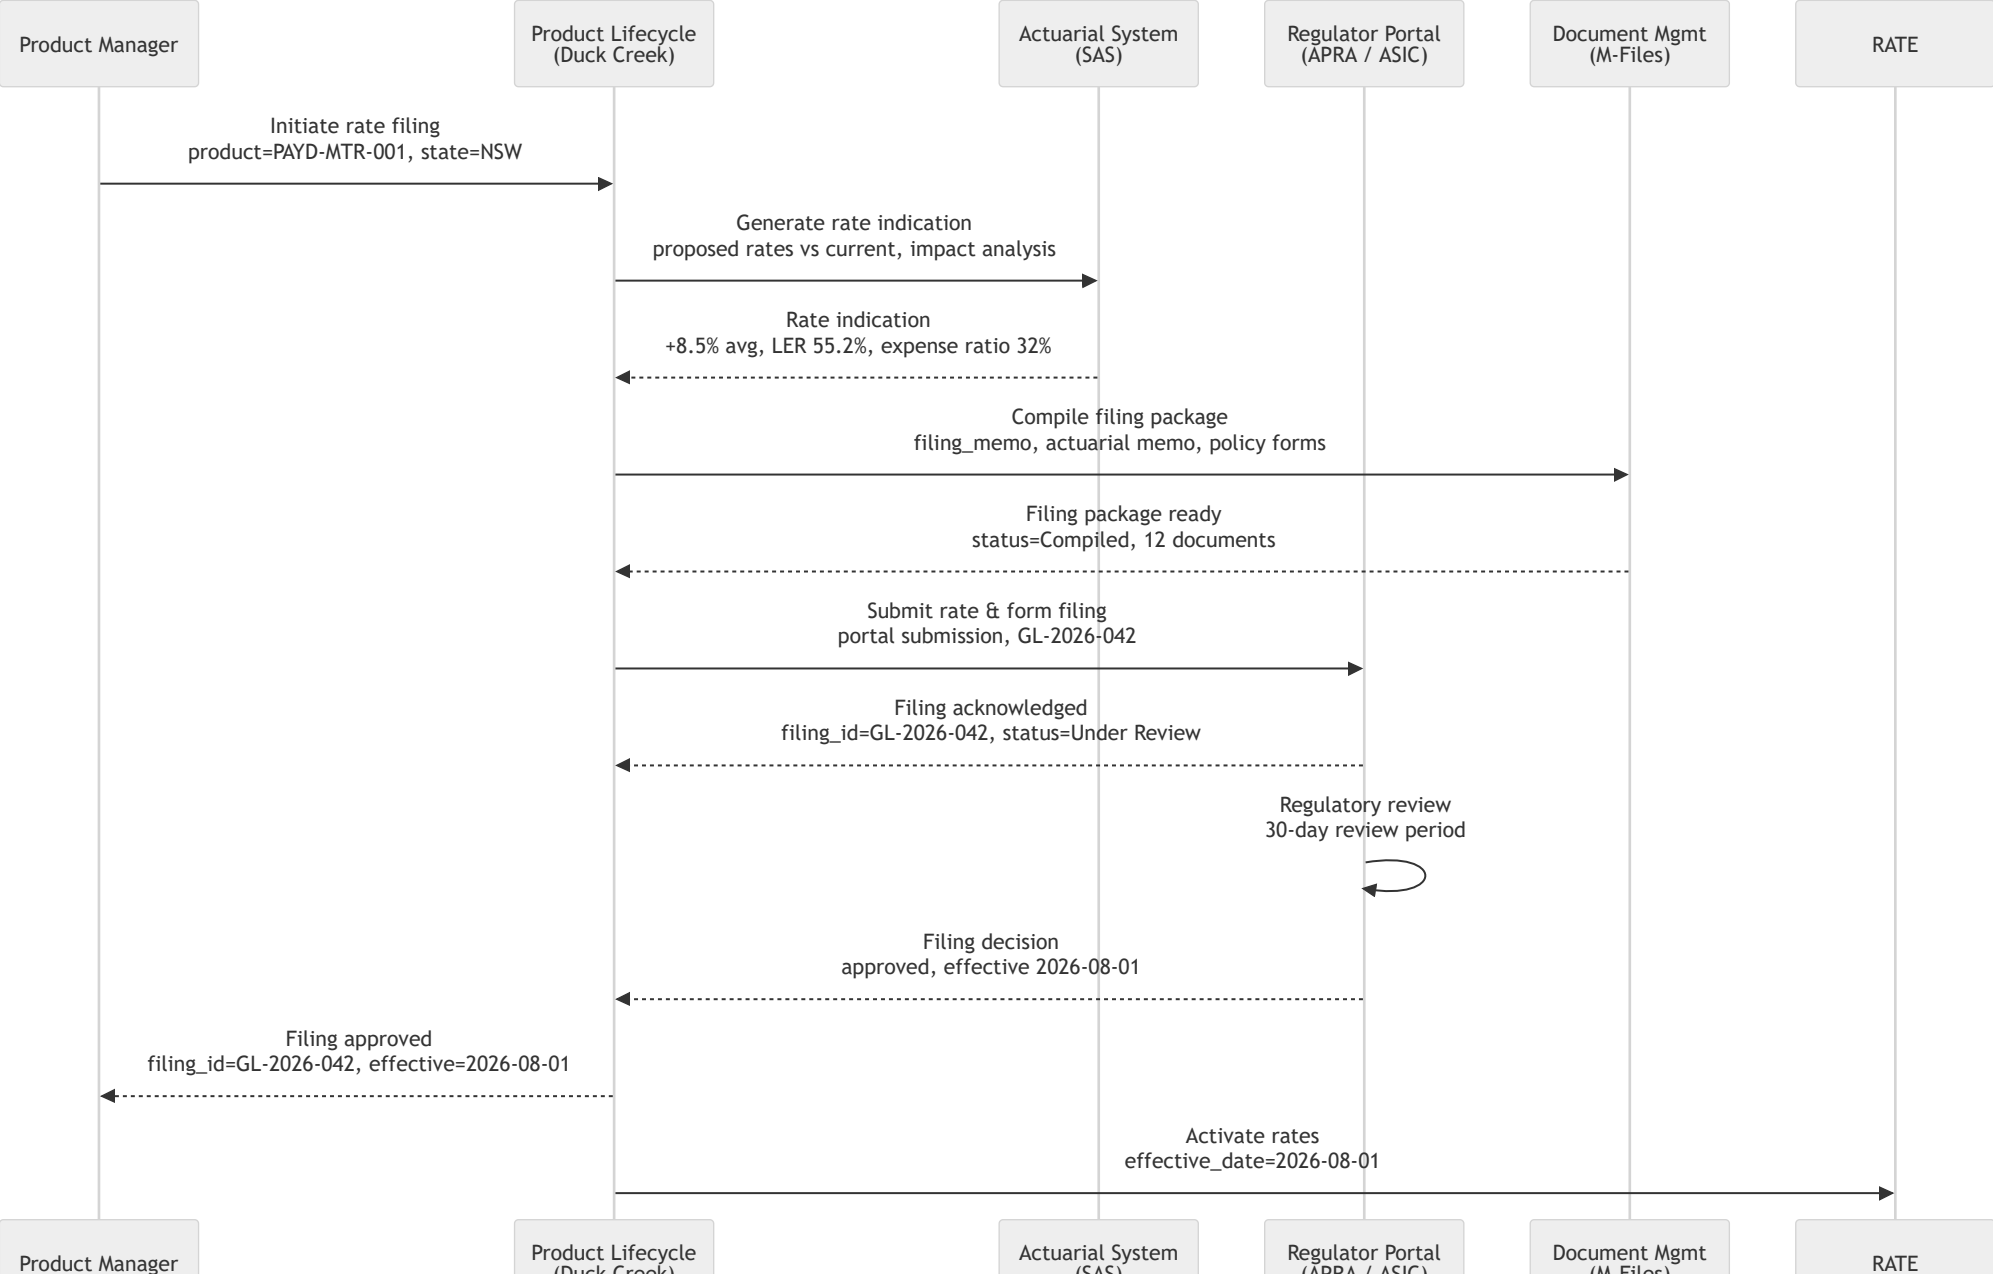

1.3 Rate & Form Filing

Description: Product team prepares rate and form filing submission for regulatory approval. Filing package includes actuarial justification, proposed rates, and policy forms.

Actors: Product Manager, Actuary, Compliance Officer, Regulator

Systems: Product Lifecycle Mgmt (Duck Creek), Actuarial System (SAS), Filing Portal (Regulator), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Rate Filing	Rate	GenerateRateIndication	Product Lifecycle (Duck Creek)	Actuarial System (SAS)	Duck Creek REST API	SAS API (SOAP)	API-led (Real-time)	High
Rate Filing	Package	CompileFilingPackage	Product Lifecycle (Duck Creek)	Document Mgmt (M-Files)	Duck Creek REST API	M-Files REST API (API Key)	Batch (Scheduled)	Medium
Rate Filing	Submit	SubmitFilingToRegulator	Product Lifecycle (Duck Creek)	Regulator Portal (APRA/ASIC)	Duck Creek REST API	Regulator Portal API (SOAP)	API-led (Real-time)	High
Rate Filing	Decision	RecordFilingDecision	Regulator Portal (APRA/ASIC)	Product Lifecycle (Duck Creek)	Regulator Portal API (SOAP)	Duck Creek REST API	Event-driven	Medium
Rate Filing	Activate	ActivateApprovedRates	Product Lifecycle (Duck Creek)	Rating Engine (Duck Creek Rating)	Duck Creek REST API	Duck Creek Rating API (REST)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Rate Filing	Rate	Rate indication prepared with actuarial justification	Rate indication includes current vs proposed comparison, impact analysis, and actuarial certification
Rate Filing	Package	Filing package compiled with all required documents	12 documents generated; all mandatory forms present; package completeness validated
Rate Filing	Submit	Filing submitted to regulator via official portal	Submission acknowledged with filing ID; confirmation receipt stored in document management
Rate Filing	Decision	Regulatory decision recorded upon completion of review	Decision captured with effective date; approved/rejected/amended status recorded with reason
Rate Filing	Activate	Approved rates activated on effective date	Rates become live at 00:00 on effective date; new quotes use approved rates; audit trail maintained

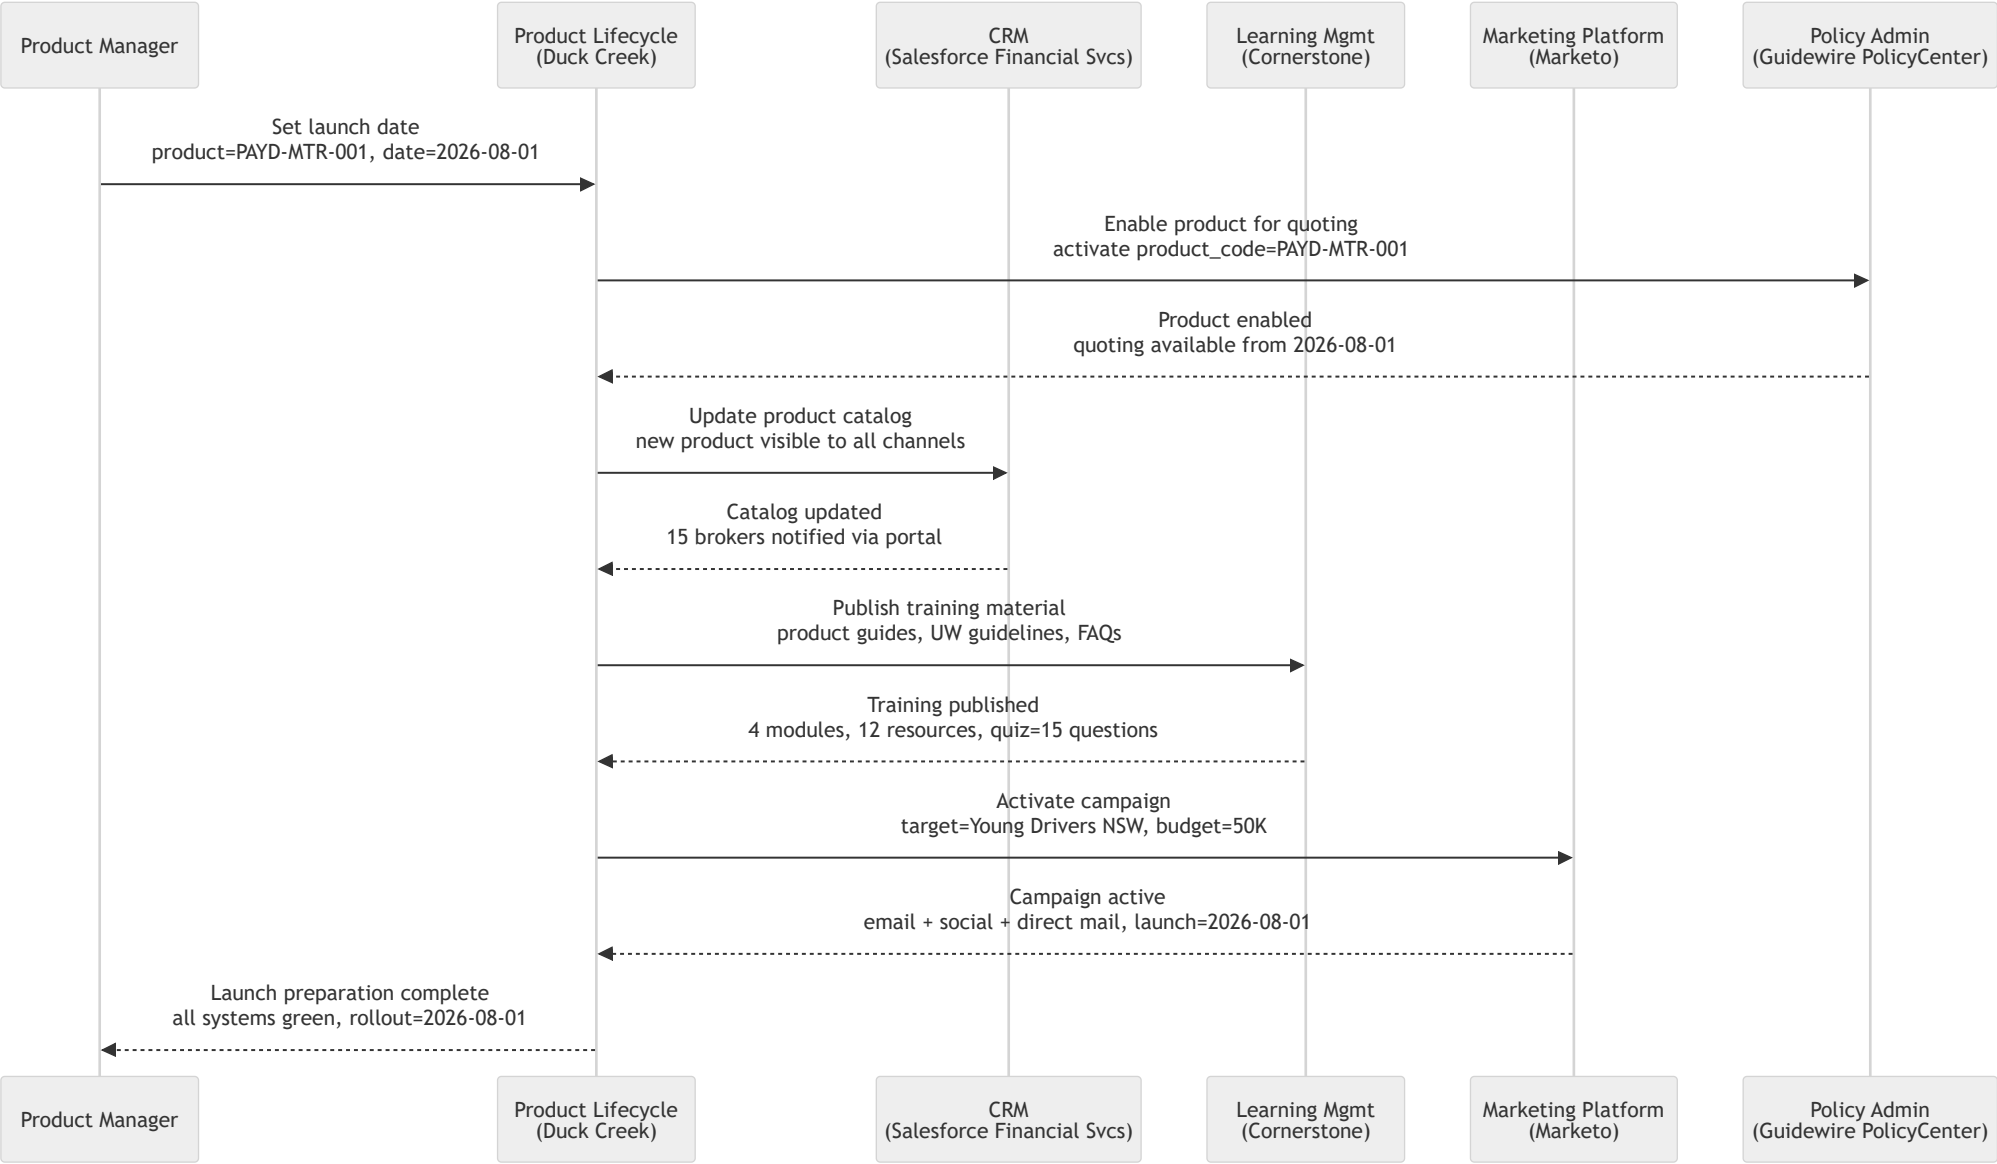

1.4 Product Launch & Distribution

Description: Product team coordinates launch across channels. System configuration enables quoting, training material distributed, and marketing campaigns activated.

Actors: Product Manager, Marketing Manager, Training Coordinator, IT Operations

Systems: Product Lifecycle Mgmt (Duck Creek), CRM (Salesforce Financial Services), Learning Mgmt (Cornerstone), Marketing Platform (Marketo), Policy Admin (Guidewire PolicyCenter)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Product Launch	Enable	EnableProductForQuoting	Product Lifecycle (Duck Creek)	Policy Admin (Guidewire PolicyCenter)	Duck Creek REST API	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Product Launch	Distribution	UpdateChannelProductCatalog	Product Lifecycle (Duck Creek)	CRM (Salesforce Financial Services)	Duck Creek REST API	Salesforce REST API (OAuth2)	Event-driven	Simple
Product Launch	Training	PublishTrainingMaterial	Product Lifecycle (Duck Creek)	Learning Mgmt (Cornerstone)	Duck Creek REST API	Cornerstone API (REST)	Batch (Scheduled)	Medium
Product Launch	Marketing	ActivateMarketingCampaign	Product Lifecycle (Duck Creek)	Marketing Platform (Marketo)	Duck Creek REST API	Marketo API (REST)	API-led (Real-time)	Simple
Product Launch	Notification	NotifyChannelPartners	CRM (Salesforce Financial Services)	Producers / Brokers	Salesforce REST API (OAuth2)	Email / Portal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Product Launch	Enable	Product enabled for quoting in policy admin system	Product active for quoting from launch date; all coverage codes available; rating engine responsive
Product Launch	Distribution	Product catalog updated across all channels	Product visible to all producers; pricing and coverage details displayed correctly; brochures available
Product Launch	Training	Training material published and available to all staff and producers	Training completion trackable; quiz result recorded; certificate issued on completion
Product Launch	Marketing	Marketing campaign activated targeting defined audience	Campaign launched on schedule; tracking pixels active; budget allocation confirmed
Product Launch	Notification	All channel partners notified of product launch	Notification sent 14 days pre-launch; reminder sent 48 hours before; launch-day confirmation sent

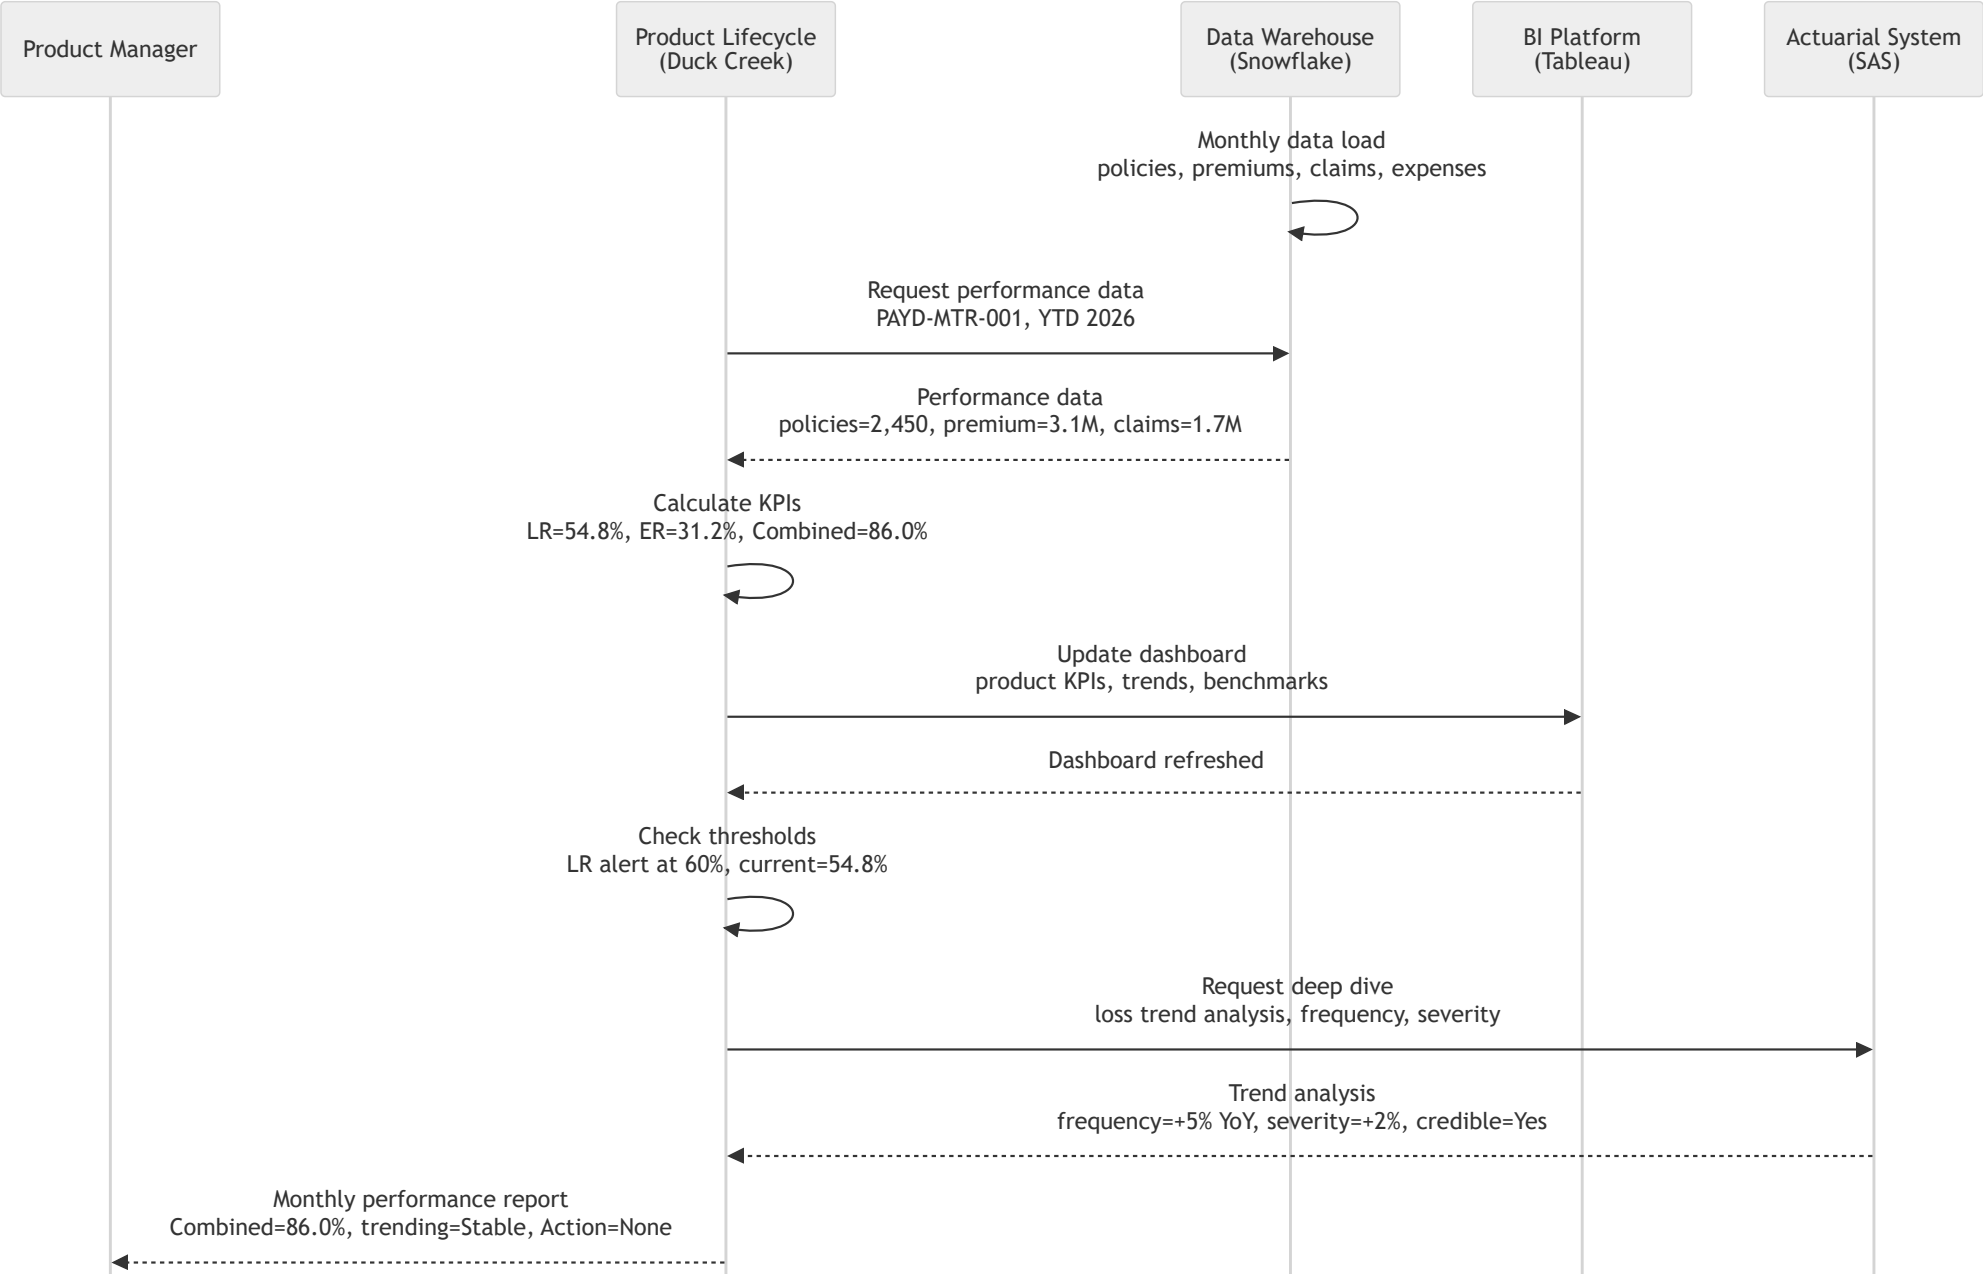

1.5 Product Performance Monitoring

Description: Product team monitors in-force block performance. System tracks loss ratios, expense ratios, policy counts, and triggers alerts when thresholds breached.

Actors: Product Manager, Actuary, Underwriting Manager

Systems: Product Lifecycle Mgmt (Duck Creek), Data Warehouse (Snowflake), BI Platform (Tableau), Actuarial System (SAS)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Product Monitoring	Data	RequestPerformanceData	Product Lifecycle (Duck Creek)	Data Warehouse (Snowflake)	Duck Creek REST API	Snowflake JDBC	API-led (Real-time)	Medium
Product Monitoring	KPI	CalculateProductKPIs	Product Lifecycle (Duck Creek)	Product Lifecycle (Duck Creek)	Internal	Internal	Batch (Scheduled)	Simple
Product Monitoring	Dashboard	UpdateDashboard	Product Lifecycle (Duck Creek)	BI Platform (Tableau)	Duck Creek REST API	Tableau REST API	Event-driven	Simple
Product Monitoring	Trend	AnalyzeLossTrends	Product Lifecycle (Duck Creek)	Actuarial System (SAS)	Duck Creek REST API	SAS API (SOAP)	Batch (Scheduled)	High
Product Monitoring	Alert	ThresholdBreachAlert	Product Lifecycle (Duck Creek)	Notification Service (Firebase)	Duck Creek REST API	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Product Monitoring	Data	Performance data loaded from warehouse within SLA	Data refreshed daily; T-1 data available by 6:00 AM; data completeness > 99.5%
Product Monitoring	KPI	KPIs calculated automatically on data refresh	Loss ratio, expense ratio, combined ratio, policy count, average premium all calculated
Product Monitoring	Dashboard	Product dashboard updated with latest KPIs	Dashboard loads within 3 seconds; drill-down to policy and claim level works
Product Monitoring	Trend	Actuarial trend analysis run monthly with credible data	Frequency and severity trends with confidence intervals; credible data flagged
Product Monitoring	Alert	Alert triggered when KPI threshold breached	Alert sent to product manager within 5 minutes; threshold levels configurable per KPI

Flow	Entity	Acceptance Criterion	Expected Outcome
------	--------	----------------------	------------------

2: Distribution & Channel Management — IN005 IN006 IN007 IN008

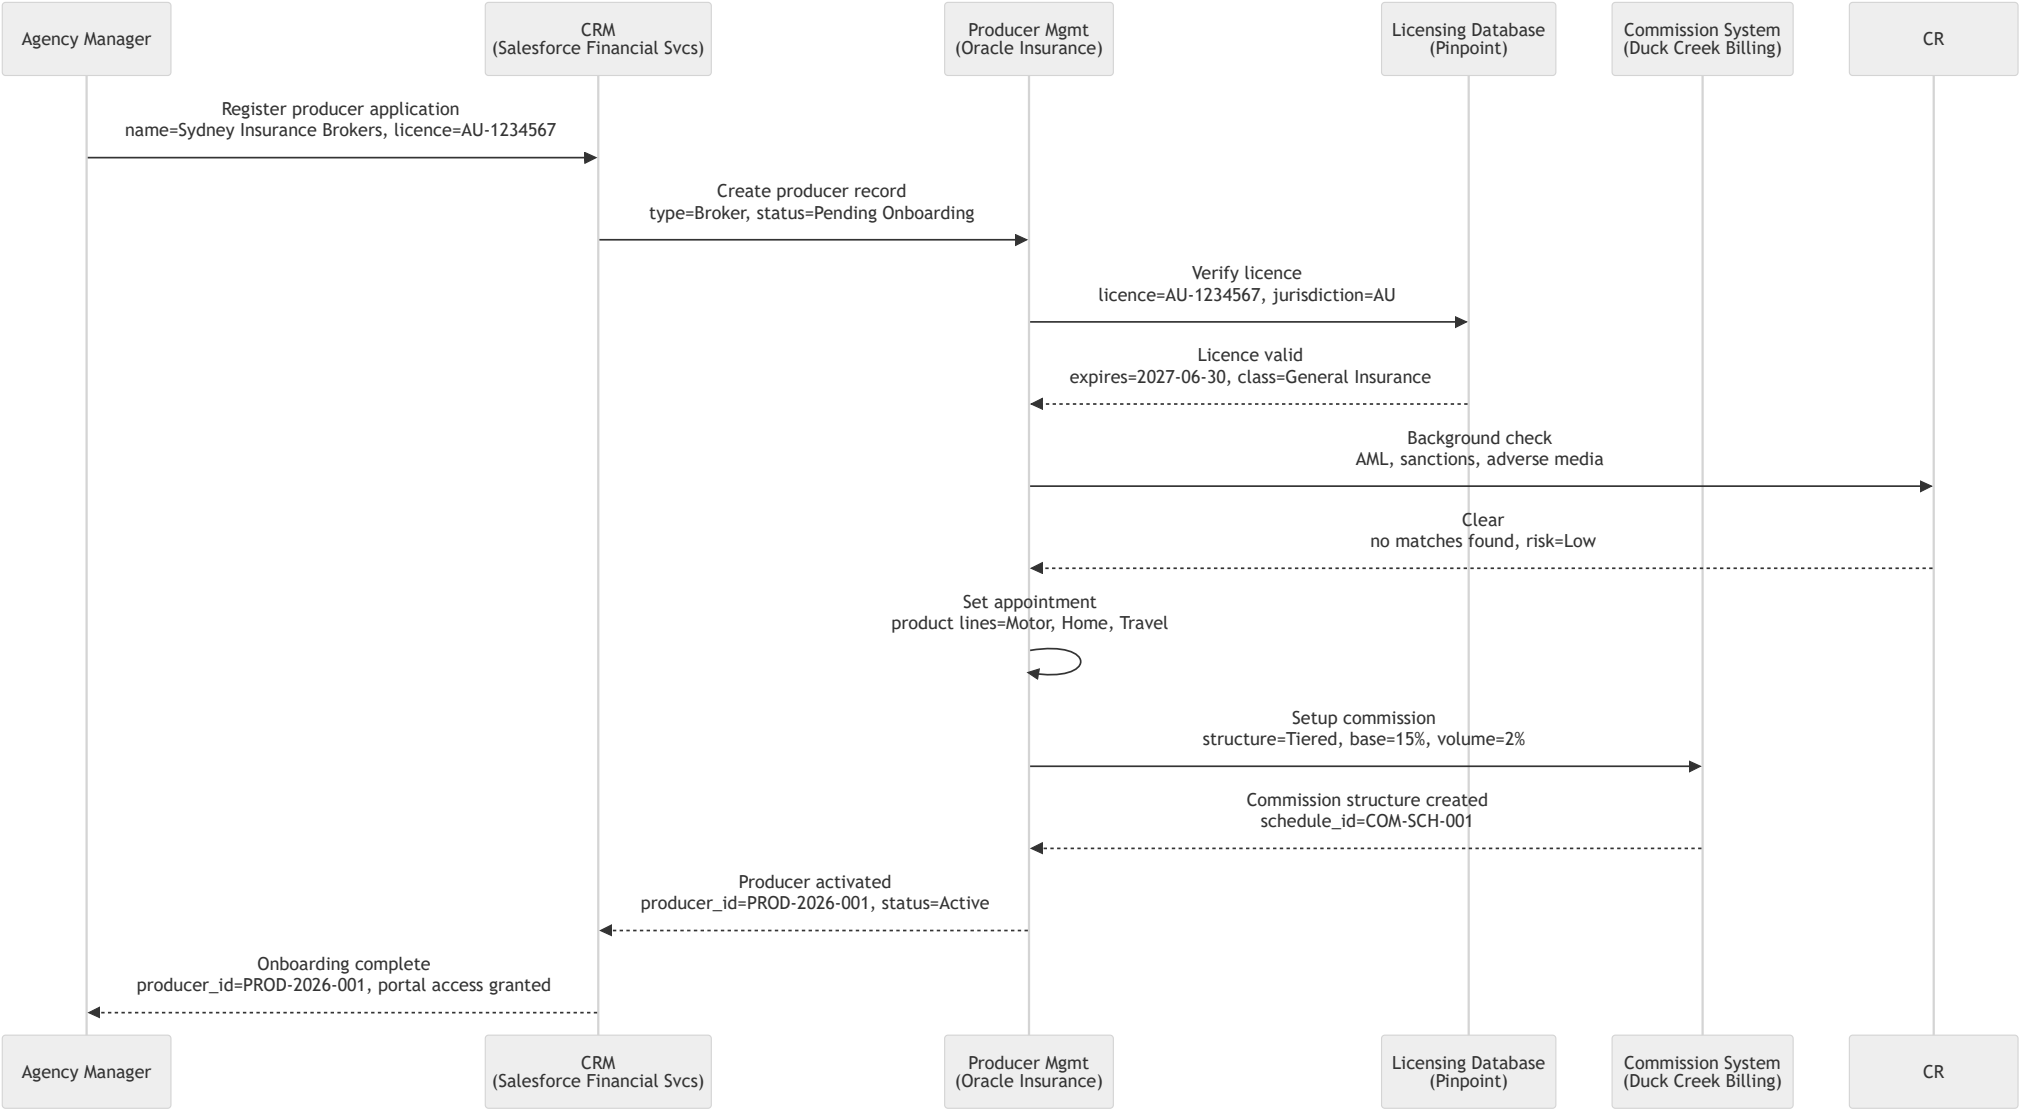

2.1 Agency & Producer Onboarding

Description: Insurance company onboards new agency or broker. System verifies licensing, performs background checks, sets up commission structure, and activates producer.

Actors: Agency Manager, Compliance Officer, Producer

Systems: CRM (Salesforce Financial Services), Producer Mgmt (Oracle Insurance), Licensing Database (Pinpoint), Commission System (Duck Creek Billing)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Producer Onboarding	Registration	RegisterProducerApplication	CRM (Salesforce Financial Services)	Producer Mgmt (Oracle Insurance)	Salesforce REST API (OAuth2)	Oracle REST API (OAuth2)	API-led (Real-time)	Medium
Producer Onboarding	Licensing	VerifyLicense	Producer Mgmt (Oracle Insurance)	Licensing Database (Pinpoint)	Oracle REST API	Pinpoint API (SOAP)	API-led (Real-time)	Medium
Producer Onboarding	Background	PerformBackgroundCheck	Producer Mgmt (Oracle Insurance)	Screening (WorldCheck)	Oracle REST API	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Producer Onboarding	Commission	SetupCommissionStructure	Producer Mgmt (Oracle Insurance)	Commission System (Duck Creek Billing)	Oracle REST API	Duck Creek REST API (OAuth2)	API-led (Real-time)	Medium
Producer Onboarding	Activation	ActivateProducer	Producer Mgmt (Oracle Insurance)	CRM (Salesforce Financial Services)	Oracle REST API	Salesforce REST API (OAuth2)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Producer Onboarding	Registration	Producer application registered with all mandatory fields	Producer record created with unique ID; status set to Pending Onboarding
Producer Onboarding	Licensing	Producer licence verified against regulatory database	Licence validated for jurisdiction; expiry date recorded; automatic renewal reminders configured
Producer Onboarding	Background	Background check completed with no adverse findings	AML, sanctions, and adverse media checks pass; any match >= 80% triggers compliance review
Producer Onboarding	Commission	Commission structure setup complete	Tiered commission schedule created; override and clawback rules configured
Producer Onboarding	Activation	Producer activated and portal access granted	Producer can log in, submit business, and view commissions; appointment letter generated

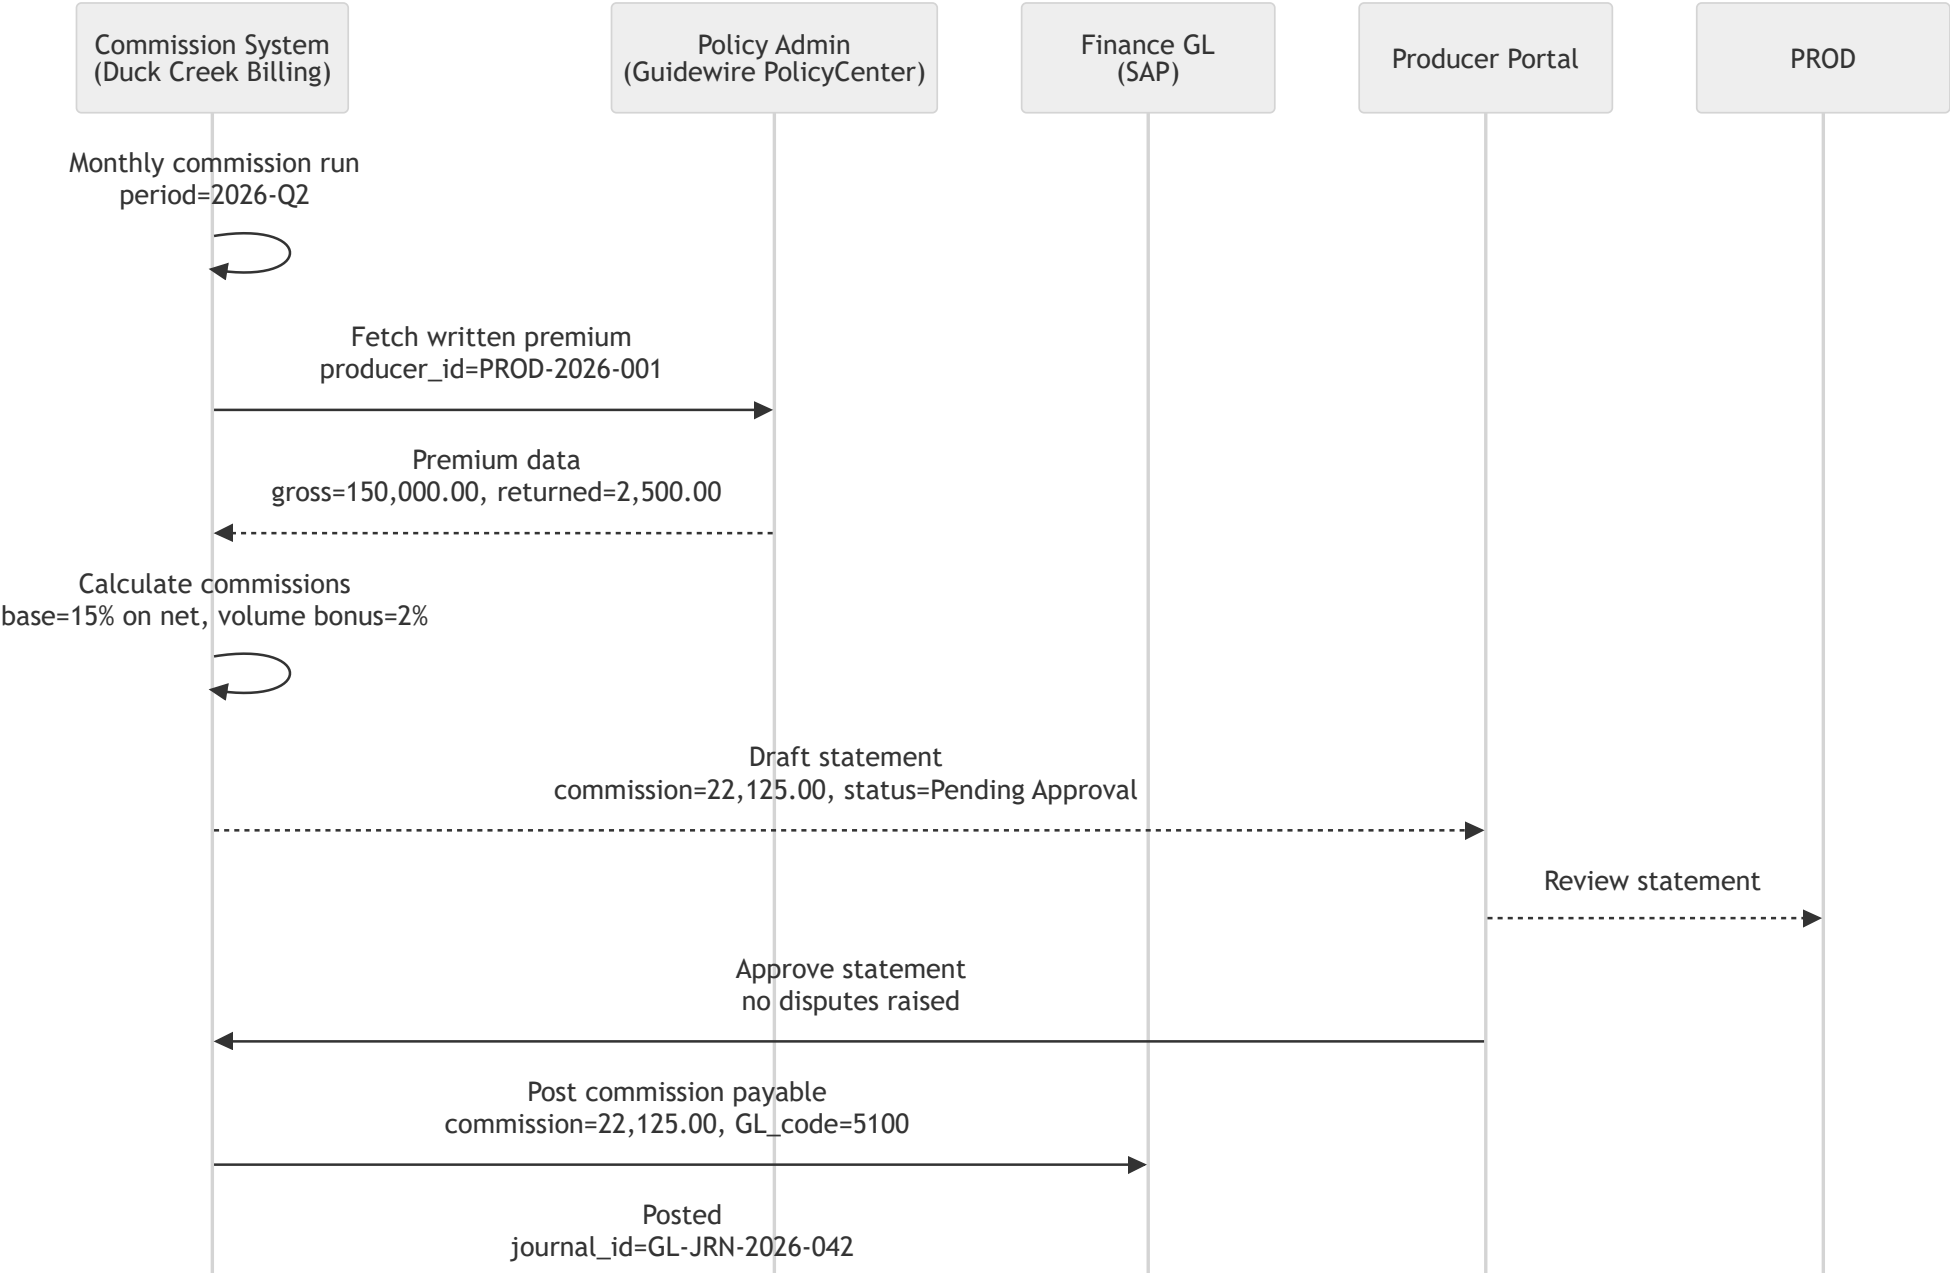

2.2 Commission Management

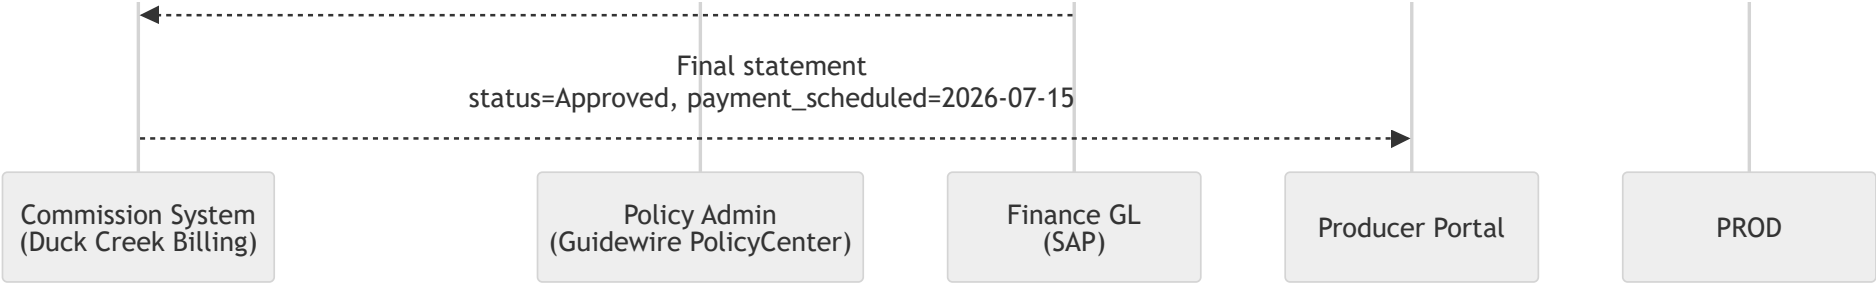

Description: Commission system calculates producer commissions based on premium written, tier structure, and bonus programs. Commission statements generated and approved.

Actors: Finance Officer, Agency Manager, Producer

Systems: Commission System (Duck Creek Billing), Policy Admin (Guidewire PolicyCenter), Finance GL (SAP), Producer Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Commission	Premium	FetchWrittenPremium	Commission System (Duck Creek Billing)	Policy Admin (Guidewire PolicyCenter)	Duck Creek REST API	Guidewire REST API (API Key)	Batch (Scheduled)	Medium
Commission	Calculation	CalculateCommission	Commission System (Duck Creek Billing)	Commission System (Duck Creek Billing)	Internal	Internal	Batch (Scheduled)	Medium
Commission	Statement	PublishCommissionStatement	Commission System (Duck Creek Billing)	Producer Portal	Duck Creek REST API	Portal REST API (JWT)	Event-driven	Simple
Commission	Approval	ApproveCommissionStatement	Producer Portal	Commission System (Duck Creek Billing)	Portal REST API (JWT)	Duck Creek REST API	API-led (Real-time)	Simple
Commission	Posting	PostCommissionToGL	Commission System (Duck Creek Billing)	Finance GL (SAP)	Duck Creek REST API	SAP API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Commission	Premium	Written premium data fetched for commission period	All in-force policies included; returned premiums deducted; multi-currency conversion applied
Commission	Calculation	Commission calculated per producer commission schedule	Base rate applied; volume bonus calculated; clawback rules applied for cancelled policies
Commission	Statement	Commission statement published to producer portal	Statement includes policy-level breakdown; dispute window open for 14 days
Commission	Approval	Approved commission statement processed for payment	Both producer and company approval captured; disputed items flagged and excluded
Commission	Posting	Commission payable posted to general ledger	GL entry balanced; accrual reversed on payment; audit trail links statement to journal

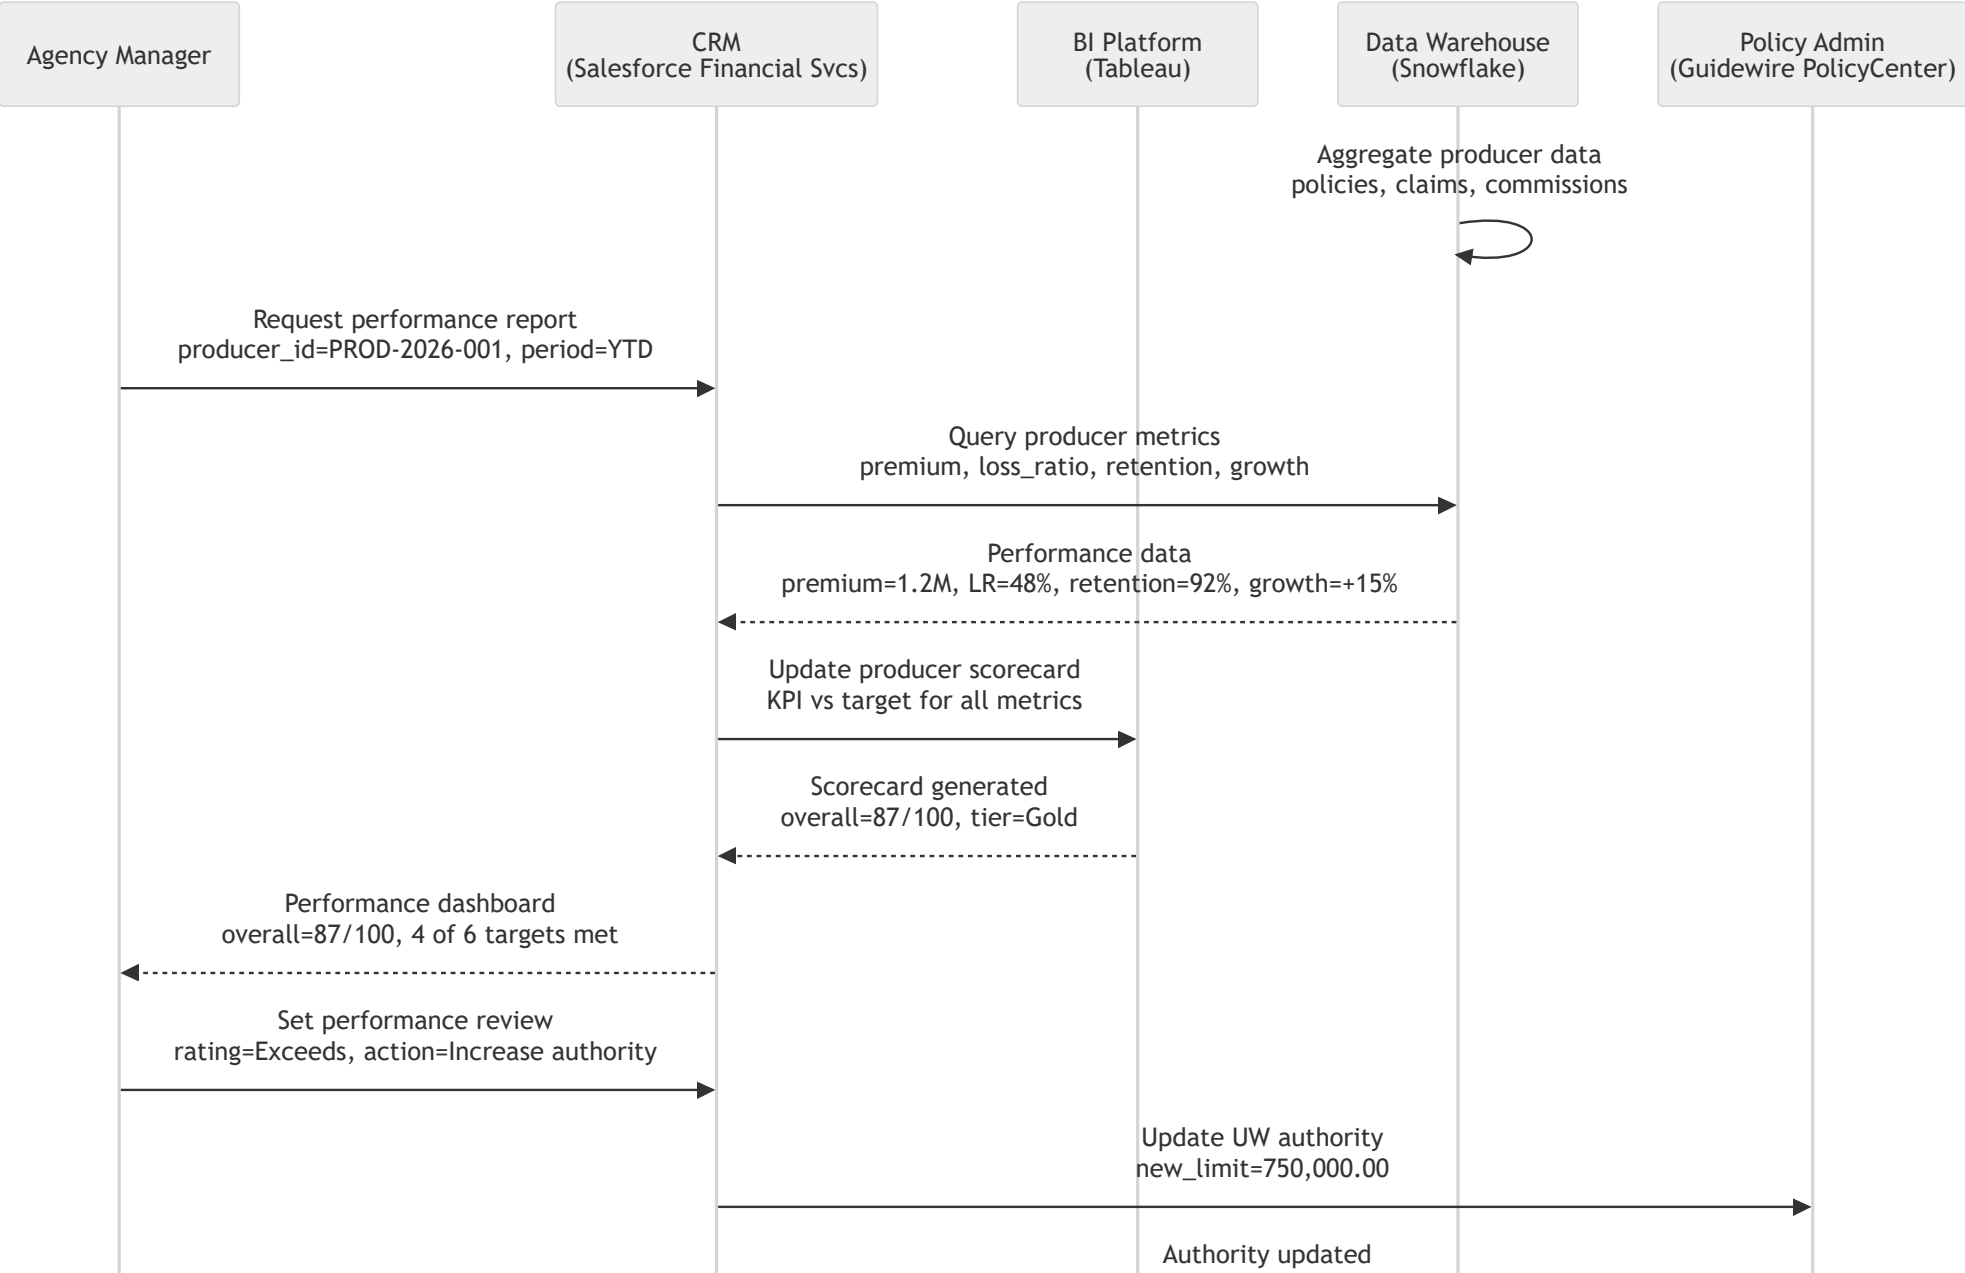

2.3 Producer Performance Management

Description: Management monitors producer performance against KPIs including premium volume, loss ratio, retention rate, and compliance score.

Actors: Agency Manager, Underwriting Manager, Producer

Systems: CRM (Salesforce Financial Services), BI Platform (Tableau), Policy Admin (Guidewire PolicyCenter), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Producer Performance	Data	AggregateProducerMetrics	Data Warehouse (Snowflake)	Data Warehouse (Snowflake)	Internal	Internal	Batch (Scheduled)	Medium
Producer Performance	Query	QueryProducerMetrics	CRM (Salesforce Financial Services)	Data Warehouse (Snowflake)	Salesforce REST API (OAuth2)	Snowflake JDBC	API-led (Real-time)	Medium
Producer Performance	Scorecard	GenerateProducerScorecard	CRM (Salesforce Financial Services)	BI Platform (Tableau)	Salesforce REST API (OAuth2)	Tableau REST API	Event-driven	Simple
Producer Performance	Review	RecordPerformanceReview	CRM (Salesforce Financial Services)	CRM (Salesforce Financial Services)	Internal	Internal	API-led (Real-time)	Simple
Producer Performance	Authority	UpdateUwAuthority	CRM (Salesforce Financial Services)	Policy Admin (Guidewire PolicyCenter)	Salesforce REST API (OAuth2)	Guidewire REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Producer Performance	Data	Producer metrics aggregated from source systems daily	Data freshness < 24 hours; all producers included; metrics calculated consistently across periods
Producer Performance	Query	Producer performance query returns within 5 seconds	Premium volume, loss ratio, retention rate, policy growth, and compliance score returned
Producer Performance	Scorecard	Scorecard generated with KPI vs target comparison	Traffic-light indicators; trend arrows; peer comparison percentile; overall composite score
Producer Performance	Review	Performance review recorded with rating and action plan	Review history maintained; rating change triggers workflow; action items assigned
Producer Performance	Authority	Underwriting authority updated based on performance tier	Authority limit effective immediately; audit trail of change; notification sent to producer

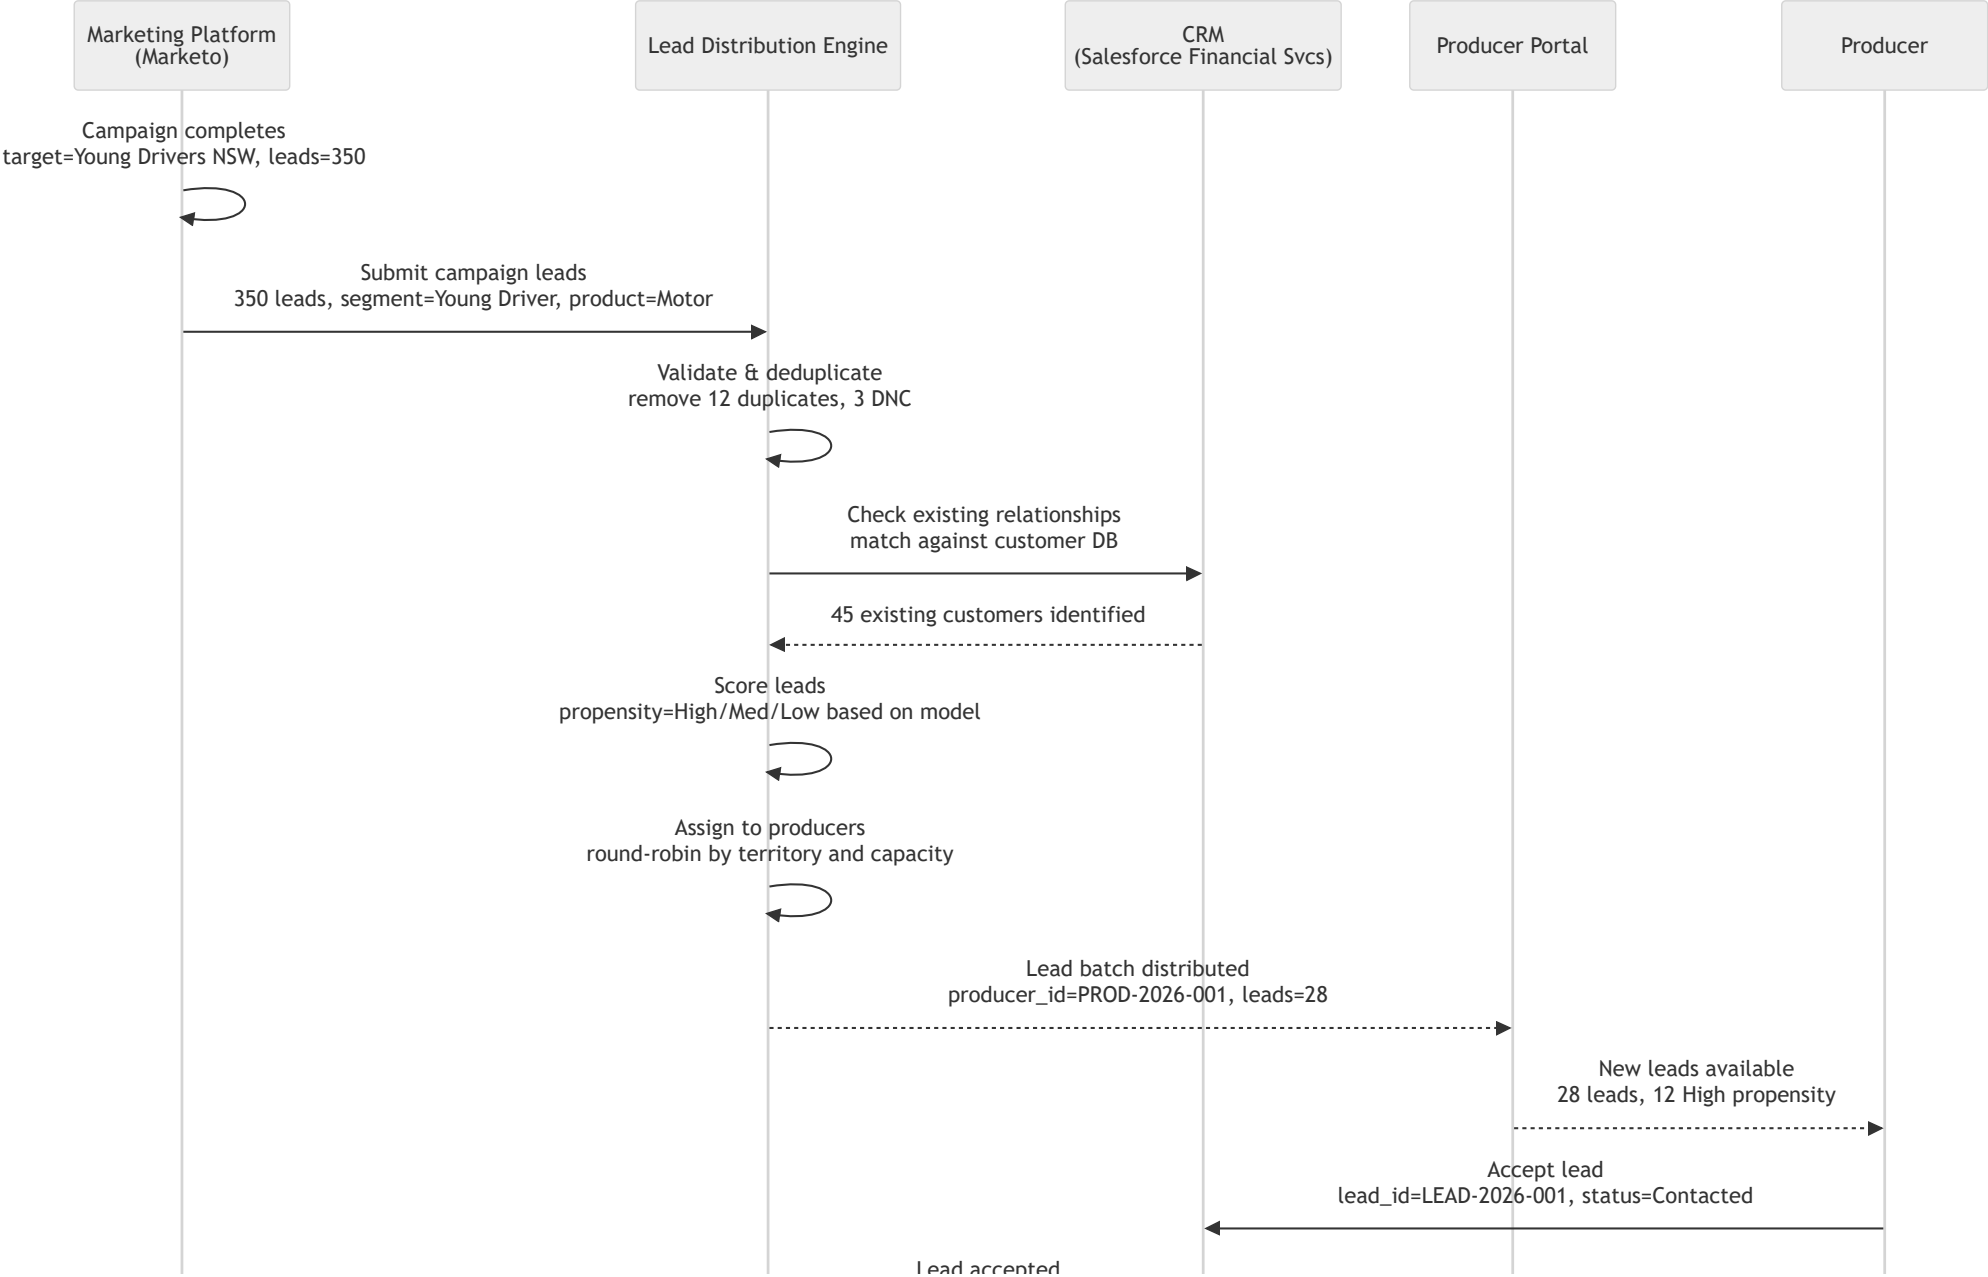

2.4 Lead Distribution & Campaign Management

Description: Marketing campaigns generate leads. Lead distribution engine assigns leads to producers based on rules including territory, product fit, and capacity.

Actors: Marketing Manager, Producer, Campaign Manager

Systems: Marketing Platform (Marketo), Lead Distribution Engine, CRM (Salesforce Financial Services), Producer Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Lead Distribution	Source	SubmitCampaignLeads	Marketing Platform (Marketo)	Lead Distribution Engine	Marketo API (REST)	Lead Engine API (REST)	Event-driven	Medium
Lead Distribution	Validation	ValidateAndDeduplicate	Lead Distribution Engine	Lead Distribution Engine	Internal	Internal	API-led (Real-time)	Medium
Lead Distribution	Match	CheckExistingRelationship	Lead Distribution Engine	CRM (Salesforce Financial Services)	Lead Engine API (REST)	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Lead Distribution	Score	ScoreLeadPropensity	Lead Distribution Engine	Lead Distribution Engine	Internal	Internal	Batch (Real-time)	Medium
Lead Distribution	Assign	AssignLeadToProducer	Lead Distribution Engine	Producer Portal	Lead Engine API (REST)	Portal REST API (JWT)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Lead Distribution	Source	Campaign leads ingested and validated within 60 minutes of campaign end	Duplicate removal, DNC check, and format validation completed; rejection report generated
Lead Distribution	Match	Existing customers identified and routed to relationship manager	Customer-producer relationship respected; cross-sell leads flagged; new business leads separate
Lead Distribution	Score	Lead propensity scored using predictive model	Score distribution captured; model confidence reported; feedback loop for model improvement
Lead Distribution	Assign	Leads assigned to producers based on rules	Round-robin balanced; territory mapped; producer capacity respected; unassigned leads queued
Lead Distribution	Response	Lead accepted within 24 hours triggers auto-reminder for unaccepted leads	Accepted leads show status change; unaccepted leads escalate at 24/48/72 hours

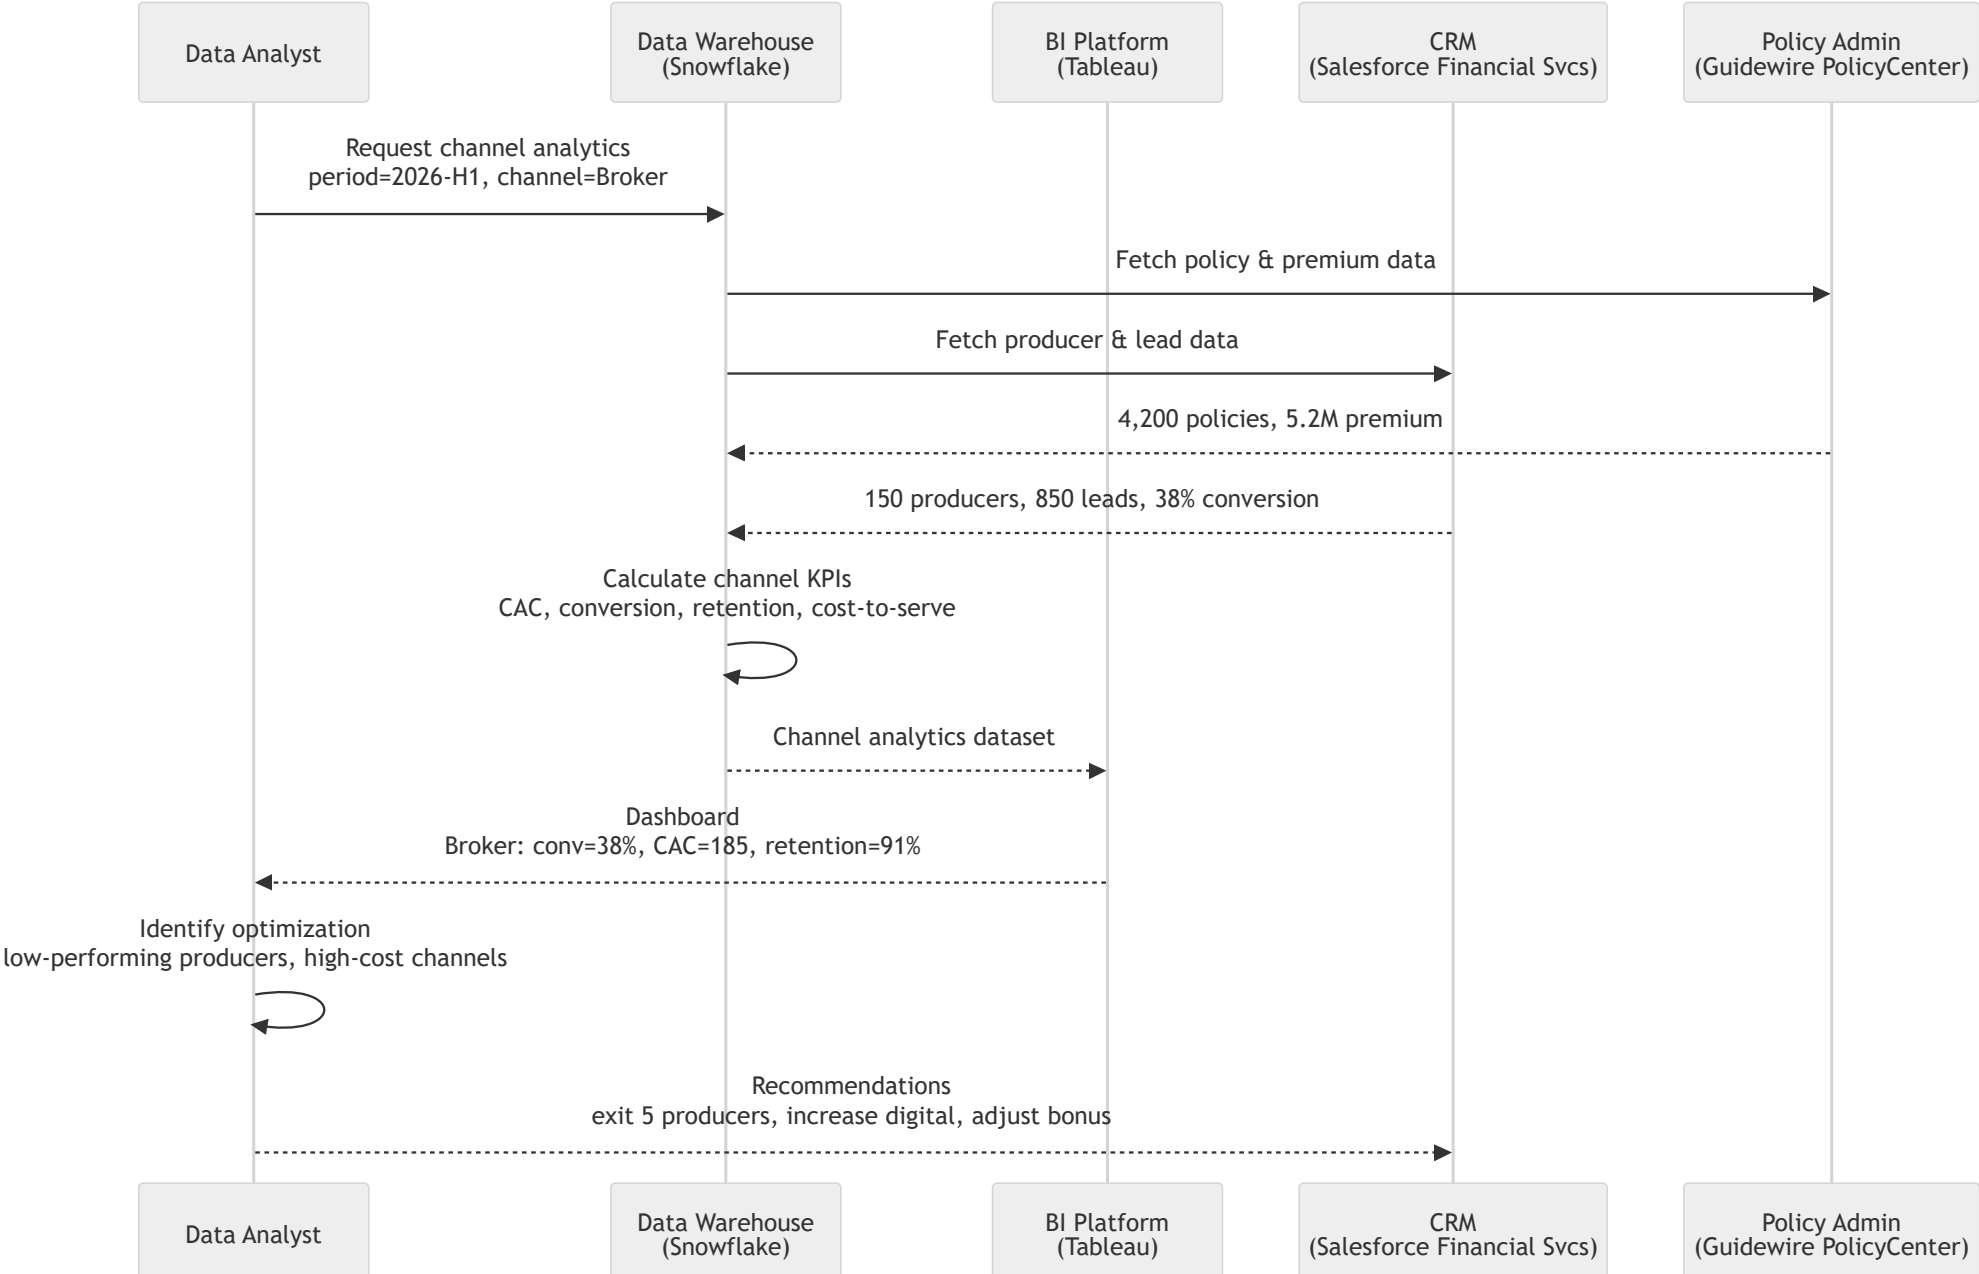

2.5 Distribution Analytics & Optimization

Description: Distribution analytics team analyzes channel performance, cost-to-serve, conversion rates, and recommends optimization strategies.

Actors: Agency Manager, Data Analyst, Channel Manager

Systems: Data Warehouse (Snowflake), BI Platform (Tableau), CRM (Salesforce Financial Services), Policy Admin (Guidewire PolicyCenter)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Distribution Analytics	Fetch	FetchChannelData	Data Warehouse (Snowflake)	Policy Admin (Guidewire PolicyCenter)	Snowflake JDBC	Guidewire REST API (API Key)	Batch (Scheduled)	Medium
Distribution Analytics	CRM	FetchCRMDData	Data Warehouse (Snowflake)	CRM (Salesforce Financial Services)	Snowflake JDBC	Salesforce REST API (OAuth2)	Batch (Scheduled)	Medium
Distribution Analytics	KPI	CalculateChannelKPIs	Data Warehouse (Snowflake)	Data Warehouse (Snowflake)	Internal	Internal	Batch (Scheduled)	Medium
Distribution Analytics	Visualize	VisualizeChannelAnalytics	Data Warehouse (Snowflake)	BI Platform (Tableau)	Snowflake JDBC	Tableau REST API	Event-driven	Simple
Distribution Analytics	Recommend	SubmitOptimizationRecommendations	BI Platform (Tableau)	CRM (Salesforce Financial Services)	Tableau REST API	Salesforce REST API (OAuth2)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Distribution Analytics	Fetch	Channel data fetched from all source systems	Data reconciled across systems; date ranges aligned; multi-currency normalized
Distribution Analytics	CRM	Producer and lead data integrated	Lead-to-policy conversion traceable; producer activity log complete; attribution accurate
Distribution Analytics	KPI	Channel KPIs calculated consistently	CAC, conversion rate, retention rate, cost-to-serve, and cross-sell ratio all calculated
Distribution Analytics	Visualize	Channel analytics dashboard generated	Dashboard loads within 5 seconds; filterable by channel, region, product, period
Distribution Analytics	Recommend	Optimization recommendations submitted with business case	Recommendations ranked by ROI; expected impact

Flow	Entity	Acceptance Criterion	Expected Outcome
			modeled; approval workflow initiated

3: Underwriting — IN009 IN010 IN011 IN012

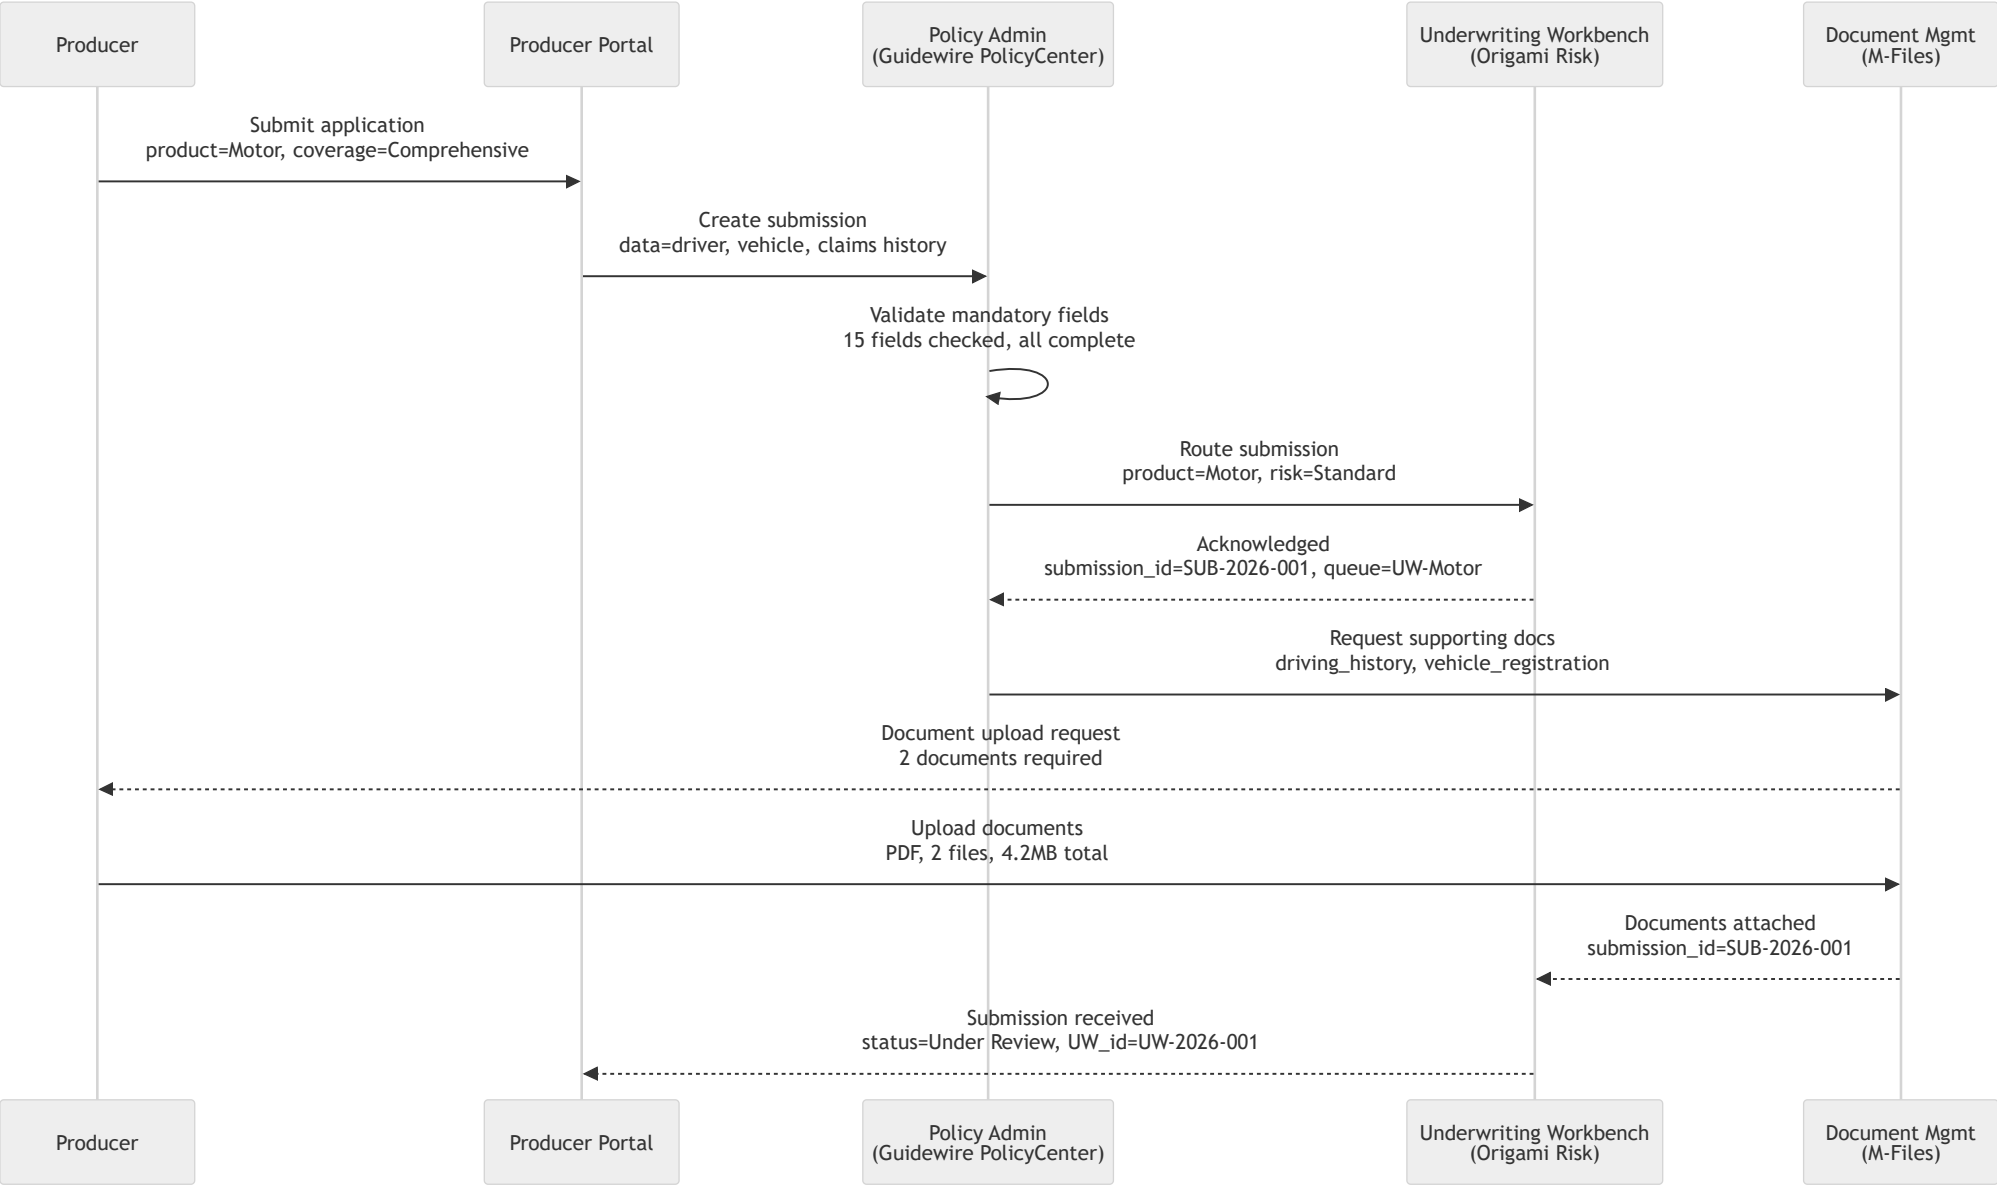

3.1 New Business Submission

Description: Producer submits new business application. System validates data completeness, performs initial triage, and routes to underwriting queue.

Actors: Producer, Underwriter, Operations Coordinator

Systems: Producer Portal, Policy Admin (Guidewire PolicyCenter), Document Mgmt (M-Files), Underwriting Workbench (Origami Risk)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
New Business	Submit	SubmitApplication	Producer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Simple
New Business	Validate	ValidateMandatoryFields	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Simple
New Business	Route	RouteSubmission	Policy Admin (Guidewire PolicyCenter)	Underwriting Workbench (Origami Risk)	Guidewire REST API (API Key)	Origami API (REST)	API-led (Real-time)	Medium
New Business	Document	RequestSupportingDocuments	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple
New Business	Attachment	AttachDocumentsToSubmission	Document Mgmt (M-Files)	Underwriting Workbench (Origami Risk)	M-Files REST API (API Key)	Origami API (REST)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
New Business	Submit	Application submitted with all mandatory data	Mandatory field validation passes; submission ID generated; confirmation sent to producer
New Business	Validate	Validation rules applied to all submission fields	All required fields populated; data format validated; out-of-range values flagged
New Business	Route	Submission routed to correct underwriting queue	Queue assignment based on product line, risk band, and workload balancing
New Business	Document	Document upload request sent to producer within 60 seconds	Upload portal link sent; document requirements clearly listed; deadline indicated
New Business	Attachment	Uploaded documents attached to submission record	Document index updated; OCR processing initiated; document status reflected in UW workbench

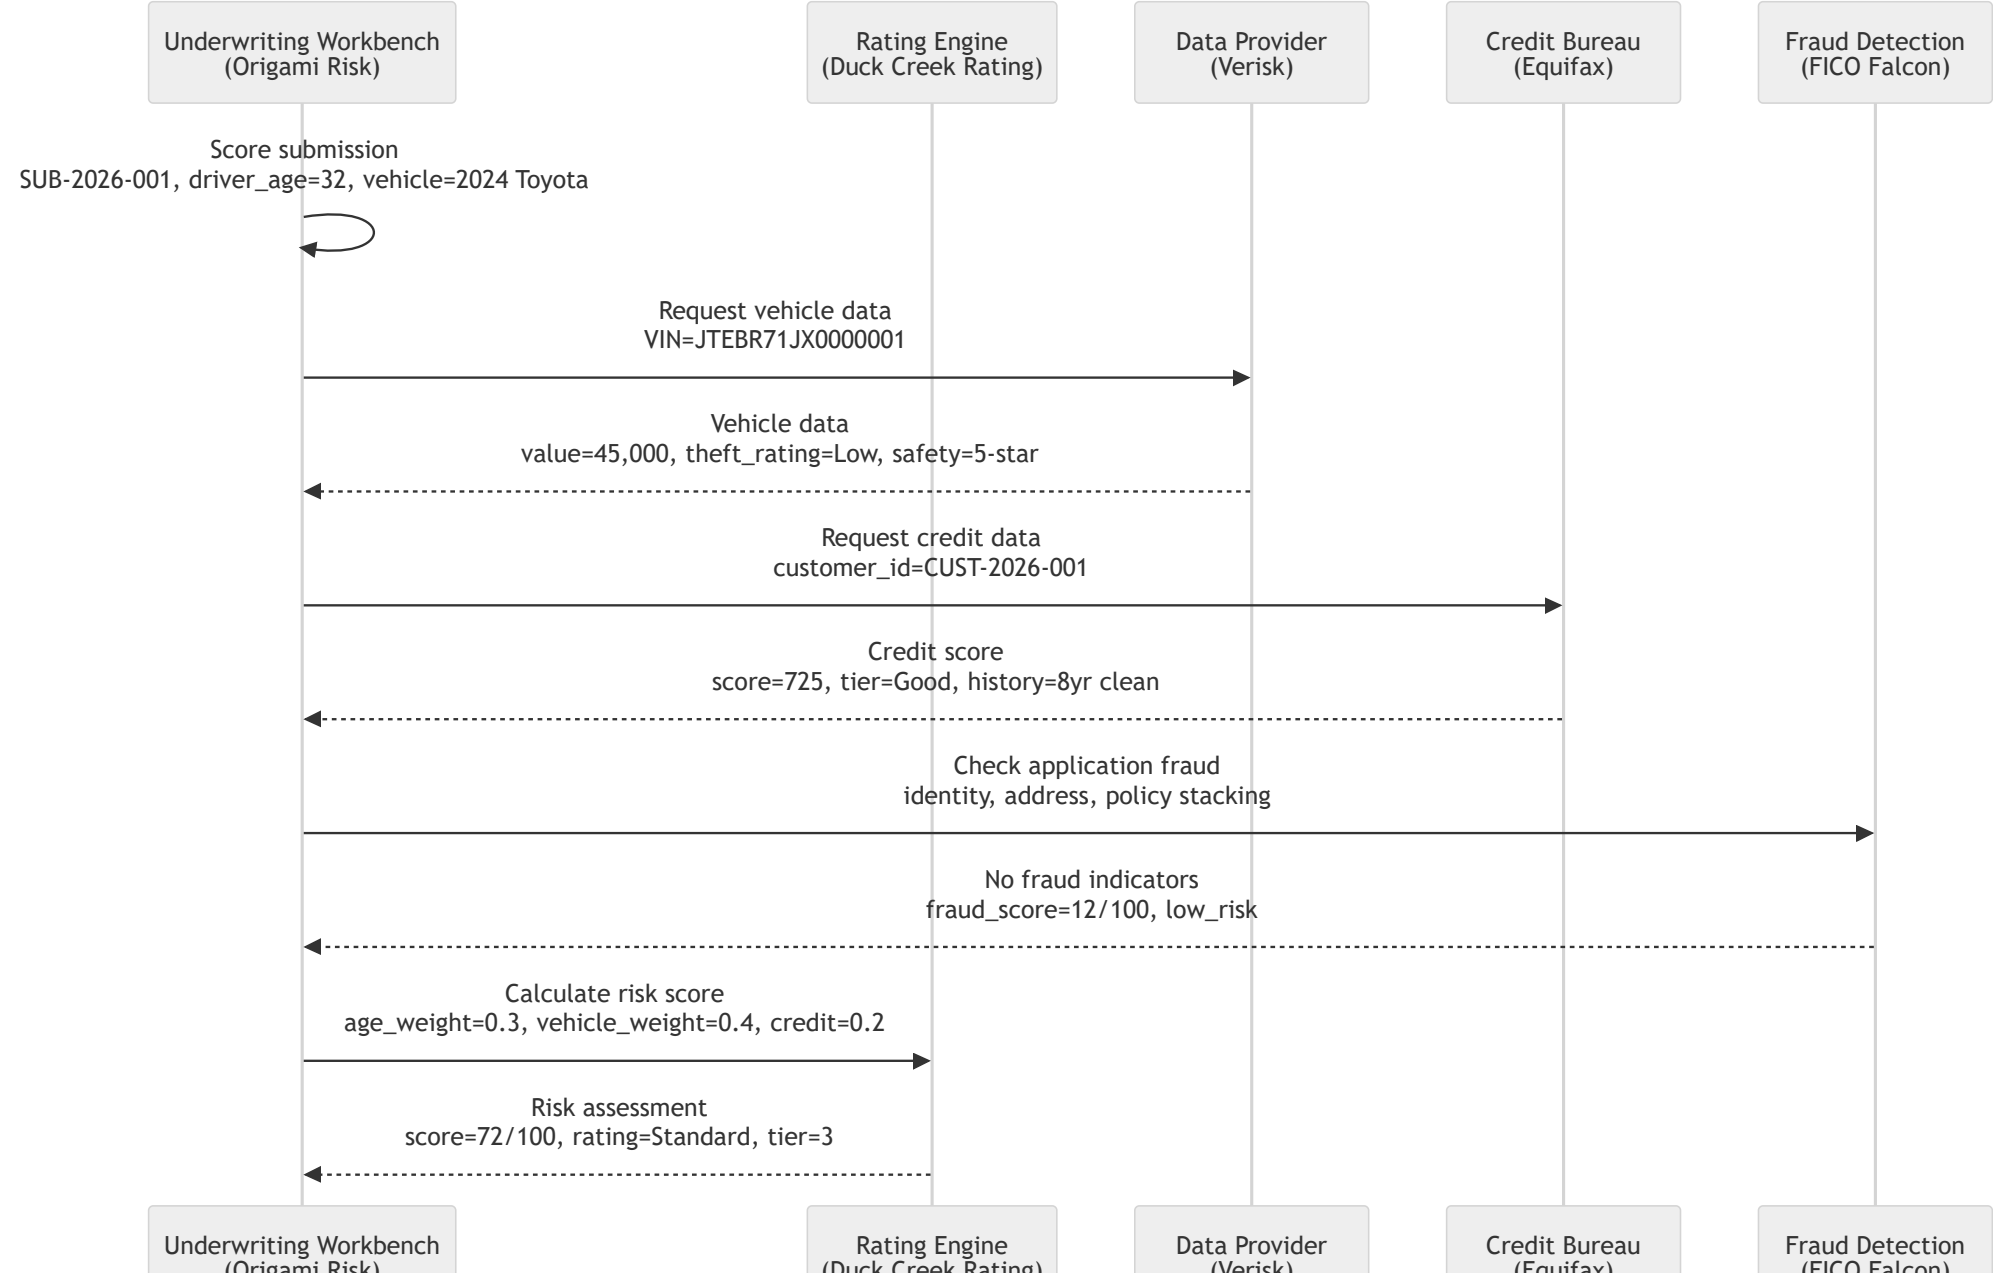

3.2 Risk Assessment & Scoring

Description: Underwriting system evaluates risk using rules, third-party data, and predictive models. Risk score determines pricing tier and acceptance decision.

Actors: Underwriter, Risk Analyst

Systems: Underwriting Workbench (Origami Risk), Rating Engine (Duck Creek Rating), Data Provider (Verisk), Credit Bureau (Equifax), Fraud Detection (FICO Falcon)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Risk Assessment	Vehicle	RequestVehicleData	Underwriting Workbench (Origami Risk)	Data Provider (Verisk)	Origami API (REST)	Verisk API (SOAP)	API-led (Real-time)	Medium
Risk Assessment	Credit	RequestCreditData	Underwriting Workbench (Origami Risk)	Credit Bureau (Equifax)	Origami API (REST)	Equifax API (SOAP)	API-led (Real-time)	Medium
Risk Assessment	Fraud	CheckFraudIndicators	Underwriting Workbench (Origami Risk)	Fraud Detection (FICO Falcon)	Origami API (REST)	Falcon API (ISO 8583)	API-led (Real-time)	High
Risk Assessment	Score	CalculateRiskScore	Underwriting Workbench (Origami Risk)	Rating Engine (Duck Creek Rating)	Origami API (REST)	Duck Creek Rating API (REST)	API-led (Real-time)	Medium
Risk Assessment	Result	RecordRiskAssessment	Underwriting Workbench (Origami Risk)	Underwriting Workbench (Origami Risk)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Risk Assessment	Vehicle	Vehicle data retrieved from Verisk within 5 seconds	VIN decoded correctly; vehicle value, theft rating, and safety rating populated
Risk Assessment	Credit	Credit data retrieved from Equifax within 10 seconds	Credit score retrieved; adverse flags reported; consent check confirmed
Risk Assessment	Fraud	Fraud check completed within 3 seconds	Fraud score returned; identity verification passed; policy stacking checked
Risk Assessment	Score	Risk score calculated using weighted model	Score 0-100; rating bands applied; score breakdown visible to underwriter
Risk Assessment	Result	Risk assessment recorded and attached to submission	Assessment timestamped; data sources logged; score and rating persisted

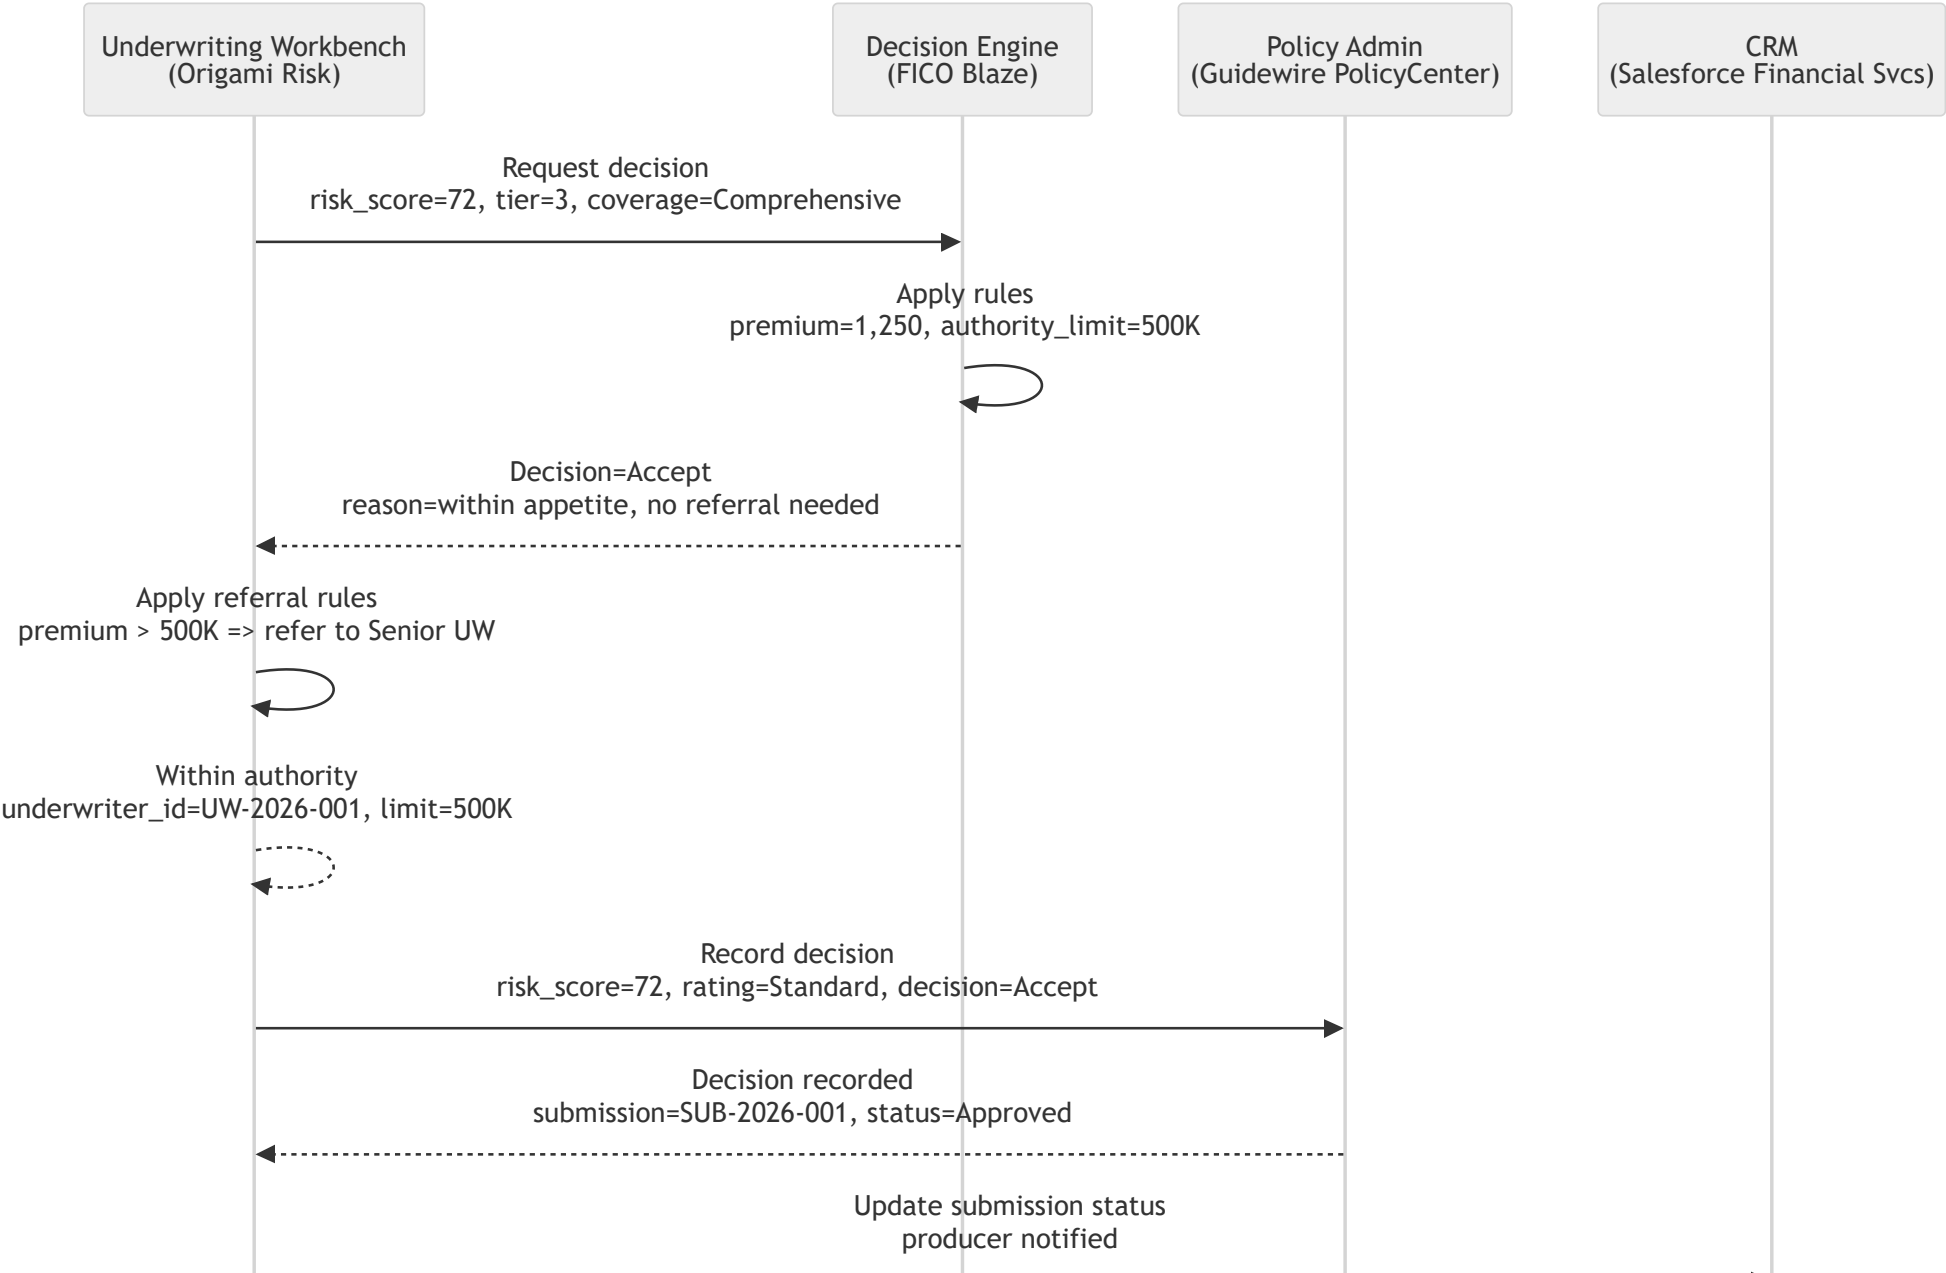

3.3 Underwriting Decision & Referral

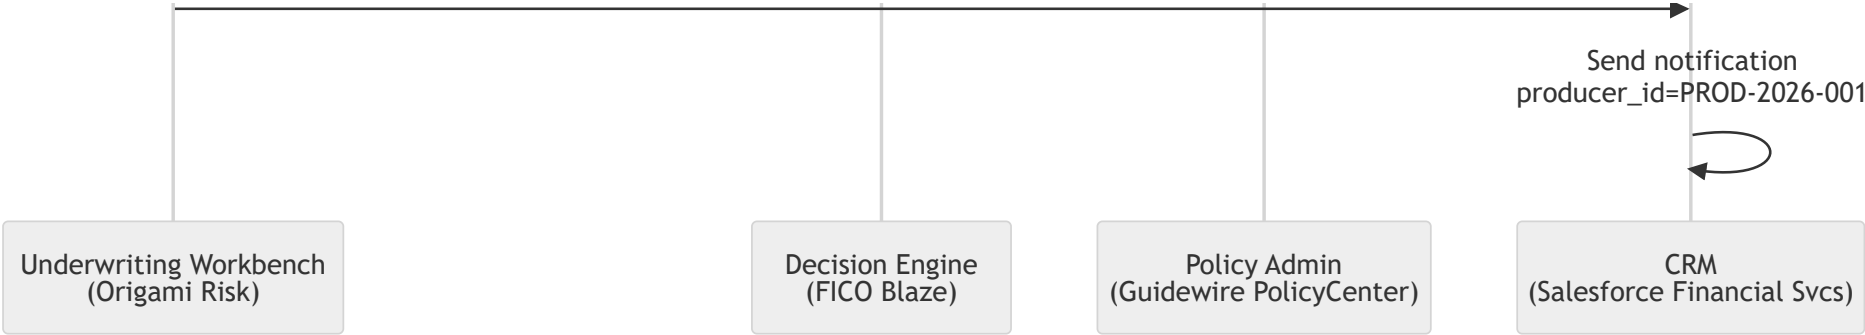

Description: Underwriter reviews risk assessment and makes decision. Referrals automatically escalated to senior underwriter or chief underwriter based on authority limits.

Actors: Underwriter, Senior Underwriter, Chief Underwriter

Systems: Underwriting Workbench (Origami Risk), Decision Engine (FICO Blaze), Policy Admin (Guidewire PolicyCenter), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Uw Decision	Decision	RequestUnderwritingDecision	Underwriting Workbench (Origami Risk)	Decision Engine (FICO Blaze)	Origami API (REST)	FICO Blaze API (REST)	API-led (Real-time)	Medium
Uw Decision	Referral	ApplyReferralRules	Underwriting Workbench (Origami Risk)	Underwriting Workbench (Origami Risk)	Internal	Internal	API-led (Real-time)	Simple
Uw Decision	Record	RecordDecision	Underwriting Workbench (Origami Risk)	Policy Admin (Guidewire PolicyCenter)	Origami API (REST)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Uw Decision	Notify	NotifyProducerOfDecision	Underwriting Workbench (Origami Risk)	CRM (Salesforce Financial Services)	Origami API (REST)	Salesforce REST API (OAuth2)	Event-driven	Simple
Uw Decision	Escalate	EscalateToSeniorUw	Underwriting Workbench (Origami Risk)	Underwriting Workbench (Origami Risk)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Uw Decision	Decision	Decision engine evaluates risk score against underwriting rules	Decision returned with reason; rules version logged; auto-accept if all criteria met
Uw Decision	Referral	Referral rules applied based on authority matrix	Referral to senior UW when premium > authority limit; referral to chief UW when > senior limit
Uw Decision	Record	Decision recorded in policy admin system	Decision timestamped; UW ID recorded; decision reason persisted
Uw Decision	Notify	Producer notified of decision	Accept: quote link sent; Decline: decline letter with reason; Refer: expected timeline communicated
Uw Decision	Escalate	Referral escalated with full submission context	Senior UW sees risk assessment, data sources, and recommendation; SLA timer started

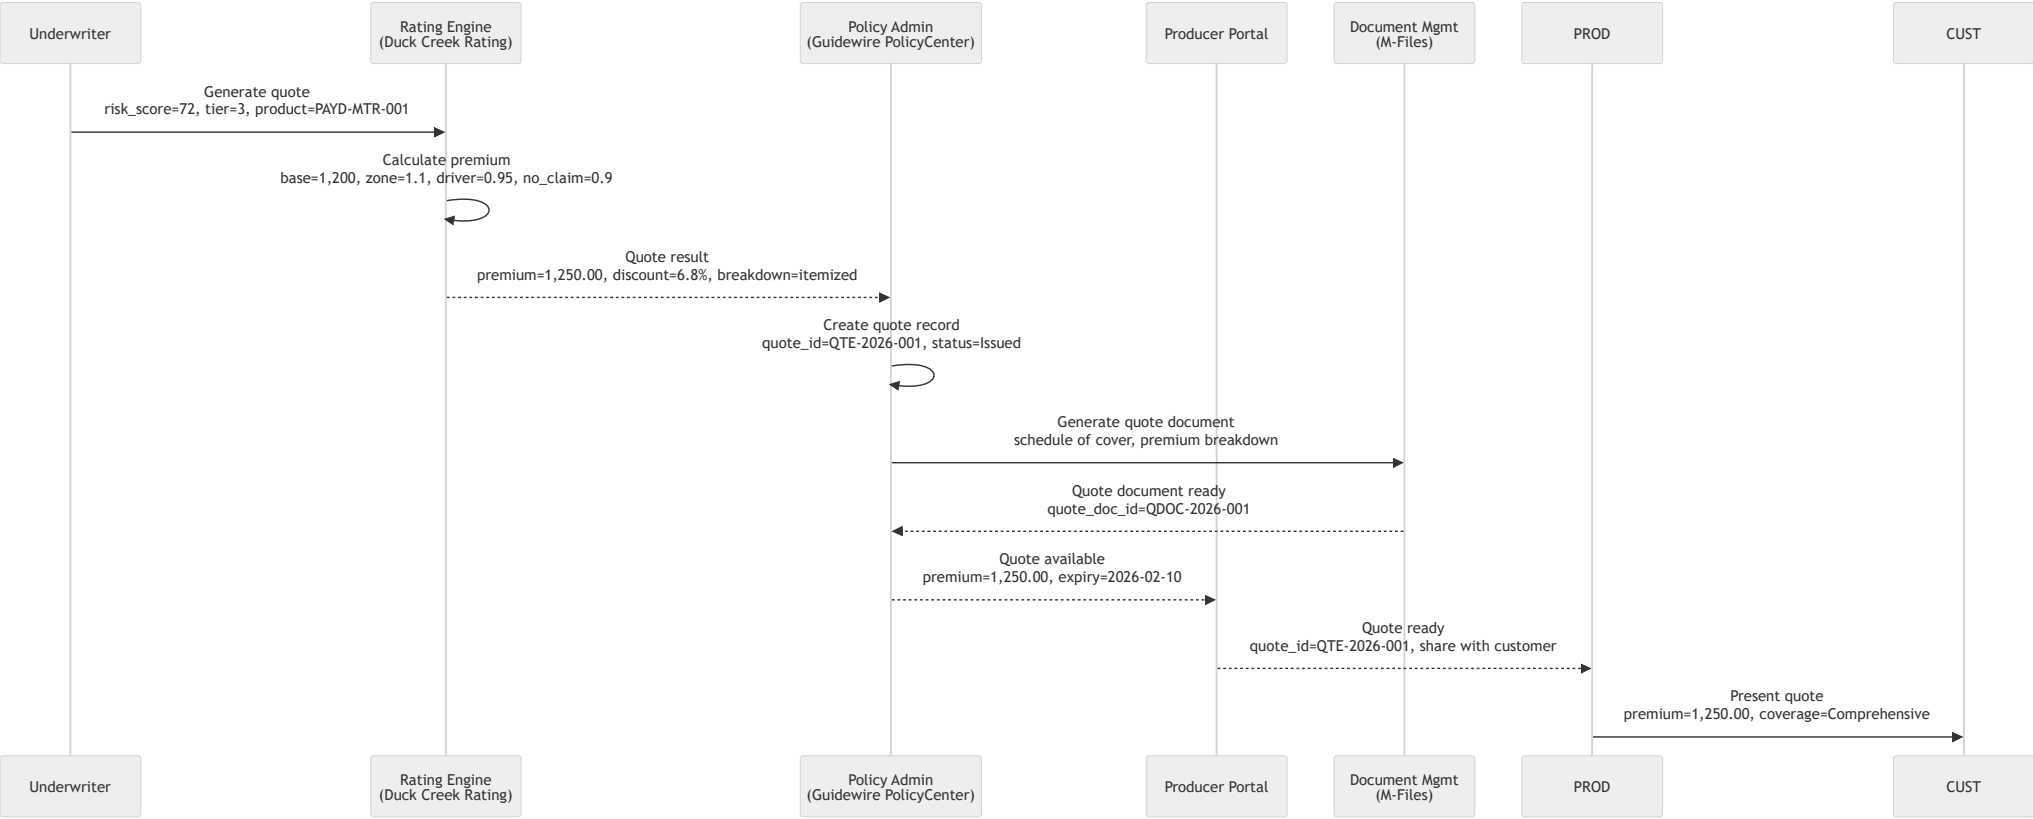

3.4 Quote Generation

Description: System generates quote based on risk assessment, rates, and approved discounts. Quote presented to producer and customer with full breakdown.

Actors: Underwriter, Producer, Customer

Systems: Rating Engine (Duck Creek Rating), Policy Admin (Guidewire PolicyCenter), Producer Portal, Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Quote	Calculate	CalculatePremium	Underwriting Workbench (Origami Risk)	Rating Engine (Duck Creek Rating)	Origami API (REST)	Duck Creek Rating API (REST)	API-led (Real-time)	Medium
Quote	Create	CreateQuoteRecord	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Simple
Quote	Document	GenerateQuoteDocument	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple
Quote	Distribute	DistributeQuote	Policy Admin (Guidewire PolicyCenter)	Producer Portal	Guidewire REST API (API Key)	Portal REST API (JWT)	Event-driven	Simple
Quote	Expiry	MonitorQuoteExpiry	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Quote	Calculate	Premium calculated using approved rates and rating rules	Premium calculation matches rate manual; all rating factors applied correctly; discounts itemized
Quote	Create	Quote record created with unique ID	Quote ID format QTE-YYYY-NNN; status = Issued; all pricing fields populated
Quote	Document	Quote document generated from approved templates	Schedule of cover accurate; premium breakdown matches system calculation; document watermarked
Quote	Distribute	Quote available to producer and customer	Quote accessible via portal; email notification sent; quote PDF available for download
Quote	Expiry	Quote expiry monitored and notifications sent before expiry	Expiry reminder at T-14, T-7, T-1 days; expired quotes flagged and removed from active view

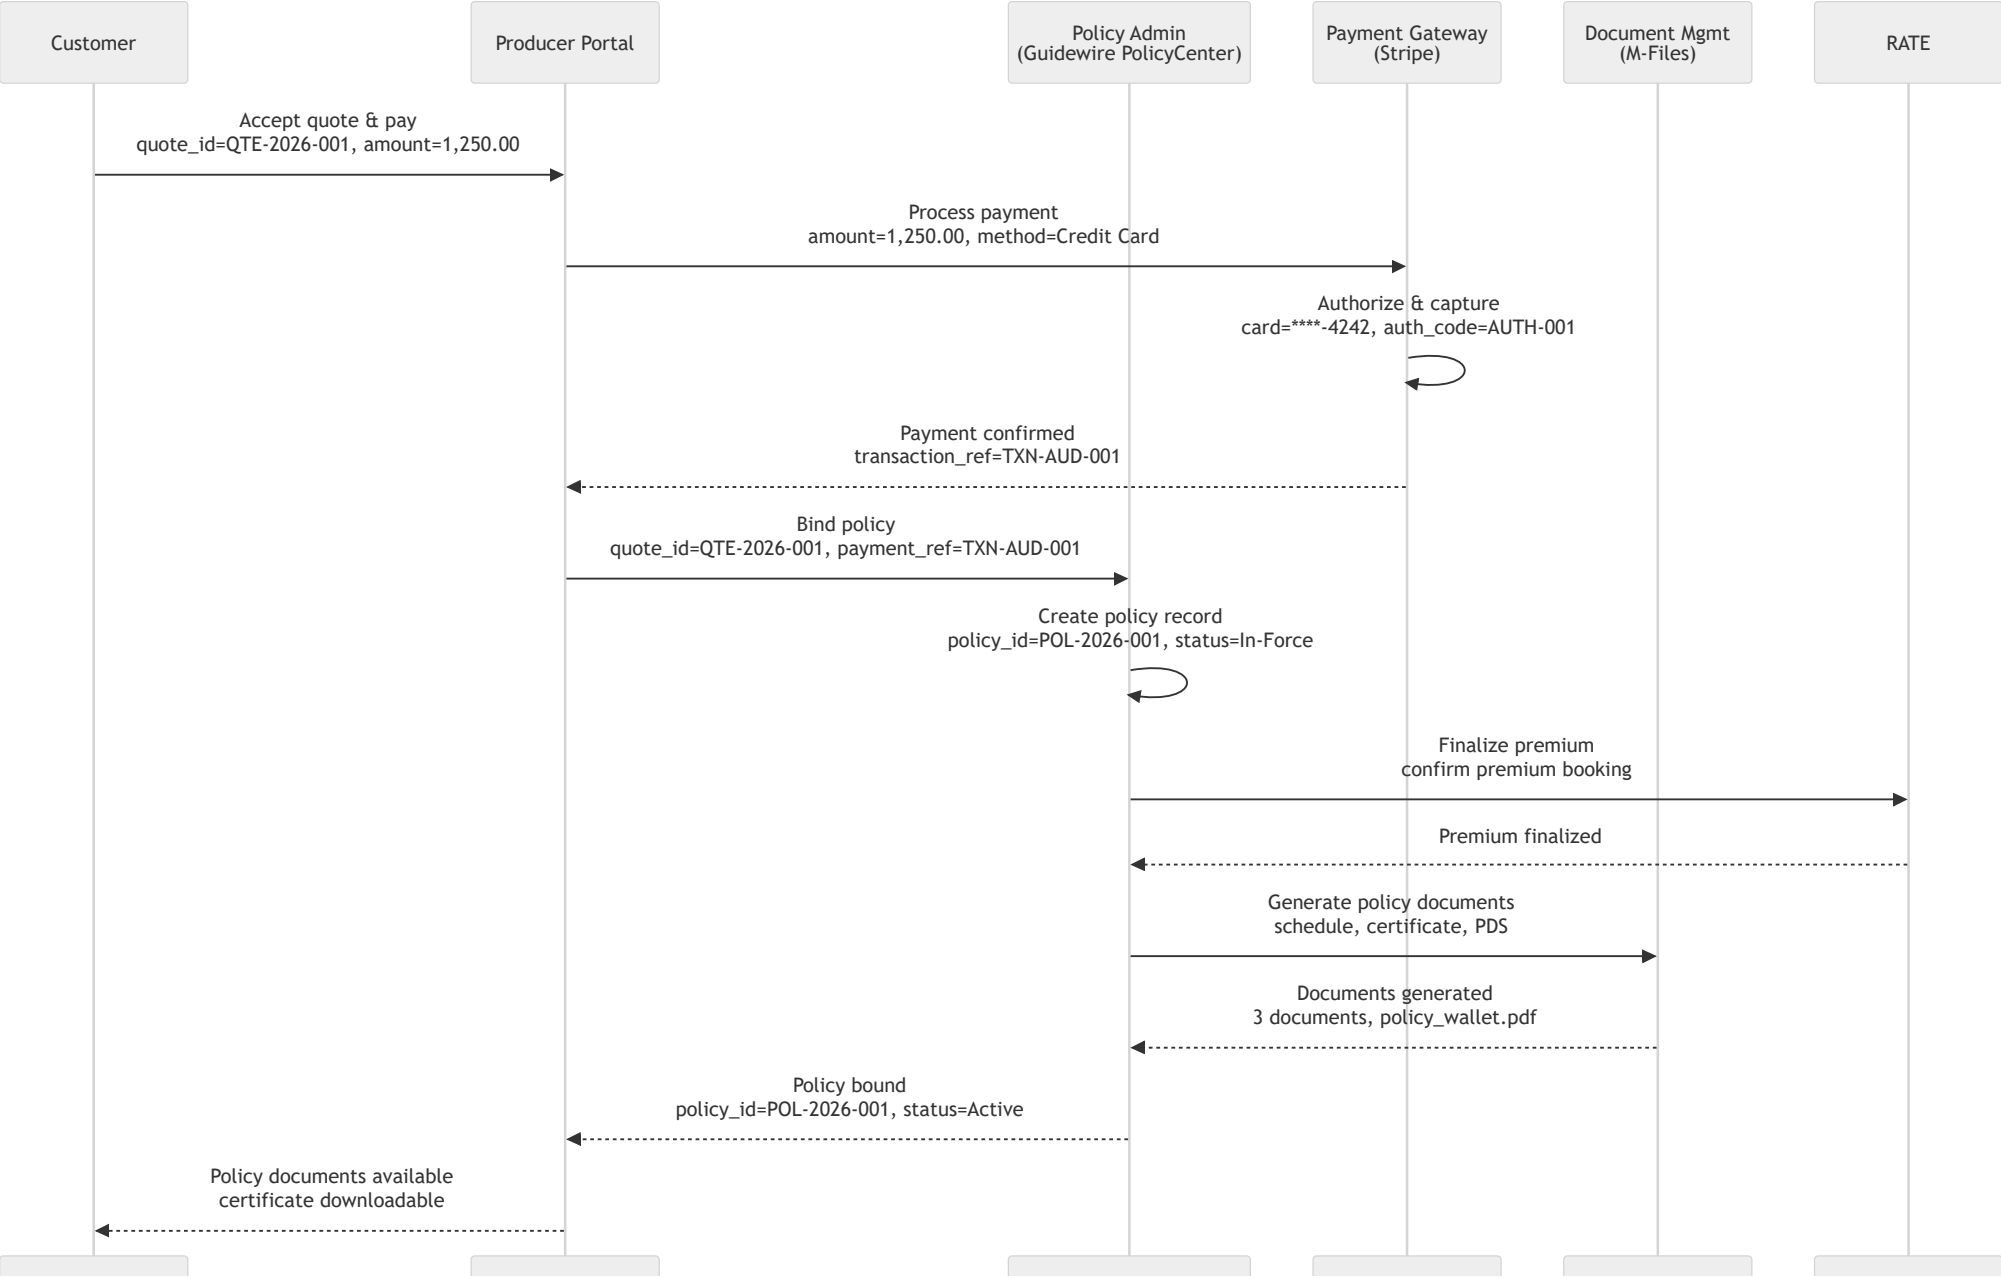

3.5 Bind & Evidence of Insurance

Description: Customer accepts quote, payment is processed, policy is bound, and evidence of insurance (certificate) is issued immediately.

Actors: Customer, Producer, Operations

Systems: Producer Portal, Policy Admin (Guidewire PolicyCenter), Payment Gateway (Stripe), Document Mgmt (M-Files), Rating Engine (Duck Creek Rating)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Bind	Payment	ProcessPayment	Producer Portal	Payment Gateway (Stripe)	Portal REST API (JWT)	Stripe API (REST)	API-led (Real-time)	Simple
Bind	Policy	BindPolicy	Producer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Bind	Premium	FinalizePremiumBooking	Policy Admin (Guidewire PolicyCenter)	Rating Engine (Duck Creek Rating)	Guidewire REST API (API Key)	Duck Creek Rating API (REST)	API-led (Real-time)	Simple
Bind	Documents	GeneratePolicyDocuments	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Medium
Bind	Certificate	IssueCertificateOfInsurance	Policy Admin (Guidewire PolicyCenter)	Producer Portal	Guidewire REST API (API Key)	Portal REST API (JWT)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Bind	Payment	Payment processed successfully before policy binding	Payment authorized and captured; receipt generated; failed payment prevents binding
Bind	Policy	Policy bound with effective date and status In-Force	Policy number assigned; coverage effective from payment timestamp; terms and conditions applied
Bind	Premium	Premium finalized and booked in rating system	Premium amount matches quote; booking confirmed; commission calculated for producer
Bind	Documents	All policy documents generated and available	Policy schedule, certificate, and PDS generated within 30 seconds; documents watermarked
Bind	Certificate	Certificate of insurance issued to customer immediately	Certificate d

Flow	Entity	Acceptance Criterion	Expected Outcome
			ownloadable; contains policy number, coverage summary, and insurer details

4: Policy Administration — IN013 IN014 IN015

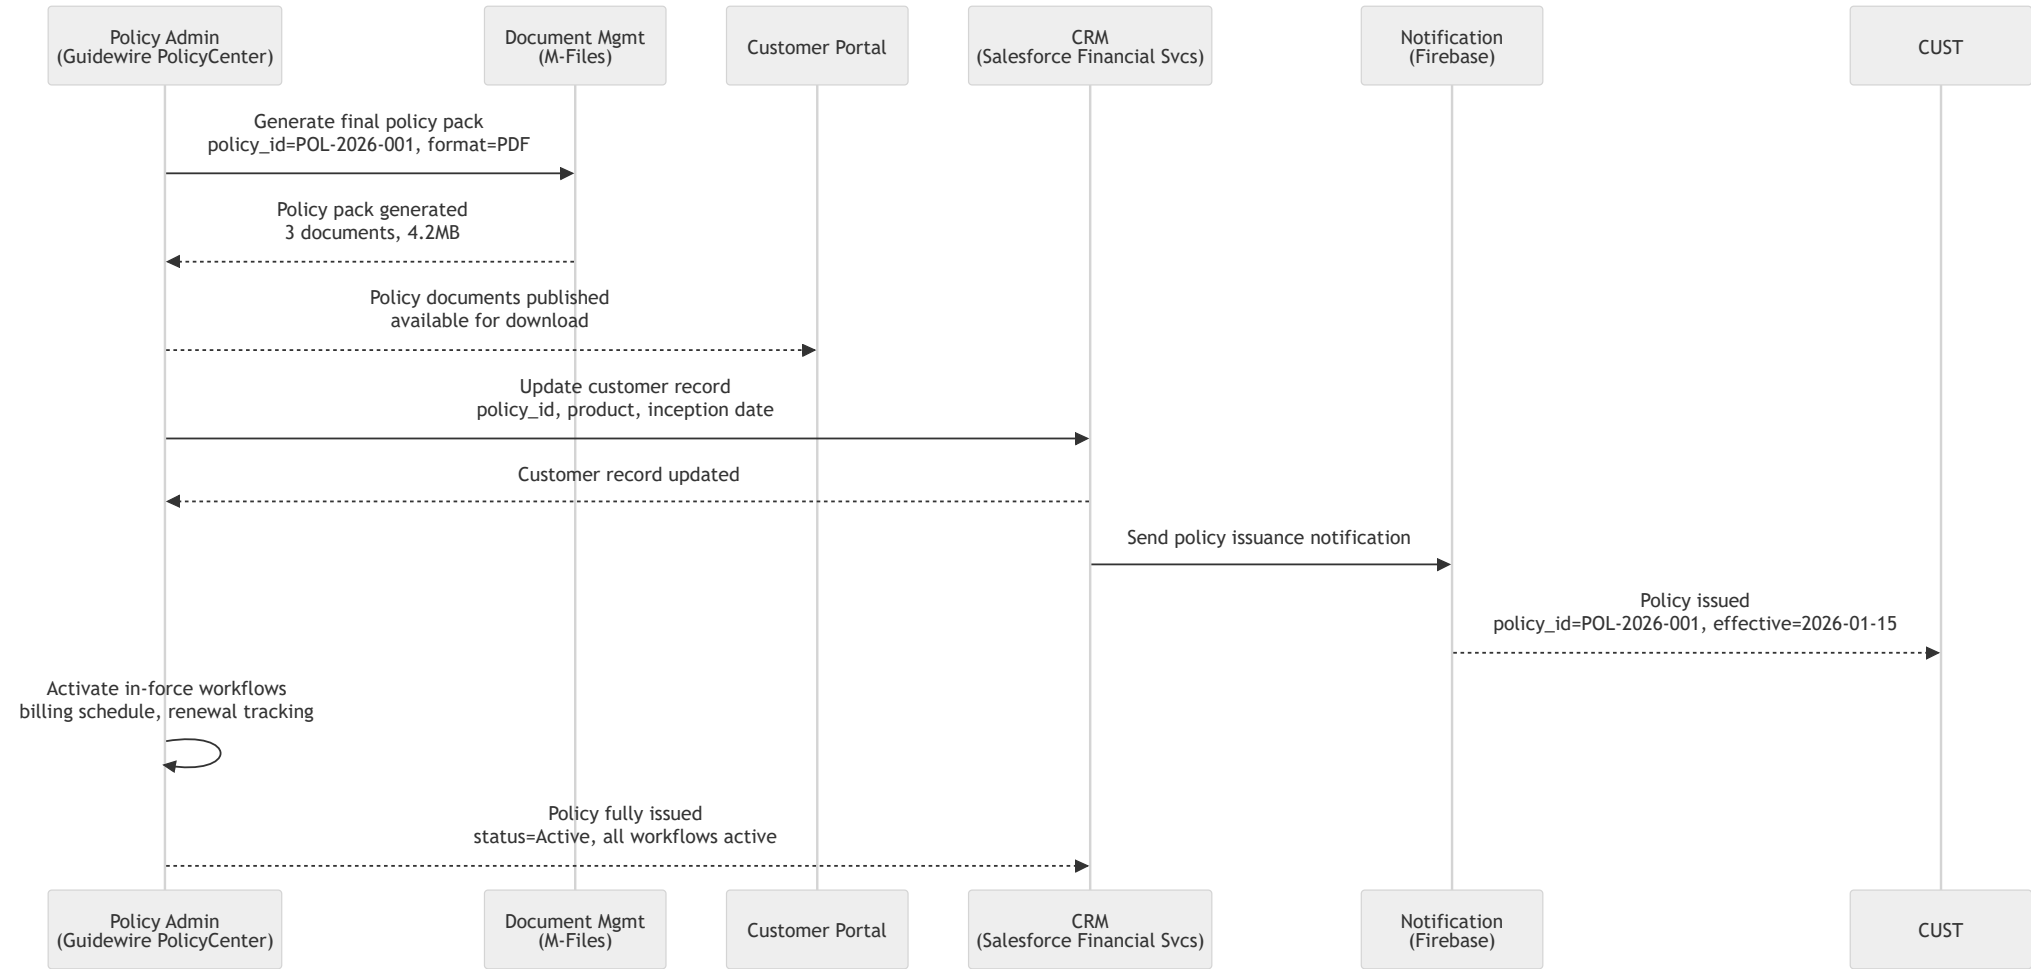

4.1 Policy Issuance

Description: After binding, policy administration system issues the full policy documentation, sends to customer, and activates in-force management workflows.

Actors: Operations, Customer, Producer

Systems: Policy Admin (Guidewire PolicyCenter), Document Mgmt (M-Files), Customer Portal, CRM (Salesforce Financial Services), Core Insurance (Majesco)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Policy Issuance	Documents	GeneratePolicyPack	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Medium
Policy Issuance	Customer	UpdateCustomerRecord	Policy Admin (Guidewire PolicyCenter)	CRM (Salesforce Financial Services)	Guidewire REST API (API Key)	Salesforce REST API (OAuth2)	Event-driven	Simple
Policy Issuance	Portal	PublishPolicyToPortal	Policy Admin (Guidewire PolicyCenter)	Customer Portal	Guidewire REST API (API Key)	Portal REST API (JWT)	Event-driven	Simple
Policy Issuance	Notification	SendIssuanceNotification	CRM (Salesforce Financial Services)	Notification Service (Firebase)	Salesforce REST API (OAuth2)	Firebase FCM API	Event-driven	Simple
Policy Issuance	Activation	ActivateInForceWorkflows	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Policy Issuance	Documents	Policy document pack generated within 60 seconds of binding	All required documents included; document quality verified; watermark and barcode applied
Policy Issuance	Customer	Customer record updated with new policy information	Customer profile shows active policy; policy linked to customer ID; CRM fields populated
Policy Issuance	Portal	Policy documents available on customer portal	Documents accessible within 2 minutes; permissions correctly set per policy holder
Policy Issuance	Notification	Issuance notification sent to customer	Email and push notification sent; delivery confirmed; policy summary included
Policy Issuance	Activation	In-force management workflows activated	Billing schedule created; first premium due date set; renewal countdown initiated

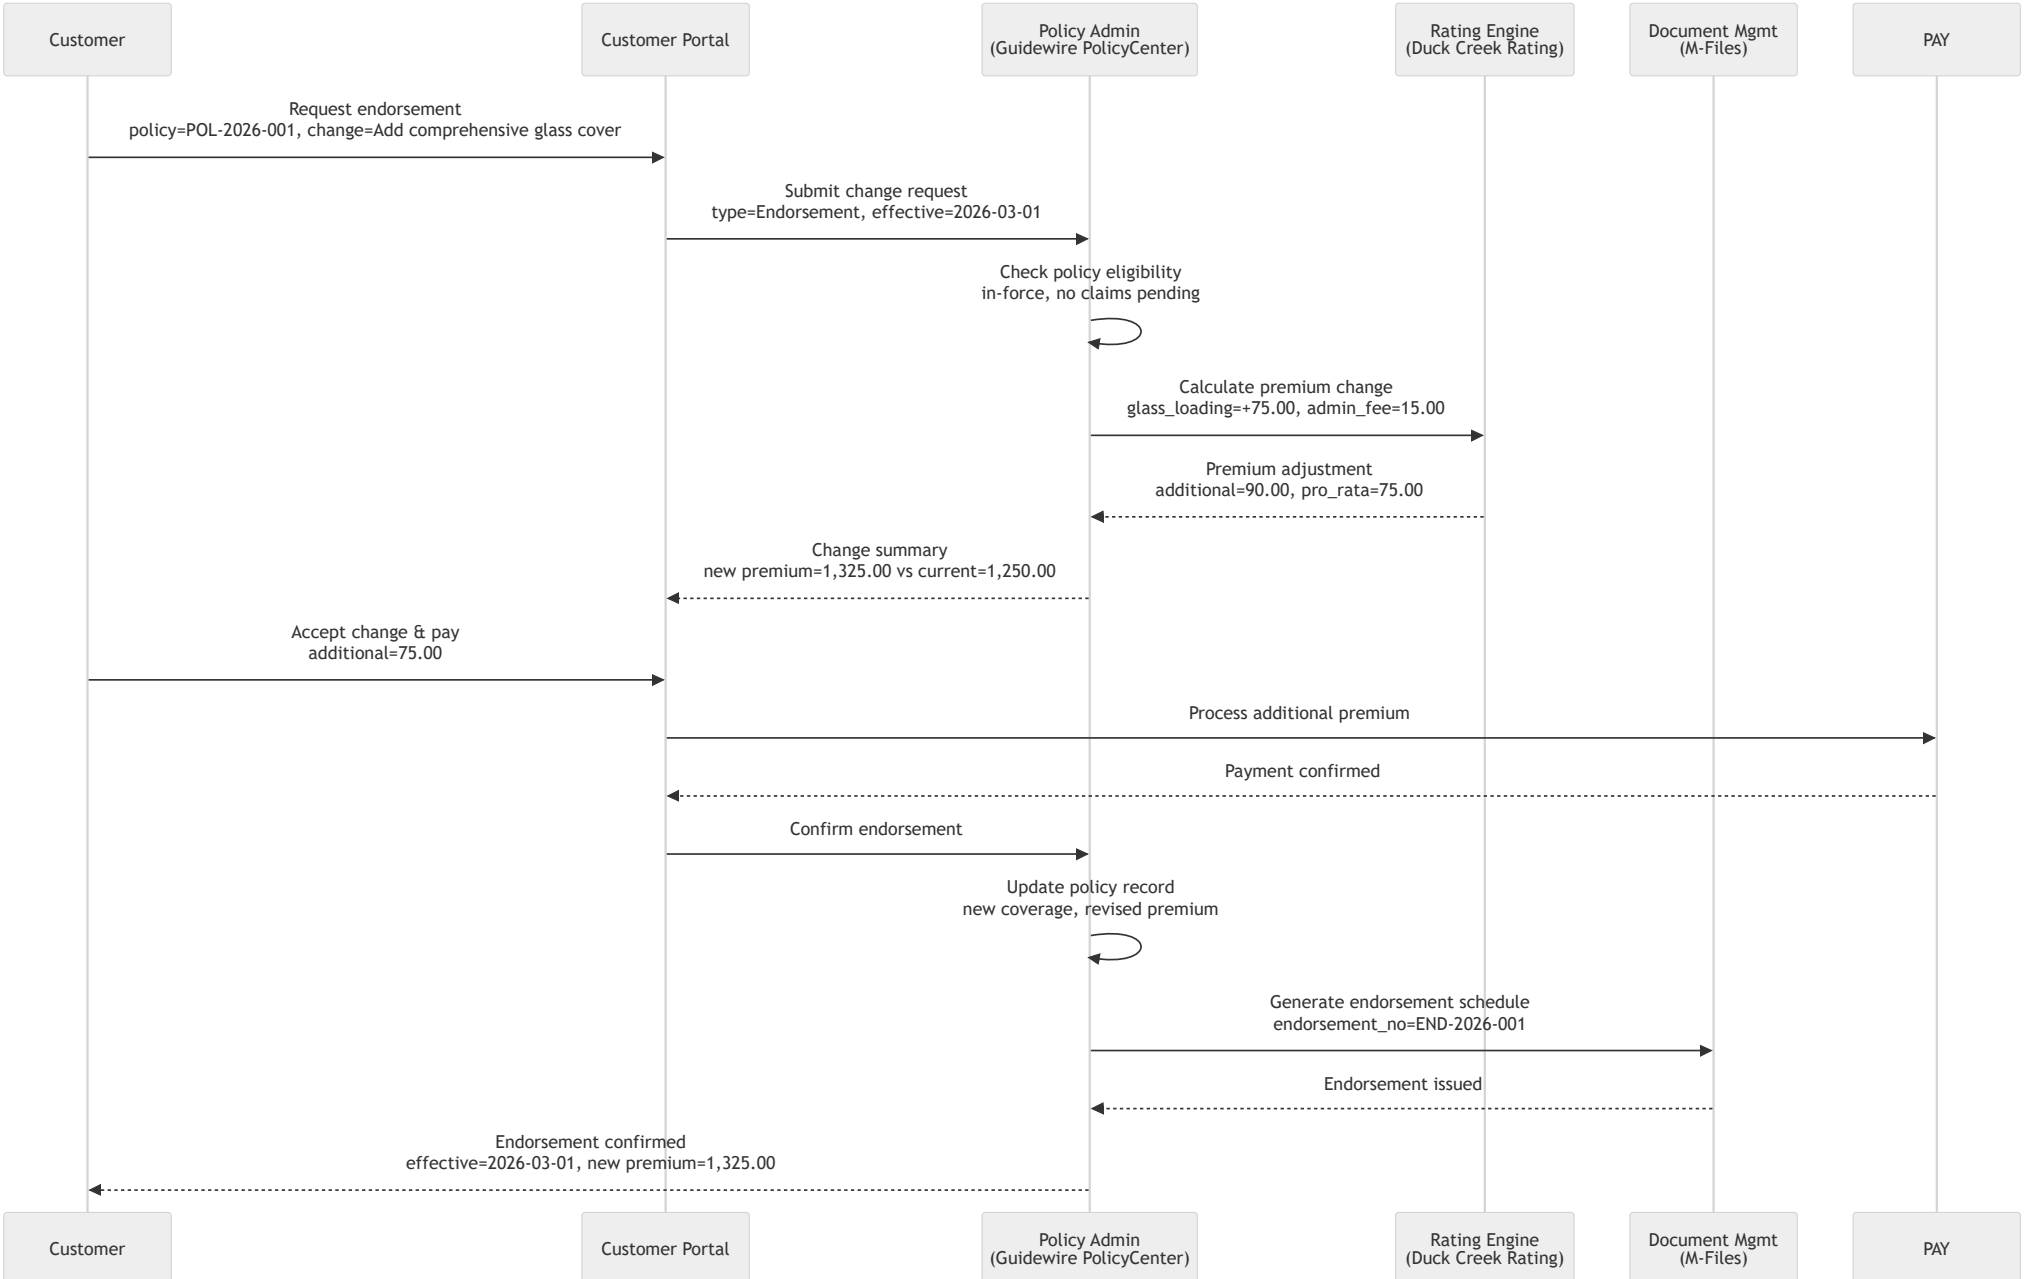

4.2 Mid-Term Adjustments & Endorsements

Description: Customer requests policy change mid-term. System validates change, adjusts premium, generates endorsement document, and updates policy record.

Actors: Customer, Operations, Underwriter (if authority needed)

Systems: Customer Portal, Policy Admin (Guidewire PolicyCenter), Rating Engine (Duck Creek Rating), Document Mgmt (M-Files), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Endorsement	Eligibility	CheckPolicyEligibility	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Simple
Endorsement	Rating	CalculatePremiumChange	Policy Admin (Guidewire PolicyCenter)	Rating Engine (Duck Creek Rating)	Guidewire REST API (API Key)	Duck Creek Rating API (REST)	API-led (Real-time)	Medium
Endorsement	Payment	ProcessAdditionalPremium	Customer Portal	Payment Gateway (Stripe)	Portal REST API (JWT)	Stripe API (REST)	API-led (Real-time)	Simple
Endorsement	Update	UpdatePolicyRecord	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Medium
Endorsement	Document	GenerateEndorsementSchedule	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Endorsement	Eligibility	Mid-term change eligibility validated before processing	Policy in-force; no claim pending; change within allowable parameters; referral limit checked
Endorsement	Rating	Premium change calculated correctly with pro-rata adjustment	Additional premium calculated; pro-rata for remaining term; admin fee applied
Endorsement	Payment	Additional premium processed before endorsement effective	Payment successful; endorsement effective from requested date; failed payment keeps current terms
Endorsement	Update	Policy record updated with new coverage and premium	Coverage codes added; premium revised; policy version incremented; audit trail recorded
Endorsement	Document	Endorsement schedule generated and issued	Endorsement number assigned; document reflects all changes; customer notified with copy

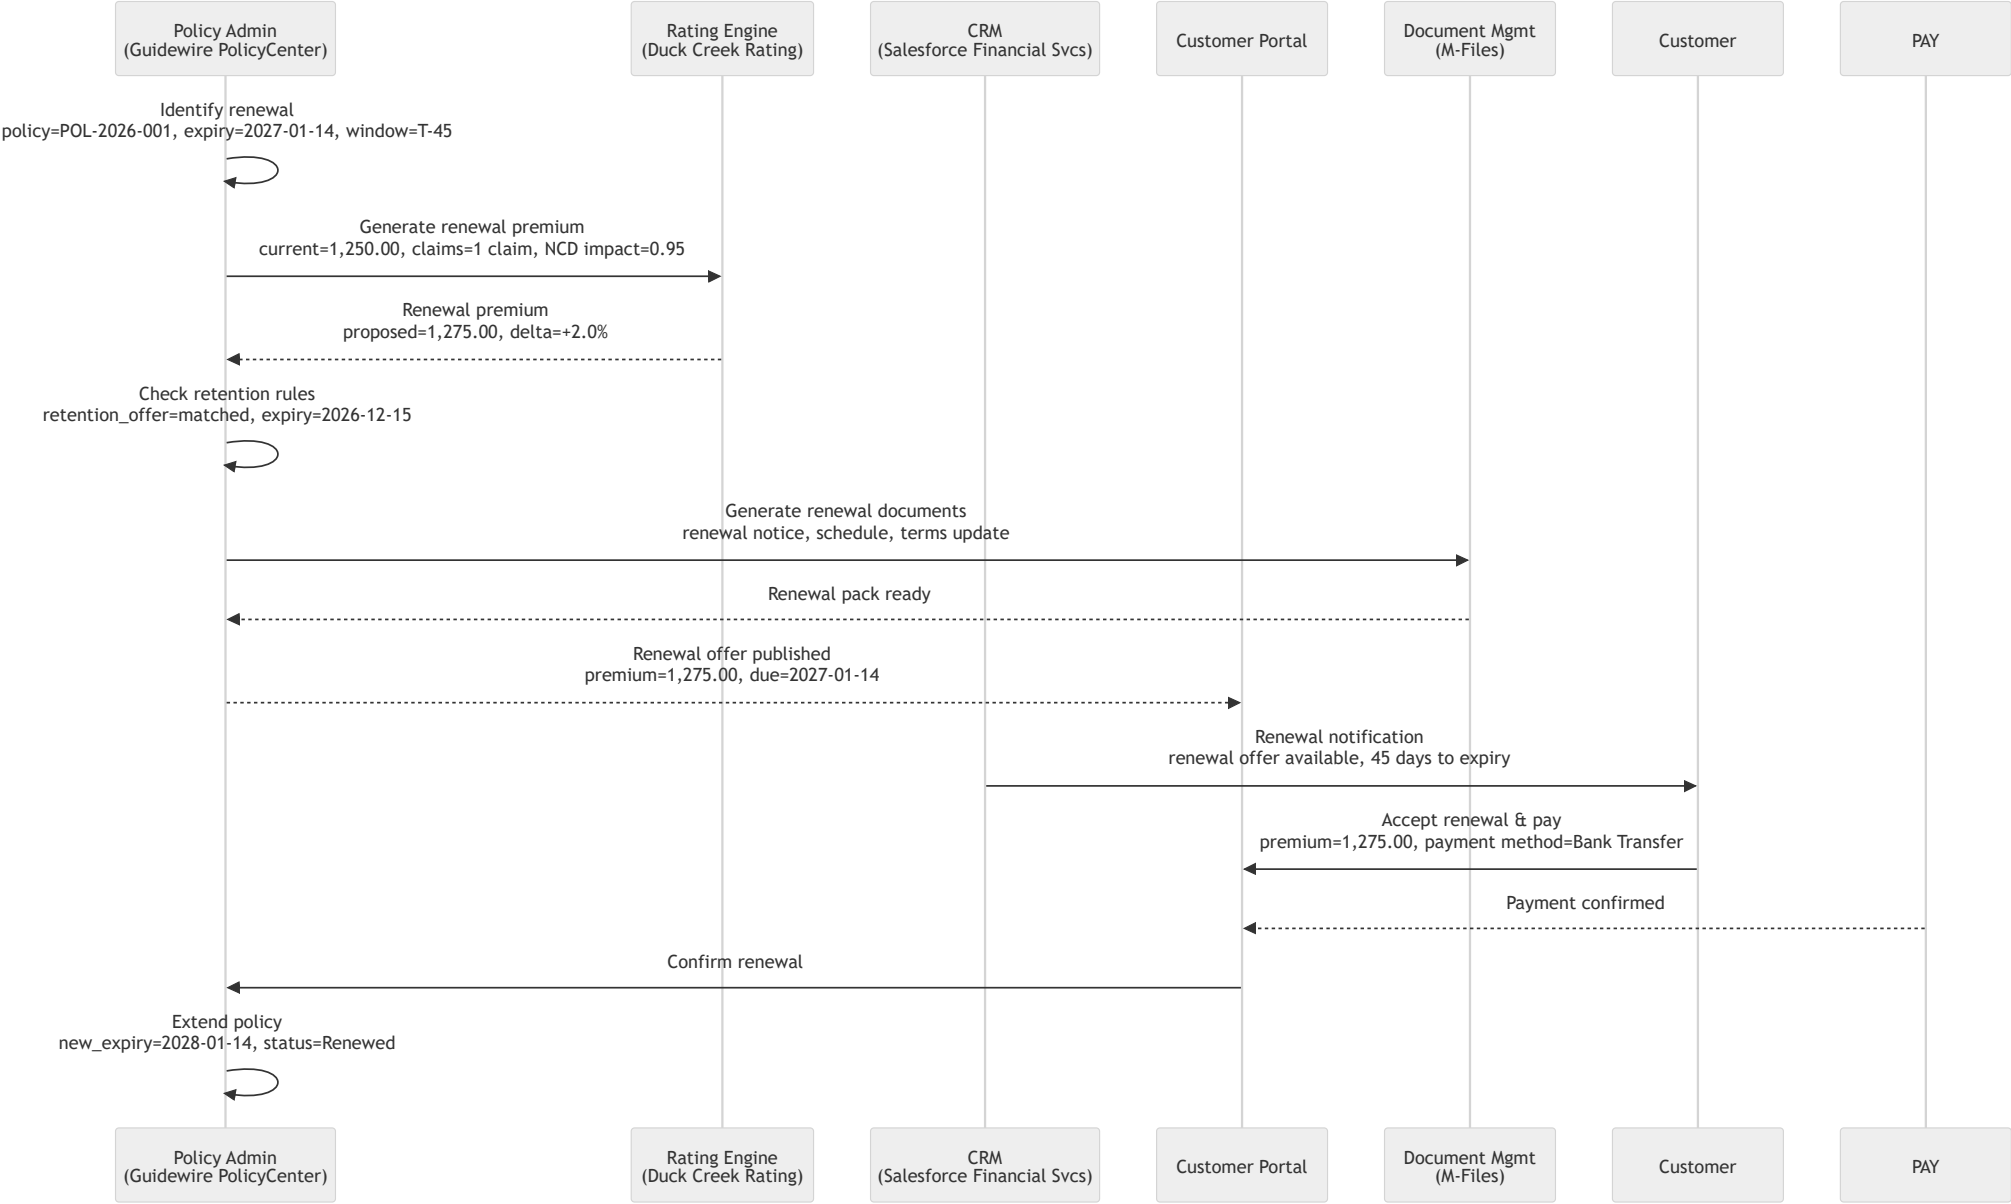

4.3 Renewal Processing

Description: System generates renewal offer before policy expiry. Underwriter reviews loss history, adjusts terms, and customer accepts renewal with payment.

Actors: Customer, Underwriter, Producer, Operations

Systems: Policy Admin (Guidewire PolicyCenter), Rating Engine (Duck Creek Rating), CRM (Salesforce Financial Services), Customer Portal, Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Renewal	Generate	GenerateRenewalPremium	Policy Admin (Guidewire PolicyCenter)	Rating Engine (Duck Creek Rating)	Guidewire REST API (API Key)	Duck Creek Rating API (REST)	Batch (Scheduled)	Medium
Renewal	Retention	CheckRetentionRules	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Simple
Renewal	Documents	GenerateRenewalPack	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple
Renewal	Notification	SendRenewalNotification	CRM (Salesforce Financial Services)	Customer	Salesforce REST API (OAuth2)	Email / Push	Event-driven	Simple
Renewal	Confirm	ConfirmRenewal	Customer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Renewal	Generate	Renewal premium generated 45 days before expiry	Premium reflects current rating rules; claims history factored; NCD/NCB applied correctly
Renewal	Retention	Retention rules applied with loyalty discounts	Multi-policy discount; loyalty tier applied; competitor match considered
Renewal	Documents	Renewal documents generated at T-45 days	Renewal notice includes proposed premium, coverage unchanged/amended, and terms update
Renewal	Notification	Customer notified of renewal offer	Notification sent at T-45, T-30, T-14, T-7, T-1 days; channel preference respected
Renewal	Confirm	Policy renewed with extended term on customer acceptance	New expiry date set; policy continuity maintained; renewal confirmation issued

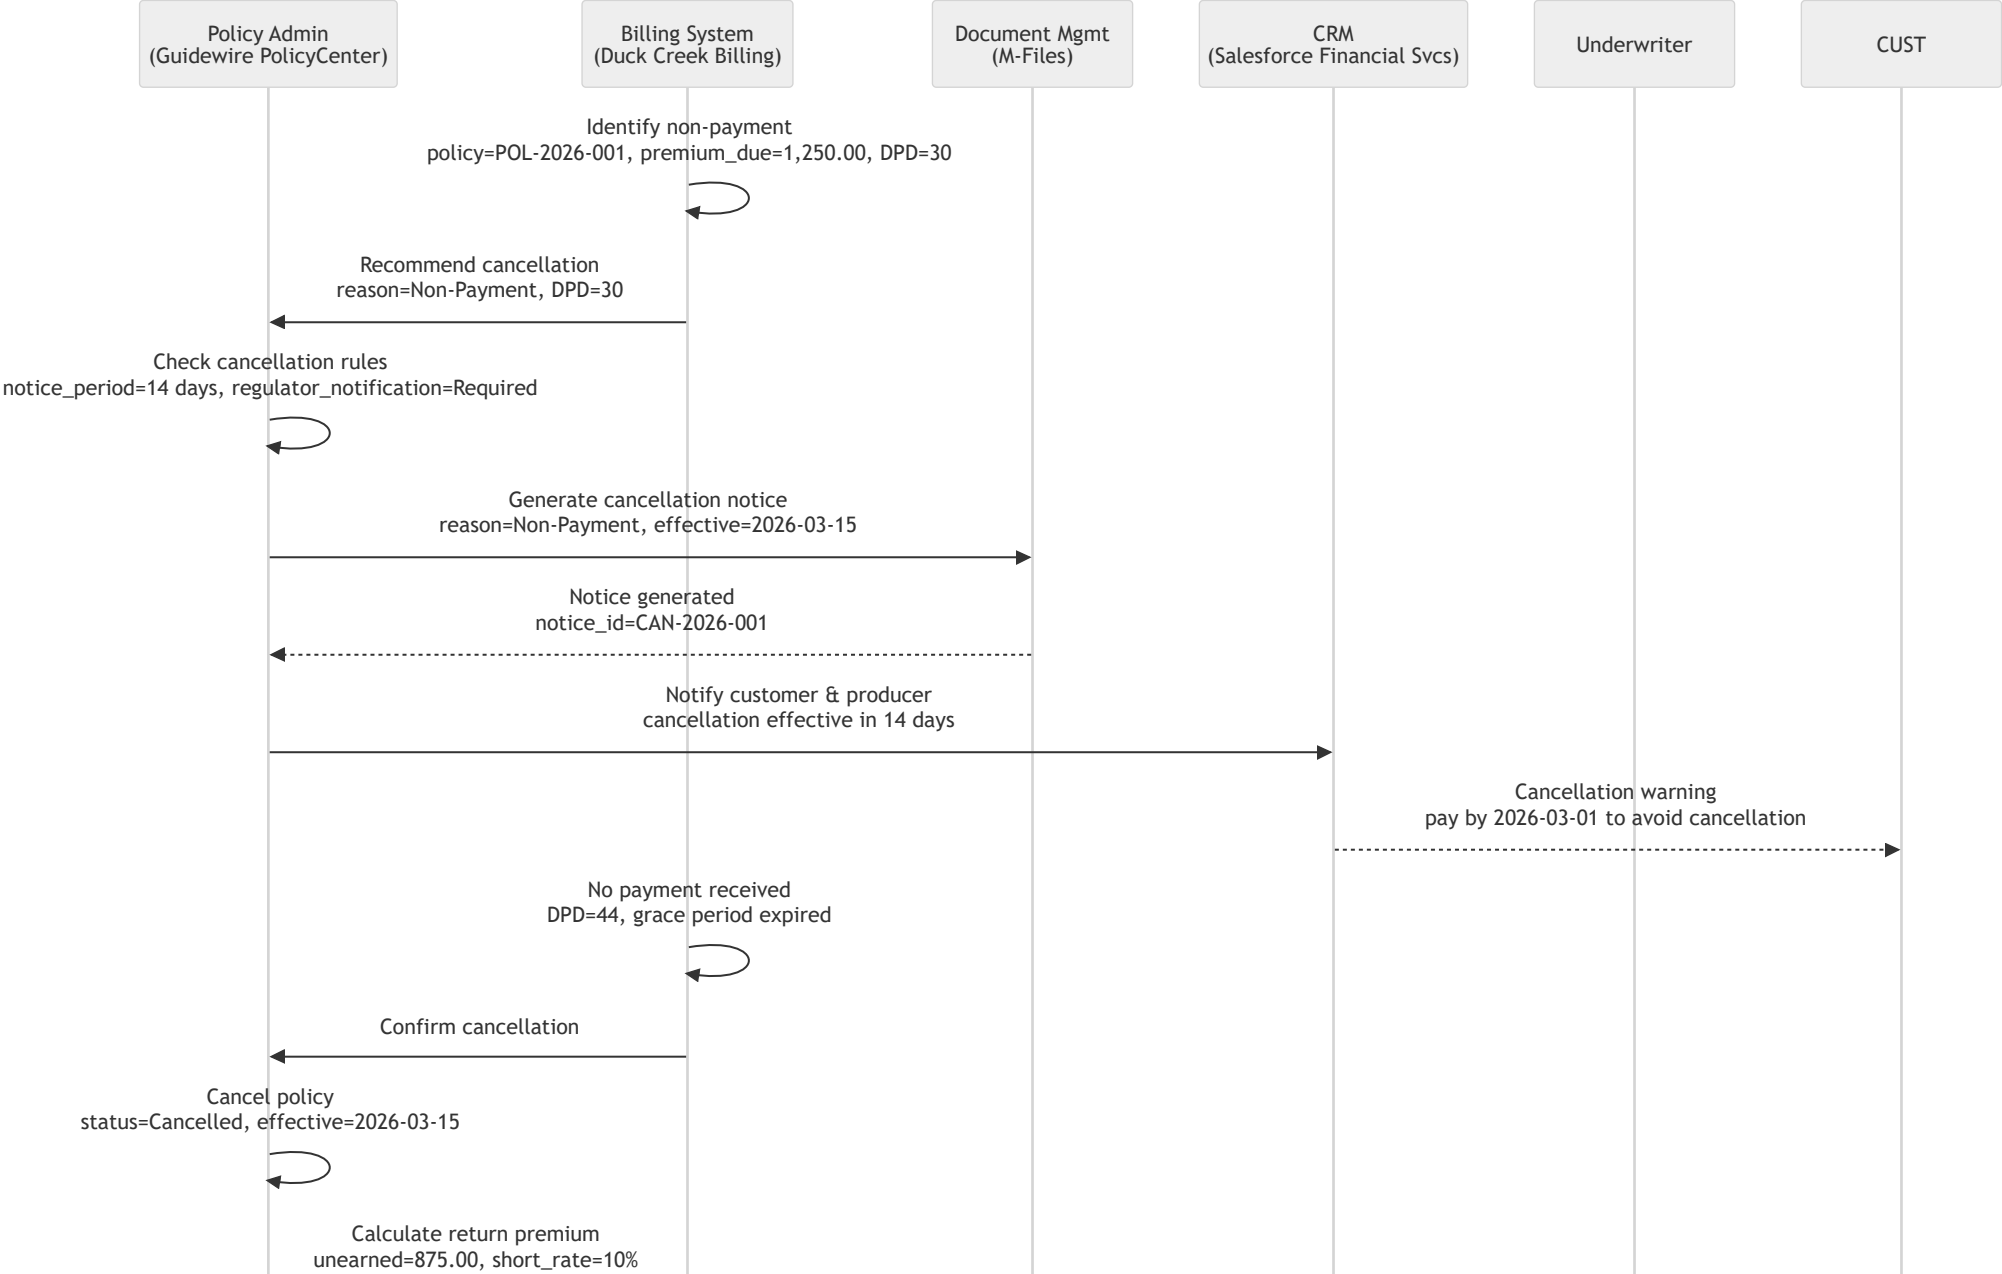

4.4 Cancellation & Non-Renewal

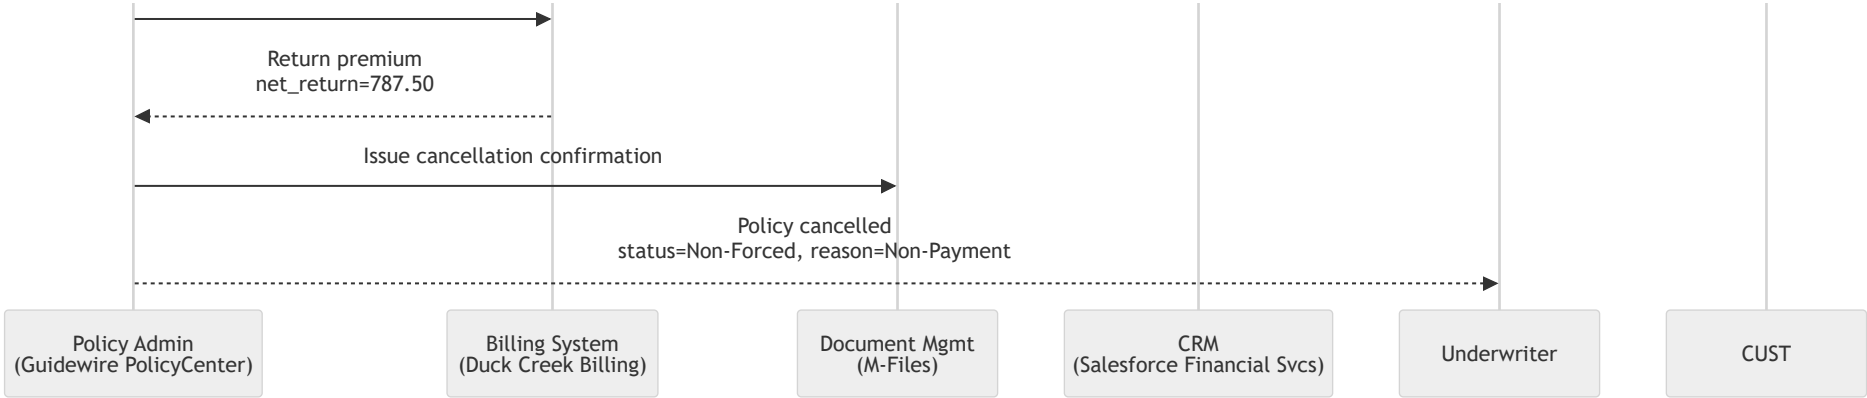

Description: Policy cancelled or non-renewed due to non-payment, fraud, or underwriting decision. System processes cancellation, calculates return premium, and generates notices.

Actors: Operations, Underwriter, Customer, Producer

Systems: Policy Admin (Guidewire PolicyCenter), Billing System (Duck Creek Billing), Document Mgmt (M-Files), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Cancellation	Trigger	IdentifyNonPayment	Billing System (Duck Creek Billing)	Billing System (Duck Creek Billing)	Internal	Internal	Batch (Scheduled)	Simple
Cancellation	Notice	GenerateCancellationNotice	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Medium
Cancellation	Notify	NotifyCancellationWarning	Policy Admin (Guidewire PolicyCenter)	CRM (Salesforce Financial Services)	Guidewire REST API (API Key)	Salesforce REST API (OAuth2)	Event-driven	Simple
Cancellation	Cancel	ExecuteCancellation	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Medium
Cancellation	Return	CalculateReturnPremium	Policy Admin (Guidewire PolicyCenter)	Billing System (Duck Creek Billing)	Guidewire REST API (API Key)	Duck Creek REST API (OAuth2)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Cancellation	Trigger	Non-payment identified at DPD=30 triggering cancellation workflow	Grace period applied; escalation at DPD=15, 30, 44; cancellation if no payment by DPD=44
Cancellation	Notice	Cancellation notice generated with correct notice period	Notice includes reason, effective date, and reinstatement options; regulator copy generated
Cancellation	Notify	Customer and producer notified within 24 hours	Statutory notice period met; delivery confirmed; proof of service retained
Cancellation	Cancel	Policy cancelled with effective date and status recorded	Coverage ceases at effective date; no claims payable after cancellation; system prevents new claims
Cancellation	Return	Return premium calculated per regulatory short-rate method	Unearned premium computed; short-rate penalty applied; refund processed within 30 days

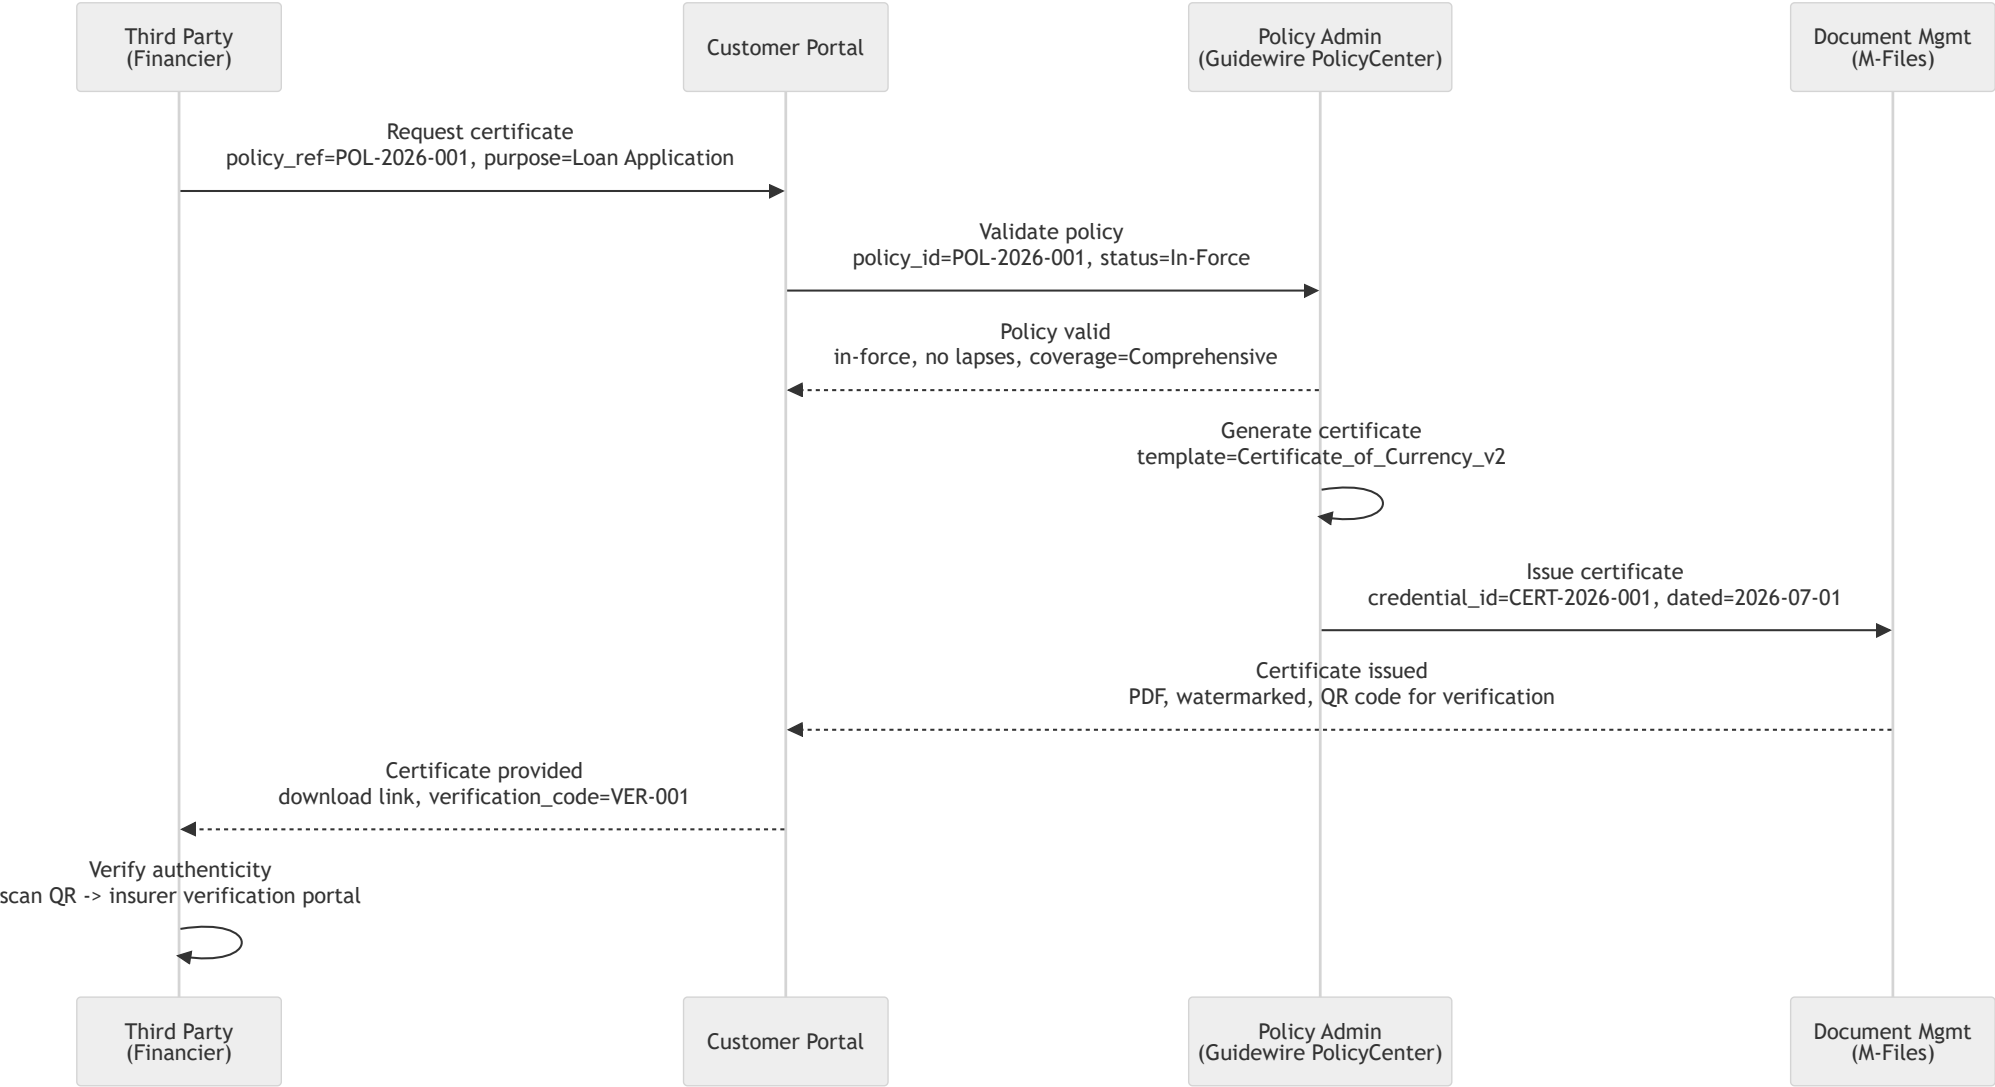

4.5 Policy Inquiry & Evidence of Insurance

Description: Third parties (finance companies, solicitors) request certificate of currency or policy status. System verifies authority and issues evidence document.

Actors: Customer, Third Party (Financier), Operations

Systems: Customer Portal, Policy Admin (Guidewire PolicyCenter), Document Mgmt (M-Files), CRM (Salesforce Financial Services)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Policy Inquiry	Validate	ValidatePolicyStatus	Customer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Simple
Policy Inquiry	Certificate	GenerateCertificate	Policy Admin (Guidewire PolicyCenter)	Policy Admin (Guidewire PolicyCenter)	Internal	Internal	API-led (Real-time)	Simple
Policy Inquiry	Issue	IssueCertificate	Policy Admin (Guidewire PolicyCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple
Policy Inquiry	Deliver	DeliverCertificate	Customer Portal	Third Party	Portal REST API (JWT)	Email / Download	Event-driven	Simple
Policy Inquiry	Verify	VerifyCertificateAuthenticity	Verification Portal	Verification Portal	Internal	Internal	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Policy Inquiry	Validate	Policy status validated in real-time	Status response within 2 seconds; in-force, cancelled, or lapsed status accurately reported
Policy Inquiry	Certificate	Certificate generated from correct template	Template version verified; all fields populated; coverage details match policy record
Policy Inquiry	Issue	Certificate issued with tamper-evident features	Watermark applied; QR code generated; digital signature verified; expiry date on certificate
Policy Inquiry	Deliver	Certificate delivered to requestor within 2 minutes	Download link sent; unique verification code provided; certificate accessible for 30 days
Policy Inquiry	Verify	Certificate authenticity verifiable via Q	QR scan leads to verification page; status reflects current policy state; expired certs flagged

Flow	Entity	Acceptance Criterion	Expected Outcome
		R code	

5: Claims Management — IN016 IN017 IN018 IN019

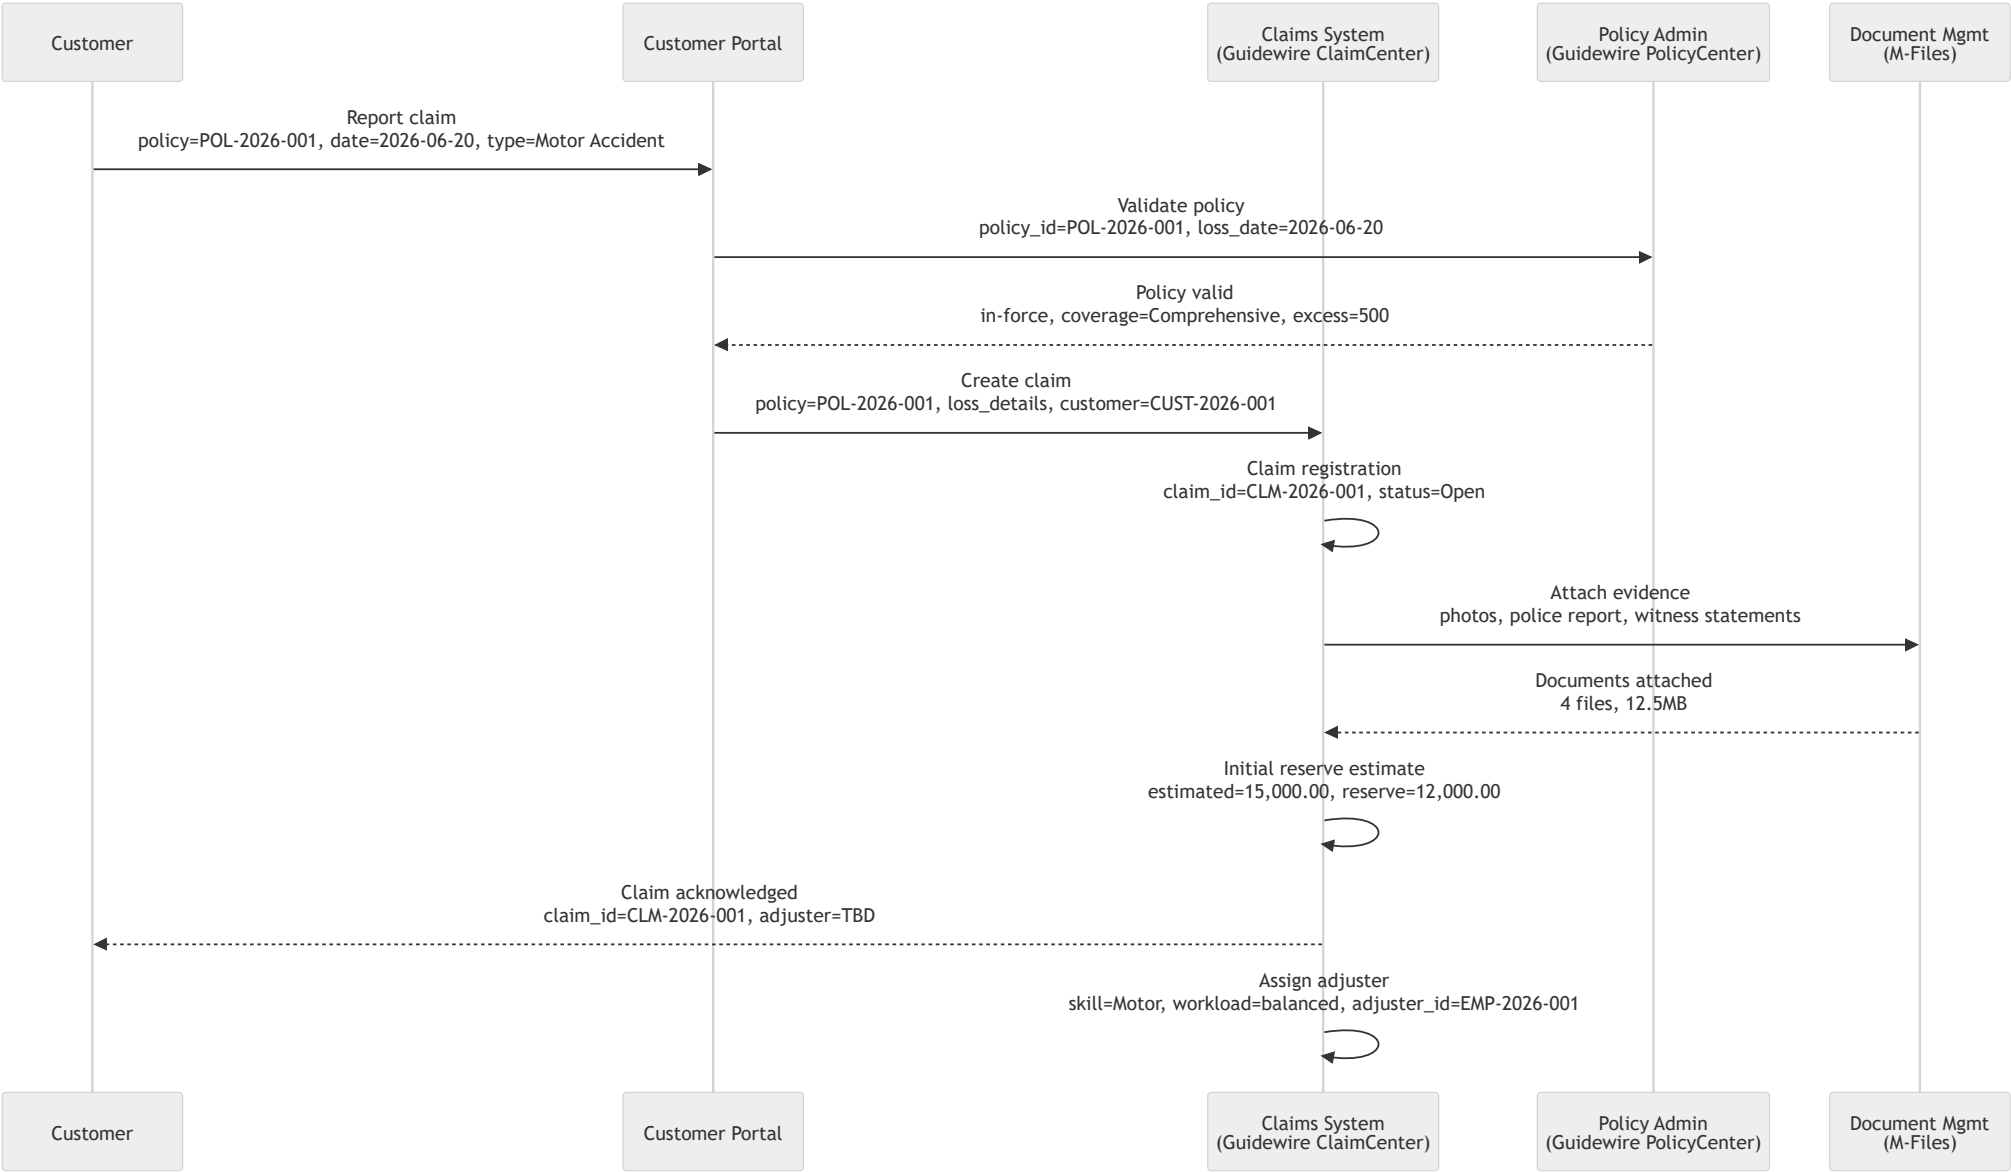

5.1 First Notice of Loss

Description: Customer or producer reports claim through multi-channel intake. System captures loss details, checks policy coverage, validates claim, and opens claim file.

Actors: Customer, Producer, Claims Intake Officer

Systems: Claims System (Guidewire ClaimCenter), Customer Portal, Call Centre (Genesys), Policy Admin (Guidewire PolicyCenter), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
FNOL	Intake	ReportClaim	Customer Portal	Claims System (Guidewire ClaimCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Simple
FNOL	Validation	ValidatePolicyCoverage	Customer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
FNOL	Registration	RegisterClaim	Customer Portal	Claims System (Guidewire ClaimCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
FNOL	Evidence	AttachClaimEvidence	Claims System (Guidewire ClaimCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple
FNOL	Assignment	AssignAdjuster	Claims System (Guidewire ClaimCenter)	Claims System (Guidewire ClaimCenter)	Internal	Internal	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
FNOL	Intake	Claim reported correctly via multi-channel (portal, phone, producer)	Claim recorded with all mandatory fields; duplicate claim check performed; coverage verified
FNOL	Validation	Policy coverage validated at time of FNOL	Coverage confirmed for loss type; excess/deductible identified; exclusions checked
FNOL	Registration	Claim registered with unique claim ID	Claim ID format CLM-YYYY-NNN; status = Open; reserve estimated; timestamp recorded
FNOL	Evidence	Photos, documents, and reports attached to claim file	File types validated; virus scan passed; auto-labelling applied; version controlled
FNOL	Assignment	Claim assigned to appropriate adjuster	Assignment based on skill set, workload, territory; assignment notification sent to adjuster within 5 minutes

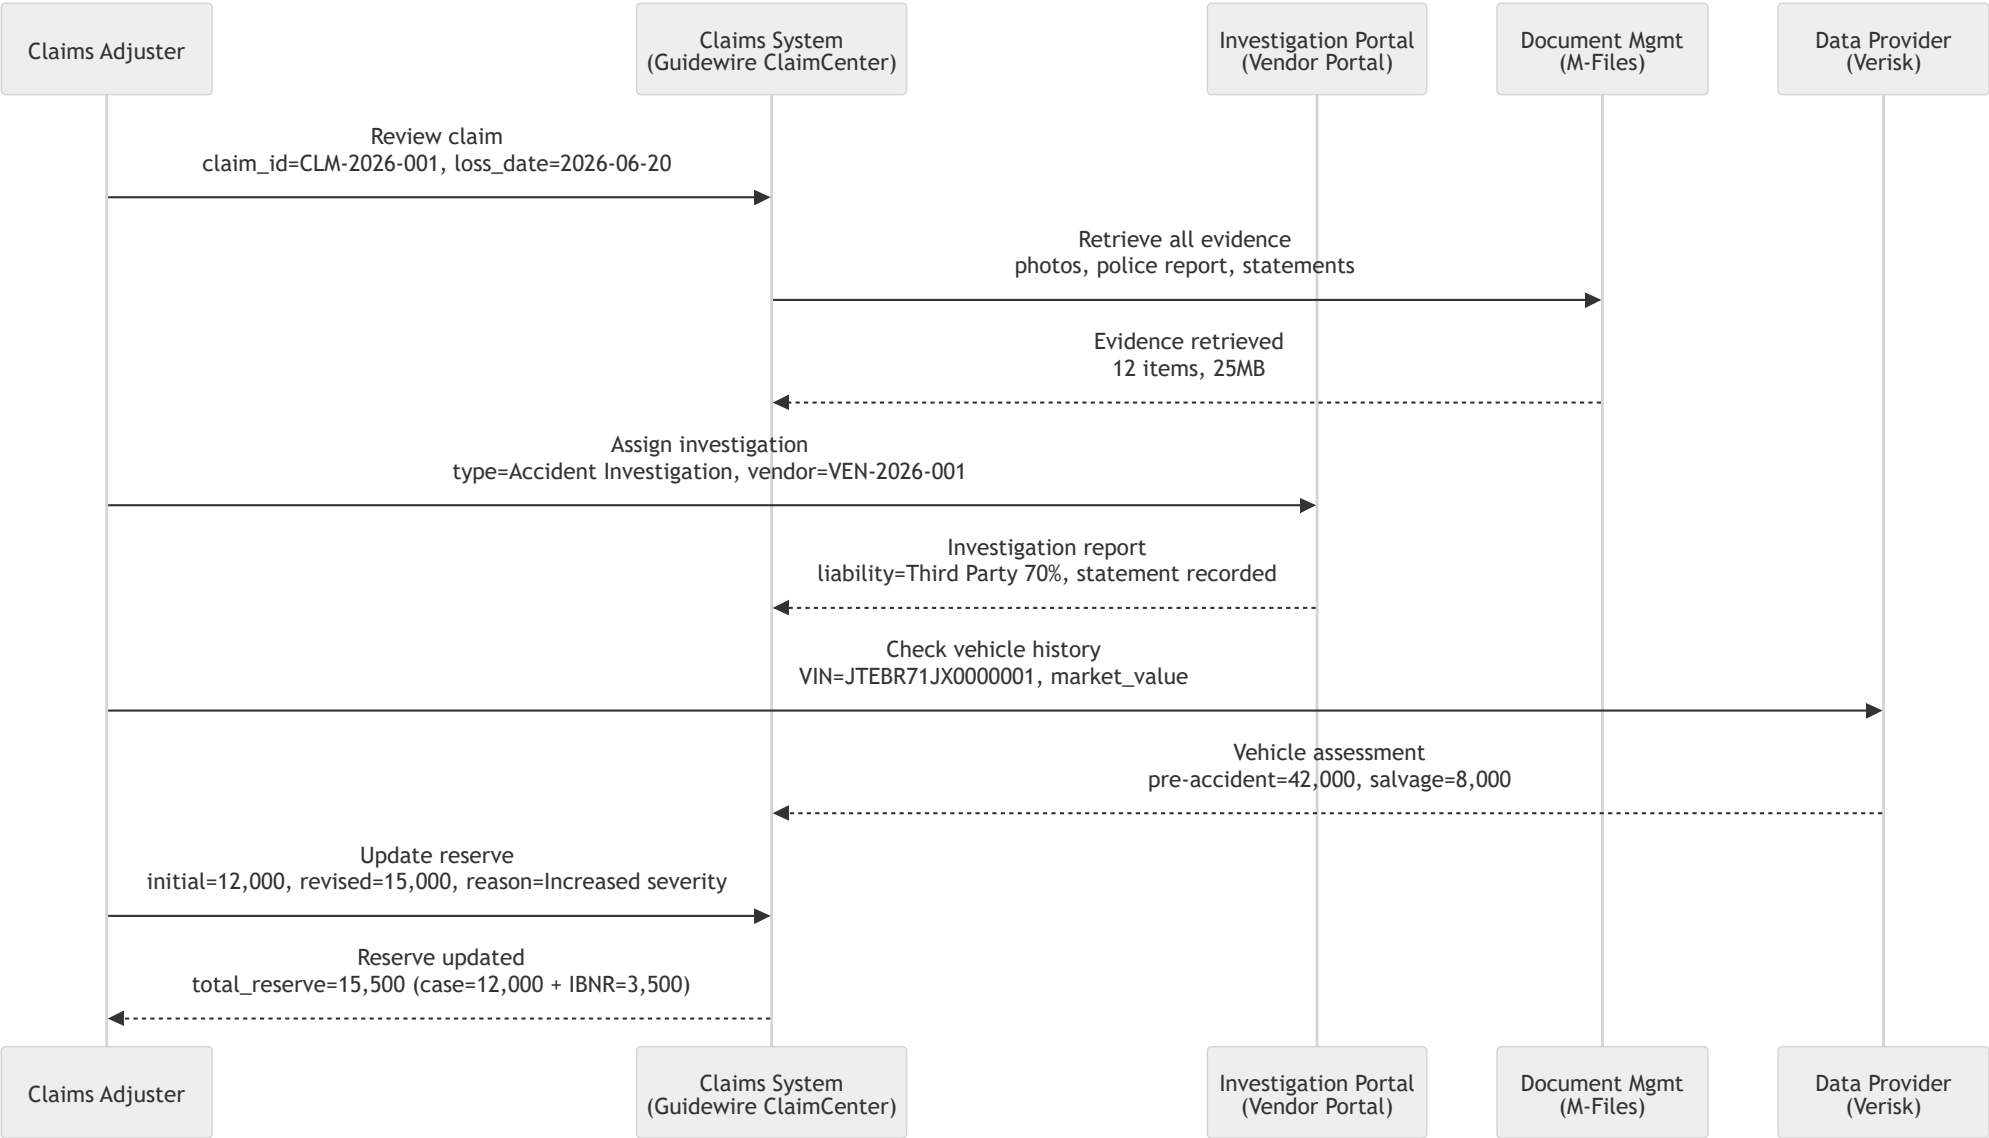

5.2 Claims Investigation & Evaluation

Description: Claims adjuster investigates the loss, gathers evidence, interviews witnesses, assesses liability, and updates claim reserve based on findings.

Actors: Claims Adjuster, Investigator, Assessor

Systems: Claims System (Guidewire ClaimCenter), Investigation Services (Vendor Portal), Document Mgmt (M-Files), External Data Provider (Verisk)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Investigation	Evidence	RetrieveClaimEvidence	Claims System (Guidewire ClaimCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	API-led (Real-time)	Simple
Investigation	Vendor	AssignInvestigation	Claims System (Guidewire ClaimCenter)	Investigation Portal (Vendor Portal)	Guidewire REST API (API Key)	Vendor API (REST)	Event-driven	Medium
Investigation	Vehicle	CheckVehicleHistory	Claims System (Guidewire ClaimCenter)	Data Provider (Verisk)	Guidewire REST API (API Key)	Verisk API (SOAP)	API-led (Real-time)	Medium
Investigation	Reserve	UpdateClaimReserve	Claims System (Guidewire ClaimCenter)	Claims System (Guidewire ClaimCenter)	Internal	Internal	API-led (Real-time)	Simple
Investigation	Report	ReceiveInvestigationReport	Investigation Portal (Vendor Portal)	Claims System (Guidewire ClaimCenter)	Vendor API (REST)	Guidewire REST API (API Key)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Investigation	Evidence	All evidence retrievable with 5-second SLA	Evidence indexed by claim ID; metadata visible; document preview available
Investigation	Vendor	Investigation assigned to approved vendor	Vendor assigned within SLA; investigation scope defined; cost estimate approved
Investigation	Vehicle	Vehicle history and valuation retrieved from Verisk	Pre-accident value, salvage value, and repair estimate obtained; fraud indicators checked
Investigation	Reserve	Reserve updated based on investigation findings	Reserve change reason recorded; reserve history maintained; authority matrix respected
Investigation	Report	Investigation report received and attached to claim	Report indexed; key findings extracted; liability assessment recorded; next steps recommended

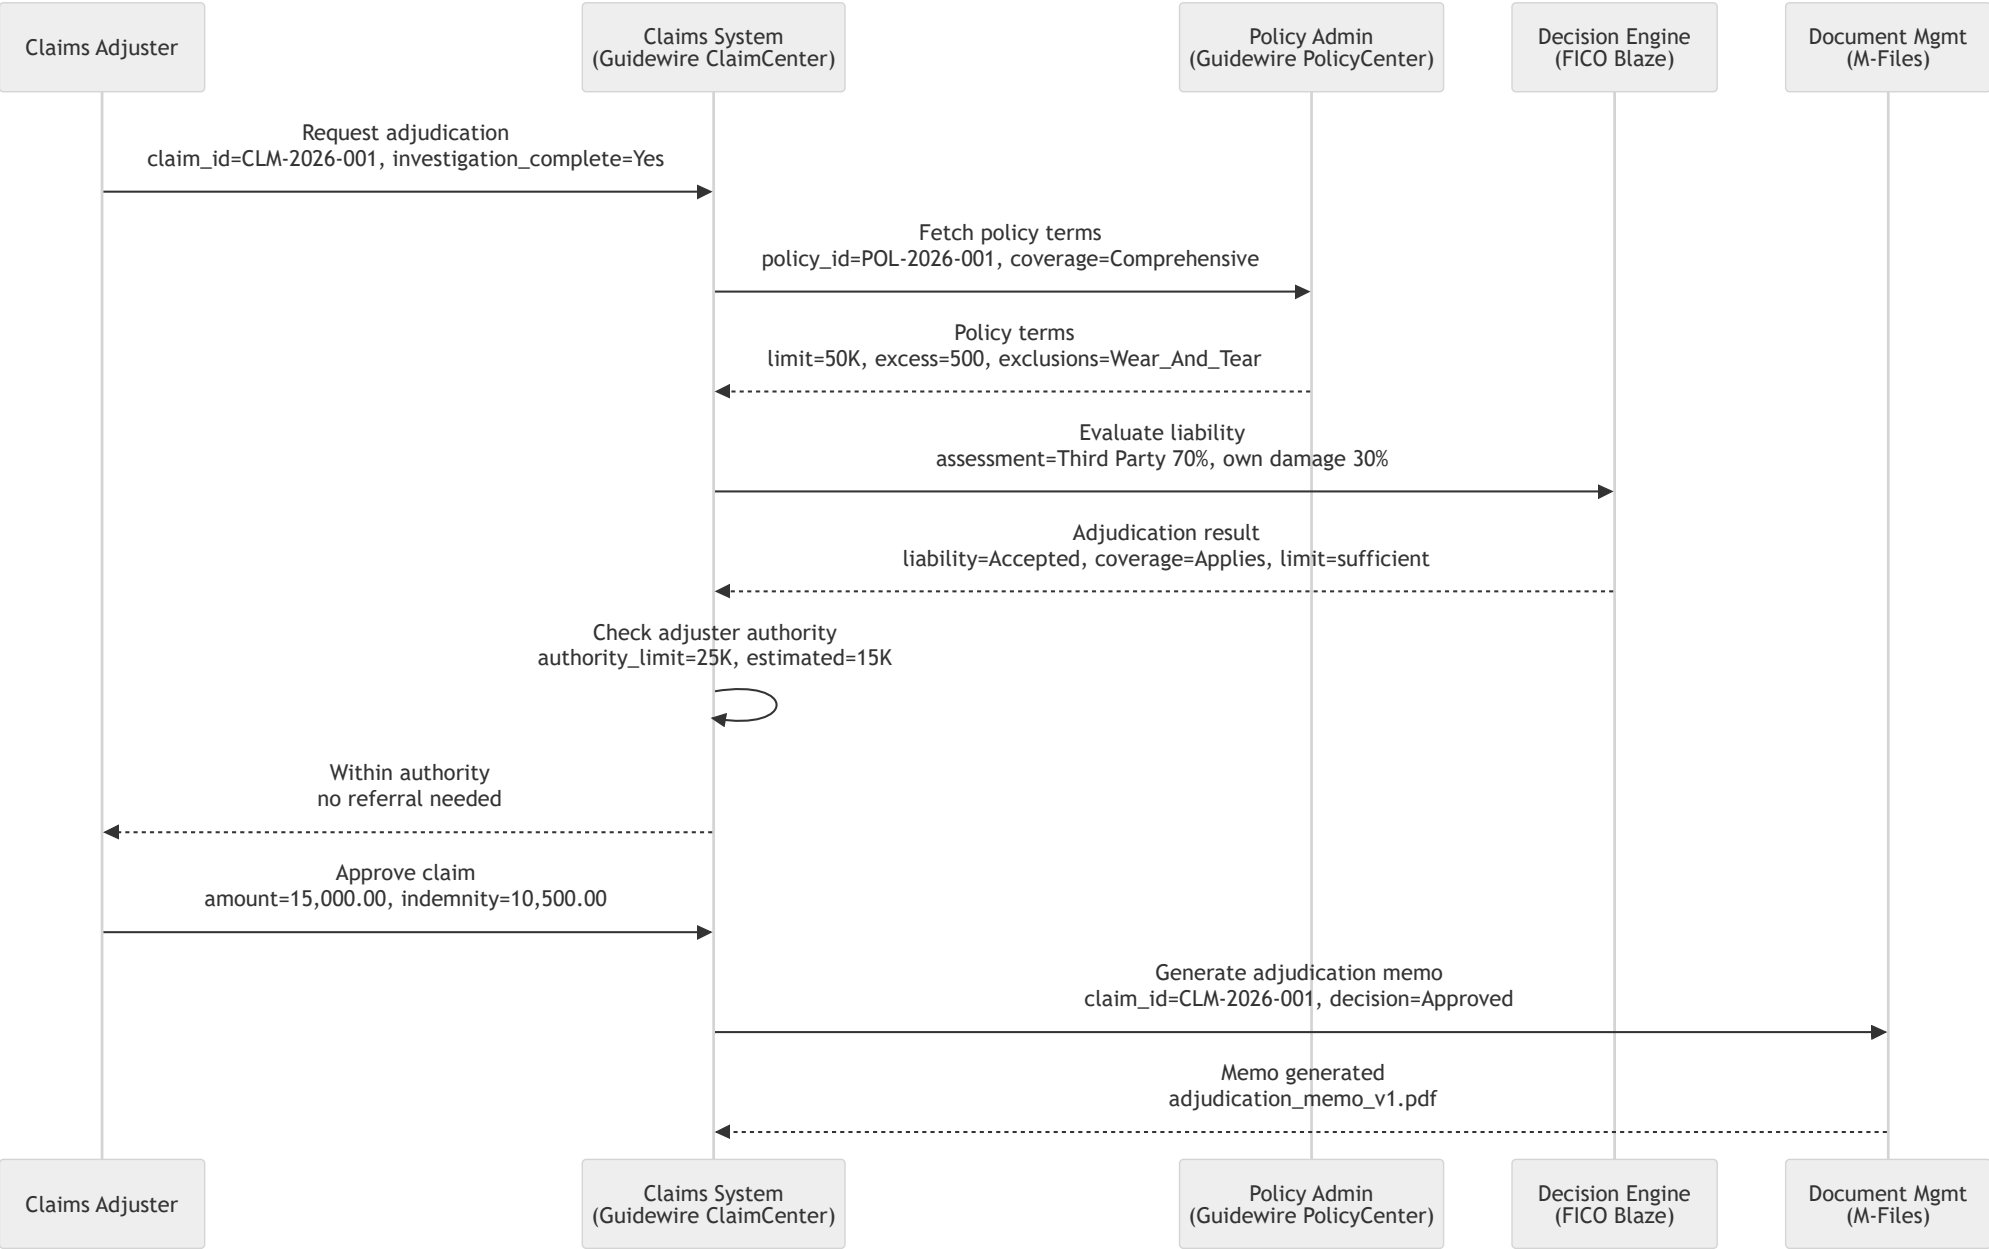

5.3 Claims Adjudication

Description: Adjuster makes liability and coverage decision. System applies policy terms, checks authority limits, and either approves or denies the claim.

Actors: Claims Adjuster, Claims Manager, Technical Specialist

Systems: Claims System (Guidewire ClaimCenter), Policy Admin (Guidewire PolicyCenter), Decision Engine (FICO Blaze), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Adjudication	Policy	FetchPolicyTerms	Claims System (Guidewire ClaimCenter)	Policy Admin (Guidewire PolicyCenter)	Guidewire REST API (API Key)	Guidewire REST API (API Key)	API-led (Real-time)	Simple
Adjudication	Evaluation	EvaluateLiability	Claims System (Guidewire ClaimCenter)	Decision Engine (FICO Blaze)	Guidewire REST API (API Key)	FICO Blaze API (REST)	API-led (Real-time)	Medium
Adjudication	Authority	CheckAdjusterAuthority	Claims System (Guidewire ClaimCenter)	Claims System (Guidewire ClaimCenter)	Internal	Internal	API-led (Real-time)	Simple
Adjudication	Decision	RecordAdjudicationDecision	Claims System (Guidewire ClaimCenter)	Claims System (Guidewire ClaimCenter)	Internal	Internal	API-led (Real-time)	Medium
Adjudication	Memo	GenerateAdjudicationMemo	Claims System (Guidewire ClaimCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Adjudication	Policy	Policy terms and coverage verified against claim	Coverage confirmed for loss type; exclusions checked; limits and excess applied correctly
Adjudication	Evaluation	Liability evaluated with supporting evidence	Liability decision documented; evidence referenced; third-party involvement assessed
Adjudication	Authority	Adjuster authority checked against estimated amount	Within authority: approve; exceeds authority: refer to manager with recommendation
Adjudication	Decision	Adjudication decision recorded with full reasoning	Approved amount within policy limit; or declined with specific exclusion referenced
Adjudication	Memo	Adjudication memo generated and attached to claim	Memo includes decision, rationale, amount breakdown, and next steps; audit trail maintained

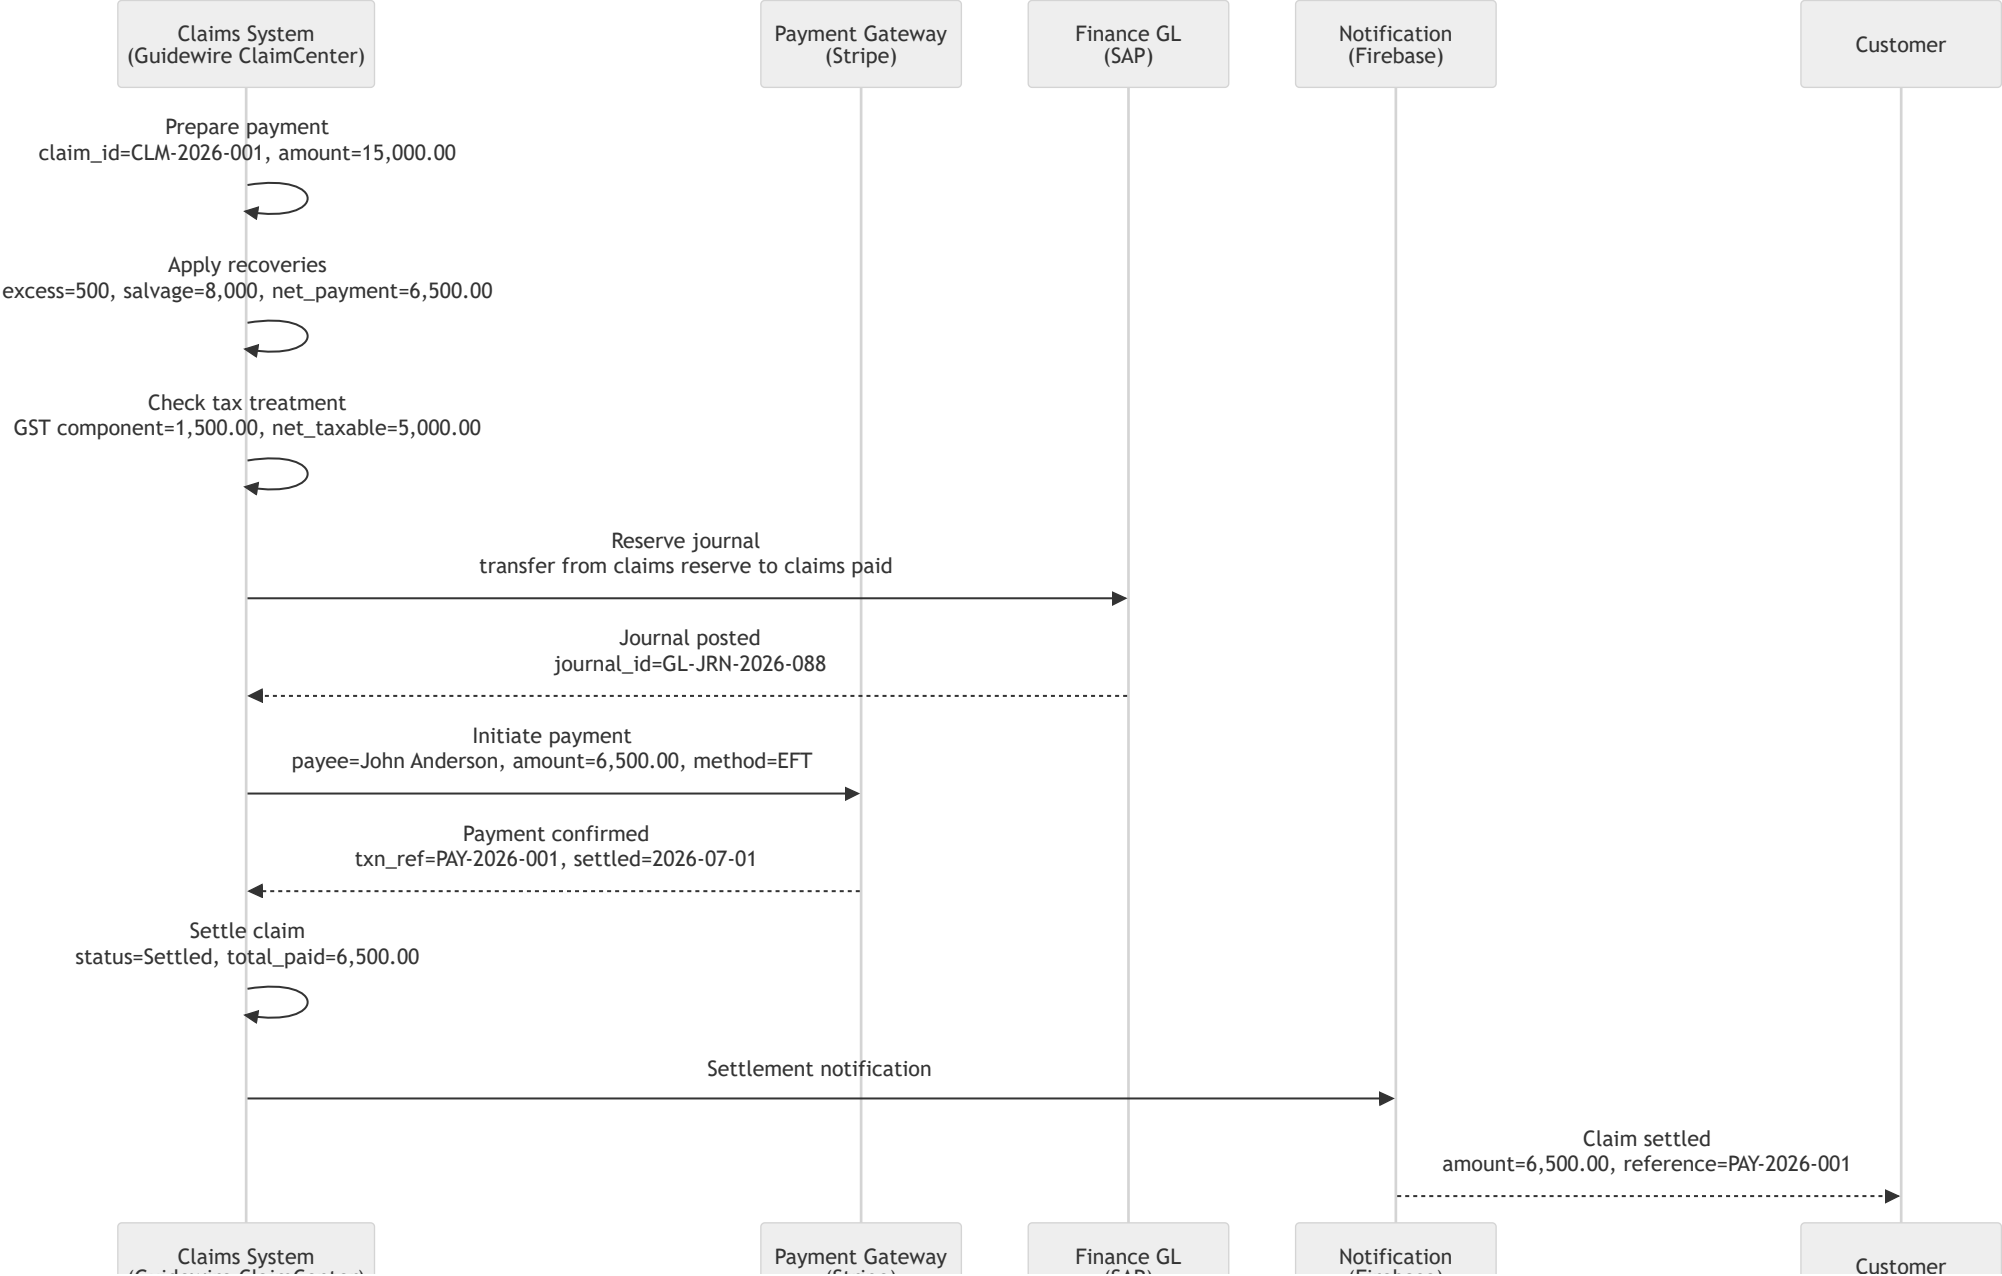

5.4 Payment & Settlement

Description: Approved claim payment is processed. System calculates payment breakdown, obtains approvals, initiates payment, and updates claim status on settlement.

Actors: Claims Adjuster, Finance Officer, Customer

Systems: Claims System (Guidewire ClaimCenter), Payment Gateway (Stripe), Finance GL (SAP), Notification Service (Firebase)

Sequence Diagram

(Guidewire ClaimCenter)

(Stripe)

(SAP)

(Firebase)

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Payment	Reserve	PostReserveJournal	Claims System (Guidewire ClaimCenter)	Finance GL (SAP)	Guidewire REST API (API Key)	SAP API (SOAP)	API-led (Real-time)	High
Payment	Disburse	InitiatePayment	Claims System (Guidewire ClaimCenter)	Payment Gateway (Stripe)	Guidewire REST API (API Key)	Stripe API (REST)	API-led (Real-time)	Medium
Payment	Reconciliation	ReconcilePayment	Payment Gateway (Stripe)	Claims System (Guidewire ClaimCenter)	Stripe API (REST)	Guidewire REST API (API Key)	Event-driven	Simple
Payment	GL	PostPaymentToGL	Payment Gateway (Stripe)	Finance GL (SAP)	Stripe API (REST)	SAP API (SOAP)	Batch (Scheduled)	High
Payment	Notification	SendSettlementNotification	Claims System (Guidewire ClaimCenter)	Notification Service (Firebase)	Guidewire REST API (API Key)	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Payment	Reserve	Reserve journal posted from claims reserve to claims paid	GL entries balanced; reserve reduced; paid-to-date updated; audit trail complete
Payment	Disburse	Payment initiated to correct payee	Payee bank details verified; BSB/account validated; payment amount matches approved settlement
Payment	Reconciliation	Payment confirmed and reconciled	Payment status returned from bank; reconciliation with bank statement within 24 hours
Payment	GL	Payment posted to general ledger	GL entries include GST, net amount, and any recoveries; multi-currency handled
Payment	Notification	Customer notified of settlement	Notification includes payment amount, reference, and expected settlement date

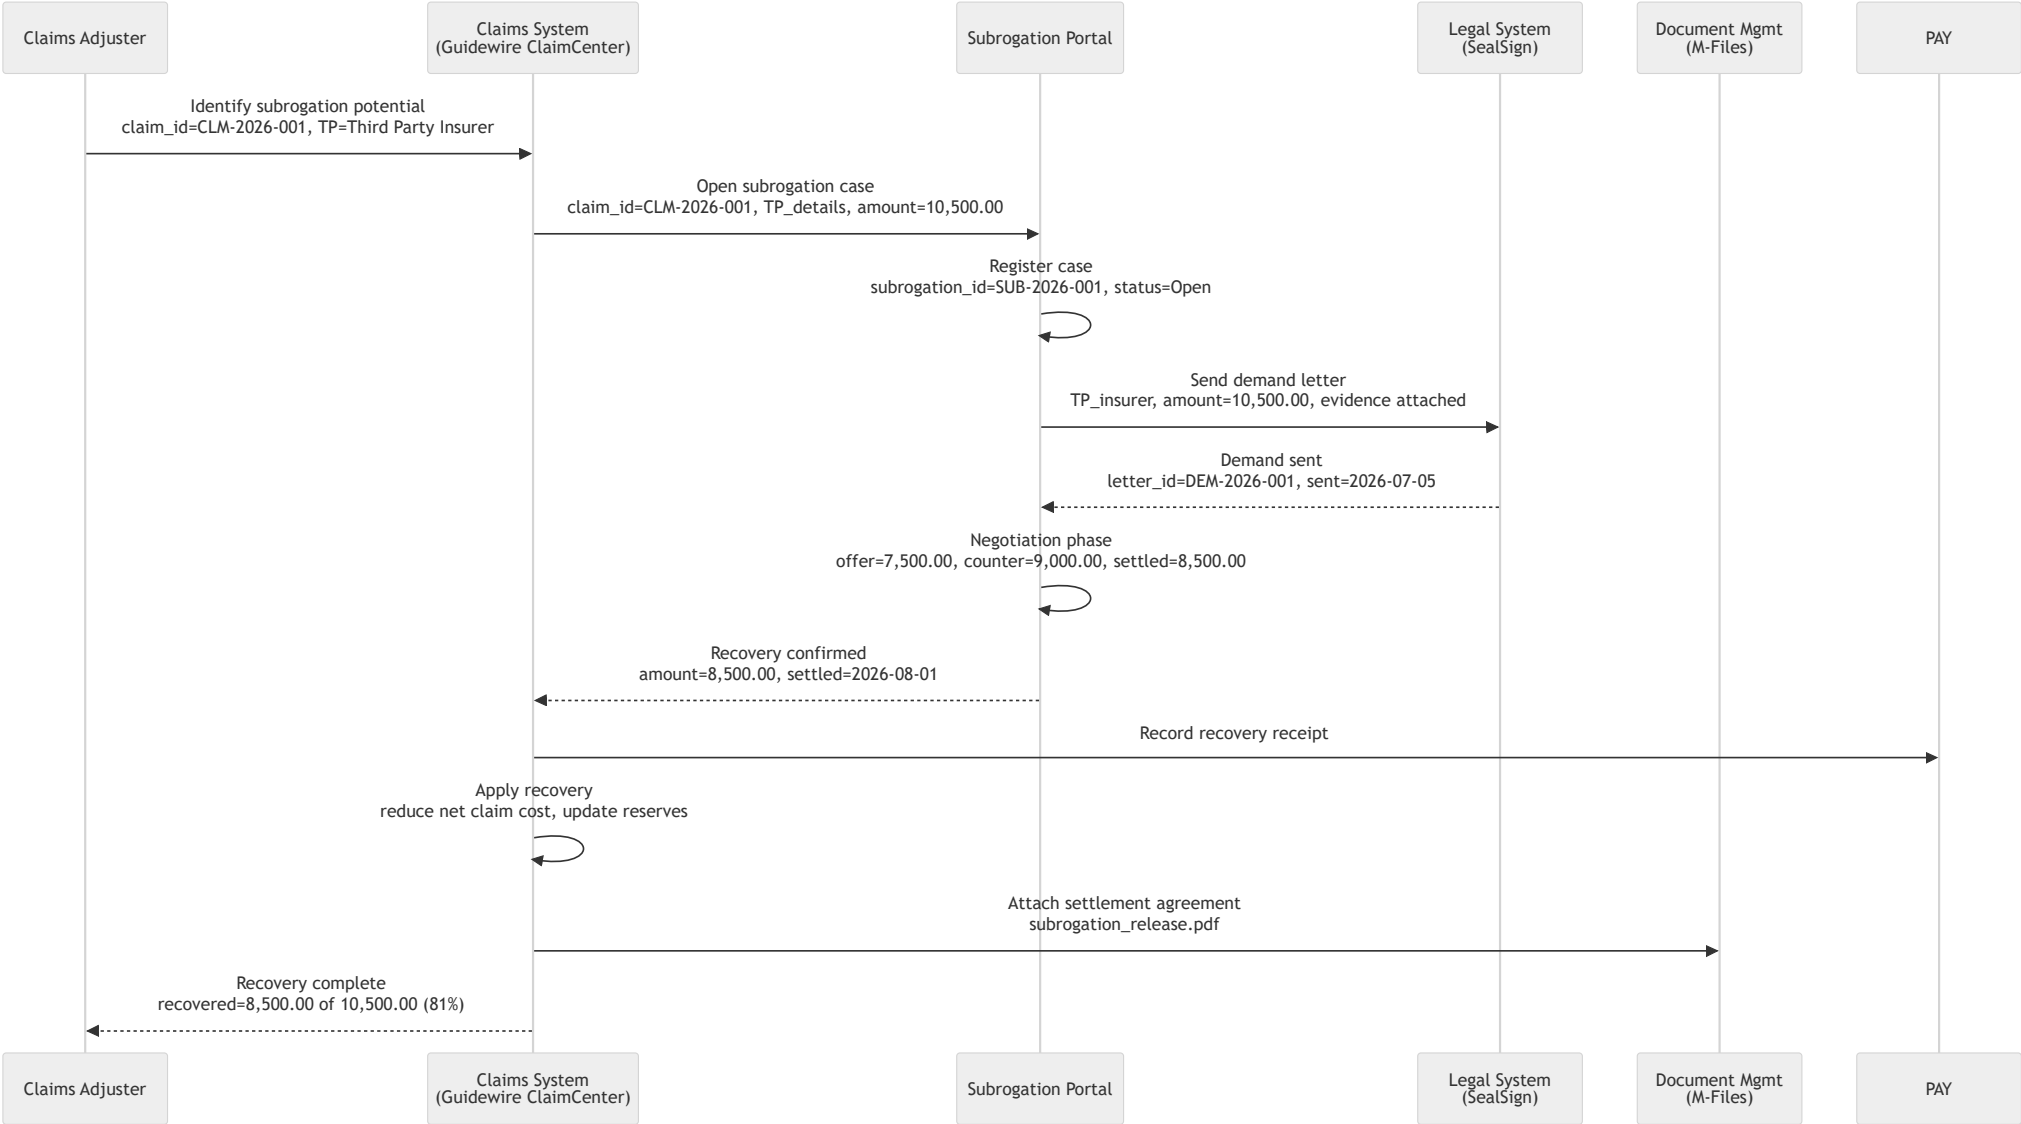

5.5 Subrogation & Recovery

Description: Claims team pursues recovery from third-party at-fault party. System manages subrogation case, tracks recovery status, and applies recoveries to claim.

Actors: Claims Adjuster, Recovery Officer, Third-Party Insurer

Systems: Claims System (Guidewire ClaimCenter), Subrogation Portal, Legal System (SealSign), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Subrogation	Identify	IdentifySubrogationPotential	Claims System (Guidewire ClaimCenter)	Claims System (Guidewire ClaimCenter)	Internal	Internal	API-led (Real-time)	Simple
Subrogation	Case	OpenSubrogationCase	Claims System (Guidewire ClaimCenter)	Subrogation Portal	Guidewire REST API (API Key)	Subrogation API (REST)	API-led (Real-time)	Medium
Subrogation	Demand	SendDemandLetter	Subrogation Portal	Legal System (SealSign)	Subrogation API (REST)	SealSign API (REST)	Event-driven	Medium
Subrogation	Settlement	RecordRecoverySettlement	Subrogation Portal	Claims System (Guidewire ClaimCenter)	Subrogation API (REST)	Guidewire REST API (API Key)	Event-driven	Medium
Subrogation	Document	AttachSettlementAgreement	Claims System (Guidewire ClaimCenter)	Document Mgmt (M-Files)	Guidewire REST API (API Key)	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Subrogation	Identify	Subrogation potential identified at FNOL or during investigation	TP details captured; liability clear; subrogation threshold met; SOL check passed
Subrogation	Case	Subrogation case opened with full claim details	Case registered with unique ID; all evidence packaged; TP insurer notified
Subrogation	Demand	Demand letter sent with supporting evidence	Letter includes breakdown; evidence package attached; response deadline specified
Subrogation	Settlement	Recovery settlement recorded and applied to claim	Settlement amount >= minimum threshold; recovery applied to reduce net claim cost
Subrogation	Document	Settlement agreement and release attached to claim	Signed agreement stored; claim file updated; subrogation case closed

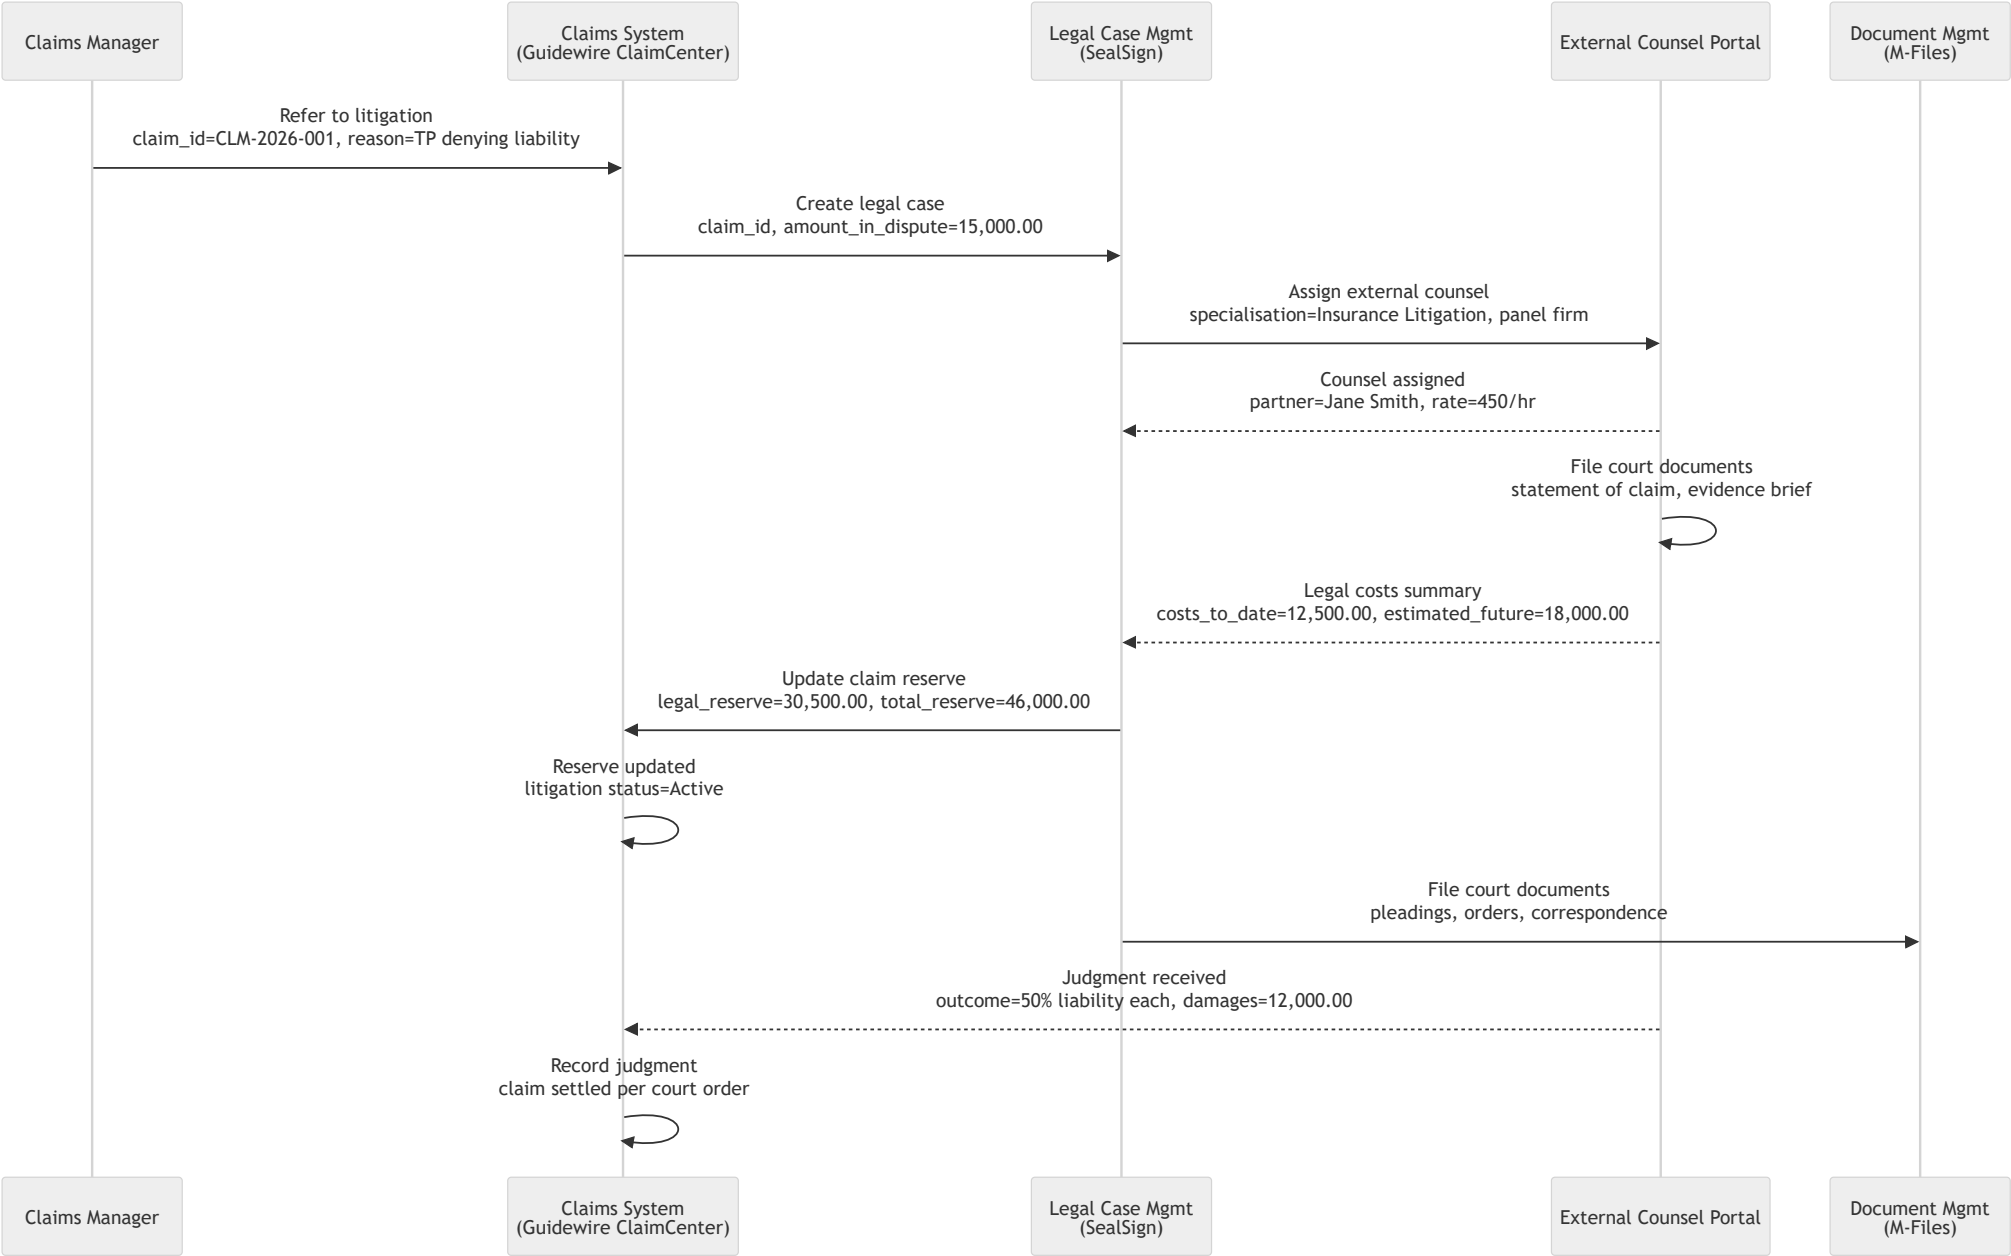

5.6 Litigation Management

Description: When claim cannot be settled, litigation is initiated. System assigns counsel, tracks legal costs, manages court dates, and records judgments.

Actors: Claims Manager, Legal Counsel, External Solicitor, Judge

Systems: Claims System (Guidewire ClaimCenter), Legal Case Mgmt (SealSign), External Counsel Portal, Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Litigation	Refer	ReferToLitigation	Claims System (Guidewire ClaimCenter)	Legal Case Mgmt (SealSign)	Guidewire REST API (API Key)	SealSign API (REST)	API-led (Real-time)	Medium
Litigation	Counsel	AssignExternalCounsel	Legal Case Mgmt (SealSign)	External Counsel Portal	SealSign API (REST)	Counsel API (REST)	Event-driven	Medium
Litigation	Costs	TrackLegalCosts	External Counsel Portal	Legal Case Mgmt (SealSign)	Counsel API (REST)	SealSign API (REST)	Batch (Scheduled)	Medium
Litigation	Reserve	UpdateLitigationReserve	Legal Case Mgmt (SealSign)	Claims System (Guidewire ClaimCenter)	SealSign API (REST)	Guidewire REST API (API Key)	API-led (Real-time)	High
Litigation	Outcome	RecordJudgment	External Counsel Portal	Claims System (Guidewire ClaimCenter)	Counsel API (REST)	Guidewire REST API (API Key)	Event-driven	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Litigation	Refer	Litigation referral approved by claims manager	Referral memo prepared; authority limit checked; legal panel assignment rules followed
Litigation	Counsel	External counsel assigned from approved panel	Conflicts checked; counsel expertise matches claim type; rates within panel agreement
Litigation	Costs	Legal costs tracked and reported monthly	Costs allocated to claim; budget vs actual tracked; cost forecast updated quarterly
Litigation	Reserve	Litigation reserve updated to reflect legal costs and potential judgment	Reserve covers defence costs, potential damages, and plaintiff costs; reviewed quarterly
Litigation	Outcome	Judgment	Judgment amount, costs order, and interest recorded; claim status updated; appeal options noted

Flow	Entity	Acceptance Criterion	Expected Outcome
		recorded and claim settled per court order	

6: Reinsurance — IN020 IN021 IN022

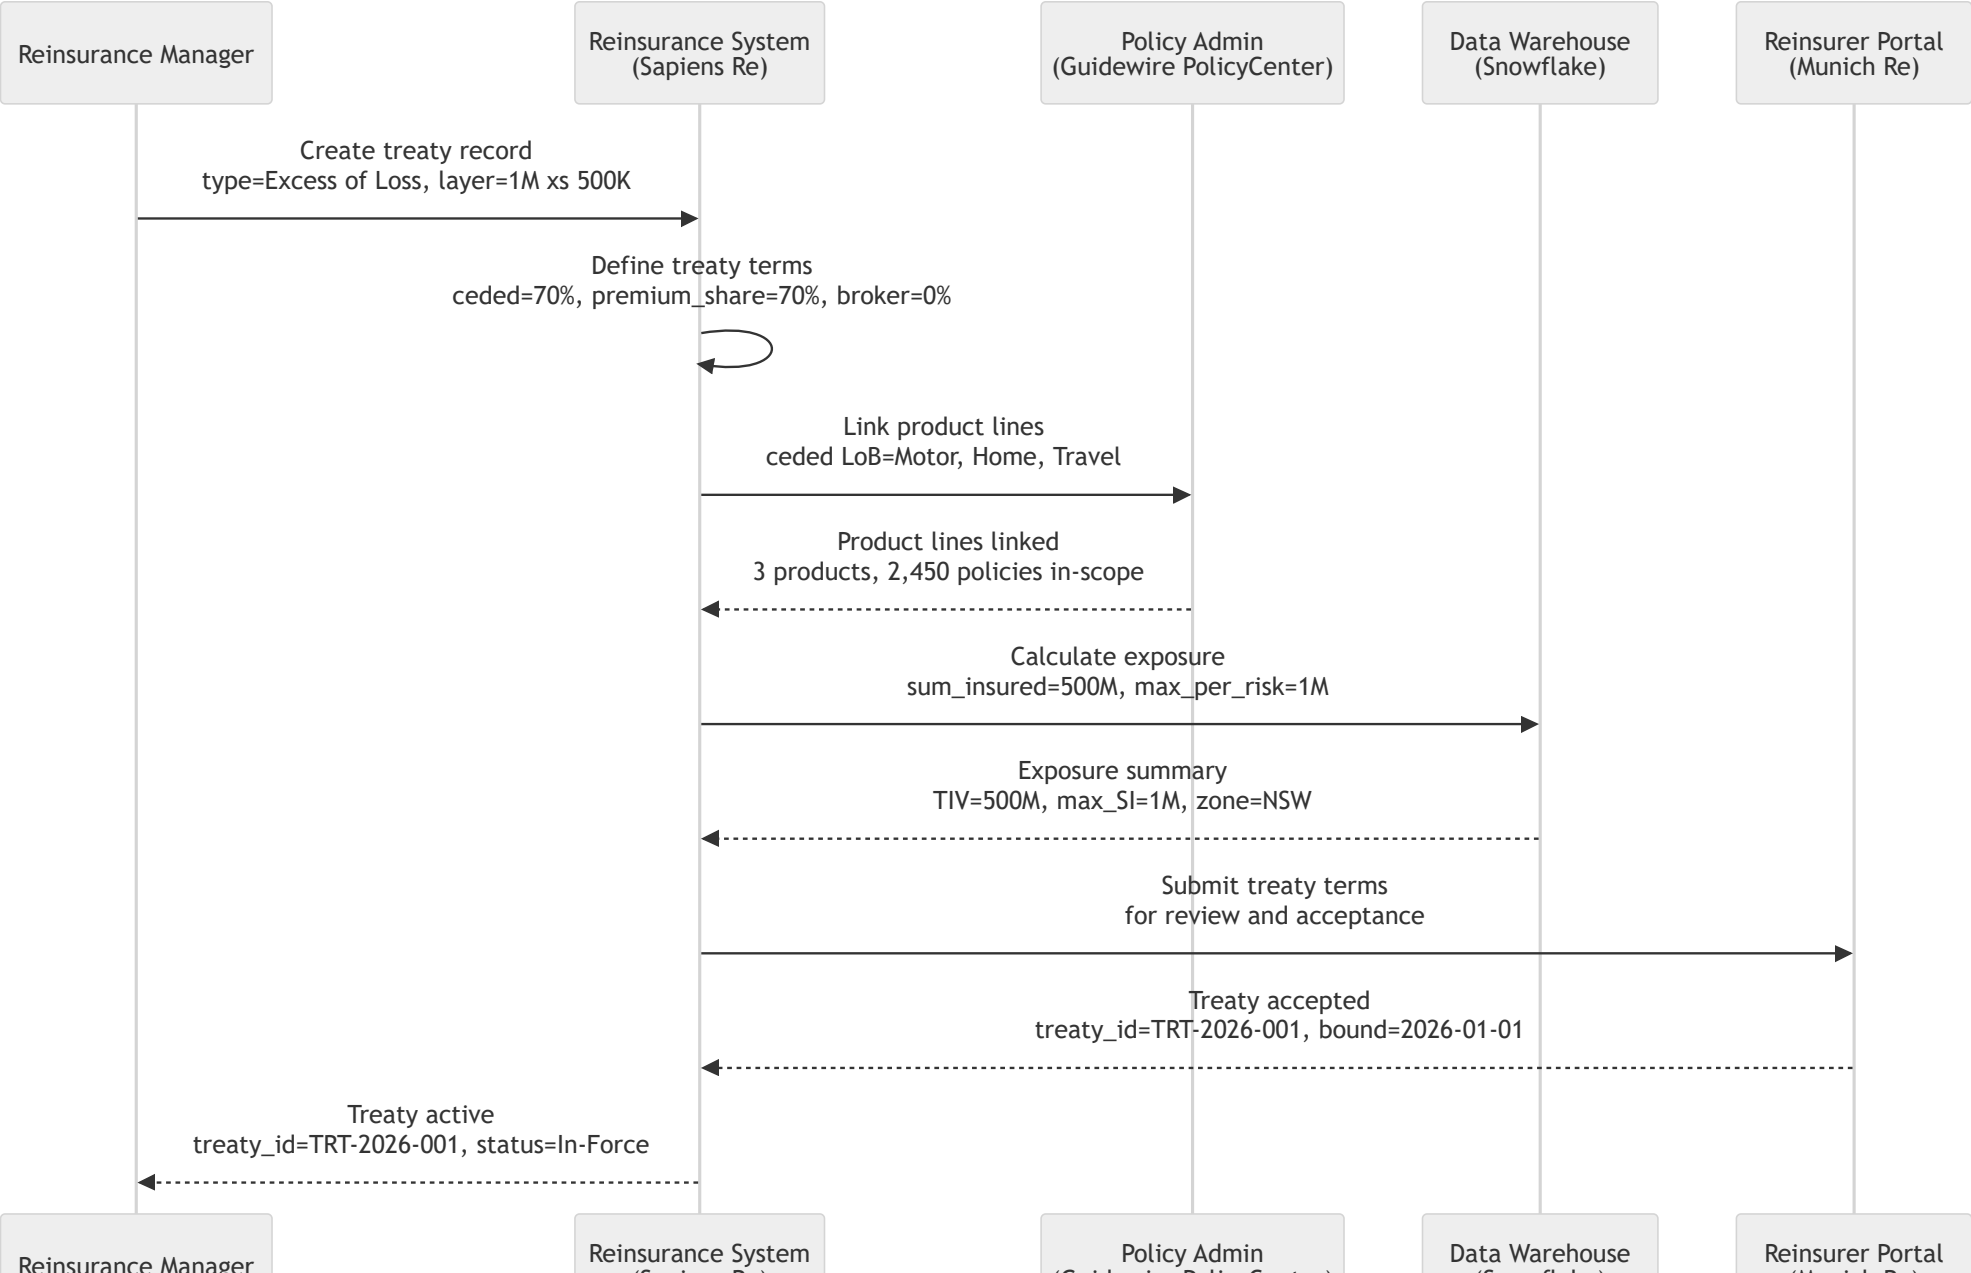

6.1 Treaty Setup & Administration

Description: Reinsurance team sets up treaty agreements with reinsurers. System records treaty terms, cession percentages, limits, and excess layers.

Actors: Reinsurance Manager, Actuary, Reinsurer

Systems: Reinsurance System (Sapiens Re), Policy Admin (Guidewire PolicyCenter), Data Warehouse (Snowflake), Reinsurer Portal (Munich Re)

Sequence Diagram

(Sapiens Re)

(Sapiens Re)

(Guidewire PolicyCenter)

(Snowflake)

(Munich Re)

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Treaty Setup	Terms	DefineTreatyTerms	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	API-led (Real-time)	Medium
Treaty Setup	Products	LinkProductsToTreaty	Reinsurance System (Sapiens Re)	Policy Admin (Guidewire PolicyCenter)	Sapiens API (REST)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Treaty Setup	Exposure	CalculateExposure	Reinsurance System (Sapiens Re)	Data Warehouse (Snowflake)	Sapiens API (REST)	Snowflake JDBC	Batch (Scheduled)	High
Treaty Setup	Market	SubmitTreatyToMarket	Reinsurance System (Sapiens Re)	Reinsurer Portal (Munich Re)	Sapiens API (REST)	Munich Re API (SOAP)	API-led (Real-time)	High
Treaty Setup	Activate	ActivateTreaty	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Treaty Setup	Terms	Treaty terms defined with all reinsurer details	Treaty type, layer, ceded share, premium share, and all limits recorded
Treaty Setup	Products	Product lines linked to treaty correctly	All in-scope products identified; ceded percentage applied; out-of-scope policies excluded
Treaty Setup	Exposure	Exposure calculated from in-force portfolio	TIV, PML, and max per risk calculated; exposure report generated for treaty pricing
Treaty Setup	Market	Treaty submitted to reinsurer market	Reinsurer acknowledges receipt; terms negotiated; binding confirmation received
Treaty Setup	Activate	Treaty activated with effective date	Active from inception date; cession schedules activated; bordereaux generation scheduled

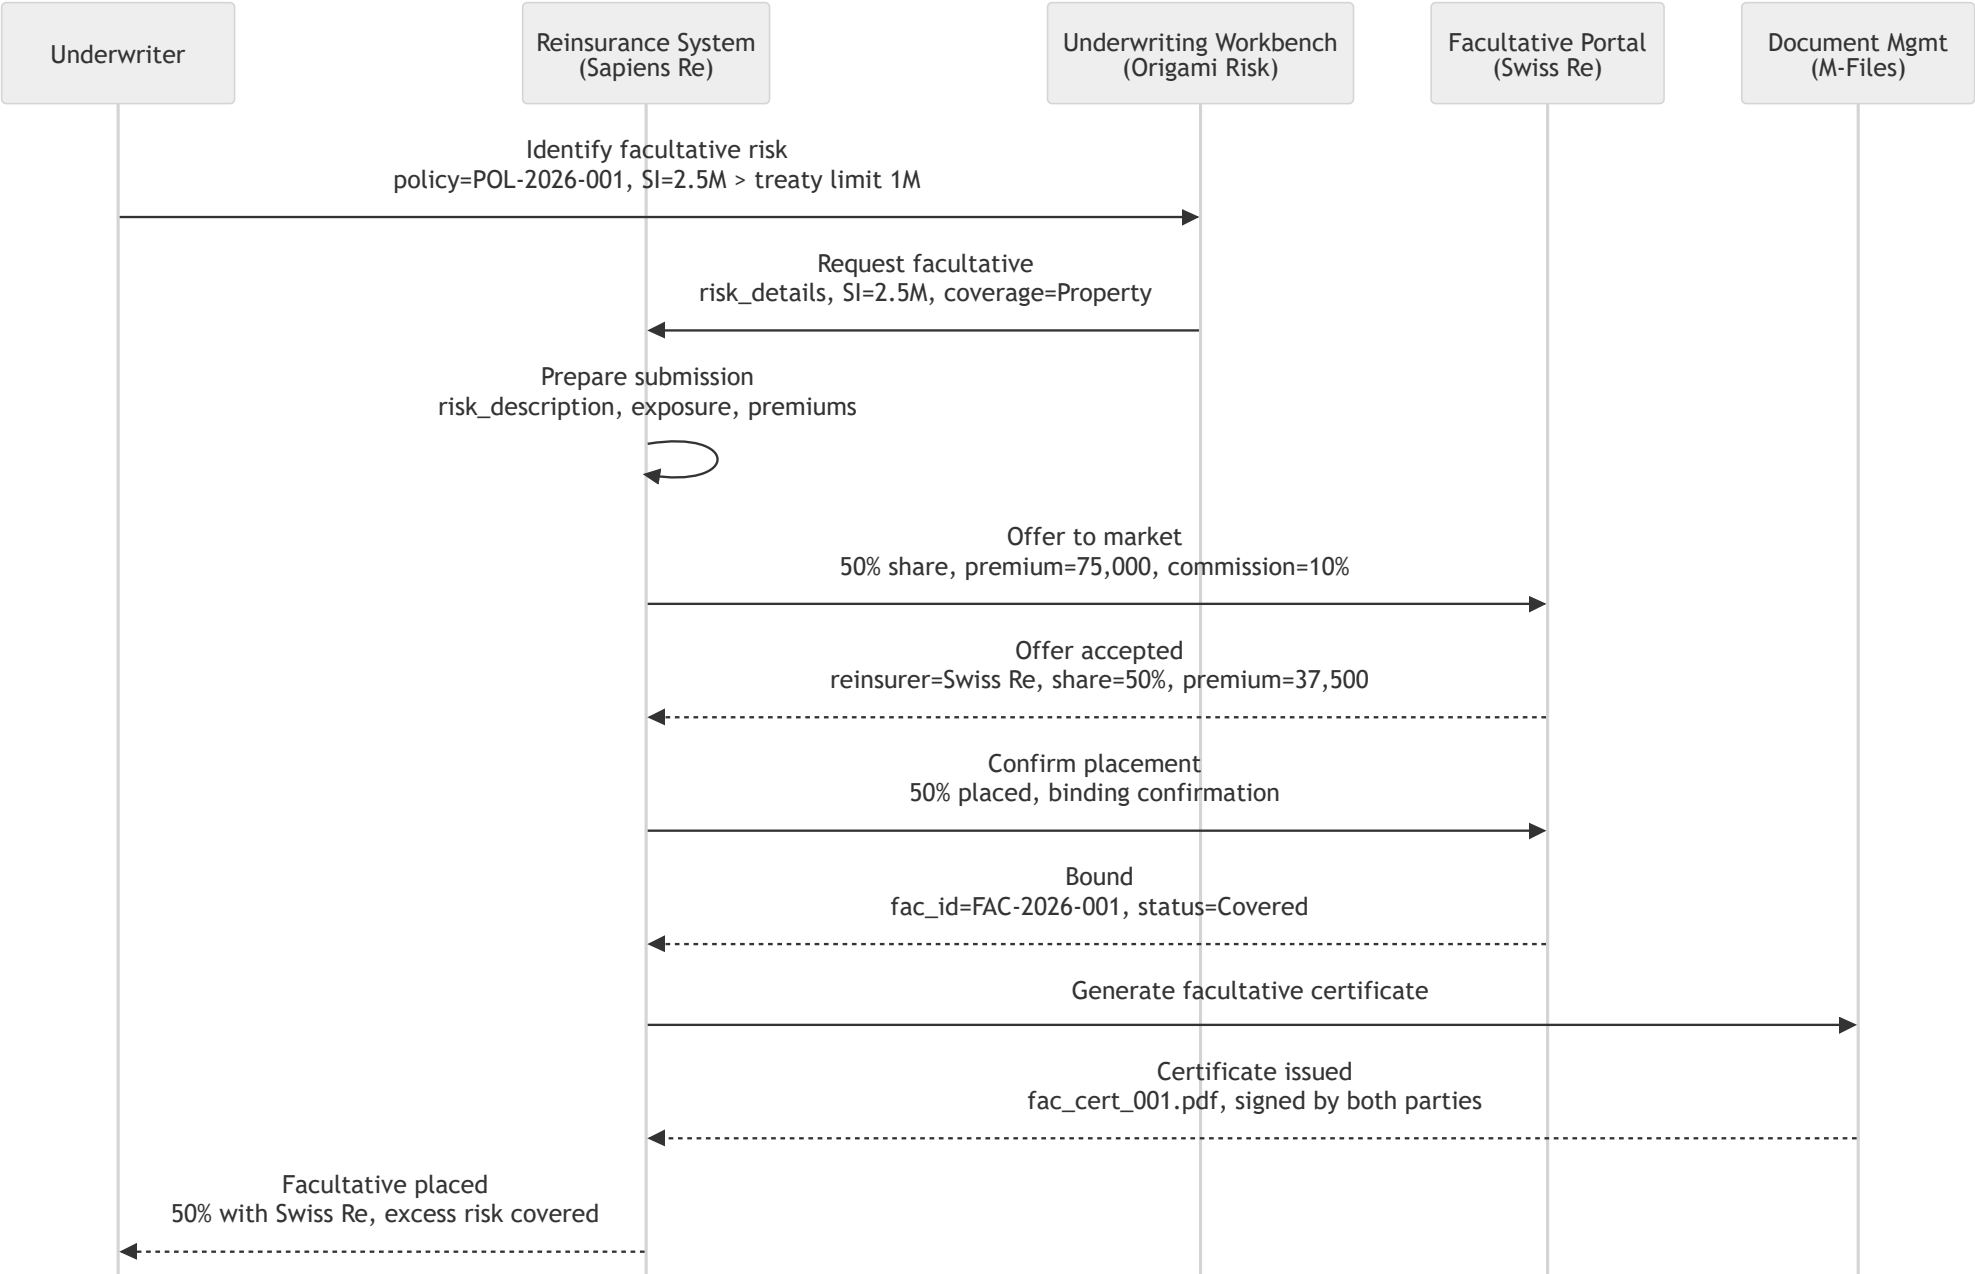

6.2 Facultative Placement

Description: Individual large or complex risk is offered to reinsurers on a facultative basis. Underwriter prepares submission, negotiates terms, and binds coverage.

Actors: Underwriter, Reinsurance Manager, Facultative Reinsurer

Systems: Reinsurance System (Sapiens Re), Underwriting Workbench (Origami Risk), Facultative Portal (Swiss Re), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Facultative	Identify	IdentifyFacultativeRisk	Underwriting Workbench (Origami Risk)	Reinsurance System (Sapiens Re)	Origami API (REST)	Sapiens API (REST)	API-led (Real-time)	Simple
Facultative	Prepare	PrepareFacSubmission	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	API-led (Real-time)	Medium
Facultative	Market	OfferToReinsurer	Reinsurance System (Sapiens Re)	Facultative Portal (Swiss Re)	Sapiens API (REST)	Swiss Re API (SOAP)	API-led (Real-time)	High
Facultative	Bind	ConfirmPlacement	Facultative Portal (Swiss Re)	Reinsurance System (Sapiens Re)	Swiss Re API (SOAP)	Sapiens API (REST)	Event-driven	Medium
Facultative	Certificate	IssueFacultativeCertificate	Reinsurance System (Sapiens Re)	Document Mgmt (M-Files)	Sapiens API (REST)	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Facultative	Identify	Facultative need identified when risk exceeds treaty limit	Risk SI compared to treaty limit; facultative threshold check; automatic referral triggered
Facultative	Prepare	Facultative submission prepared with all risk details	Submission includes risk survey, exposure data, premium indication, and proposed terms
Facultative	Market	Risk offered to facultative market	Offers sent within 24 hours; multiple quotes obtained; best terms selected
Facultative	Bind	Placement confirmed and bound by reinsurer	Binding confirmation received; fac ID assigned; coverage effective from risk inception
Facultative	Certificate	Facultative certificate issued and signed	Certificate signed by both cedent and reinsurer; document stored in permanent record

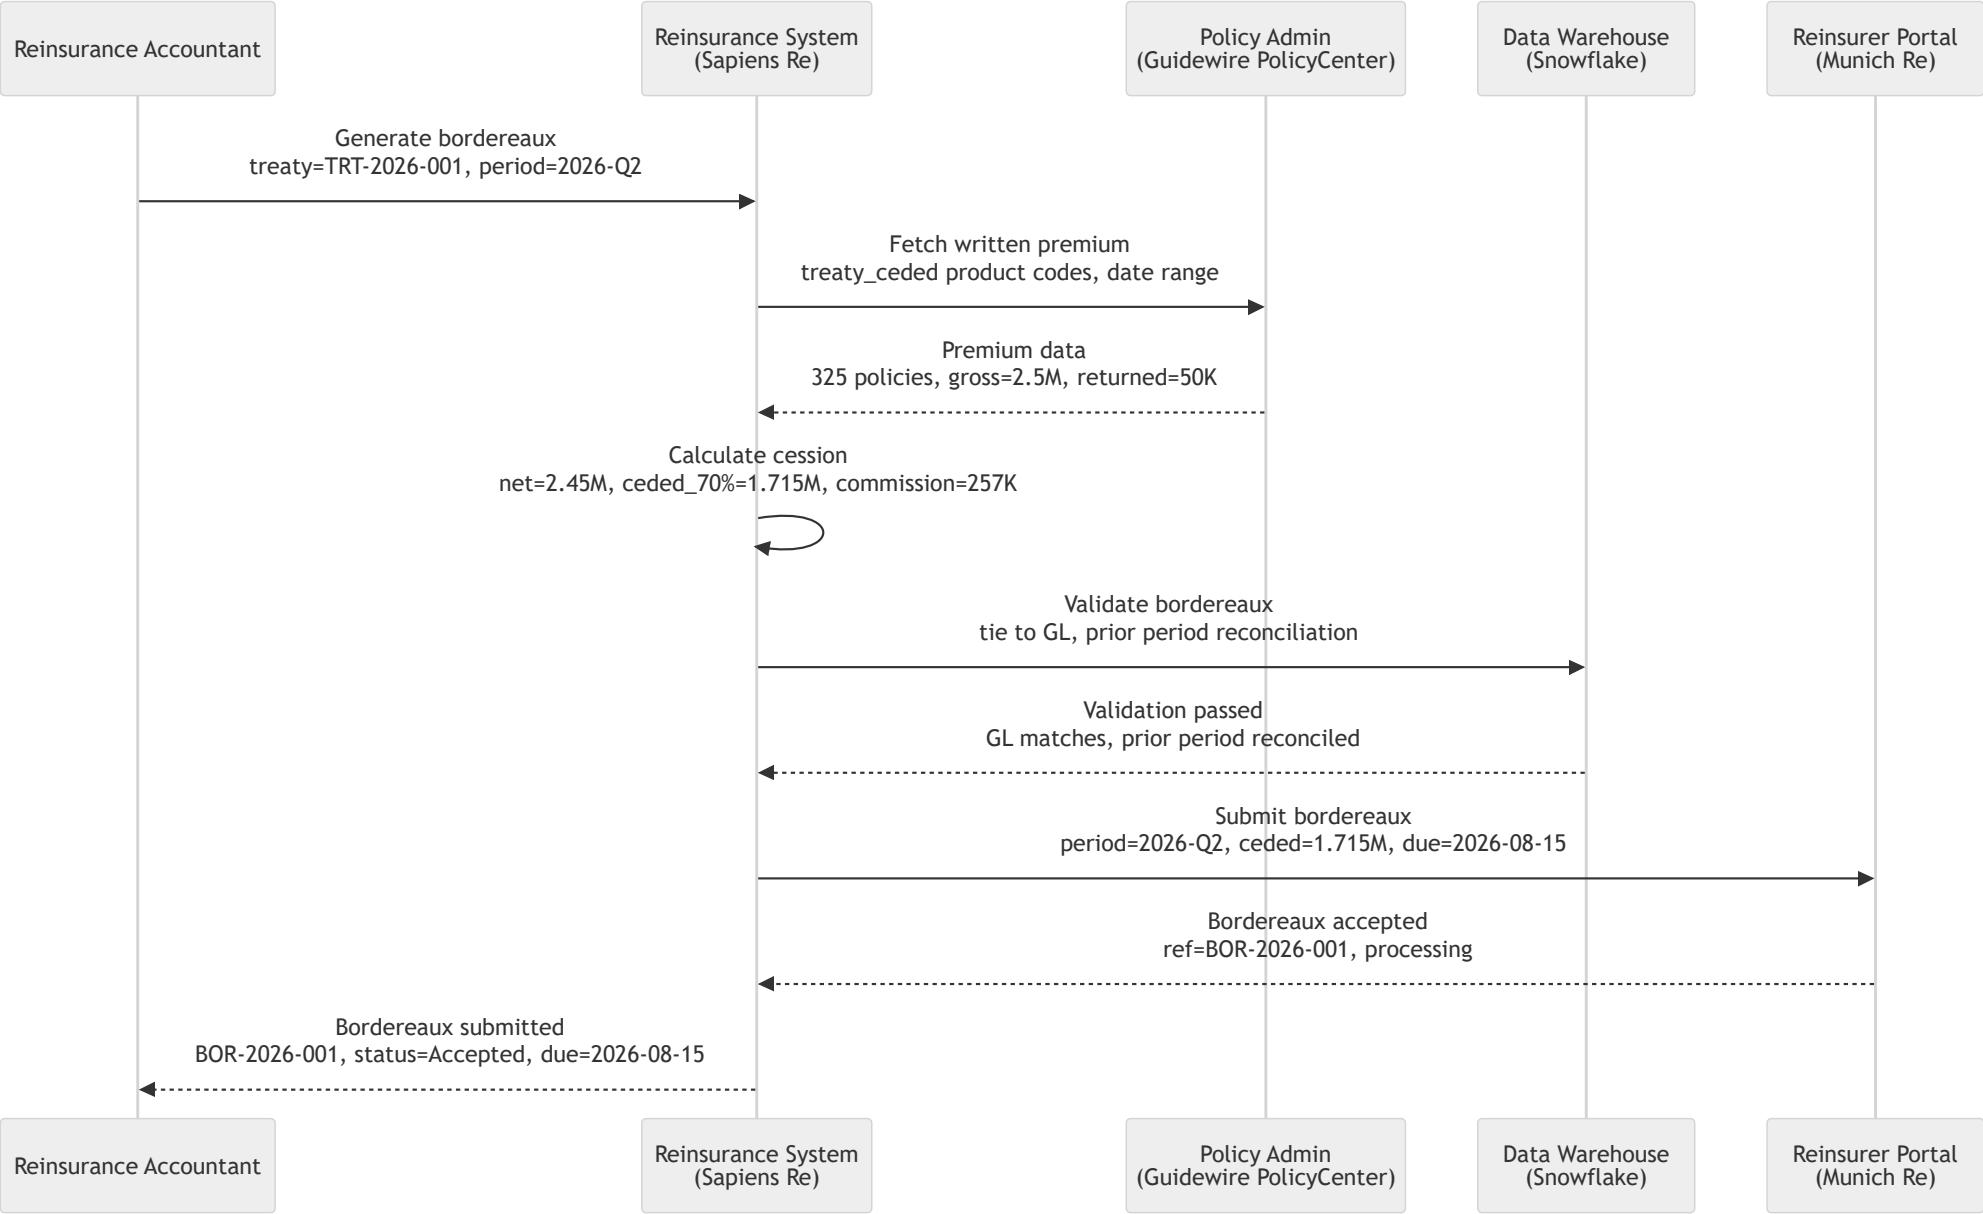

6.3 Premium Bordereaux Processing

Description: Ceding company prepares and submits premium bordereaux to reinsurers detailing written premiums, ceded amounts, and commissions for the treaty period.

Actors: Reinsurance Accountant, Operations, Reinsurer

Systems: Reinsurance System (Sapiens Re), Policy Admin (Guidewire PolicyCenter), Data Warehouse (Snowflake), Reinsurer Portal (Munich Re)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Premium Bordereaux	Premium	FetchWrittenPremium	Reinsurance System (Sapiens Re)	Policy Admin (Guidewire PolicyCenter)	Sapiens API (REST)	Guidewire REST API (API Key)	Batch (Scheduled)	Medium
Premium Bordereaux	Cession	CalculateCession	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	Batch (Scheduled)	Medium
Premium Bordereaux	Validation	ValidateBordereaux	Reinsurance System (Sapiens Re)	Data Warehouse (Snowflake)	Sapiens API (REST)	Snowflake JDBC	Batch (Scheduled)	High
Premium Bordereaux	Submit	SubmitBordereauxToReinsurer	Reinsurance System (Sapiens Re)	Reinsurer Portal (Munich Re)	Sapiens API (REST)	Munich Re API (SOAP)	Batch (Scheduled)	High
Premium Bordereaux	Status	ReceiveBordereauxStatus	Reinsurer Portal (Munich Re)	Reinsurance System (Sapiens Re)	Munich Re API (SOAP)	Sapiens API (REST)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Premium Bordereaux	Premium	Written premium data fetched for treaty period	All policies in-scope included; returned premiums deducted; multi-currency converted
Premium Bordereaux	Cession	Cession calculated correctly per treaty terms	Ceded percentage applied; commission deducted; reinsurer share matches treaty schedule
Premium Bordereaux	Validation	Bordereaux validated against GL and prior period	GL premium matches bordereaux total; prior period adjustments applied; break report generated
Premium Bordereaux	Submit	Bordereaux submitted to reinsurer within contractual timeframe	Submission by 15th day post-quarter; acknowledgment received; format per reinsurer requirements
Premium Bordereaux	Status	Bordereaux acceptance status received from reinsurer	Accepted or queried status; queries resolved within 5 business days

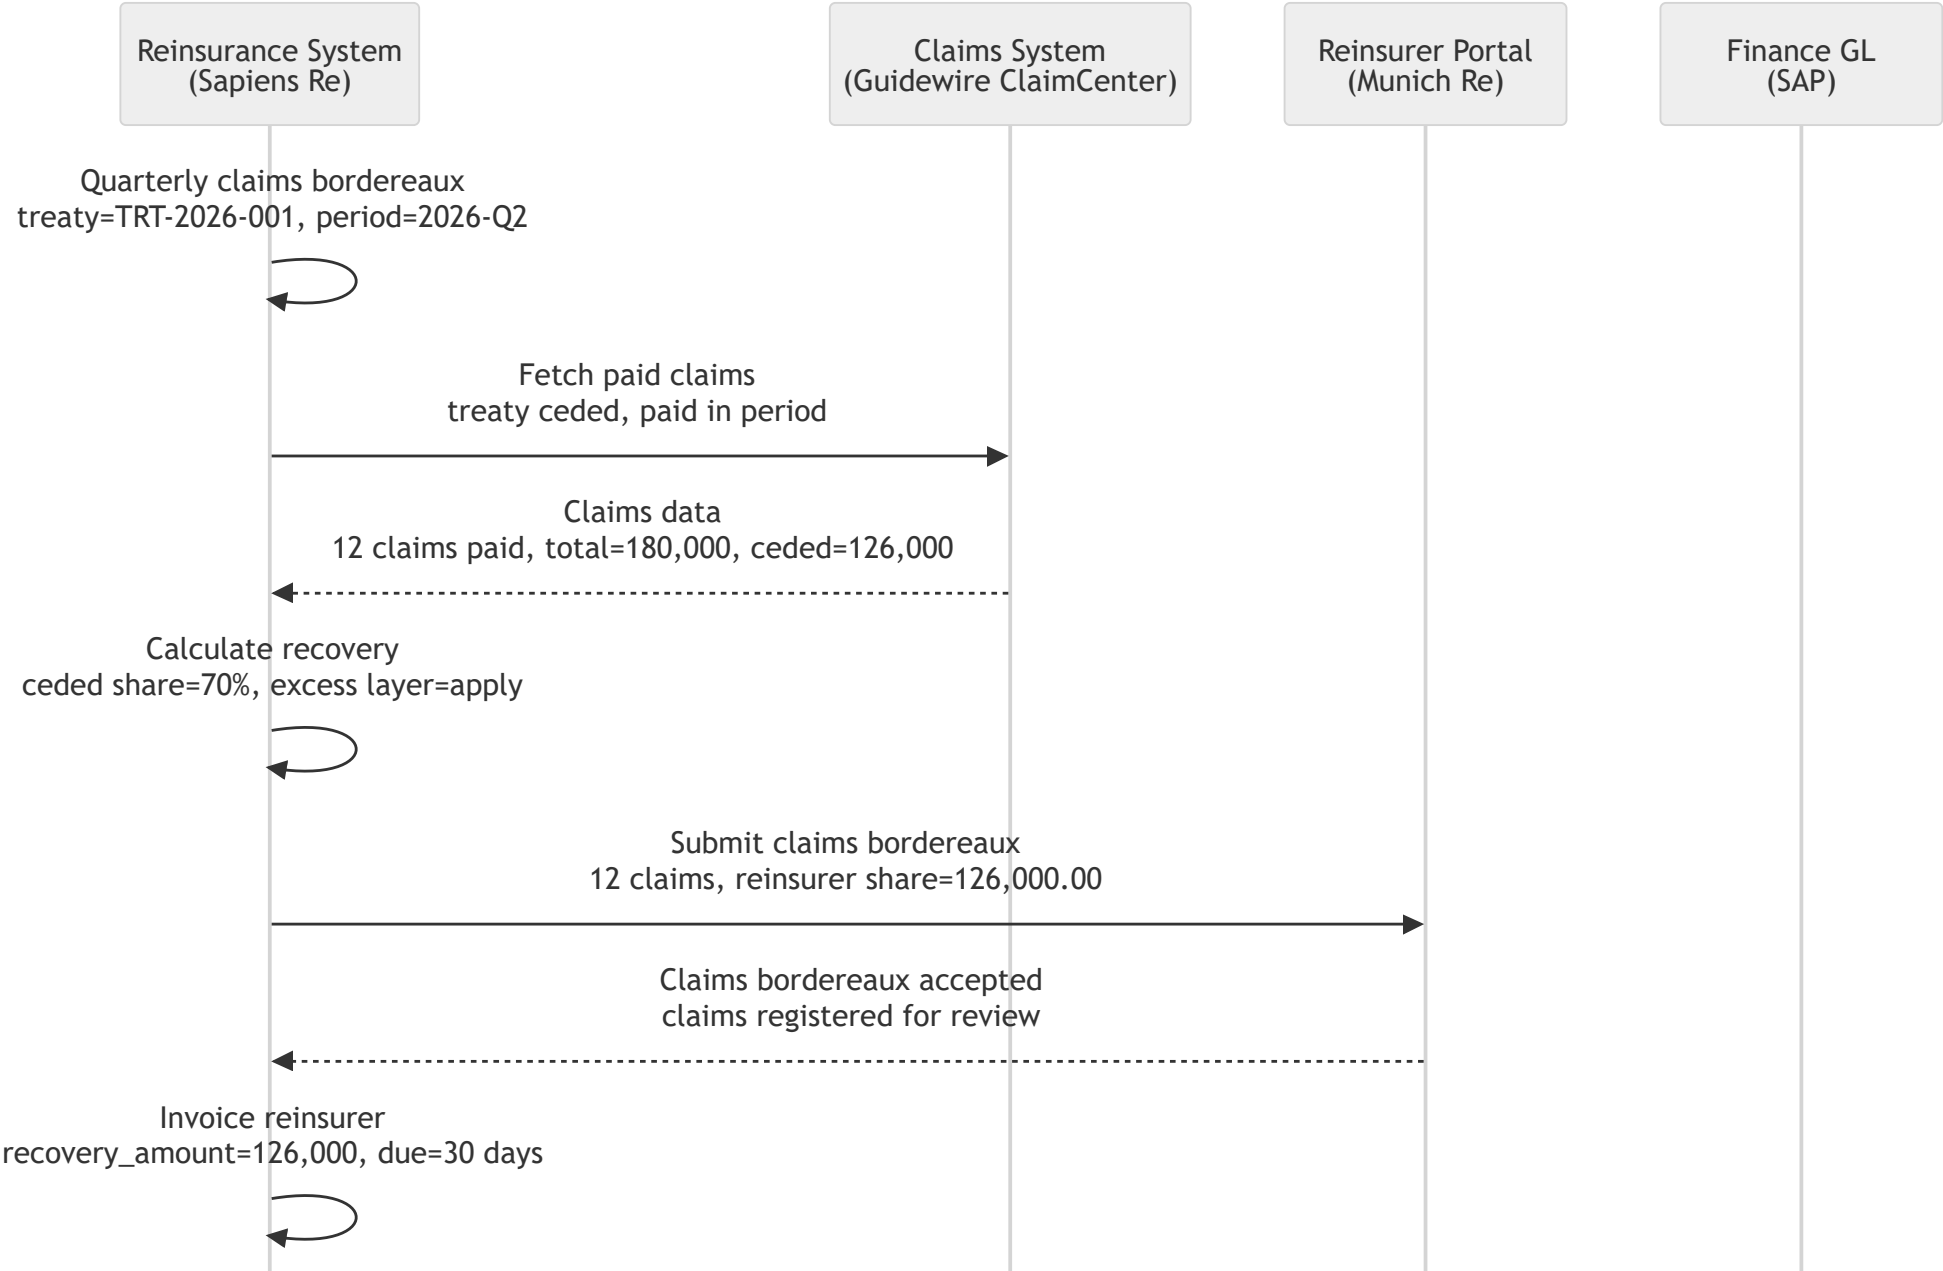

6.4 Claims Bordereaux & Recovery

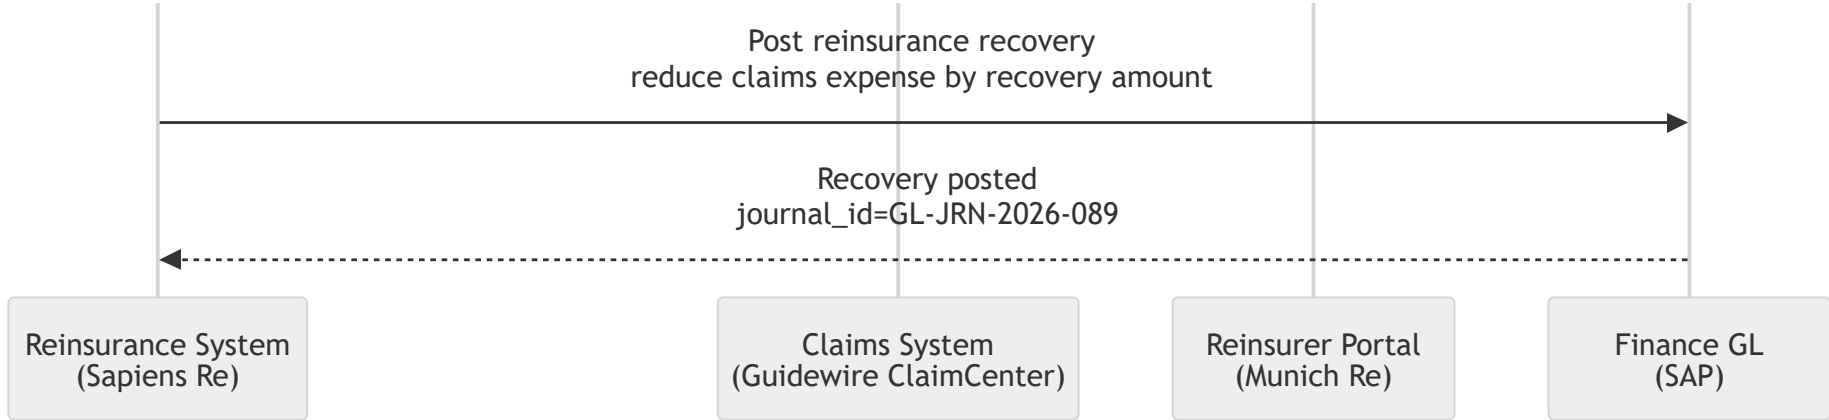

Description: Ceding company reports claims to reinsurers via claims bordereaux. Reinsurer's share of paid losses is recovered through the reinsurance program.

Actors: Claims Adjuster, Reinsurance Accountant, Reinsurer

Systems: Reinsurance System (Sapiens Re), Claims System (Guidewire ClaimCenter), Reinsurer Portal (Munich Re), Finance GL (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Claims Bordereaux	Claims	FetchPaidClaims	Reinsurance System (Sapiens Re)	Claims System (Guidewire ClaimCenter)	Sapiens API (REST)	Guidewire REST API (API Key)	Batch (Scheduled)	Medium
Claims Bordereaux	Calculation	CalculateRecovery	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	Batch (Scheduled)	Medium
Claims Bordereaux	Submit	SubmitClaimsBordereaux	Reinsurance System (Sapiens Re)	Reinsurer Portal (Munich Re)	Sapiens API (REST)	Munich Re API (SOAP)	Batch (Scheduled)	High
Claims Bordereaux	Invoice	InvoiceReinsurer	Reinsurance System (Sapiens Re)	Reinsurer Portal (Munich Re)	Sapiens API (REST)	Munich Re API (SOAP)	Event-driven	Medium
Claims Bordereaux	Post	PostReinsuranceRecovery	Reinsurance System (Sapiens Re)	Finance GL (SAP)	Sapiens API (REST)	SAP API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Claims Bordereaux	Claims	Paid claims data fetched for treaty period	All claims attached to treaty identified; paid amounts match GL; claims not yet advised excluded
Claims Bordereaux	Calculation	Reinsurer recovery calculated per treaty terms	Reinsurer share = ceded percentage of paid loss; excess layer applied correctly
Claims Bordereaux	Submit	Claims bordereaux submitted within contractual timeframe	Submission contains all required fields; individual claim details provided; acceptance confirmed
Claims Bordereaux	Invoice	Reinsurer invoiced for recovery amount	Invoice generated with reference to bordereaux; payment terms per treaty agreement
Claims Bordereaux	Post	Reinsurance recovery posted to reduce claims expense	GL entry reduces net claims cost; recovery tracked by claim; outstanding recovery aged

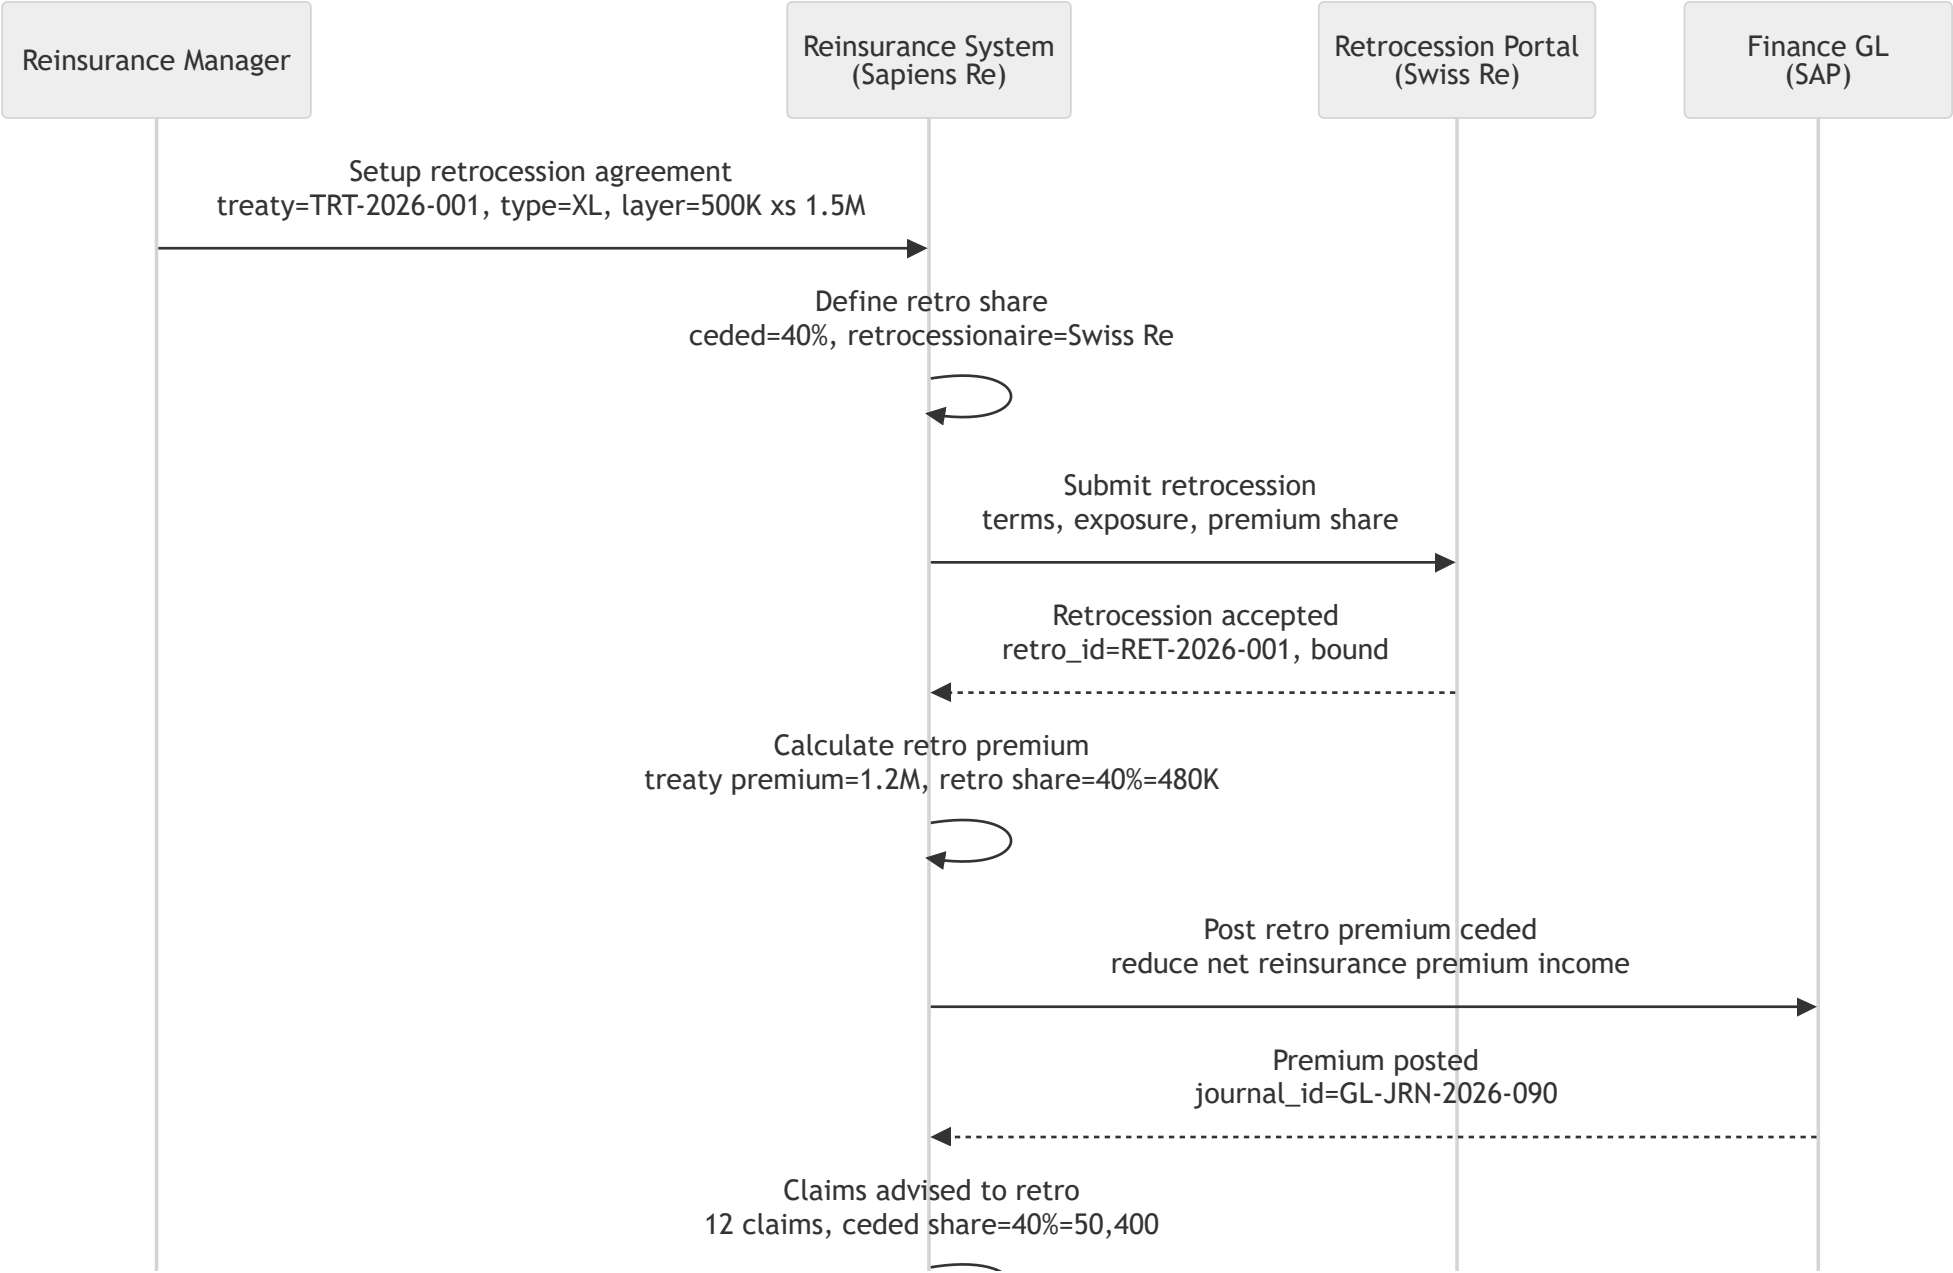

6.5 Retrocession Management

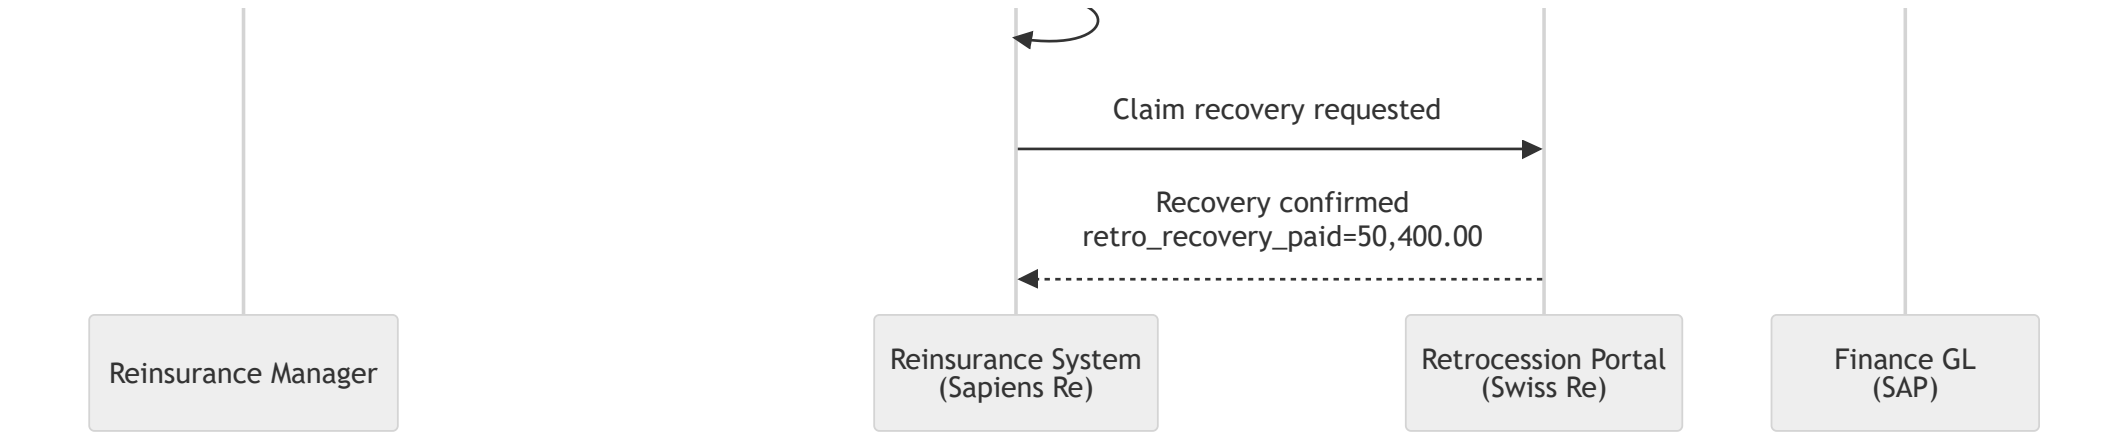

Description: Reinsurance company (reinsurer) passes on portions of risk to retrocessionaires. System manages retrocession agreements, premium sharing, and claims recovery.

Actors: Reinsurance Manager, Retrocessionaire, Finance Officer

Systems: Reinsurance System (Sapiens Re), Retrocession Portal (Swiss Re), Finance GL (SAP), Document Mgmt (M-Files)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Retrocession	Setup	SetupRetrocessionAgreement	Reinsurance System (Sapiens Re)	Reinsurance System (Sapiens Re)	Internal	Internal	API-led (Real-time)	Medium
Retrocession	Placement	SubmitRetrocession	Reinsurance System (Sapiens Re)	Retrocession Portal (Swiss Re)	Sapiens API (REST)	Swiss Re API (SOAP)	API-led (Real-time)	High
Retrocession	Premium	PostRetroPremiumCeded	Reinsurance System (Sapiens Re)	Finance GL (SAP)	Sapiens API (REST)	SAP API (SOAP)	API-led (Real-time)	Medium
Retrocession	Claims	AdviseRetroClaims	Reinsurance System (Sapiens Re)	Retrocession Portal (Swiss Re)	Sapiens API (REST)	Swiss Re API (SOAP)	Batch (Scheduled)	Medium
Retrocession	Recovery	RequestRetroRecovery	Reinsurance System (Sapiens Re)	Retrocession Portal (Swiss Re)	Sapiens API (REST)	Swiss Re API (SOAP)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Retrocession	Setup	Retrocession agreement set up with full terms	Retro share, layer, and limits defined; retrocessionaire details recorded; agreement signed
Retrocession	Placement	Retrocession placed with retrocessionaire	Acceptance confirmed; retro ID assigned; effective date matches underlying treaty
Retrocession	Premium	Retro premium ceded posted to GL correctly	Premium ceded reduces net reinsurance income; GL entry balanced; accruals reversed
Retrocession	Claims	Claims advised to retrocessionaire on schedule	Claims bordereaux submitted; individual claims with ceded amounts; acceptance confirmed
Retrocession	Recovery	Retrocession recovery received and reconciled	Recovery amount matches ceded share; payment received within terms; claim file updated

7: Actuarial & Pricing — IN023 IN024 IN025

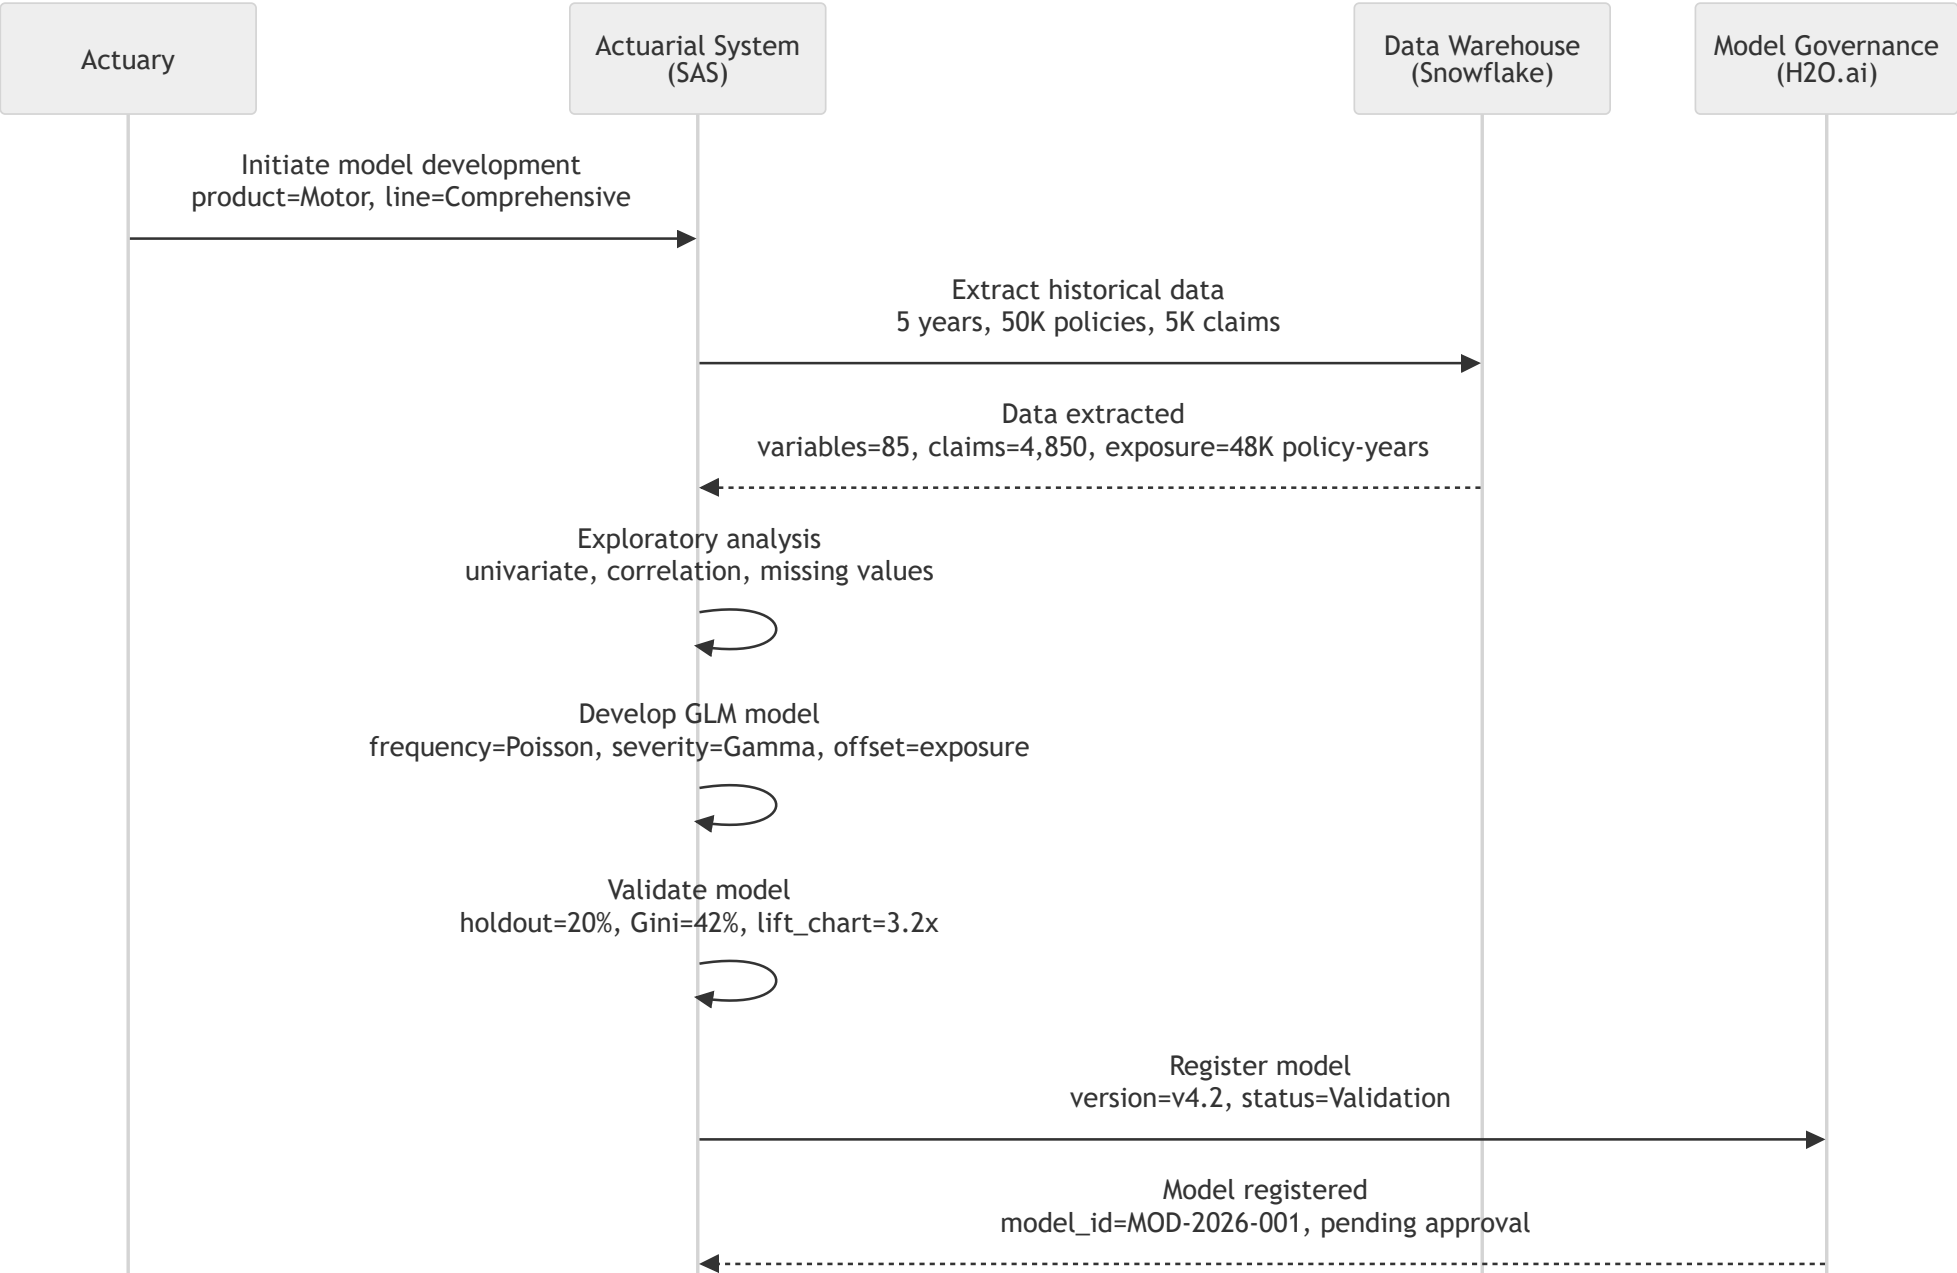

7.1 Pricing Model Development

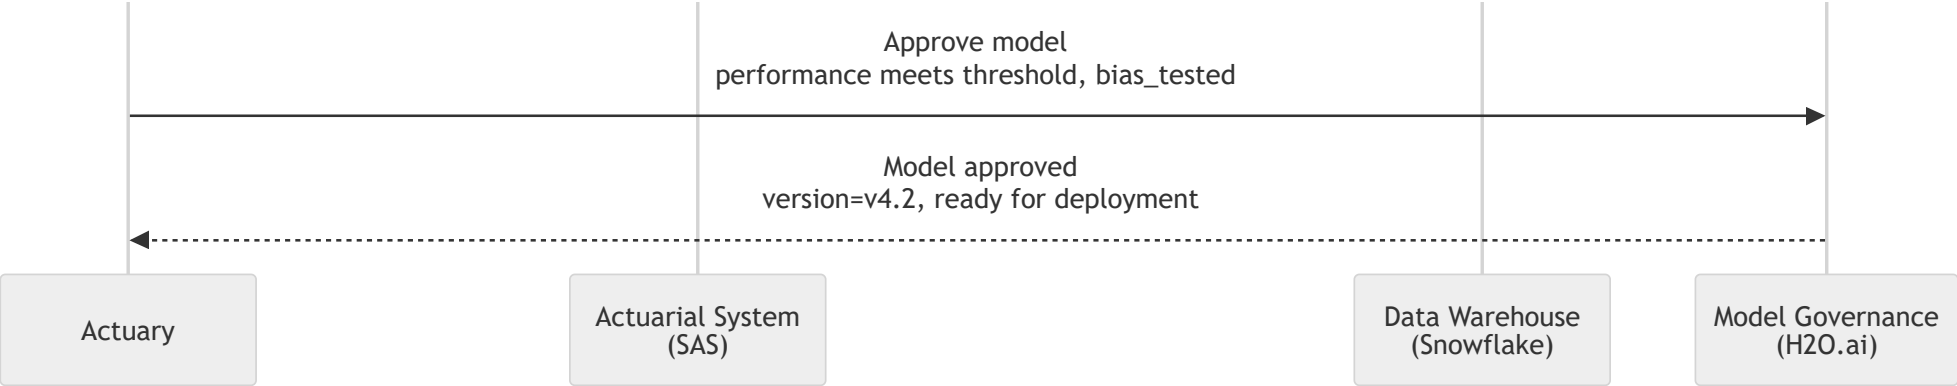

Description: Actuary develops or updates pricing model using historical data, statistical analysis, and predictive modeling techniques.

Actors: Actuary, Data Scientist, Product Manager

Systems: Actuarial System (SAS), Statistical Tool (R/Python), Data Warehouse (Snowflake), Model Governance Platform (H2O.ai)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Pricing Model	Data	ExtractHistoricalData	Actuarial System (SAS)	Data Warehouse (Snowflake)	SAS API (SOAP)	Snowflake JDBC	Batch (ETL)	High
Pricing Model	Analysis	RunExploratoryAnalysis	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	Medium
Pricing Model	Development	DevelopGLMMModel	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	High
Pricing Model	Validation	ValidateModelPerformance	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	Medium
Pricing Model	Governance	RegisterAndApproveModel	Actuarial System (SAS)	Model Governance Platform (H2O.ai)	SAS API (SOAP)	H2O API (REST)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Pricing Model	Data	Historical data extracted with sufficient volume and depth	5+ years data; 50K+ records; all rating variables present; data quality score > 95%
Pricing Model	Analysis	Exploratory analysis completed identifying key rating factors	Variable importance ranked; correlations identified; missing value strategy defined
Pricing Model	Development	GLM model developed with acceptable statistical fit	Gini > 40%; lift chart > 2.5x; residual analysis acceptable; overdispersion handled
Pricing Model	Validation	Model validated on holdout data	Holdout performance within 5% of training; no significant bias by segment
Pricing Model	Governance	Model registered and approved through governance process	Model card complete; bias tested; approved by actuarial HoD; version controlled

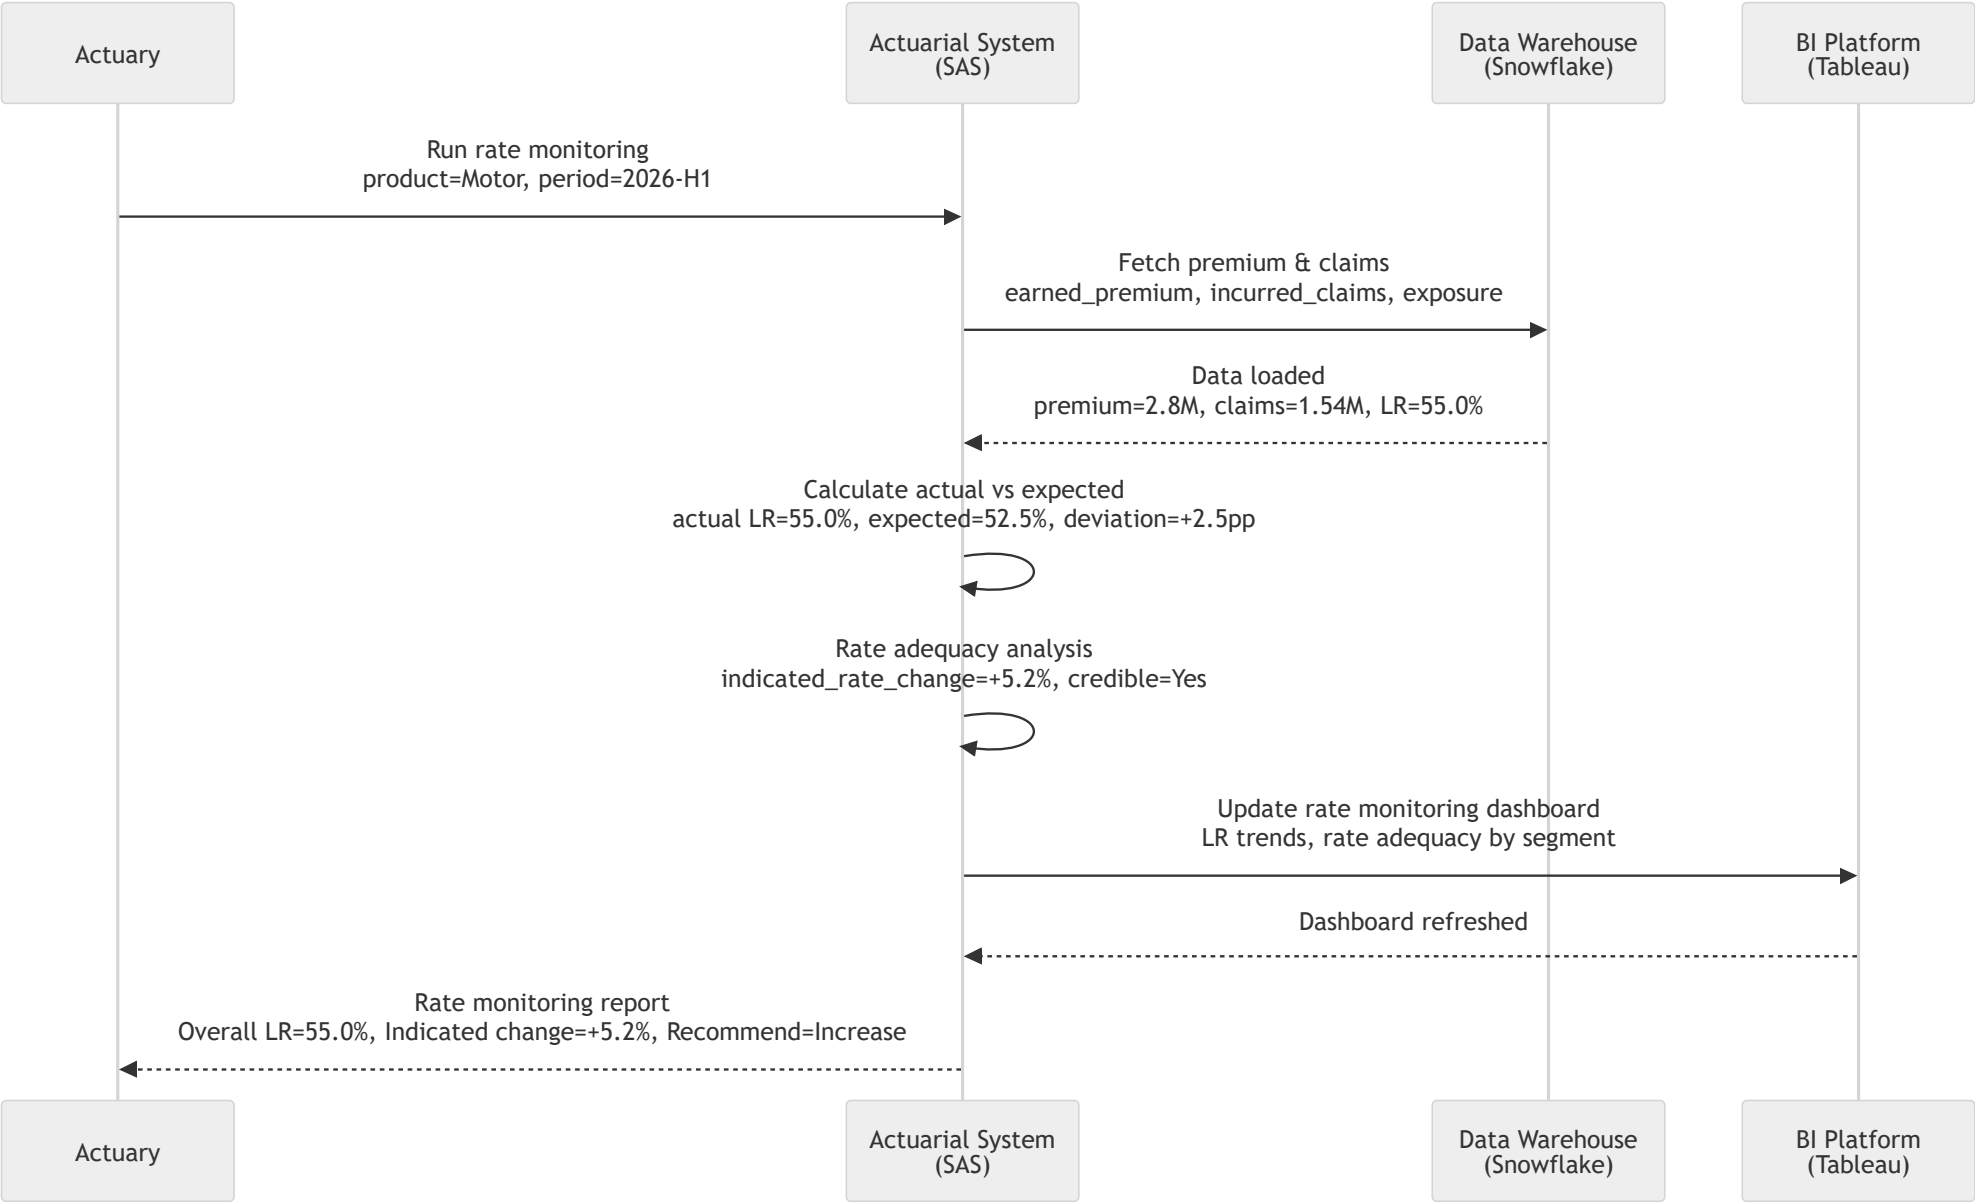

7.2 Rate Monitoring & Analysis

Description: Actuary monitors actual vs expected loss ratios, rate adequacy, and portfolio performance. System generates rate monitoring reports and recommends adjustments.

Actors: Actuary, Pricing Analyst, Product Manager

Systems: Actuarial System (SAS), Data Warehouse (Snowflake), BI Platform (Tableau), Policy Admin (Guidewire PolicyCenter)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Rate Monitoring	Data	FetchPremiumAndClaims	Actuarial System (SAS)	Data Warehouse (Snowflake)	SAS API (SOAP)	Snowflake JDBC	Batch (Scheduled)	Medium
Rate Monitoring	Analysis	CalculateActualVsExpected	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	Medium
Rate Monitoring	Adequacy	AnalyseRateAdequacy	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	High
Rate Monitoring	Dashboard	UpdateDashboard	Actuarial System (SAS)	BI Platform (Tableau)	SAS API (SOAP)	Tableau REST API	Event-driven	Simple
Rate Monitoring	Report	GenerateRateReport	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Rate Monitoring	Data	Premium, claims, and exposure data loaded correctly	Earned premium calculated; incurred claims with IBNR; exposure in policy-years consistent
Rate Monitoring	Analysis	Actual vs expected loss ratio calculated	Actual LR by segment; expected LR from pricing model; deviation quantified with confidence interval
Rate Monitoring	Adequacy	Rate adequacy analysis completed with indicated rate change	Indicated rate change by segment; credibility-weighted; implementation timeframe recommended
Rate Monitoring	Dashboard	Rate monitoring dashboard updated	LR trends over 4+ quarters; rate adequacy heat map; premium distribution charts
Rate Monitoring	Report	Rate monitoring report generated with recommendations	Report includes executive summary, segment detail, and rate change recommendations

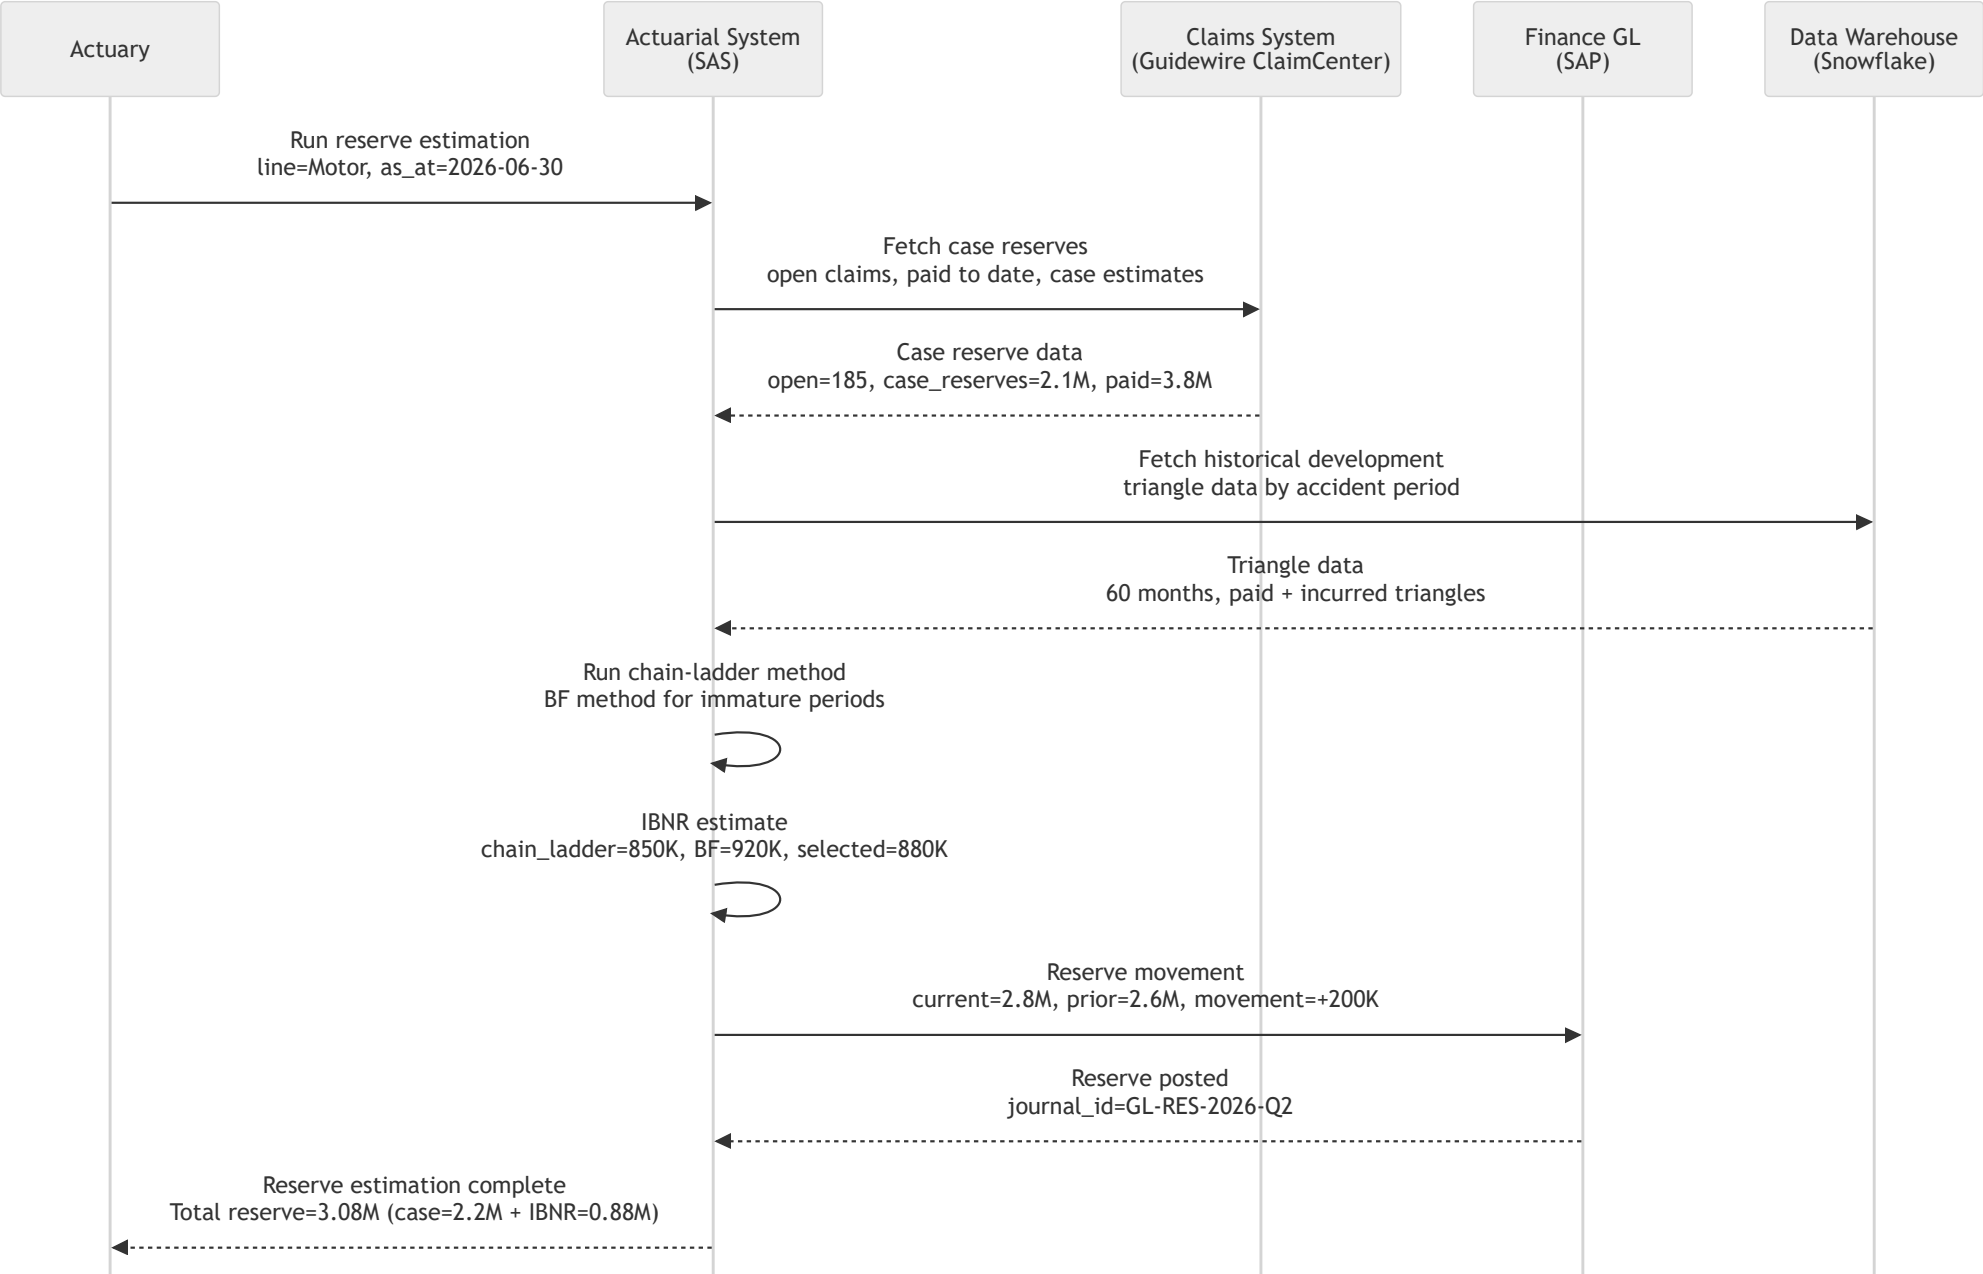

7.3 Reserve Estimation & IBNR

Description: Actuary estimates outstanding claims reserves including case reserves, IBNR, and IBNER using actuarial methods consistent with accounting standards.

Actors: Actuary, Claims Manager, Finance Officer, Auditor

Systems: Actuarial System (SAS), Claims System (Guidewire ClaimCenter), Finance GL (SAP), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Reserve	Case	FetchCaseReserves	Actuarial System (SAS)	Claims System (Guidewire ClaimCenter)	SAS API (SOAP)	Guidewire REST API (API Key)	Batch (Scheduled)	Medium
Reserve	Triangle	FetchDevelopmentTriangles	Actuarial System (SAS)	Data Warehouse (Snowflake)	SAS API (SOAP)	Snowflake JDBC	Batch (ETL)	High
Reserve	Method	RunChainLadderMethod	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	High
Reserve	IBNR	CalculateIBNR	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	High
Reserve	Post	PostReserveMovement	Actuarial System (SAS)	Finance GL (SAP)	SAS API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Reserve	Case	Case reserve data extracted with full claim details	All open claims included; case reserves by claim; paid-to-date amounts; claim status consistent
Reserve	Triangle	Development triangles complete for 60+ months	Paid and incurred triangles; by accident period and development period; no missing cells
Reserve	Method	Chain-ladder method applied to mature periods	Age-to-age factors; selected development pattern; tail factor estimated; diagnostic tests passed
Reserve	IBNR	IBNR estimated using multiple methods with selected point estimate	Chain-ladder and Bornhuetter-Ferguson; best estimate basis; margin for adverse deviation
Reserve	Post	Reserve movement posted to GL with full audit trail	Opening to closing reconciliation; movement by accident period; actuary sign-off recorded

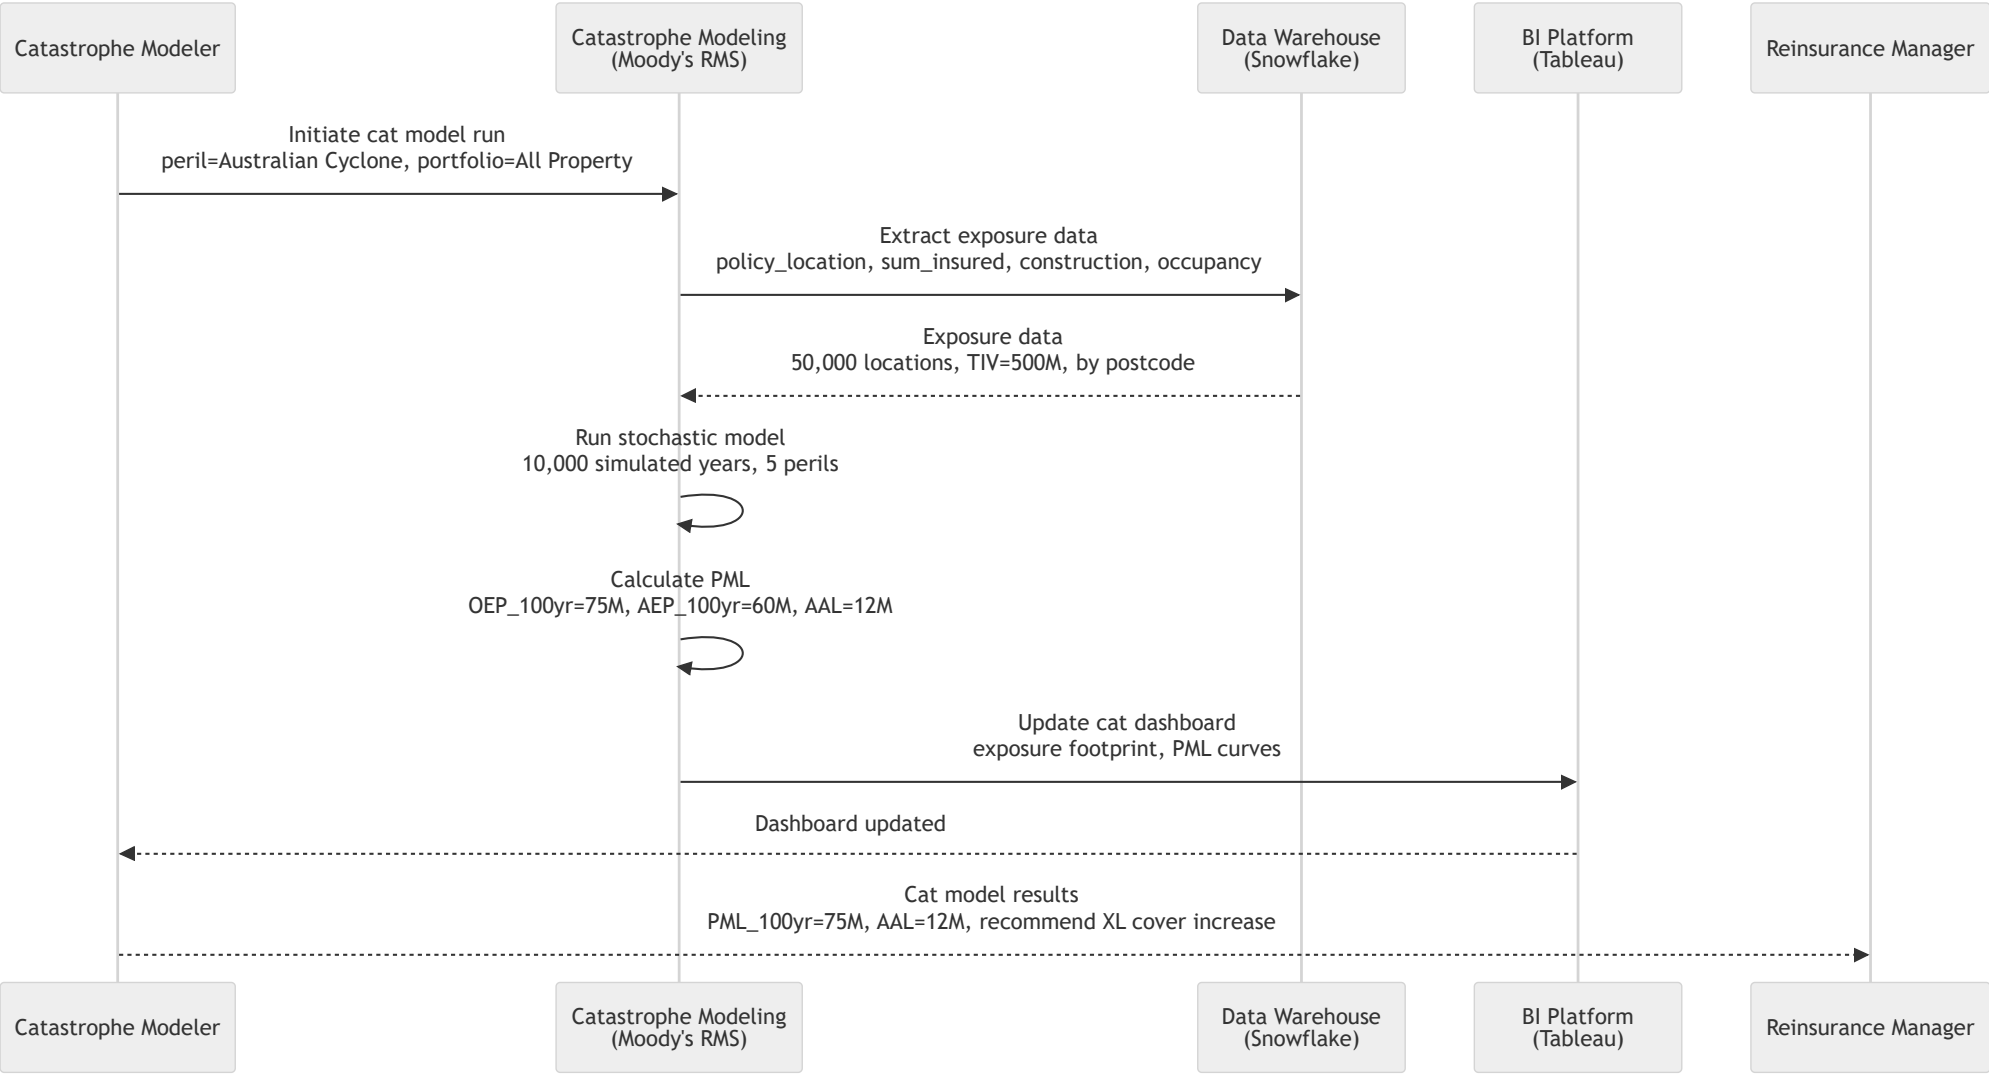

7.4 Catastrophe Modeling

Description: Catastrophe modeling team runs exposure through cat models to estimate probable maximum loss and guide reinsurance purchasing.

Actors: Catastrophe Modeler, Reinsurance Manager, Risk Manager

Systems: Catastrophe Modeling (Moody's RMS), Data Warehouse (Snowflake), BI Platform (Tableau), GIS Platform (ESRI)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Cat Model	Exposure	ExtractExposureData	Catastrophe Modeling (Moody's RMS)	Data Warehouse (Snowflake)	RMS API (SOAP)	Snowflake JDBC	Batch (ETL)	High
Cat Model	Run	RunStochasticModel	Catastrophe Modeling (Moody's RMS)	Catastrophe Modeling (Moody's RMS)	Internal	Internal	Batch (Scheduled)	High
Cat Model	PML	CalculatePML	Catastrophe Modeling (Moody's RMS)	Catastrophe Modeling (Moody's RMS)	Internal	Internal	Batch (Scheduled)	High
Cat Model	Dashboard	UpdateCatDashboard	Catastrophe Modeling (Moody's RMS)	BI Platform (Tableau)	RMS API (SOAP)	Tableau REST API	Event-driven	Simple
Cat Model	Report	GenerateCatReport	Catastrophe Modeling (Moody's RMS)	Catastrophe Modeling (Moody's RMS)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Cat Model	Exposure	Exposure data extracted with accurate location data	Geocoding accuracy > 98%; TIV by CRESTA zone; construction and occupancy codes mapped
Cat Model	Run	Stochastic model run with latest vulnerability curves	10,000+ simulated years; model version recorded; secondary perils included
Cat Model	PML	PML calculated at standard return periods	OEP and AEP curves; PML at 10, 20, 50, 100, 250, 500yr; AAL reported
Cat Model	Dashboard	Cat dashboard updated with latest run	Exposure heat map; PML curve; year-likely-loss distribution; layer loss exceedance
Cat Model	Report	Cat report generated for reinsurance decision-making	Report includes PML summary, model limitations, and recommended reinsurance structure

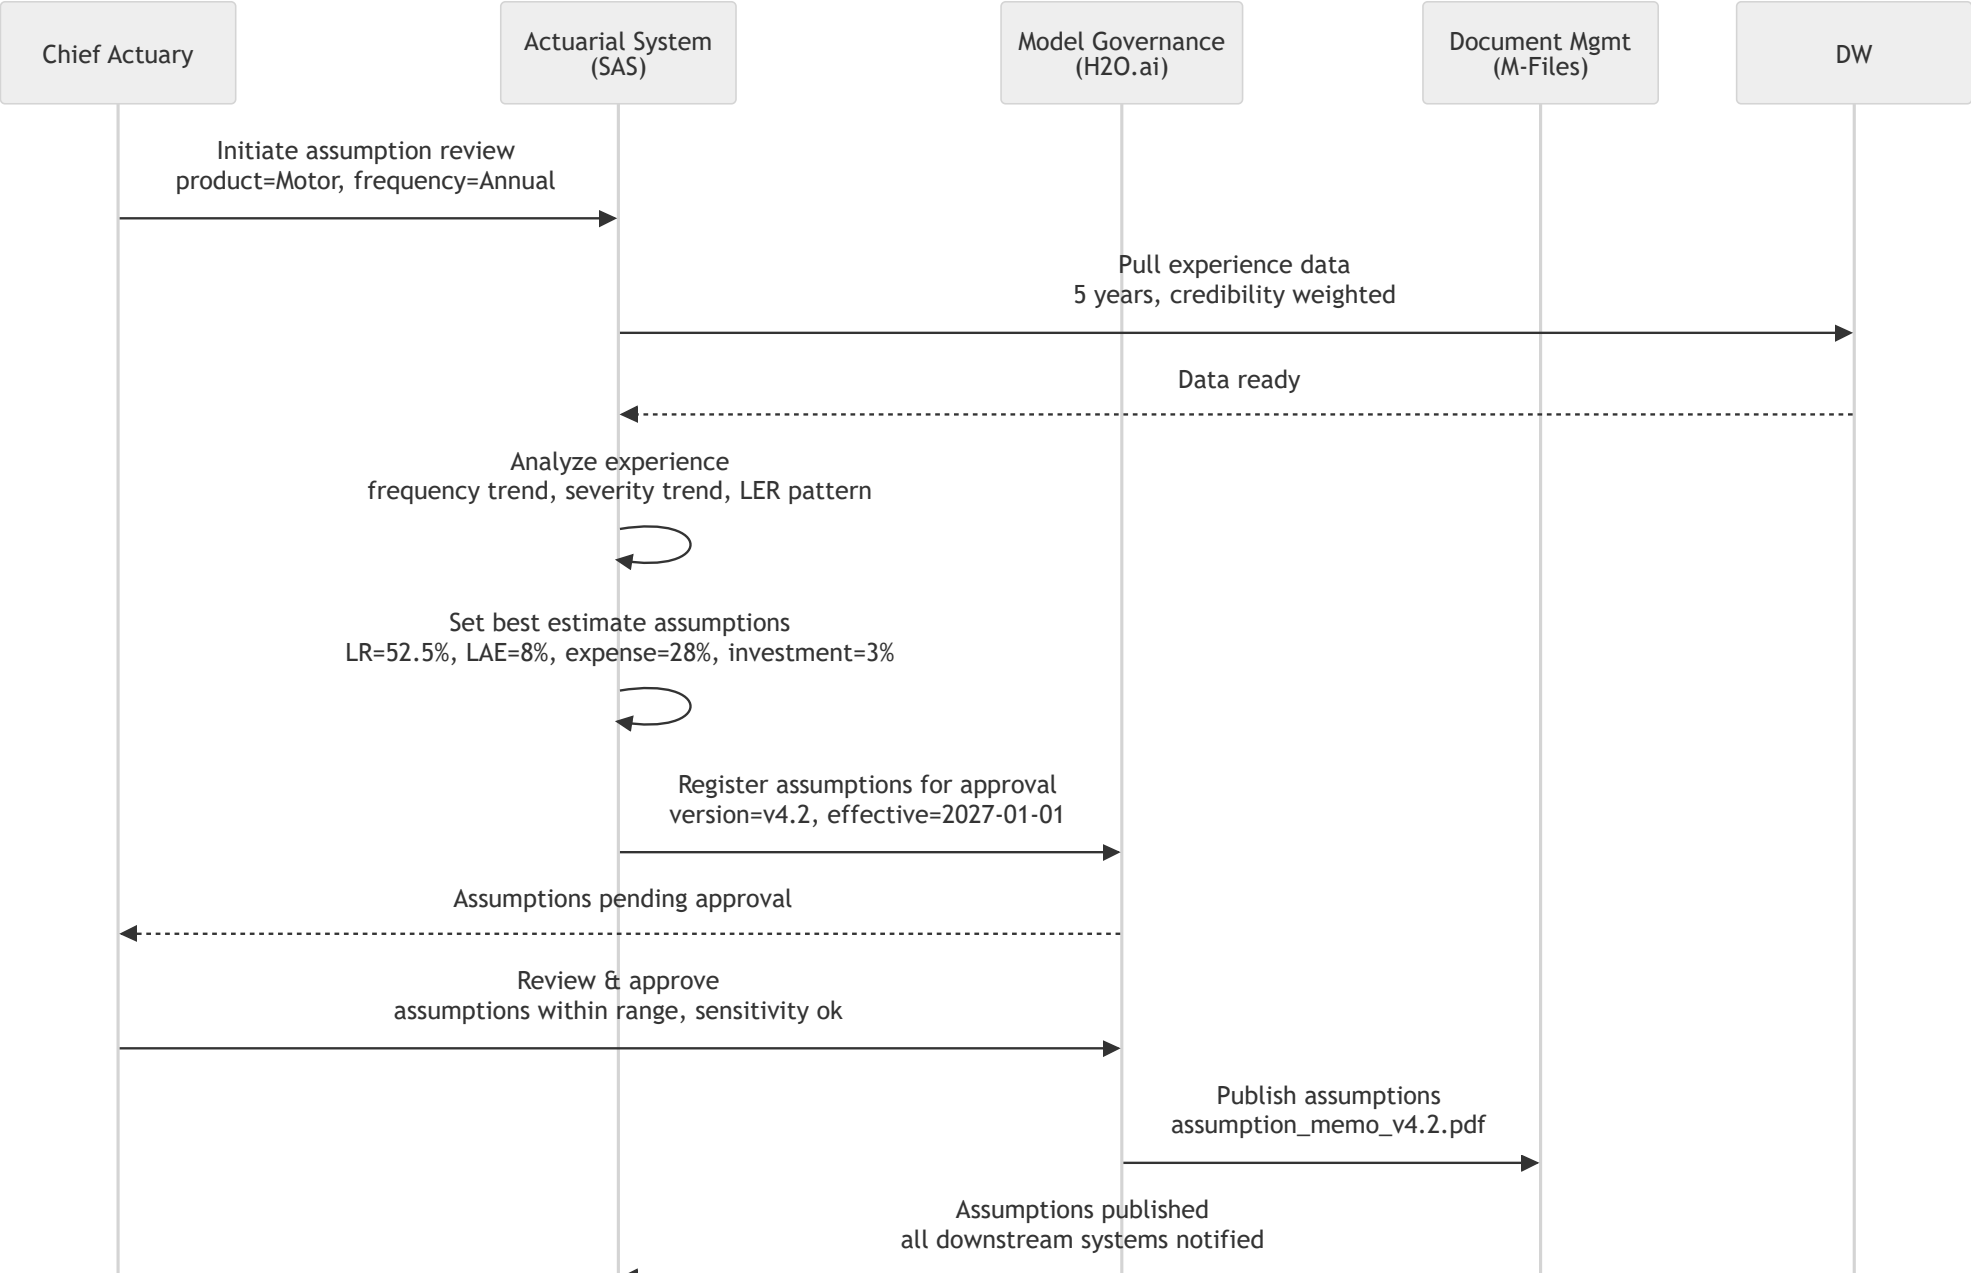

7.5 Actuarial Assumption Setting

Description: Actuary sets key assumptions used in pricing, reserving, and financial projections. Assumptions reviewed, approved, and documented through governance process.

Actors: Chief Actuary, Pricing Actuary, Reserving Actuary, Auditor

Systems: Actuarial System (SAS), Model Governance Platform (H2O.ai), Document Mgmt (M-Files), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Assumptions	Data	PullExperienceData	Actuarial System (SAS)	Data Warehouse (Snowflake)	SAS API (SOAP)	Snowflake JDBC	Batch (ETL)	Medium
Assumptions	Analysis	AnalyseExperienceTrends	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	High
Assumptions	Setting	SetBestEstimateAssumptions	Actuarial System (SAS)	Actuarial System (SAS)	Internal	Internal	Batch (Scheduled)	Medium
Assumptions	Governance	RegisterAssumptionsForApproval	Actuarial System (SAS)	Model Governance Platform (H2O.ai)	SAS API (SOAP)	H2O API (REST)	API-led (Real-time)	Medium
Assumptions	Publish	PublishApprovedAssumptions	Model Governance Platform (H2O.ai)	Document Mgmt (M-Files)	H2O API (REST)	M-Files REST API (API Key)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Assumptions	Data	Experience data pulled with sufficient credibility	5+ years; credibility score > 80%; large claim capping applied; trend smoothed
Assumptions	Analysis	Experience trends analysed with appropriate statistical methods	Trends statistically significant; confidence intervals; expert judgment documented
Assumptions	Setting	Best estimate assumptions set with supporting analysis	Each assumption documented with rationale; range provided; sensitivity impact quantified
Assumptions	Governance	Assumptions approved through governance process	Chief Actuary sign-off; peer review completed; audit tra

Flow	Entity	Acceptance Criterion	Expected Outcome
			il maintained
Assumptions	Publish	Approved assumptions published to all downstream systems	Rating engine updated; reserving system updated; financial projection system updated

8: Billing & Collections — IN031

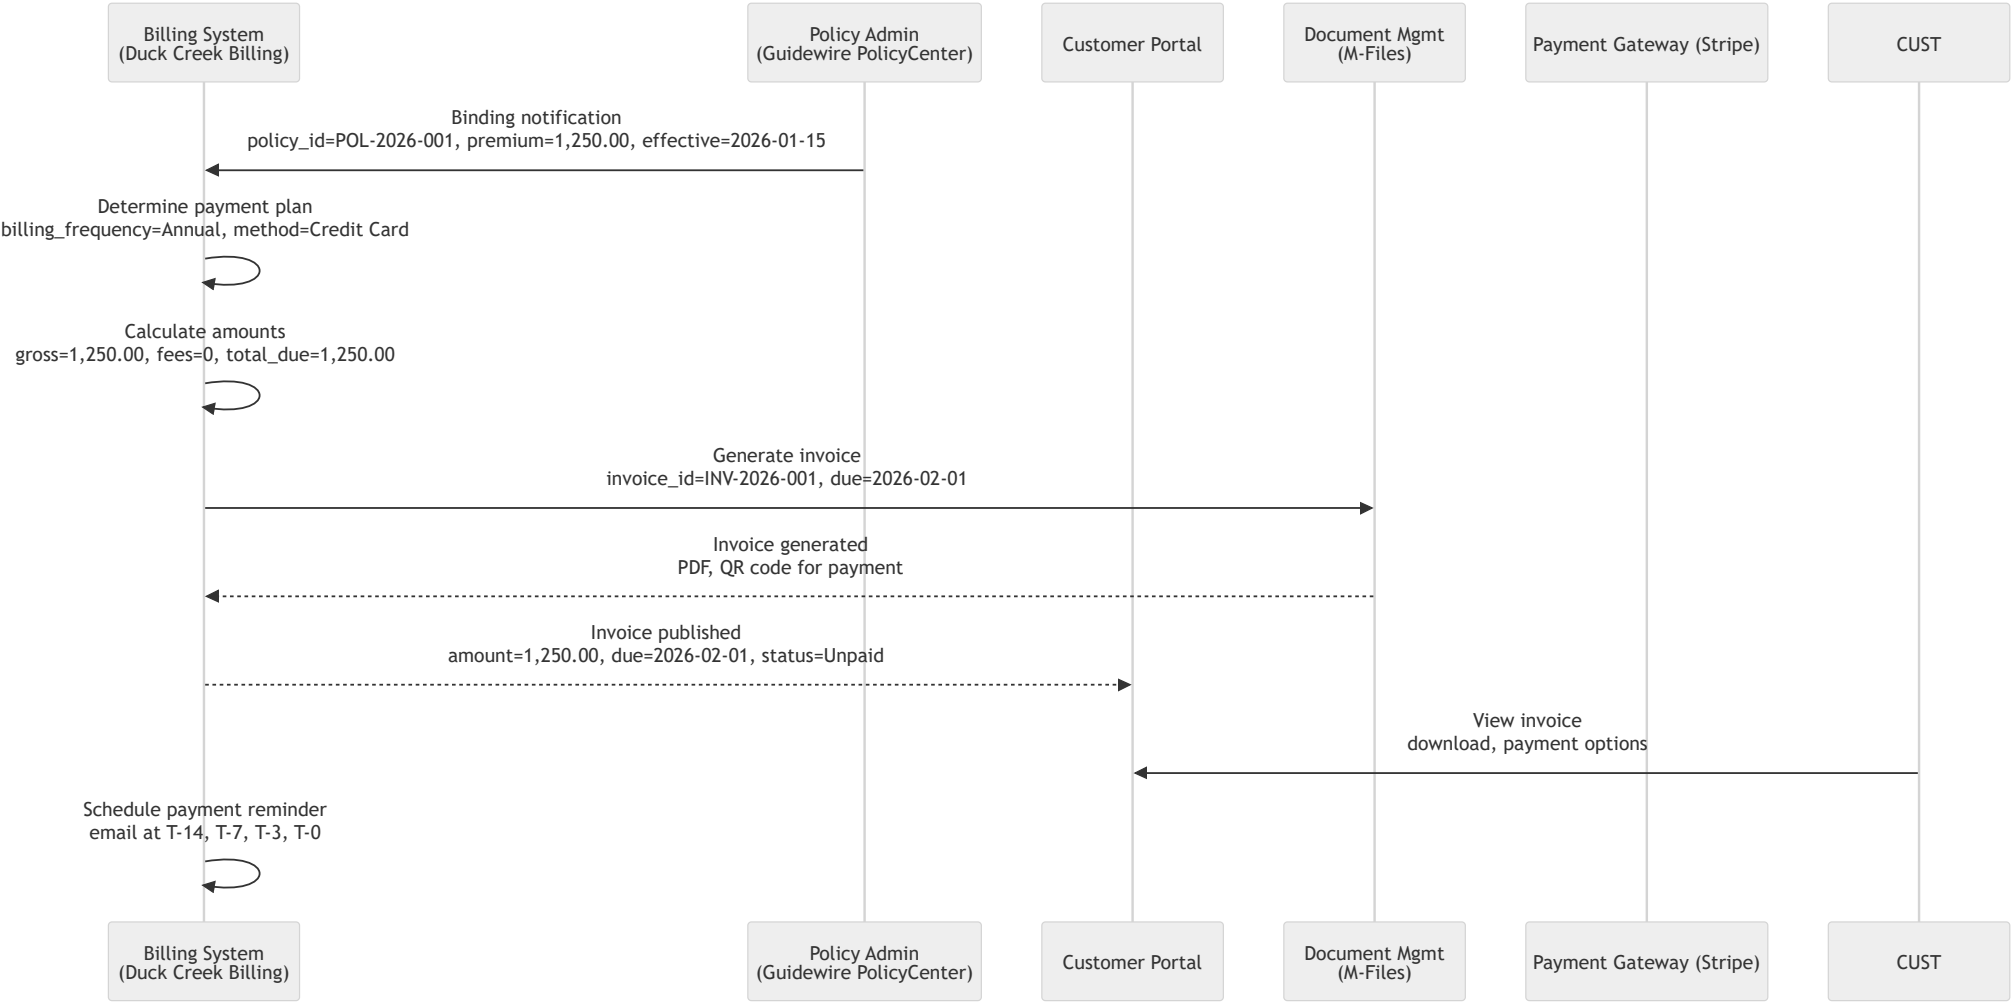

8.1 Premium Billing Generation

Description: Billing system generates premium invoices for new policies, renewals, and mid-term adjustments. Invoices delivered via customer's preferred channel.

Actors: Billing Officer, Customer, Producer

Systems: Billing System (Duck Creek Billing), Policy Admin (Guidewire PolicyCenter), Customer Portal, Document Mgmt (M-Files), Payment Gateway (Stripe)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Billing	Trigger	ReceiveBindingNotification	Policy Admin (Guidewire PolicyCenter)	Billing System (Duck Creek Billing)	Guidewire REST API (API Key)	Duck Creek REST API (OAuth2)	Event-driven	Medium
Billing	Invoice	GenerateInvoice	Billing System (Duck Creek Billing)	Document Mgmt (M-Files)	Duck Creek REST API (OAuth2)	M-Files REST API (API Key)	Event-driven	Simple
Billing	Publish	PublishInvoiceToPortal	Billing System (Duck Creek Billing)	Customer Portal	Duck Creek REST API (OAuth2)	Portal REST API (JWT)	Event-driven	Simple
Billing	Reminder	SchedulePaymentReminders	Billing System (Duck Creek Billing)	Billing System (Duck Creek Billing)	Internal	Internal	Batch (Scheduled)	Simple
Billing	Plan	DeterminePaymentPlan	Billing System (Duck Creek Billing)	Billing System (Duck Creek Billing)	Internal	Internal	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Billing	Trigger	Billing triggered within 5 minutes of policy binding	Invoice generation SLA met; billing frequency determined per policy terms
Billing	Invoice	Invoice generated with accurate premium and fees	Gross premium matches policy; fees calculated per schedule; GST applied correctly
Billing	Publish	Invoice published to customer portal immediately	Invoice visible in portal; download available; payment button functional
Billing	Reminder	Payment reminder schedule set according to billing frequency	First reminder at T-14; escalation at T-7, T-3, T-0; overdue at T+1
Billing	Plan	Payment plan determined correctly from billing election	Annual, semi-annual, quarterly, or monthly; instalment amounts calculated; fees for instalments

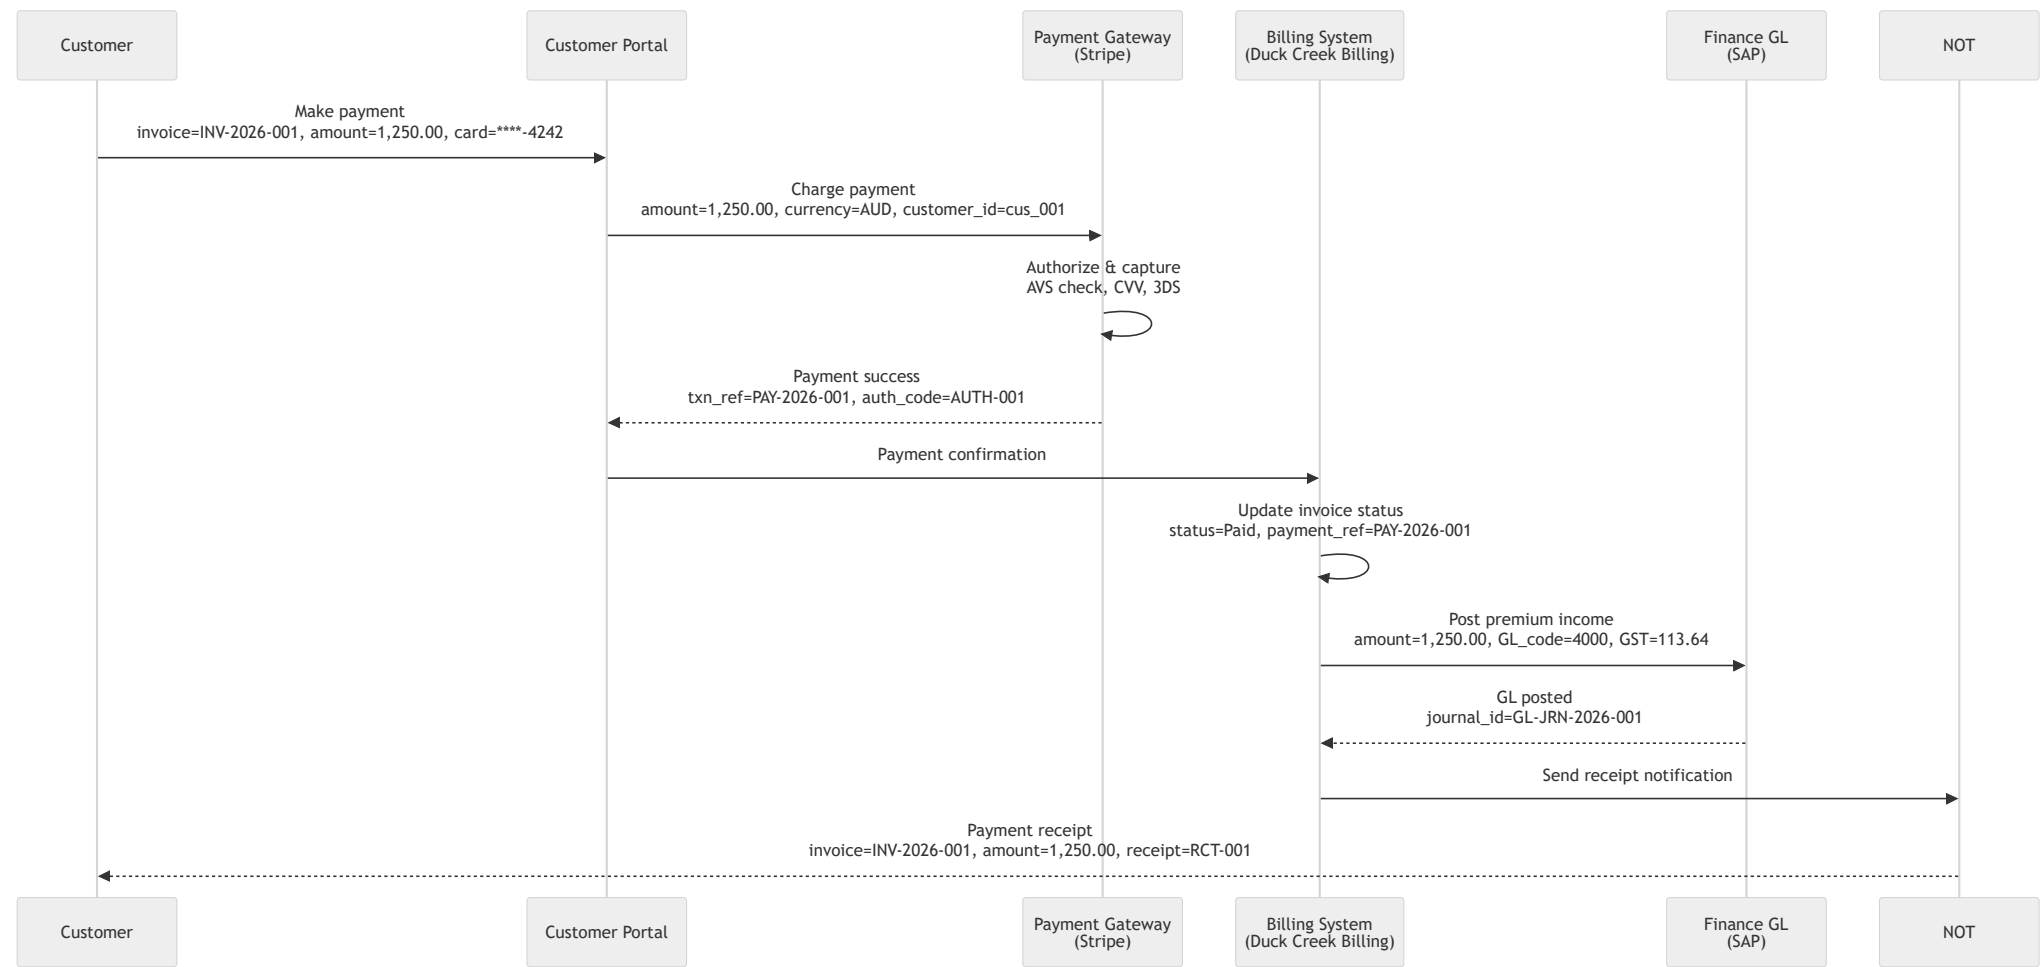

8.2 Payment Processing

Description: Customer submits premium payment. Payment gateway processes transaction, billing system updates invoice status, and GL records premium income.

Actors: Customer, Finance Officer

Systems: Customer Portal, Payment Gateway (Stripe), Billing System (Duck Creek Billing), Finance GL (SAP), Notification Service (Firebase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Payment	Gateway	ProcessPayment	Customer Portal	Payment Gateway (Stripe)	Portal REST API (JWT)	Stripe API (REST)	API-led (Real-time)	Medium
Payment	Confirmation	ConfirmPayment	Customer Portal	Billing System (Duck Creek Billing)	Portal REST API (JWT)	Duck Creek REST API (OAuth2)	Event-driven	Medium
Payment	Invoice	UpdateInvoiceStatus	Billing System (Duck Creek Billing)	Billing System (Duck Creek Billing)	Internal	Internal	API-led (Real-time)	Simple
Payment	GL	PostPremiumIncome	Billing System (Duck Creek Billing)	Finance GL (SAP)	Duck Creek REST API (OAuth2)	SAP API (SOAP)	API-led (Real-time)	High
Payment	Receipt	SendPaymentReceipt	Billing System (Duck Creek Billing)	Notification Service (Firebase)	Duck Creek REST API (OAuth2)	Firebase FCM API	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Payment	Gateway	Payment processed through gateway with 3DS authentication	Payment authorized; fraud checks passed; auth code returned within 5 seconds
Payment	Confirmation	Payment confirmation sent to billing system in real-time	Billing system updated within 2 seconds; payment reference linked to invoice
Payment	Invoice	Invoice status updated to Paid with timestamp	Invoice marked paid; paid date recorded; overdue status cleared
Payment	GL	Premium income posted to GL with correct accounting	Gross premium, GST, and net premium correctly split; GL code per product line
Payment	Receipt	Payment receipt sent to customer within 60 seconds	Receipt includes transaction reference, amount, date, and payment method

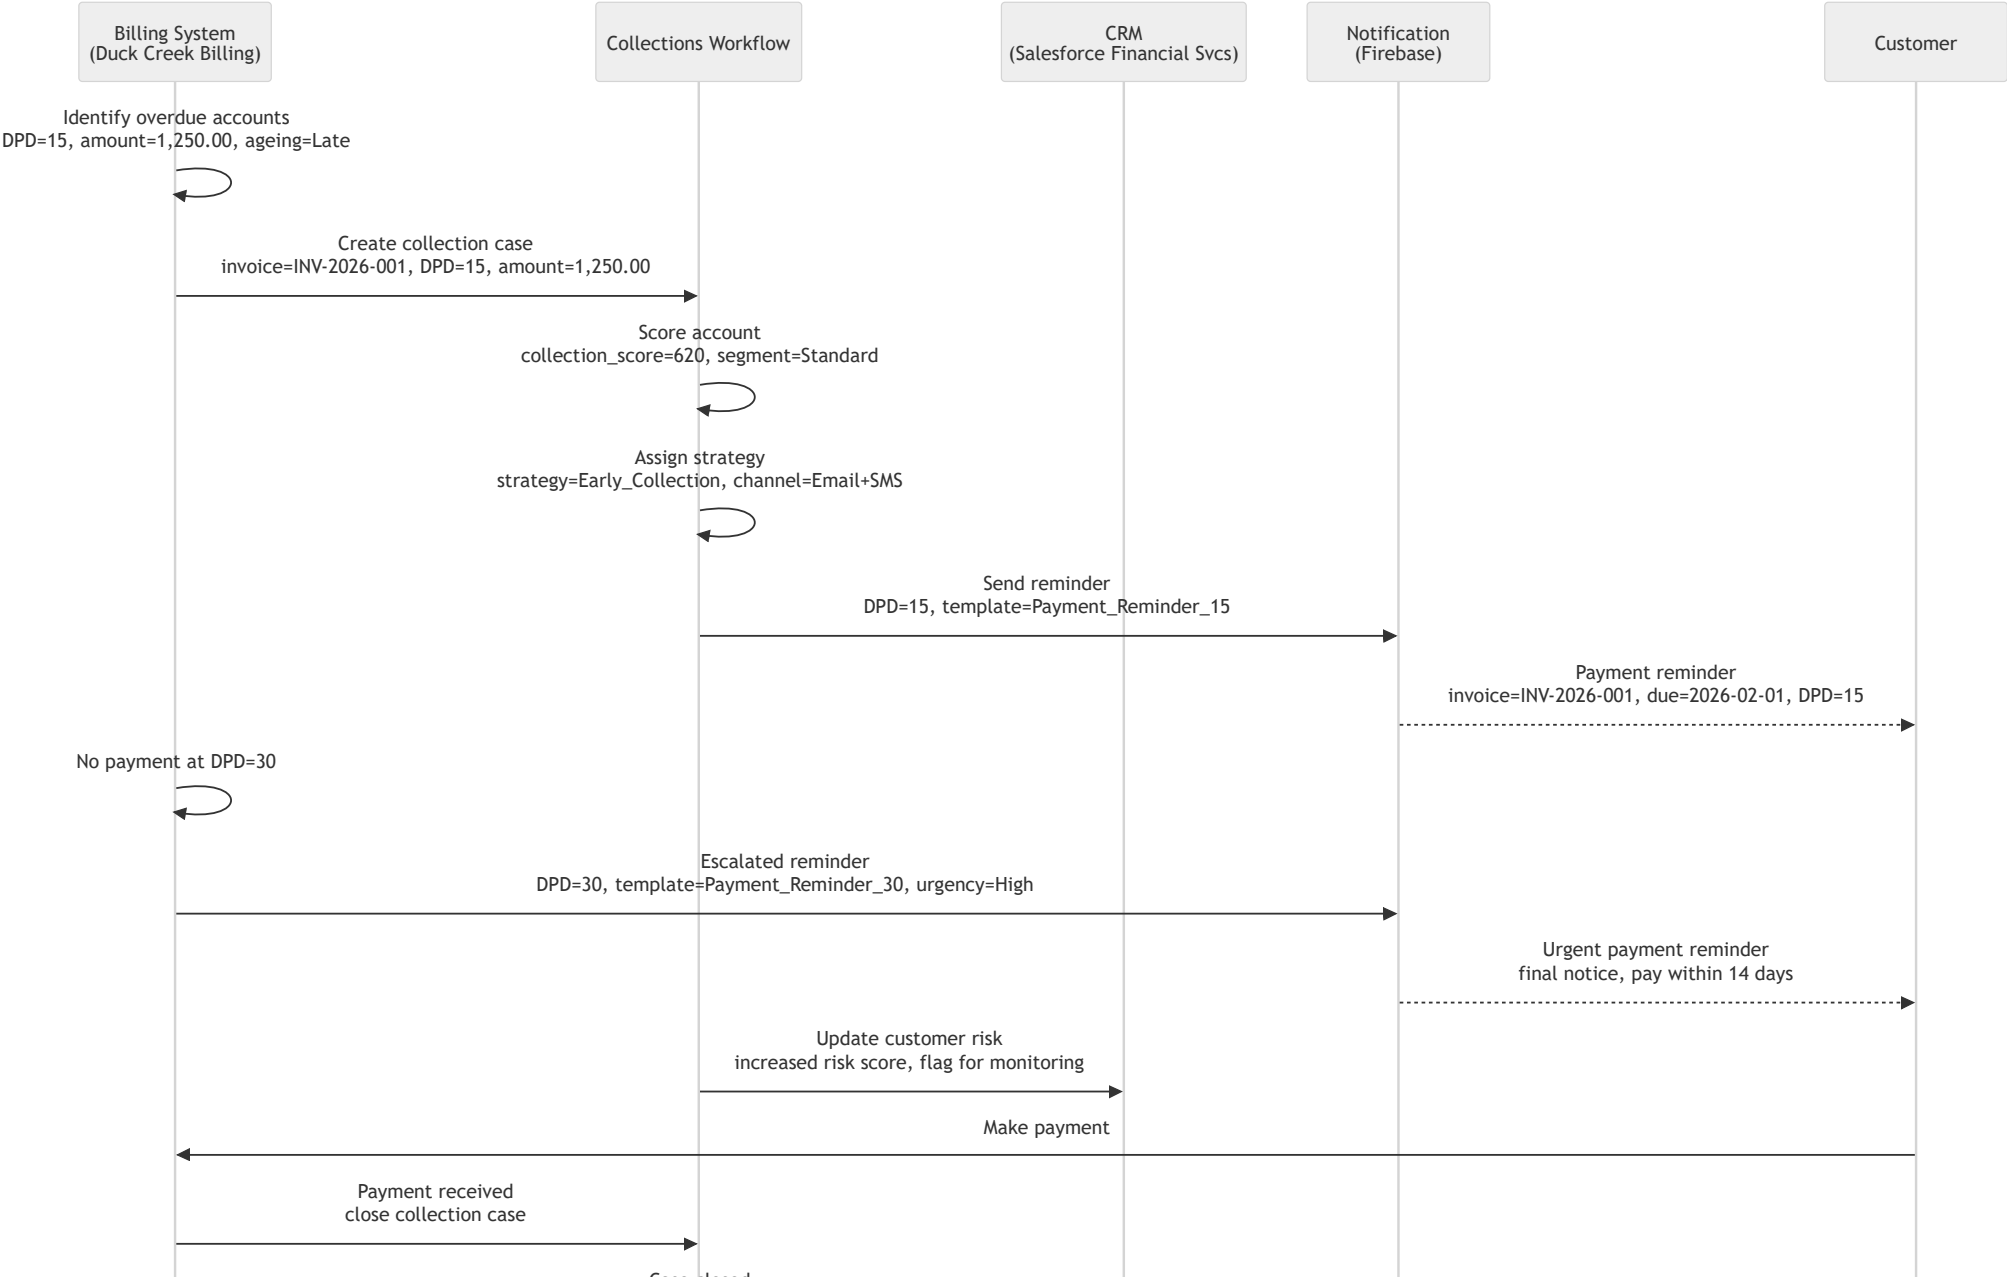

8.3 Collections & Arrears Management

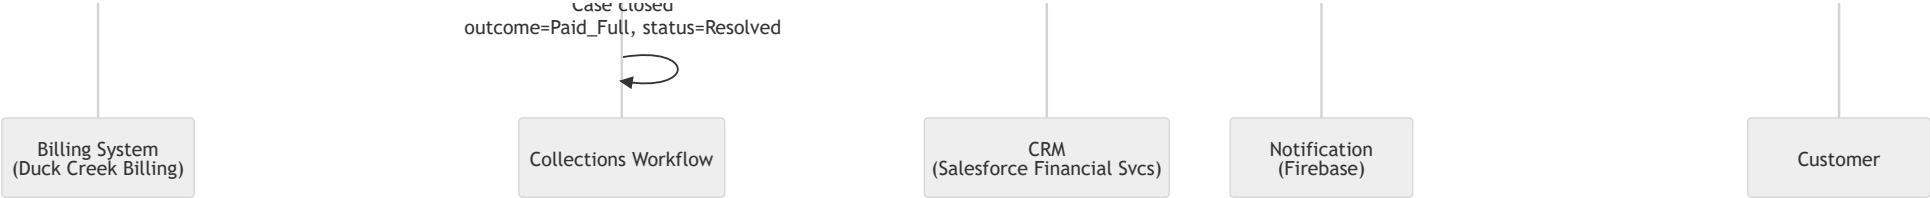

Description: Collections team manages overdue premium accounts. System applies collection strategies, sends reminders, and escalates to cancellation process.

Actors: Collections Officer, Customer, Producer

Systems: Billing System (Duck Creek Billing), Collections Workflow, CRM (Salesforce Financial Services), Notification Service (Firebase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Collections	Identify	IdentifyOverdueAccounts	Billing System (Duck Creek Billing)	Collections Workflow	Duck Creek REST API (OAuth2)	Collections API (REST)	Batch (Scheduled)	Medium
Collections	Scoring	ScoreCollectionAccount	Collections Workflow	Collections Workflow	Internal	Internal	API-led (Real-time)	Medium
Collections	Strategy	AssignCollectionStrategy	Collections Workflow	Collections Workflow	Internal	Internal	API-led (Real-time)	Simple
Collections	Notification	SendPaymentReminder	Collections Workflow	Notification Service (Firebase)	Collections API (REST)	Firebase FCM API	Event-driven	Simple
Collections	Resolution	ResolveCollectionCase	Billing System (Duck Creek Billing)	Collections Workflow	Duck Creek REST API (OAuth2)	Collections API (REST)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Collections	Identify	Overdue accounts identified daily with correct ageing	DPD calculated from due date; ageing buckets: Early(1-14), Late(15-30), Default(31-60), Severe(61+)
Collections	Scoring	Collection score assigned based on payment history and risk	Score calibrated; segment assignment: Low/Standard/High Risk; treatment path determined
Collections	Strategy	Collection strategy assigned based on segment	Early: email+SMS; Late: phone+email; Default: letter+phone; Severe: legal referral
Collections	Notification	Payment reminders sent per schedule	Reminder at DPD=15, 30, 45, 60; escalating tone; delivery confirmed
Collections	Resolution	Collection case resolved on payment	Full or partial payment recorded; case outcome documented; recovery rate tracked

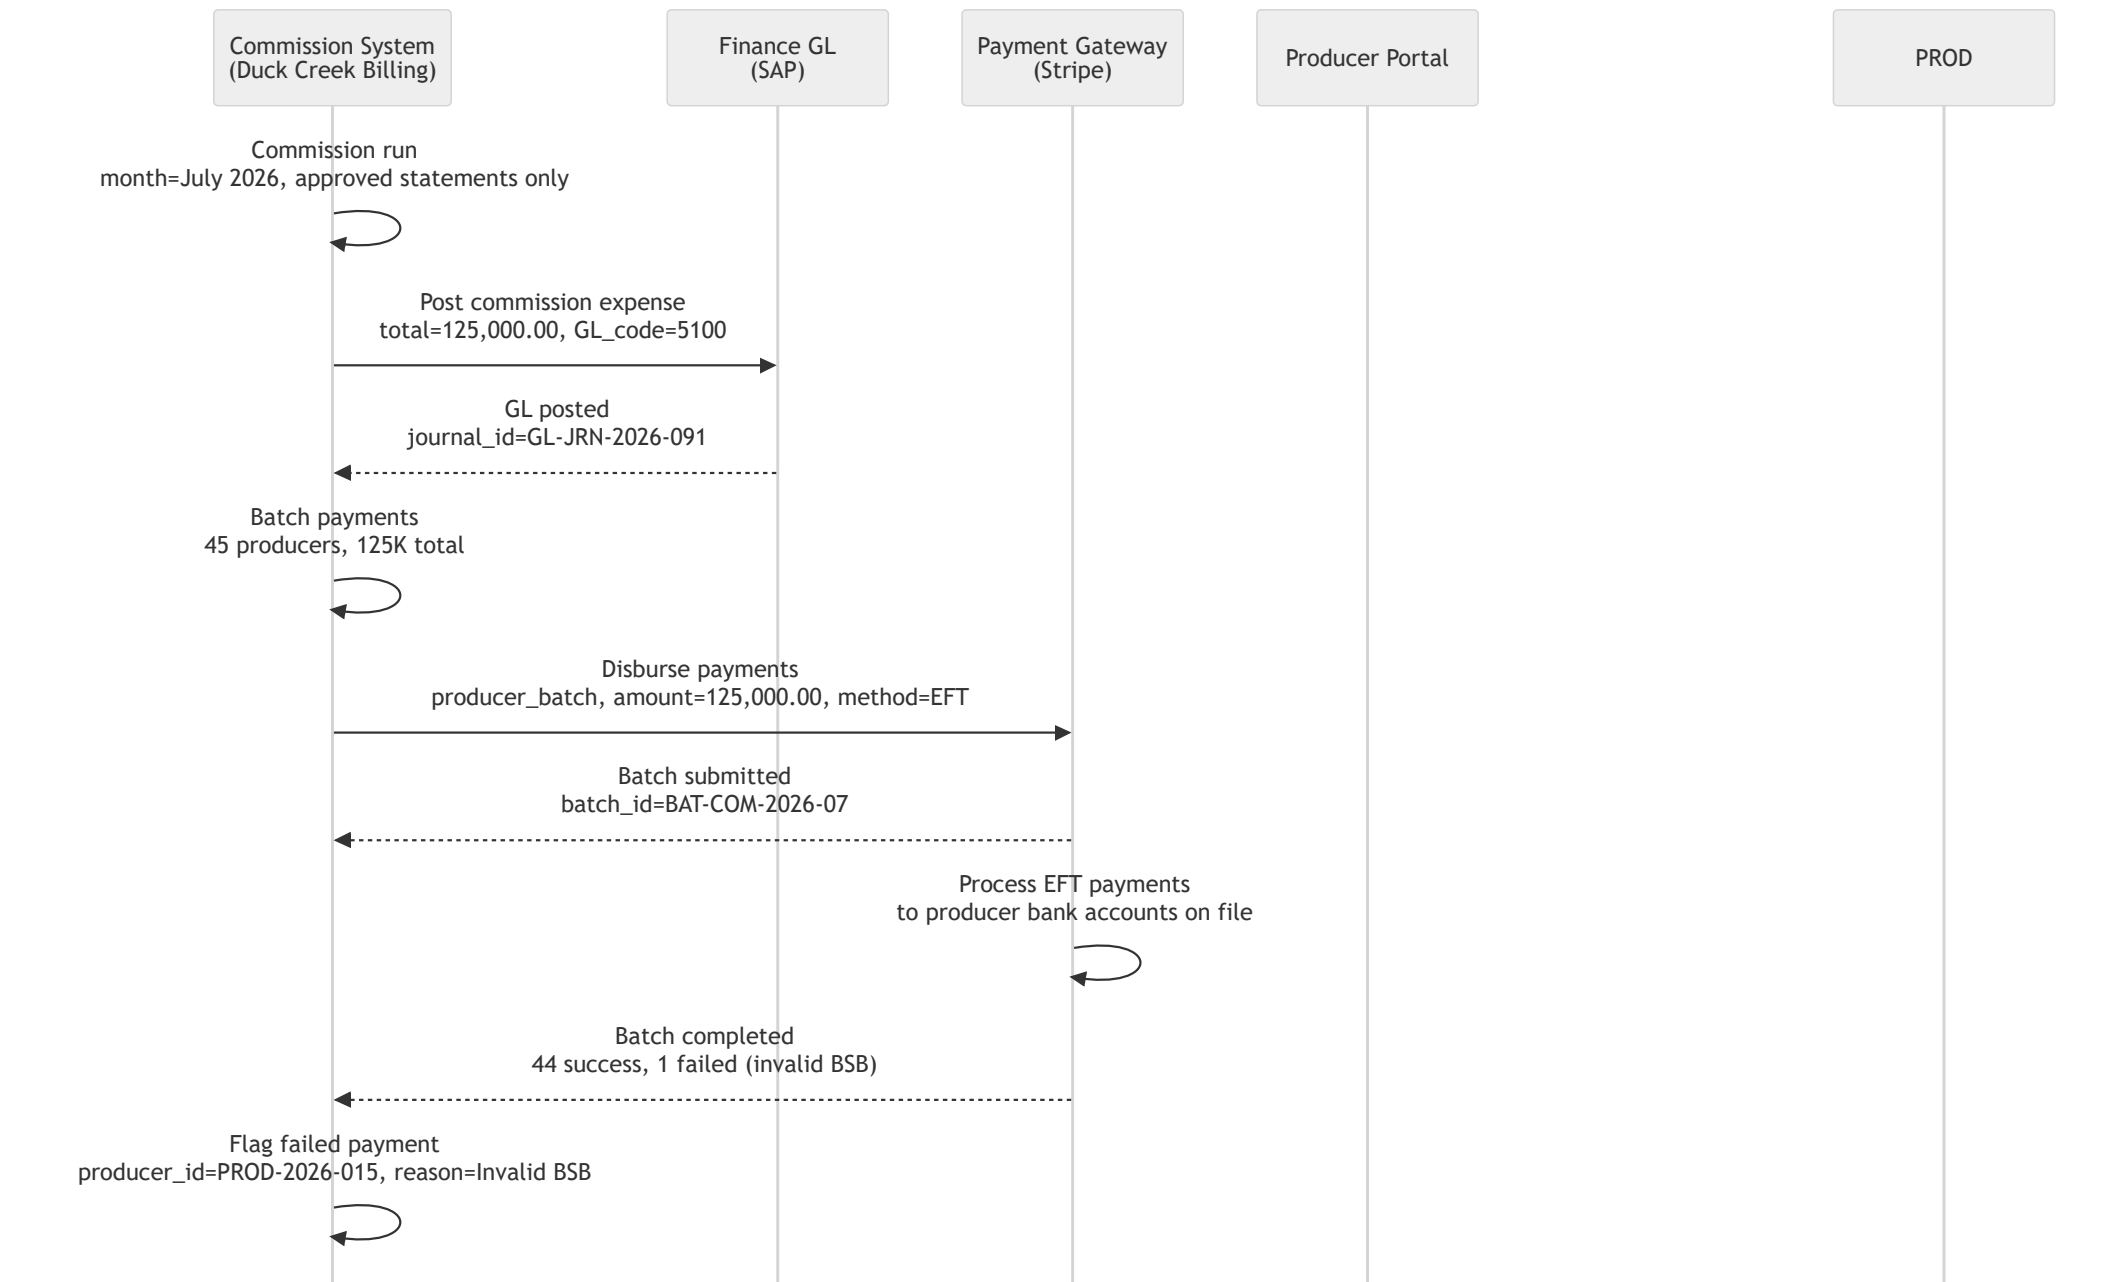

8.4 Commission Disbursement

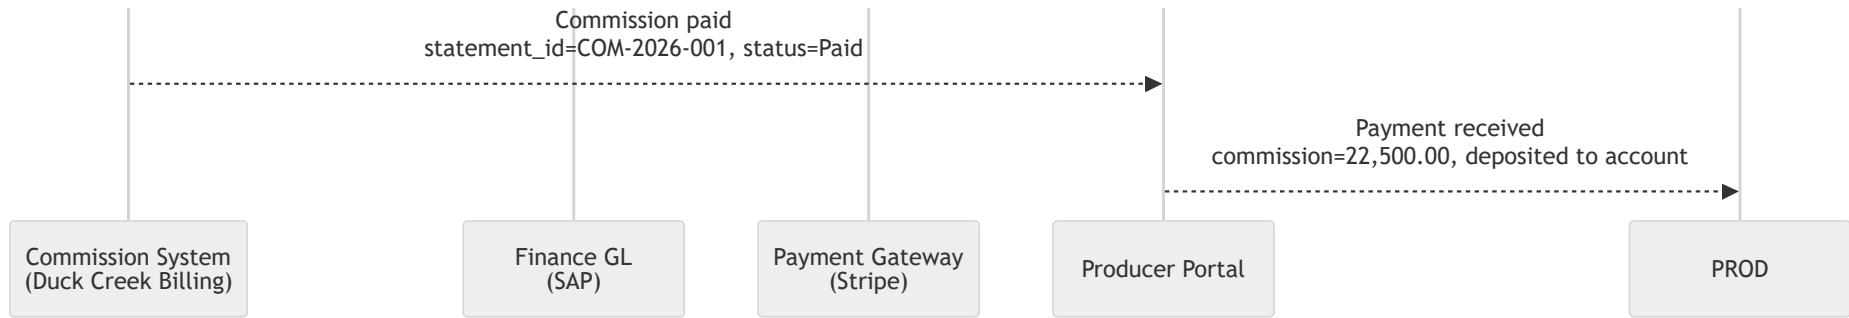

Description: Finance team processes commission payments to producers based on approved commission statements. Payments batched and disbursed via EFT.

Actors: Finance Officer, Producer (Agent/Broker)

Systems: Commission System (Duck Creek Billing), Finance GL (SAP), Payment Gateway (Stripe), Producer Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Commission Disbursement	GL	PostCommissionExpense	Commission System (Duck Creek Billing)	Finance GL (SAP)	Duck Creek REST API (OAuth2)	SAP API (SOAP)	API-led (Real-time)	High
Commission Disbursement	Batch	BatchPayments	Commission System (Duck Creek Billing)	Commission System (Duck Creek Billing)	Internal	Internal	Batch (Scheduled)	Medium
Commission Disbursement	Payment	DisbursePayments	Commission System (Duck Creek Billing)	Payment Gateway (Stripe)	Duck Creek REST API (OAuth2)	Stripe API (REST)	Batch (Scheduled)	Medium
Commission Disbursement	Status	ProcessBatchStatus	Payment Gateway (Stripe)	Commission System (Duck Creek Billing)	Stripe API (REST)	Duck Creek REST API (OAuth2)	Event-driven	Simple
Commission Disbursement	Notification	NotifyPaymentStatus	Commission System (Duck Creek Billing)	Producer Portal	Duck Creek REST API (OAuth2)	Portal REST API (JWT)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Commission Disbursement	GL	Commission expense posted to GL before disbursement	GL entry balanced; accrued commission reversed; expense recognised in correct period
Commission Disbursement	Batch	Commissions batched by payment method	All approved statements included; minimum payment threshold checked; net off against advances
Commission Disbursement	Payment	EFT payments submitted to payment gateway	Batch accepted; BSB/account validation; expected settlement date confirmed
Commission Disbursement	Status	Payment status updated per producer	Successful payments marked Paid; failed payments flagged with reason; retry scheduled
Commission Disbursement	Notification	Producer notified of payment status	Successful: payment advice available; Failed: alert with corrective action instructions

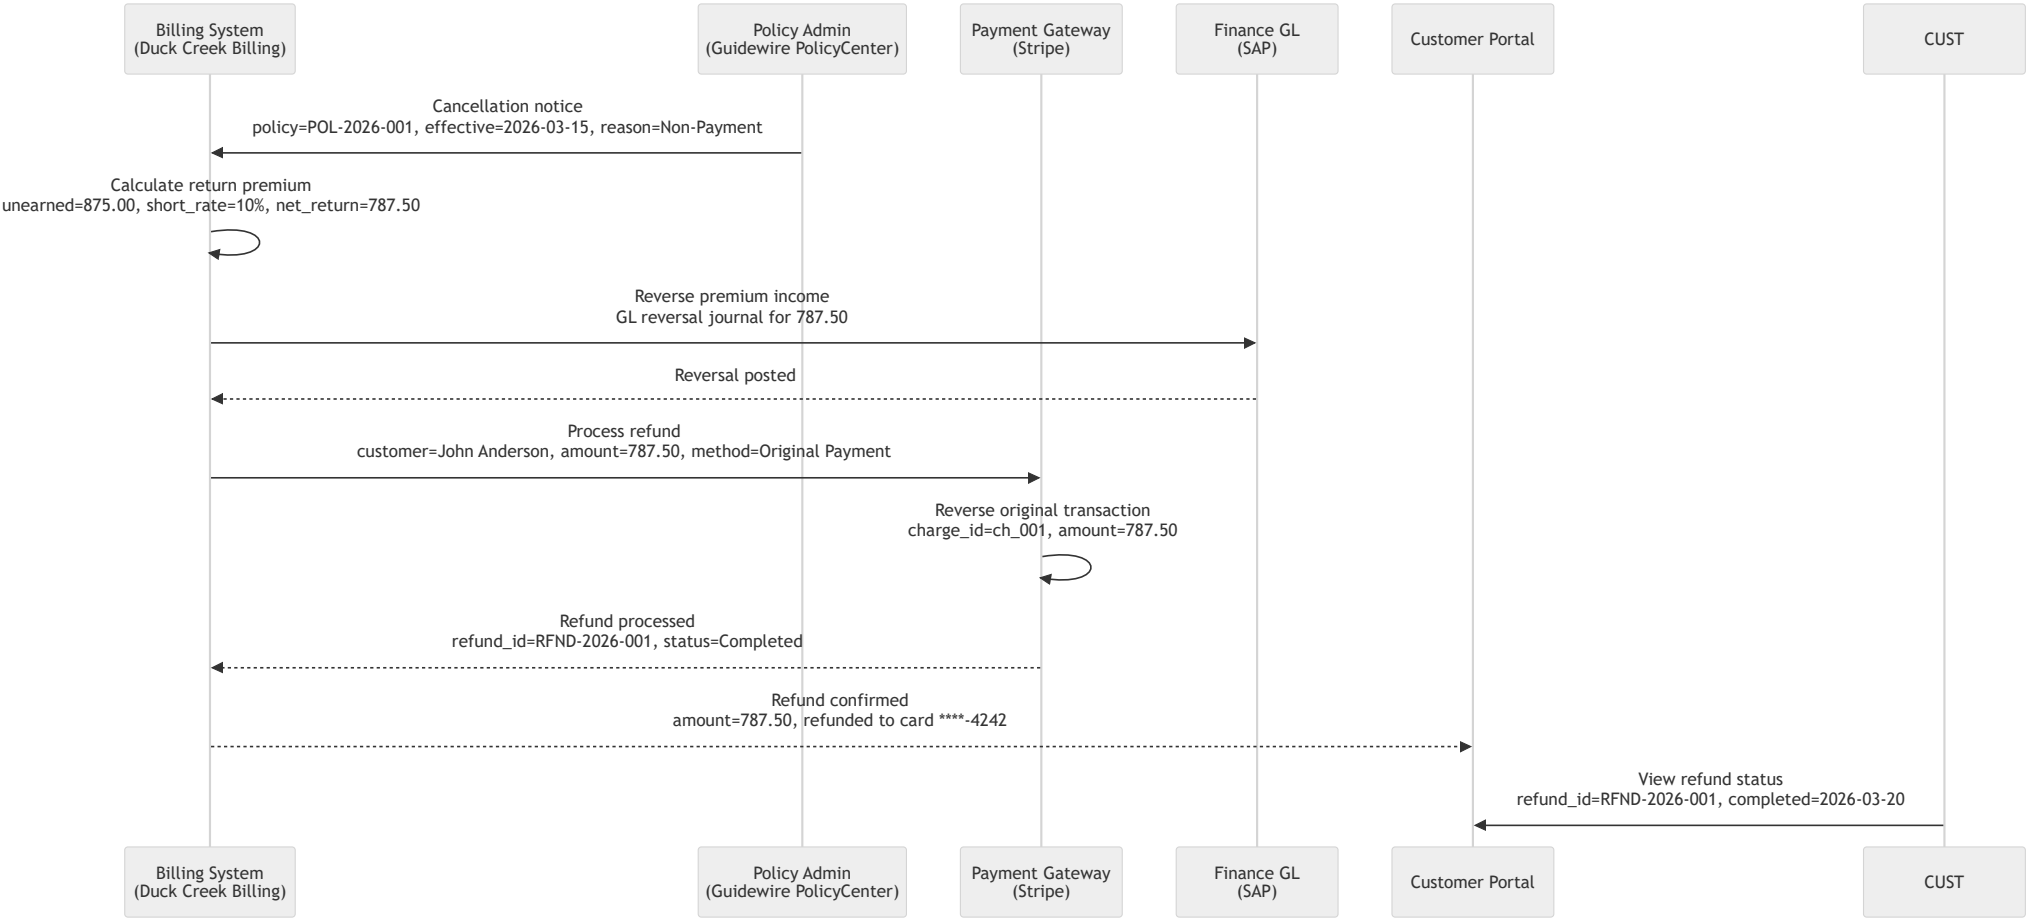

8.5 Refund & Return Premium Processing

Description: When policy is cancelled or mid-term adjustment reduces premium, system calculates return premium and processes refund to customer's original payment method.

Actors: Customer, Finance Officer, Operations

Systems: Billing System (Duck Creek Billing), Payment Gateway (Stripe), Finance GL (SAP), Customer Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Refund	Calculate	CalculateReturnPremium	Billing System (Duck Creek Billing)	Billing System (Duck Creek Billing)	Internal	Internal	API-led (Real-time)	Medium
Refund	GL	ReversePremiumIncome	Billing System (Duck Creek Billing)	Finance GL (SAP)	Duck Creek REST API (OAuth2)	SAP API (SOAP)	API-led (Real-time)	High
Refund	Payment	ProcessRefund	Billing System (Duck Creek Billing)	Payment Gateway (Stripe)	Duck Creek REST API (OAuth2)	Stripe API (REST)	API-led (Real-time)	Medium
Refund	Status	ConfirmRefundStatus	Payment Gateway (Stripe)	Billing System (Duck Creek Billing)	Stripe API (REST)	Duck Creek REST API (OAuth2)	Event-driven	Simple
Refund	Portal	PublishRefundToPortal	Billing System (Duck Creek Billing)	Customer Portal	Duck Creek REST API (OAuth2)	Portal REST API (JWT)	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Refund	Calculate	Return premium calculated per cancellation terms	Unearned premium computed pro-rata; short-rate penalty per policy terms; net amount correct
Refund	GL	Premium income reversed from original GL entry	GL reversal entries match original posting; GST adjustment included; audit trail maintained
Refund	Payment	Refund processed to original payment method	Full or partial refund; transaction fee implications calculated; refund reference generated
Refund	Status	Refund status confirmed from payment gateway	Refund completed or

Flow	Entity	Acceptance Criterion	Expected Outcome
			pending; reason for failure captured; automatic retry for failed refunds
Refund	Portal	Refund confirmation visible on customer portal	Refund amount, date, and status displayed; expected settlement timeline shown

9: Customer Management — IN026 IN027

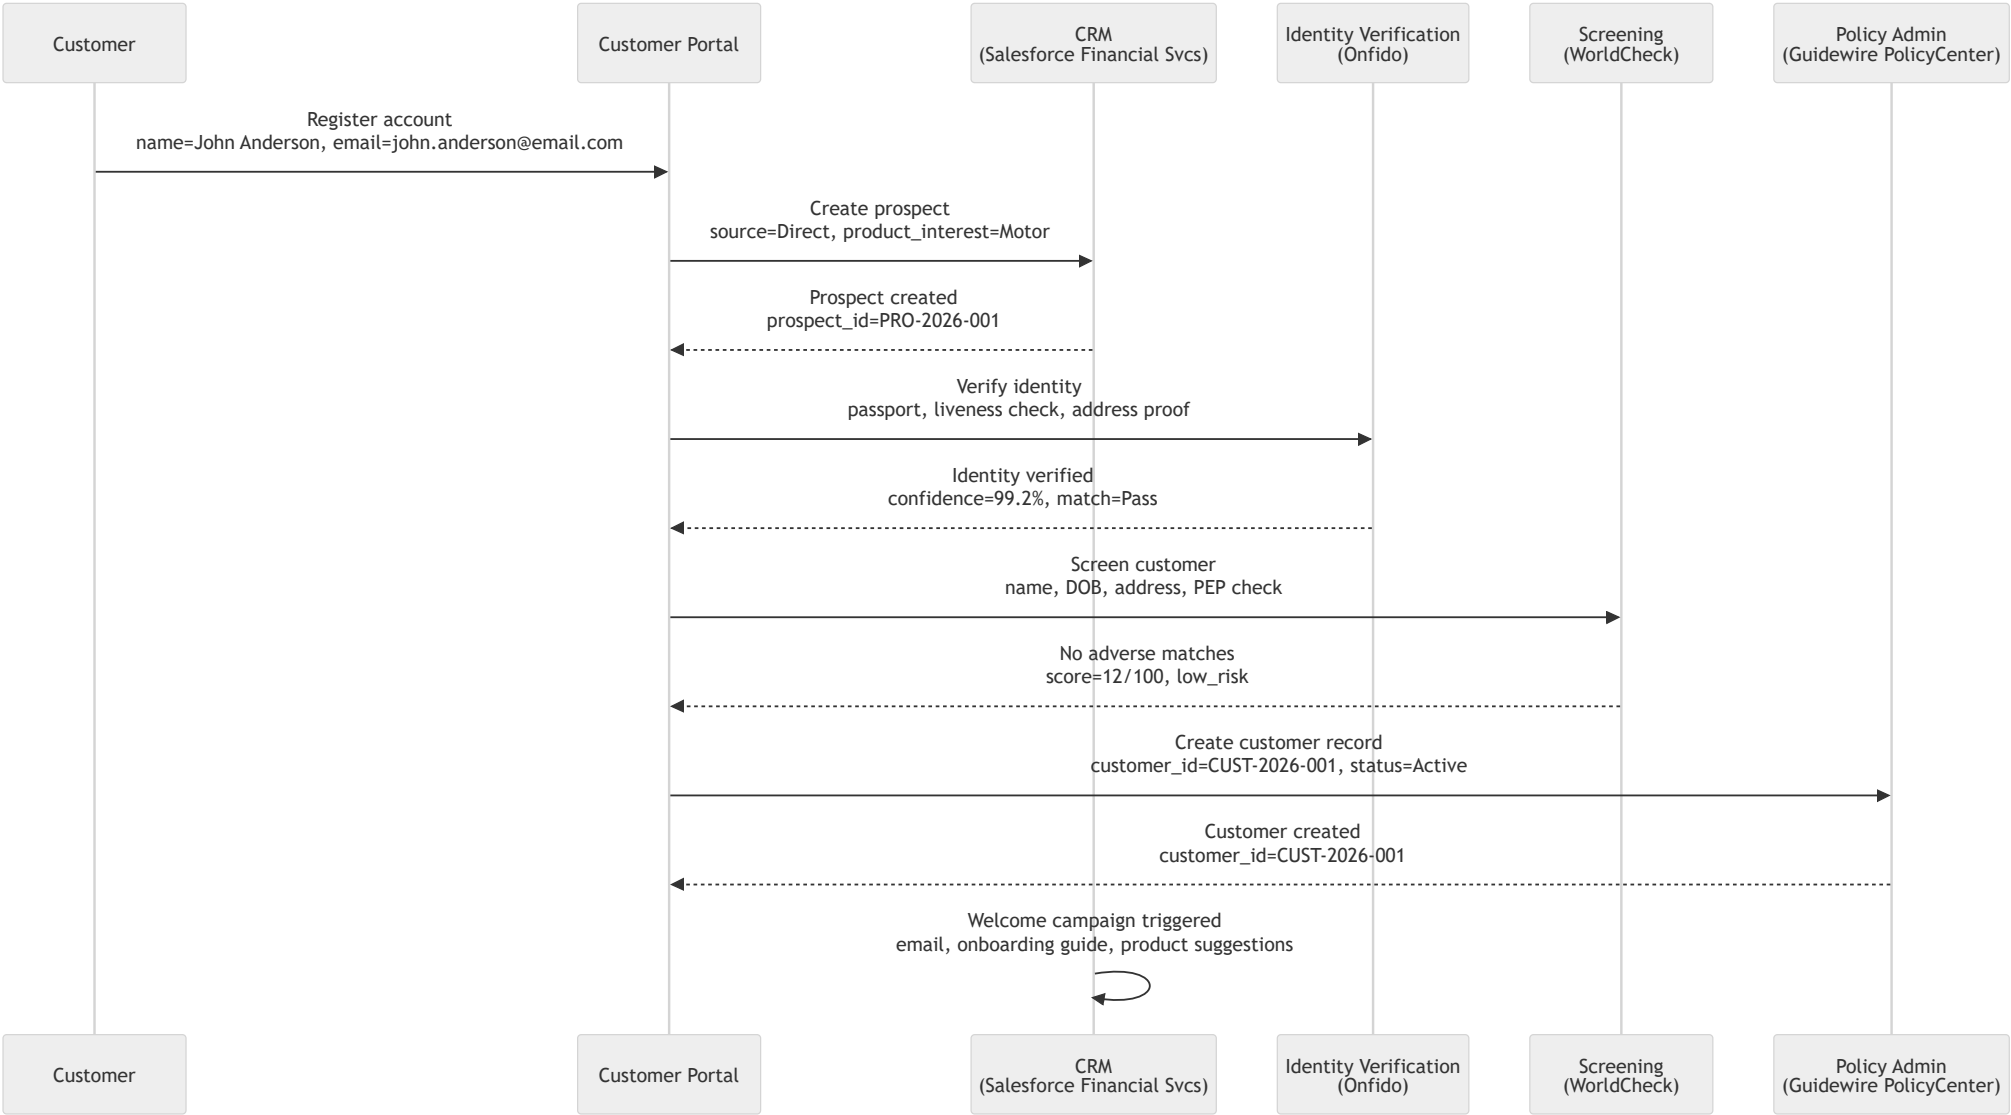

9.1 Customer Onboarding & KYC

Description: Customer registers for insurance services. System performs identity verification, AML screening, and creates customer record across all touchpoints.

Actors: Customer, Compliance Officer, Customer Service Agent

Systems: Customer Portal, CRM (Salesforce Financial Services), Identity Verification (Onfido), Screening (WorldCheck), Policy Admin (Guidewire PolicyCenter)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Customer Onboarding	Registration	RegisterCustomer	Customer Portal	CRM (Salesforce Financial Services)	Portal REST API (JWT)	Salesforce REST API (OAuth2)	API-led (Real-time)	Simple
Customer Onboarding	Identity	VerifyIdentity	Customer Portal	Identity Verification (Onfido)	Portal REST API (JWT)	Onfido API (API Key)	API-led (Real-time)	Medium
Customer Onboarding	Screening	ScreenCustomer	Customer Portal	Screening (WorldCheck)	Portal REST API (JWT)	WorldCheck API (SOAP)	API-led (Real-time)	Medium
Customer Onboarding	Create	CreateCustomerRecord	Customer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Customer Onboarding	Campaign	TriggerWelcomeCampaign	CRM (Salesforce Financial Services)	CRM (Salesforce Financial Services)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Customer Onboarding	Registration	Customer registered with valid email and phone	Account created; email verified; 2FA setup; welcome message sent
Customer Onboarding	Identity	Identity verified with document and liveness check	Document verification >= 95%; liveness check passed; failed verifications reported
Customer Onboarding	Screening	Customer screened against PEP and sanctions lists	No matches or matches investigated; low/medium/high risk rating assigned
Customer Onboarding	Create	Customer record created in policy admin system	Customer ID assigned; KYC status documented; risk rating recorded
Customer Onboarding	Campaign	Welcome campaign triggered with relevant content	Email sent within 1 hour; onboarding guide accessible; product recommendations personalised

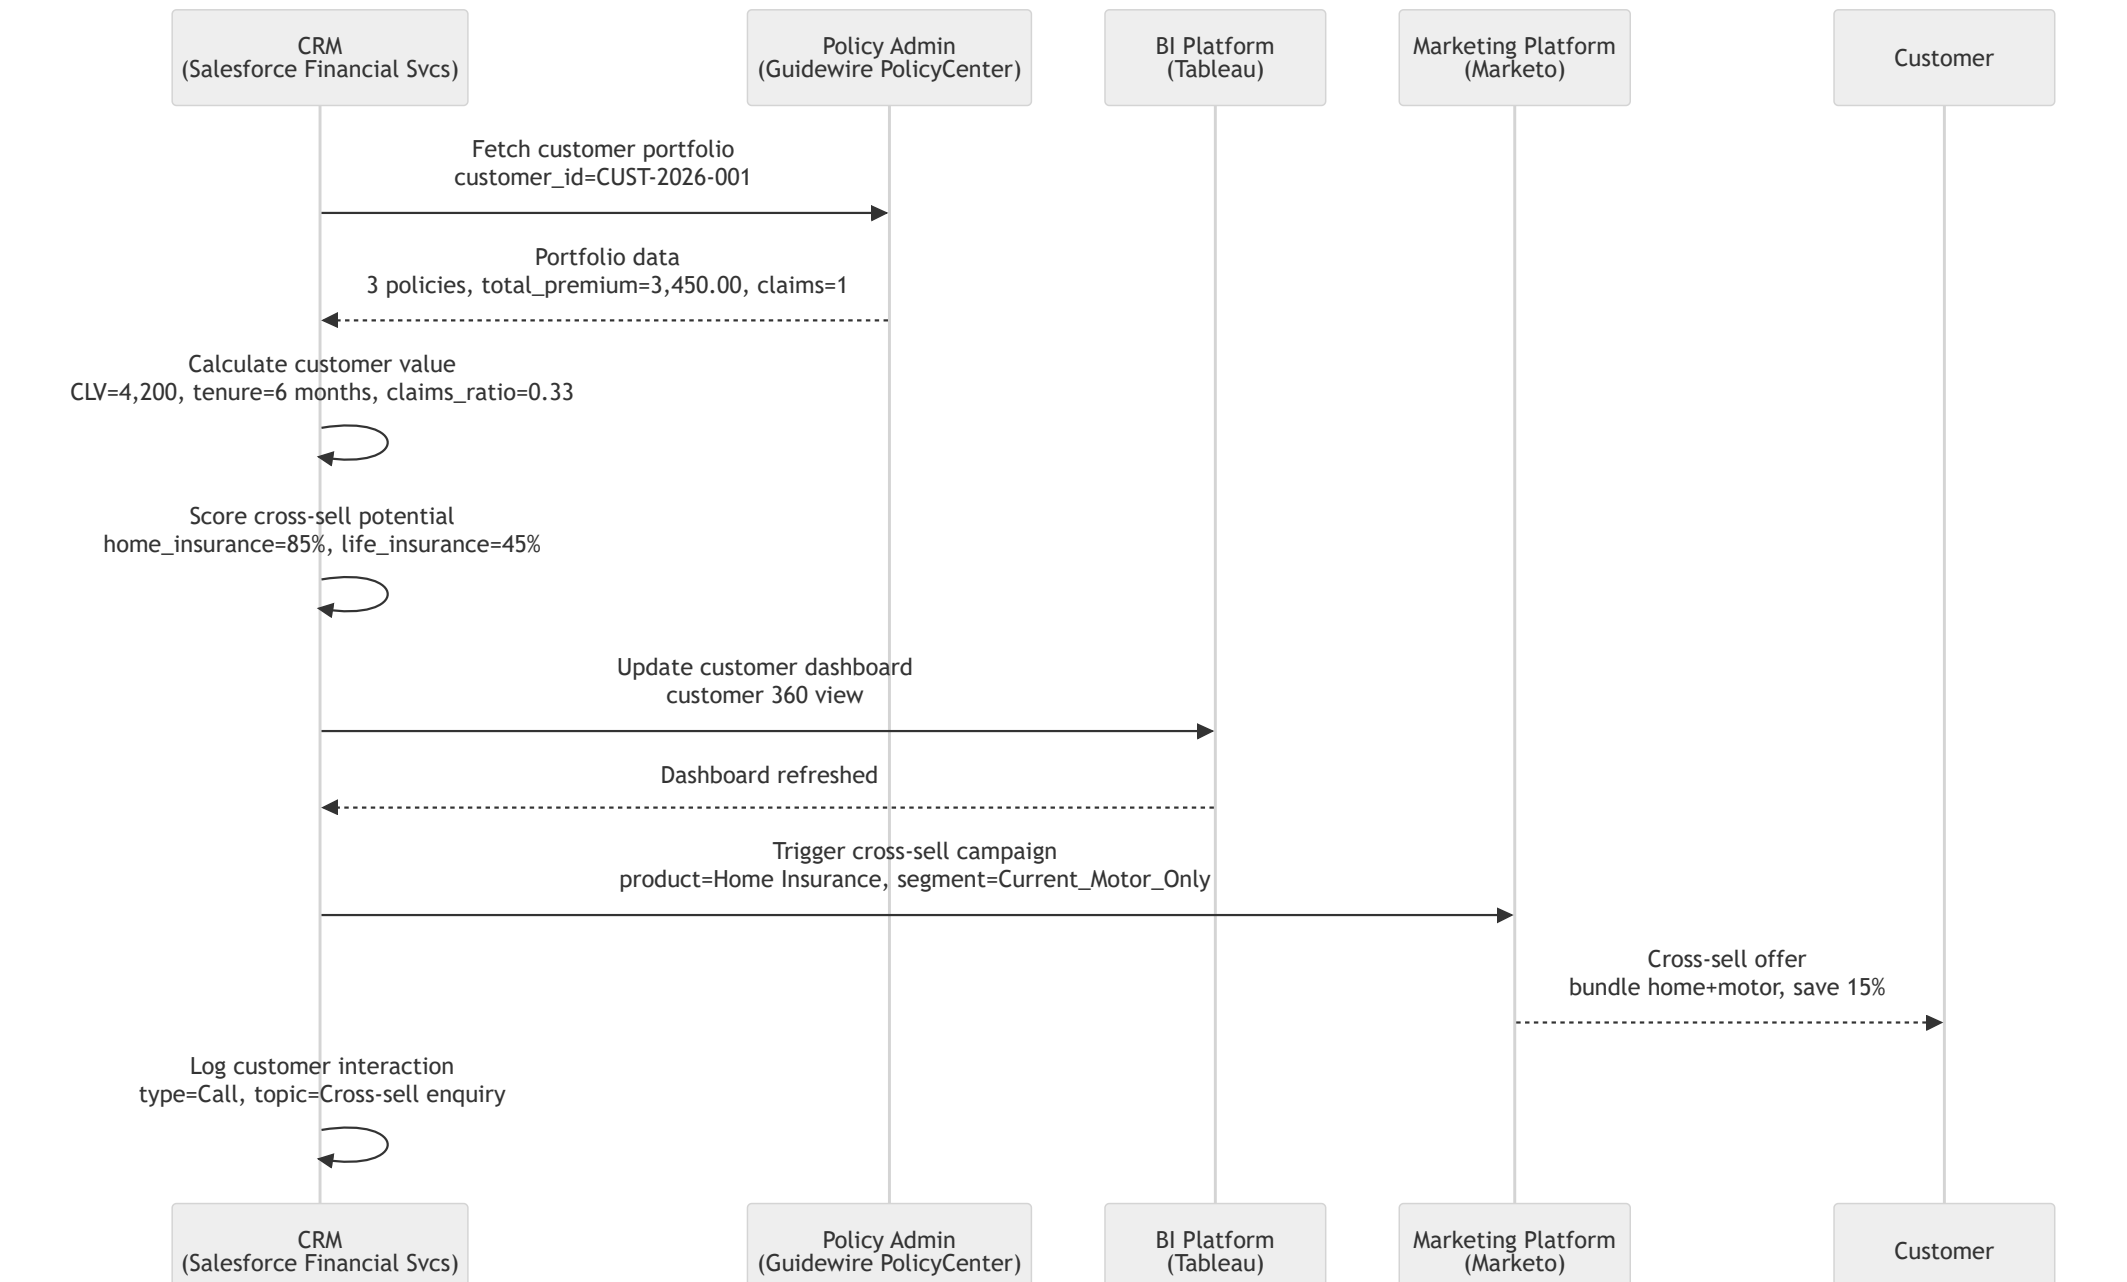

9.2 Customer Relationship Management

Description: CRM system manages all customer interactions, policy portfolio view, cross-sell and up-sell opportunities, and customer health scoring.

Actors: Customer, Relationship Manager, Customer Service Agent

Systems: CRM (Salesforce Financial Services), Policy Admin (Guidewire PolicyCenter), BI Platform (Tableau), Marketing Platform (Marketo)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
CRM	Portfolio	FetchCustomerPortfolio	CRM (Salesforce Financial Services)	Policy Admin (Guidewire PolicyCenter)	Salesforce REST API (OAuth2)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
CRM	Value	CalculateCustomerValue	CRM (Salesforce Financial Services)	CRM (Salesforce Financial Services)	Internal	Internal	Batch (Scheduled)	Medium
CRM	Insight	ScoreCrossSellPotential	CRM (Salesforce Financial Services)	CRM (Salesforce Financial Services)	Internal	Internal	API-led (Real-time)	Simple
CRM	Dashboard	UpdateDashboard	CRM (Salesforce Financial Services)	BI Platform (Tableau)	Salesforce REST API (OAuth2)	Tableau REST API	Event-driven	Simple
CRM	Campaign	TriggerCrossSellCampaign	CRM (Salesforce Financial Services)	Marketing Platform (Marketo)	Salesforce REST API (OAuth2)	Marketo API (REST)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
CRM	Portfolio	Customer portfolio retrieved with all policies	Portfolio view within 3 seconds; policies, premiums, claims, and payment history visible
CRM	Value	Customer lifetime value calculated accurately	CLV model considers premium, retention probability, cross-sell potential, and service cost
CRM	Insight	Cross-sell and up-sell scores calculated for relevant products	Product affinity scoring; propensity model; next-best-product recommendation
CRM	Dashboard	Customer 360 dashboard updated in real-time	All interactions, policies, and claims visible; timeline view; sentiment analysis
CRM	Campaign	Targeted cross-sell campaign triggered	Campaign personalised; offer consistent with customer profile; opt-out respected

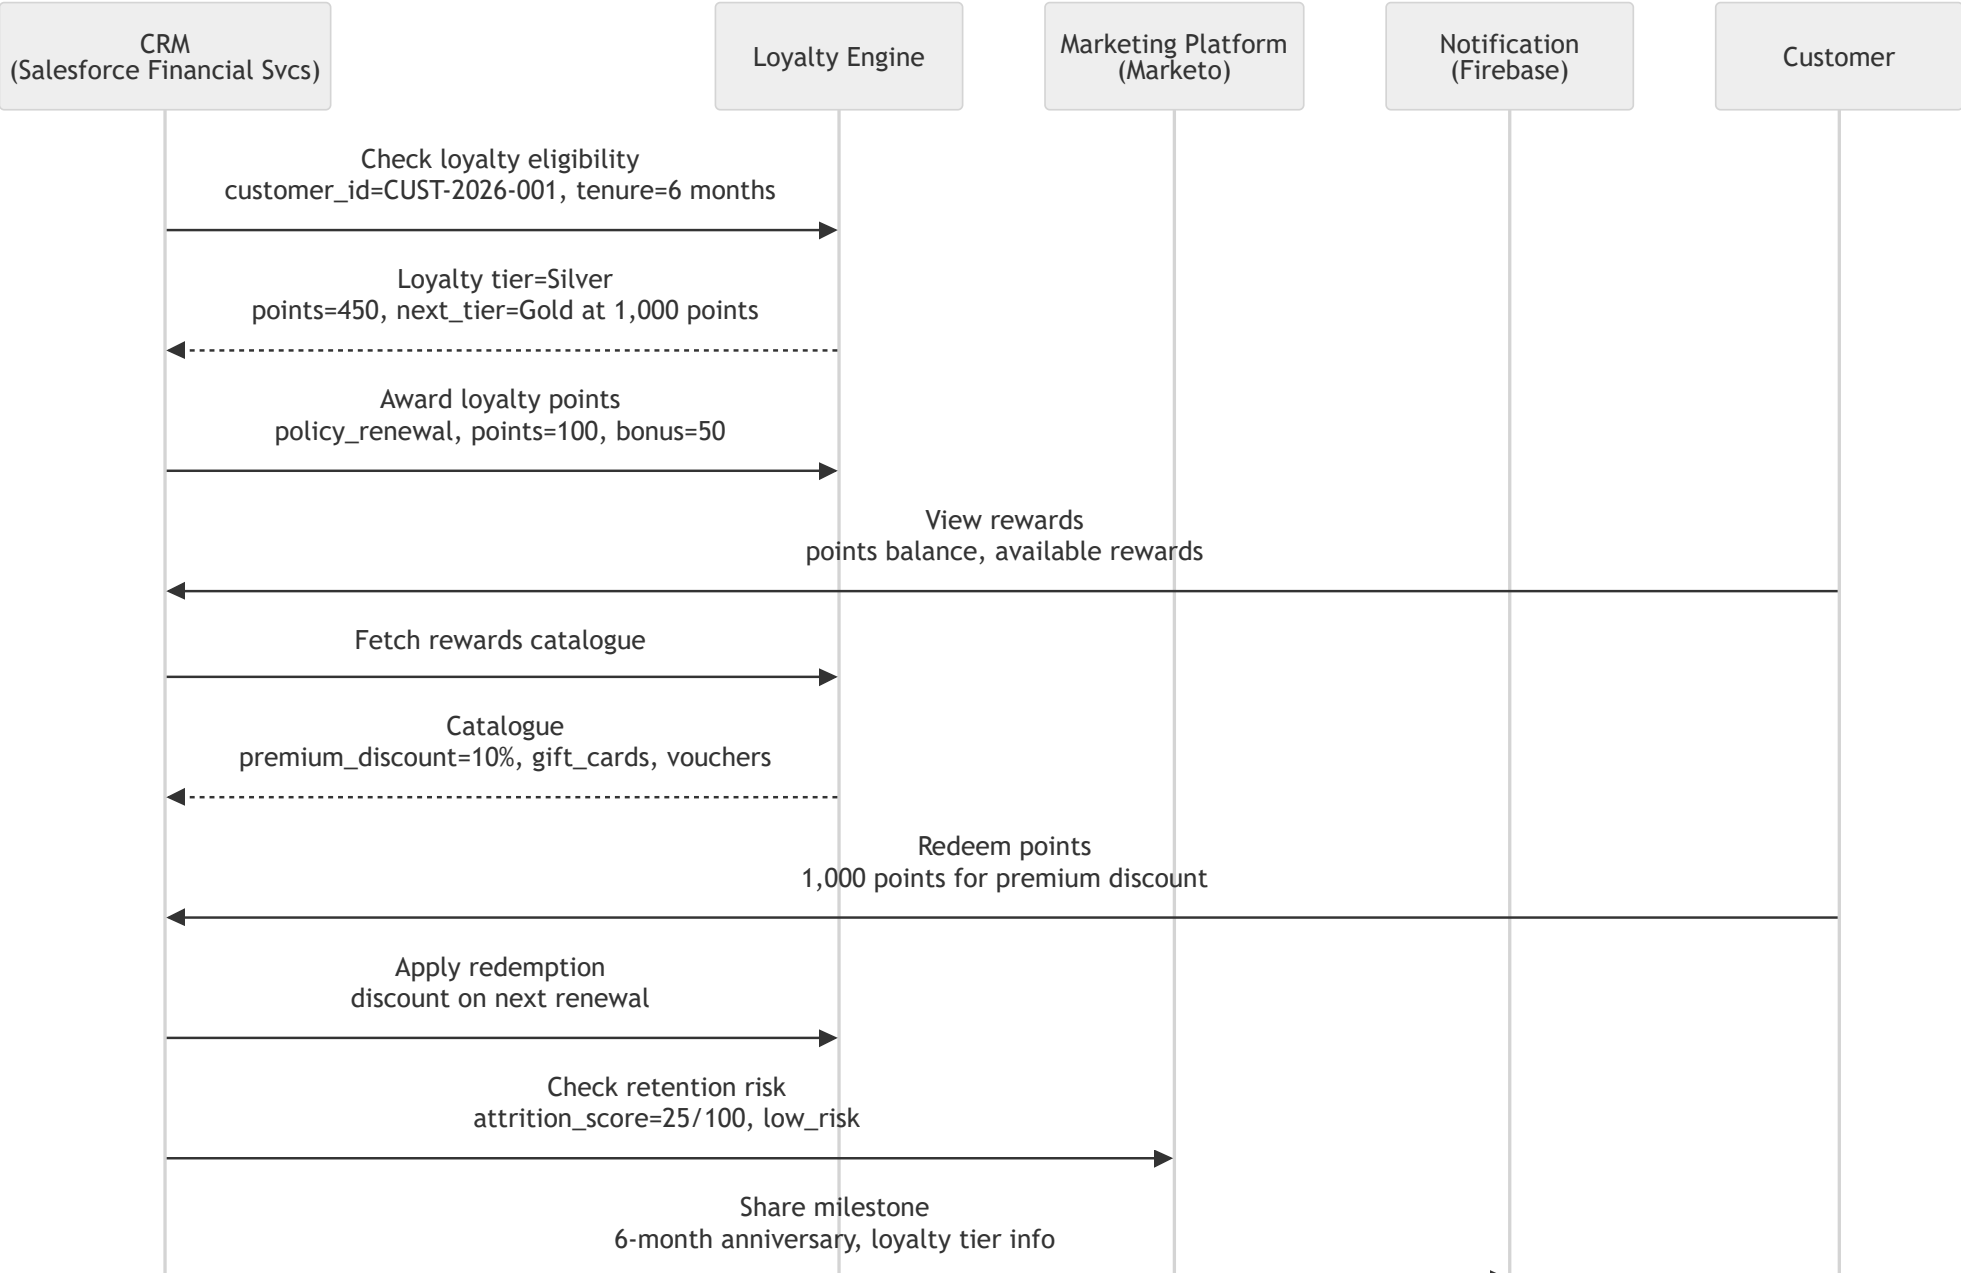

9.3 Loyalty & Retention Programs

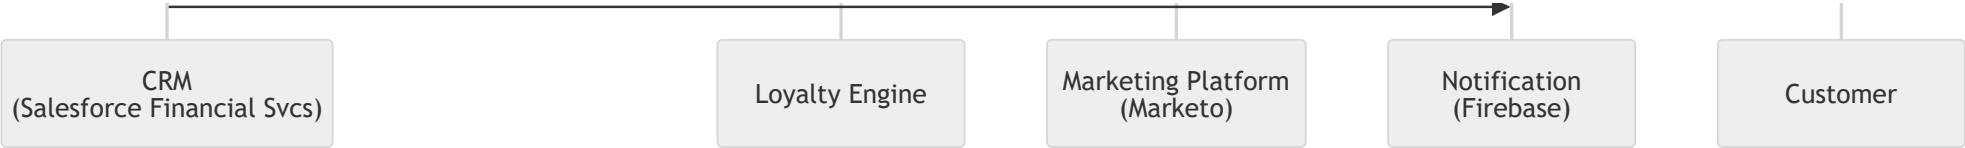

Description: Customer loyalty program tracks engagement, awards loyalty points or discounts, and manages retention offers for customers showing attrition risk.

Actors: Customer, Marketing Manager, Product Manager

Systems: CRM (Salesforce Financial Services), Loyalty Engine, Marketing Platform (Marketo), Notification Service (Firebase)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Loyalty	Eligibility	CheckLoyaltyEligibility	CRM (Salesforce Financial Services)	Loyalty Engine	Salesforce REST API (OAuth2)	Loyalty API (REST)	API-led (Real-time)	Simple
Loyalty	Points	AwardLoyaltyPoints	CRM (Salesforce Financial Services)	Loyalty Engine	Salesforce REST API (OAuth2)	Loyalty API (REST)	Event-driven	Medium
Loyalty	Catalogue	FetchRewardsCatalogue	CRM (Salesforce Financial Services)	Loyalty Engine	Salesforce REST API (OAuth2)	Loyalty API (REST)	API-led (Real-time)	Simple
Loyalty	Redemption	RedeemRewardPoints	CRM (Salesforce Financial Services)	Loyalty Engine	Salesforce REST API (OAuth2)	Loyalty API (REST)	API-led (Real-time)	Medium
Loyalty	Retention	CheckRetentionRisk	CRM (Salesforce Financial Services)	Marketing Platform (Marketo)	Salesforce REST API (OAuth2)	Marketo API (REST)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Loyalty	Eligibility	Customer loyalty eligibility checked at key events	Eligibility at onboarding, renewal, claim settlement; tier based on premium and tenure
Loyalty	Points	Loyalty points awarded for qualifying events	Policy purchase, renewal, referral, claim-free period; bonus points for double milestones
Loyalty	Catalogue	Rewards catalogue displayed with available options	Catalogue personalised by tier; points required clearly shown; stock availability
Loyalty	Redemption	Points redeemed for selected reward	Sufficient points validated; discount applied to renewal; gift card issued; confirmation sent
Loyalty	Retention	Attrition risk scored and retention offer triggered	Attrition score < 30: standard; 30-60: retention offer; > 60: priority save campaign

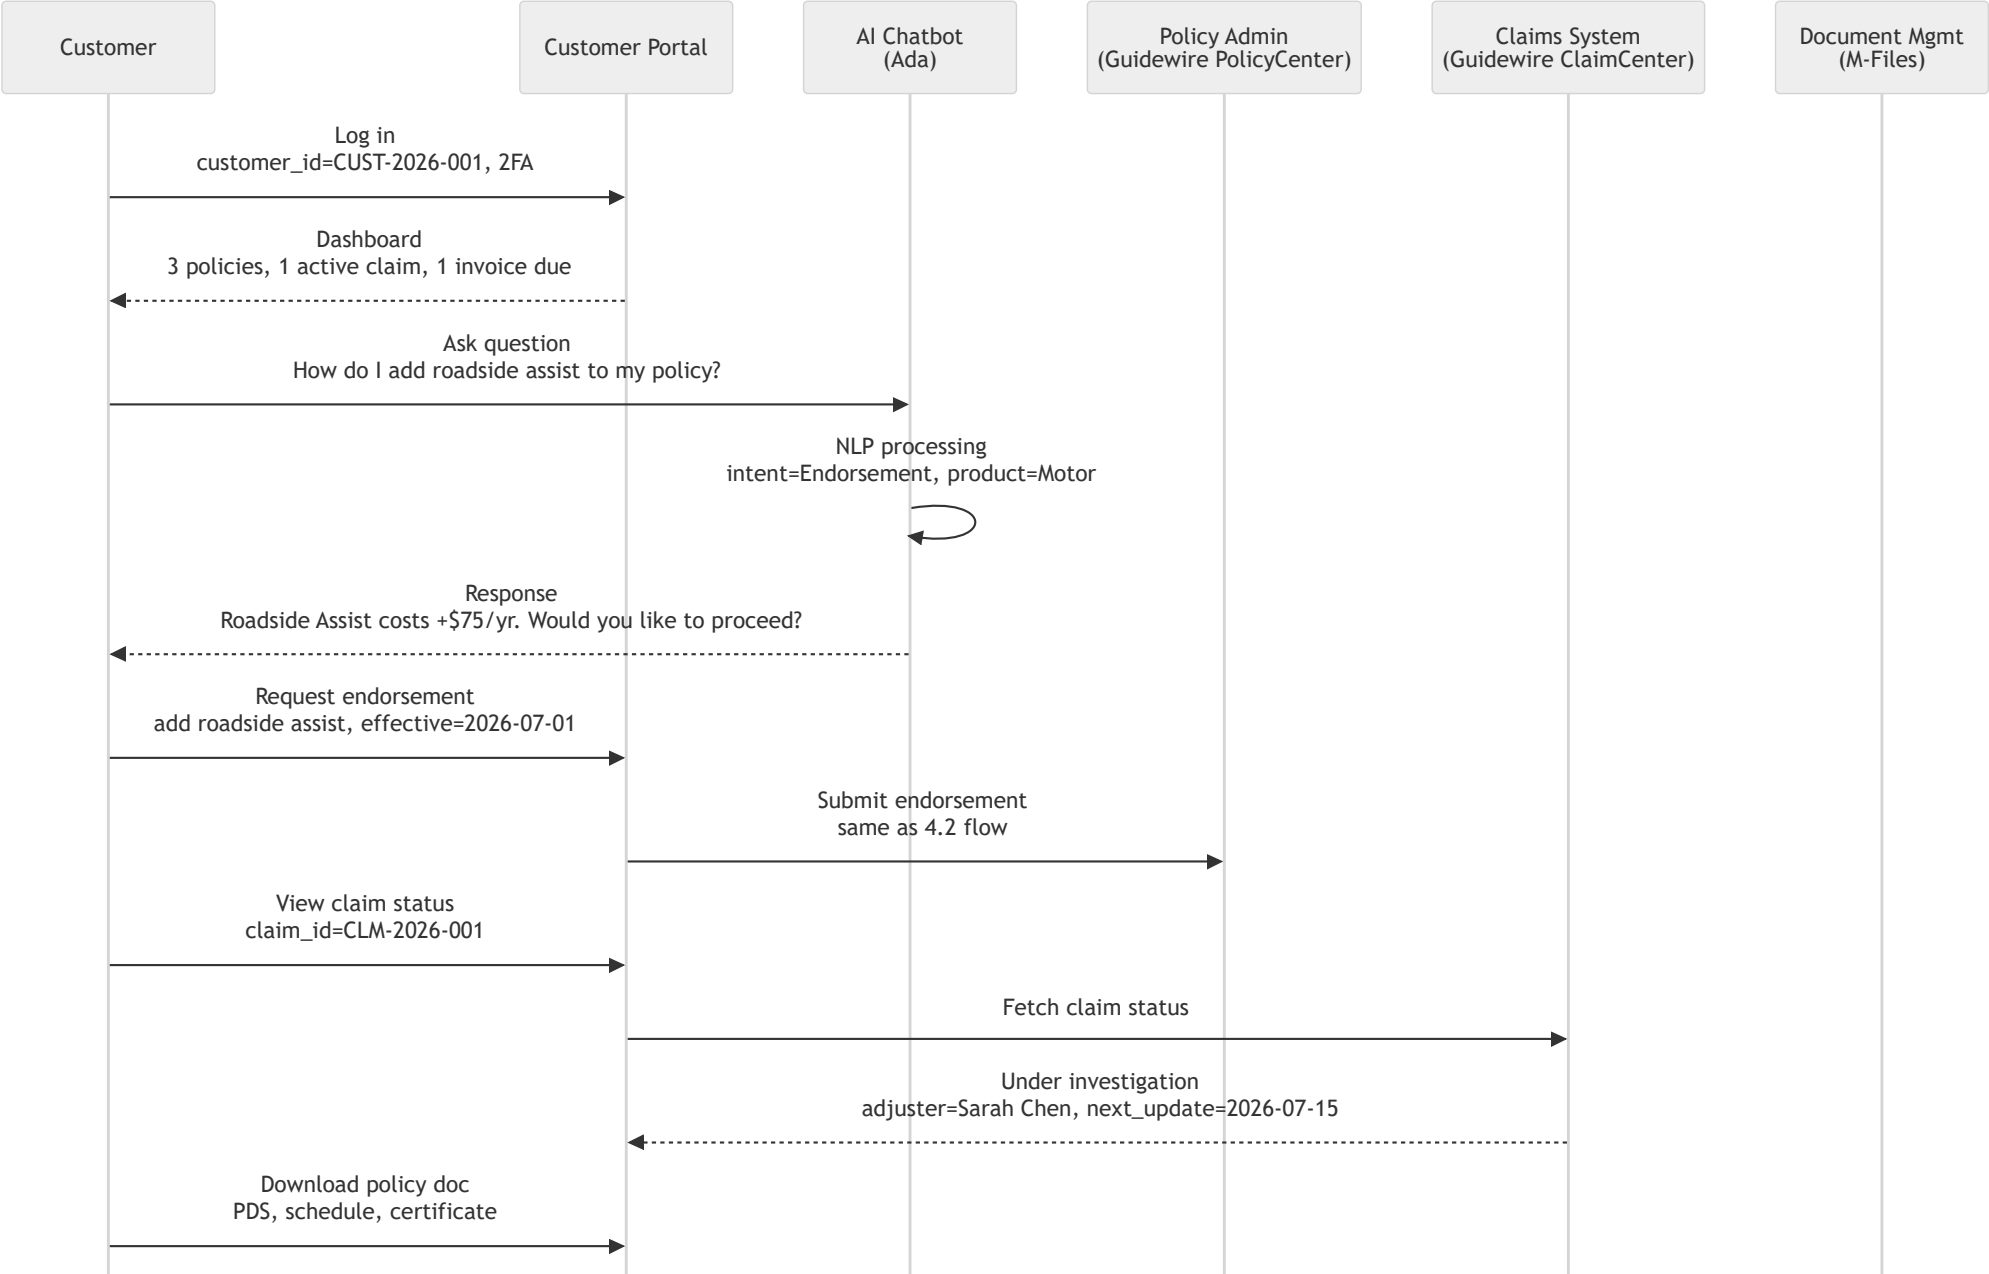

9.4 Customer Portal & Self-Service

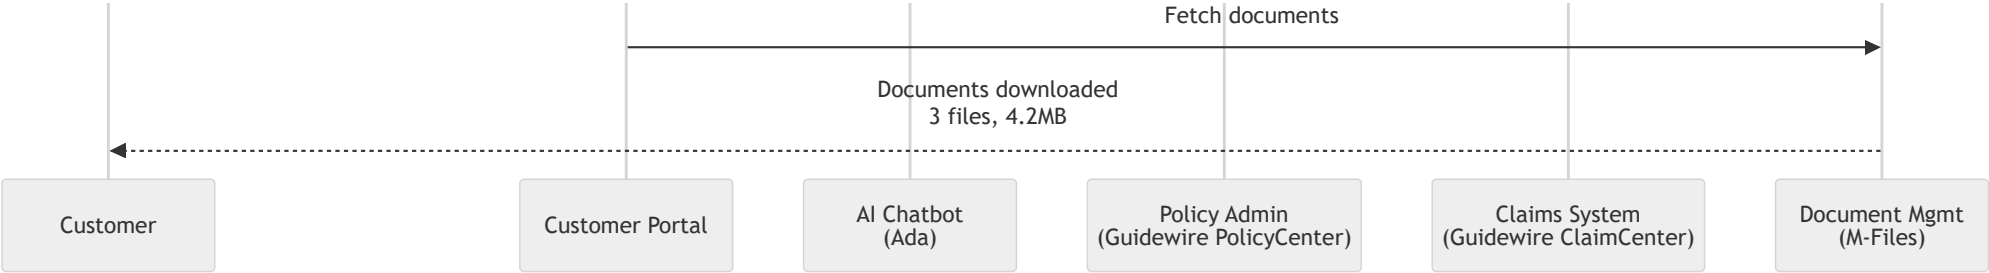

Description: Customer accesses self-service portal to view policies, download documents, make changes, report claims, and communicate with the insurer.

Actors: Customer, Customer Service Agent (escalation)

Systems: Customer Portal, Policy Admin (Guidewire PolicyCenter), Claims System (Guidewire ClaimCenter), Document Mgmt (M-Files), AI Chatbot (Ada)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Self-Service	Auth	AuthenticateCustomer	Customer Portal	Customer Portal	Internal	Internal	API-led (Real-time)	Simple
Self-Service	Chatbot	HandleCustomerQuery	Customer Portal	AI Chatbot (Ada)	Portal REST API (JWT)	Ada API (REST)	API-led (Real-time)	Medium
Self-Service	Policy	ViewPolicyDetails	Customer Portal	Policy Admin (Guidewire PolicyCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Medium
Self-Service	Claims	ViewClaimStatus	Customer Portal	Claims System (Guidewire ClaimCenter)	Portal REST API (JWT)	Guidewire REST API (API Key)	API-led (Real-time)	Simple
Self-Service	Documents	DownloadPolicyDocuments	Customer Portal	Document Mgmt (M-Files)	Portal REST API (JWT)	M-Files REST API (API Key)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Self-Service	Auth	Customer authenticated with 2FA within 10 seconds	Login credential verified; 2FA code sent and validated; session token issued
Self-Service	Chatbot	AI chatbot handles common queries with >90% accuracy	Query understood; response accurate; escalation to agent on failure; feedback captured
Self-Service	Policy	Policy details displayed with full coverage summary	All policies listed; coverage details, limits, excess, premium, and status shown
Self-Service	Claims	Claim status displayed with latest updates	Claim timeline; adjuster contact; next milestone; document upload capability
Self-Service	Documents	Policy documents available for download	Documents load within 3 seconds; searchable; version control visible

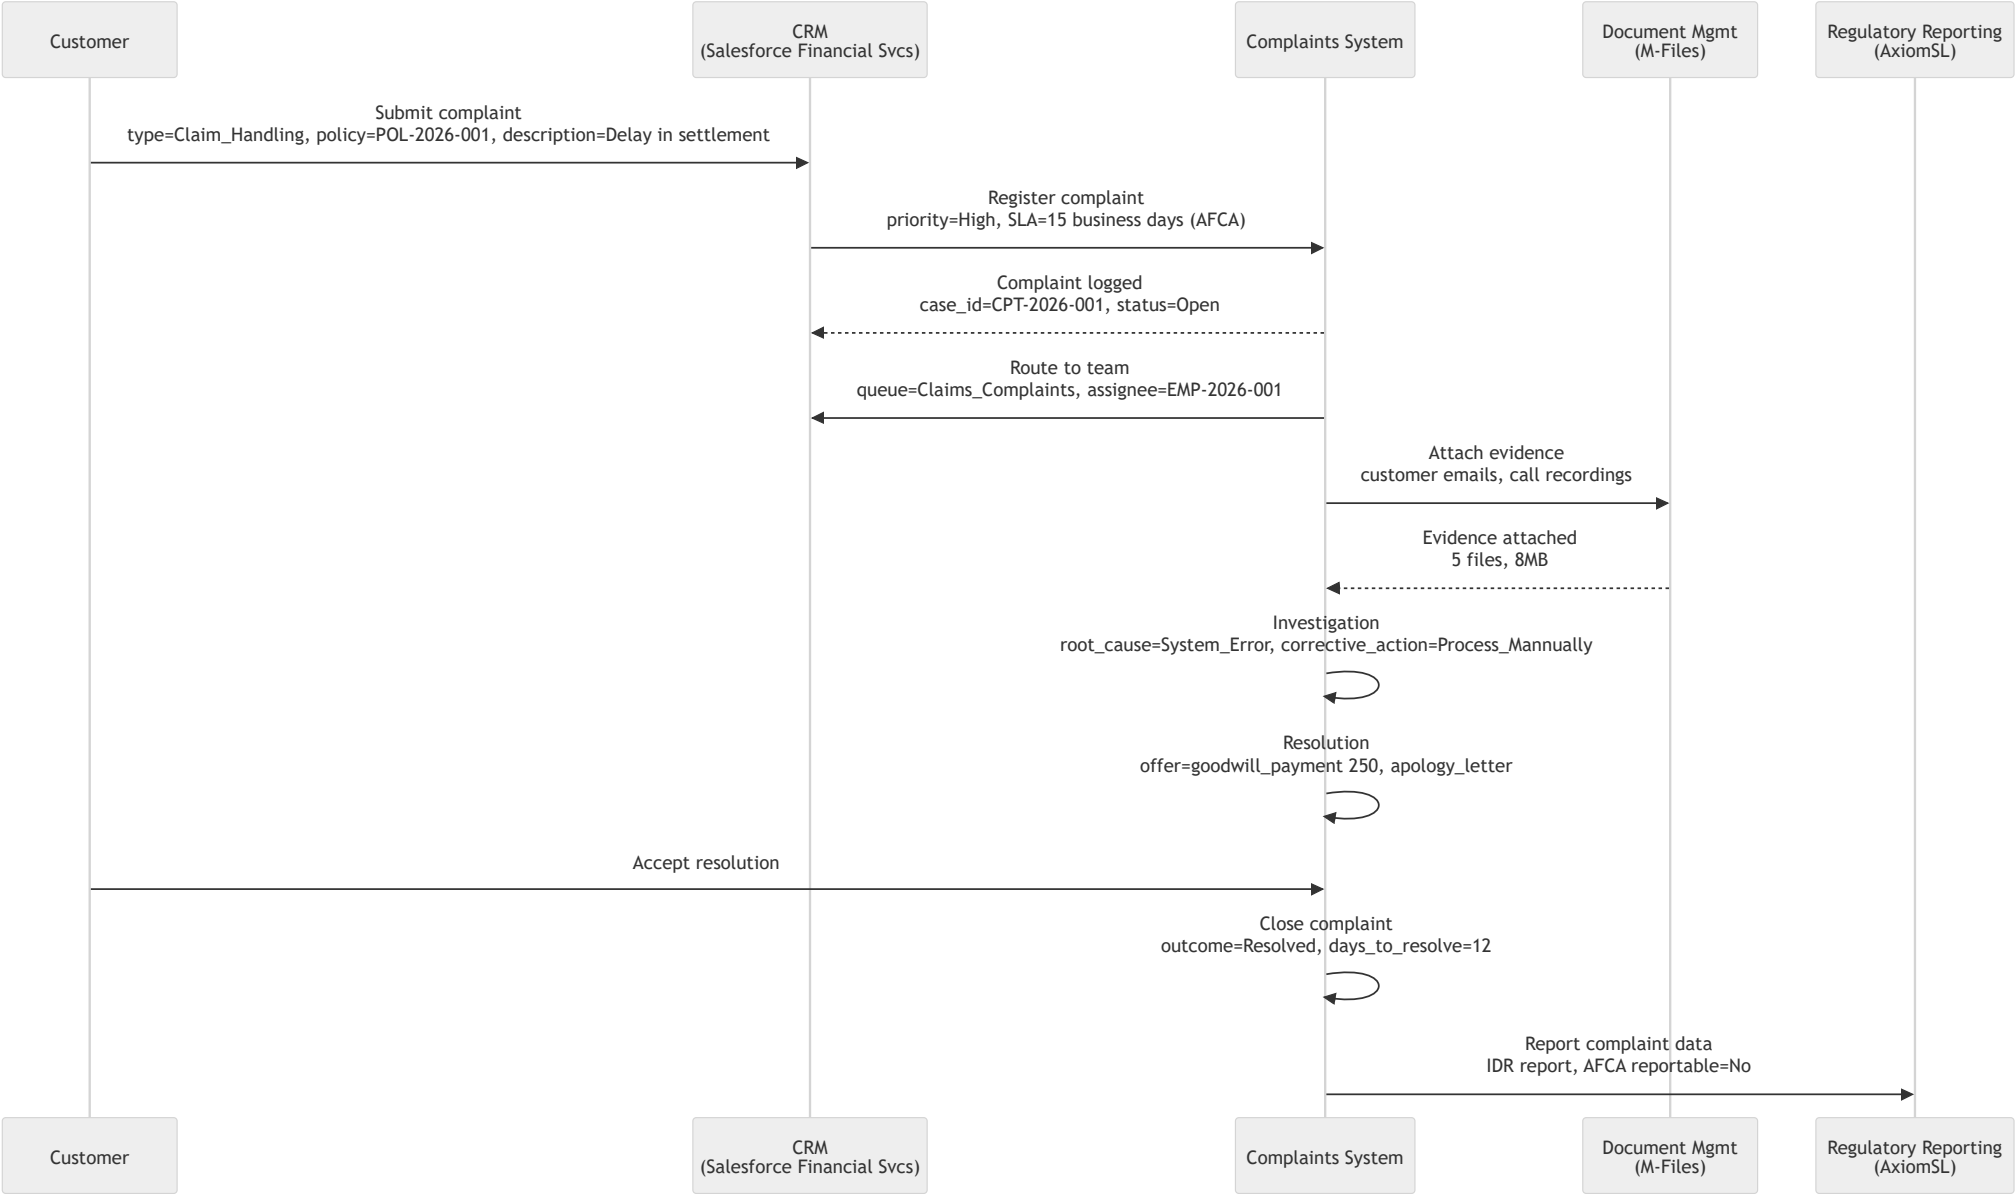

9.5 Complaints & Enquiries Management

Description: Customer complaints and enquiries logged, tracked, and resolved within regulatory timeframes. System manages SLA, escalation, and regulatory reporting.

Actors: Customer, Customer Service Agent, Complaints Manager, Ombudsman

Systems: CRM (Salesforce Financial Services), Complaints System, Document Mgmt (M-Files), Regulatory Reporting (AxiomSL)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Complaints	Registration	RegisterComplaint	CRM (Salesforce Financial Services)	Complaints System	Salesforce REST API (OAuth2)	Complaints API (REST)	API-led (Real-time)	Medium
Complaints	Evidence	AttachComplaintEvidence	Complaints System	Document Mgmt (M-Files)	Complaints API (REST)	M-Files REST API (API Key)	Event-driven	Simple
Complaints	Investigation	InvestigateComplaint	Complaints System	Complaints System	Internal	Internal	API-led (Real-time)	Medium
Complaints	Resolution	RecordResolution	Complaints System	CRM (Salesforce Financial Services)	Complaints API (REST)	Salesforce REST API (OAuth2)	Event-driven	Simple
Complaints	Reporting	ReportComplaintData	Complaints System	Regulatory Reporting (AxiomSL)	Complaints API (REST)	AxiomSL API (REST)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Complaints	Registration	Complaint registered with correct priority and SLA	Complaint ID generated; SLA calculated per regulatory timeframe; acknowledgment sent within 24 hours
Complaints	Evidence	Evidence attached and linked to complaint case	File types validated; metadata indexed; evidence review trail maintained
Complaints	Investigation	Investigation completed within SLA	Root cause identified; corrective action defined; customer kept informed at milestones
Complaints	Resolution	Resolution accepted and complaint closed	Resolution offer documented; acceptance recorded; closure reason categorized
Complaints	Reporting	Complaint data reported for IDR and EDR compliance	IDR report submitted quarterly; reportable complaints flagged for AFCA; data accuracy validated

10: Risk Management & Compliance — IN028 IN029 IN030

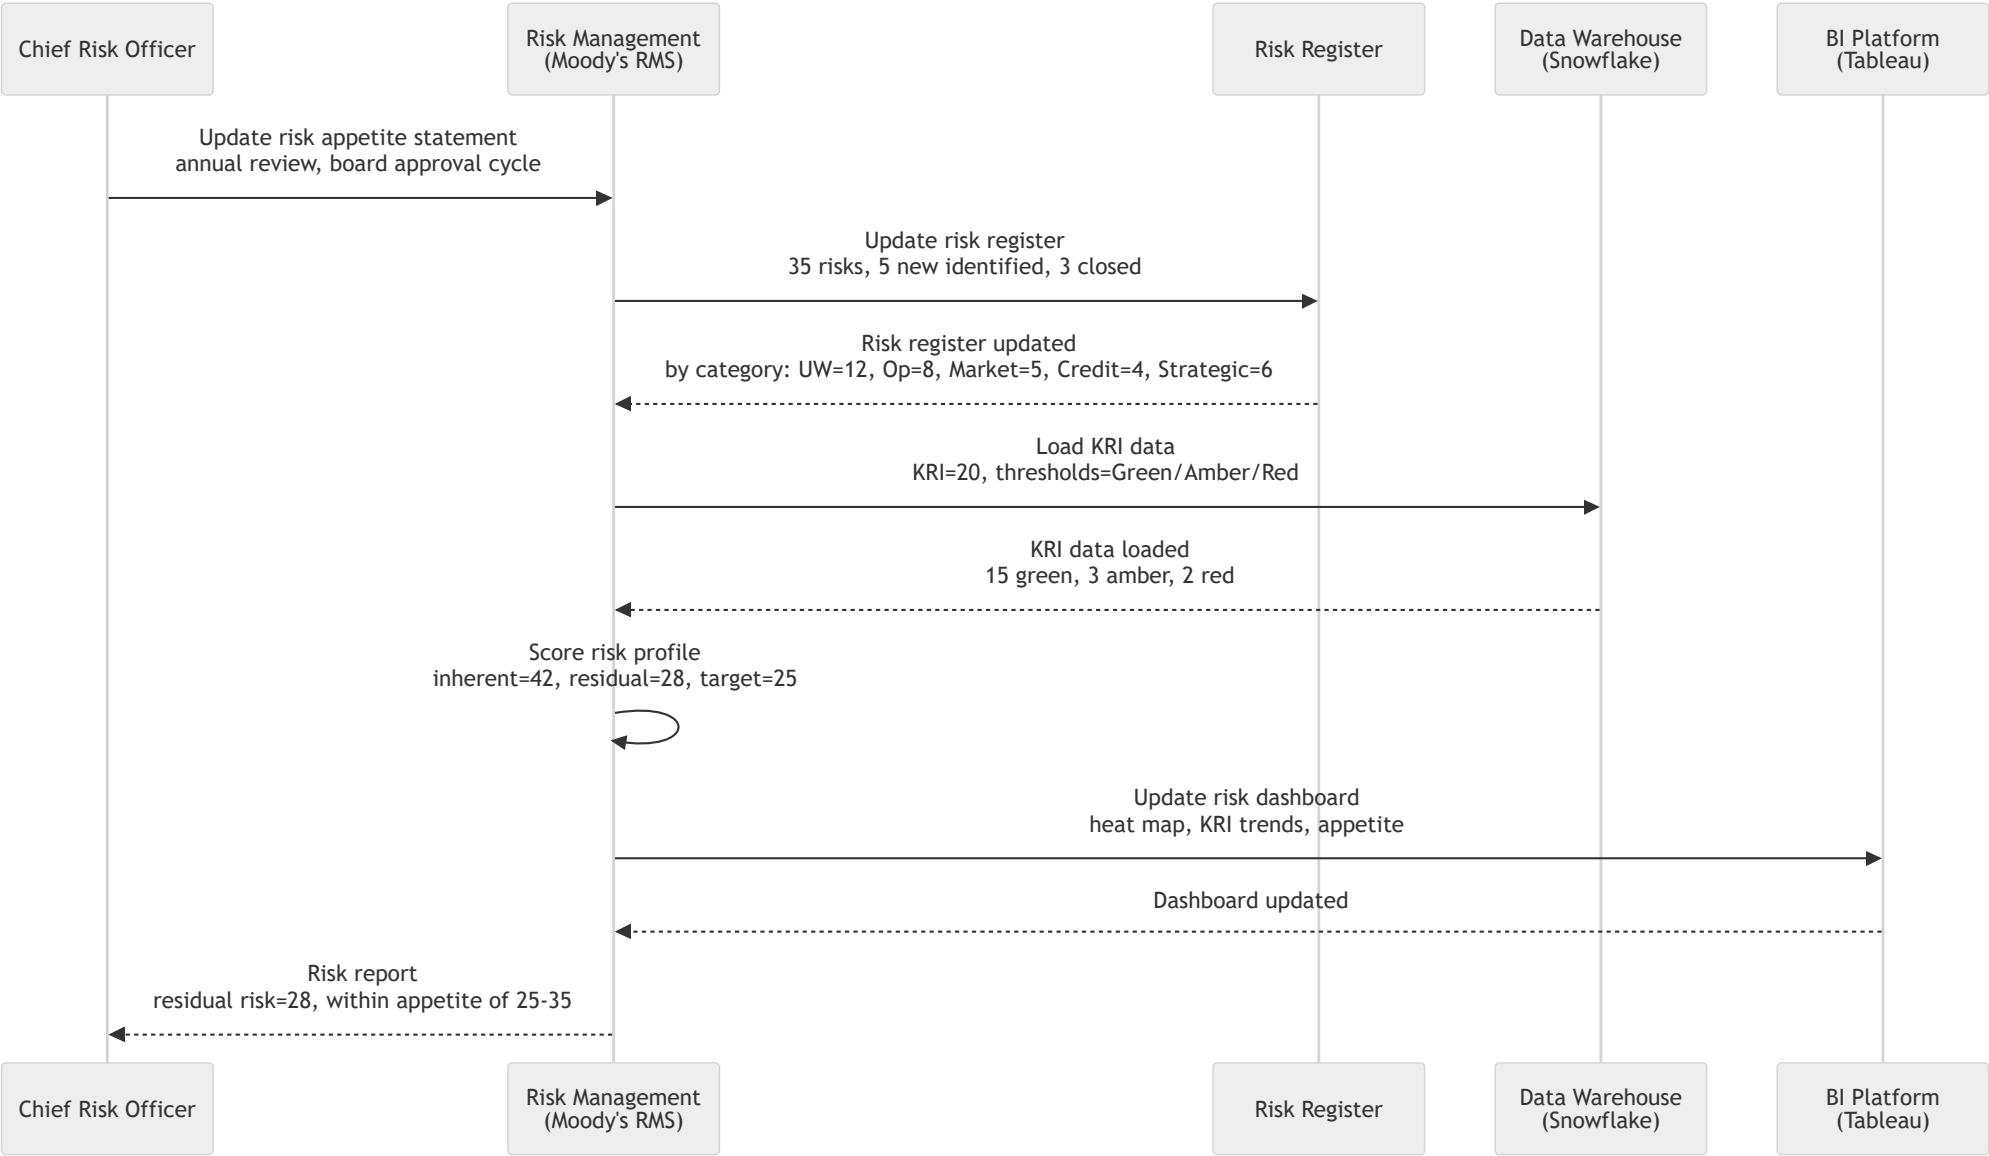

10.1 Enterprise Risk Management Framework

Description: Risk team maintains ERM framework including risk appetite, risk register, key risk indicators, and risk reporting to board and regulators.

Actors: Chief Risk Officer, Risk Manager, Board

Systems: Risk Management (Moody's RMS), Risk Register, Data Warehouse (Snowflake), BI Platform (Tableau)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
ERM	Appetite	UpdateRiskAppetite	Risk Management (Moody's RMS)	Risk Management (Moody's RMS)	Internal	Internal	API-led (Real-time)	Medium
ERM	Register	UpdateRiskRegister	Risk Management (Moody's RMS)	Risk Register	RMS API (SOAP)	Risk Register API (REST)	API-led (Real-time)	Medium
ERM	KRI	LoadKRIData	Risk Management (Moody's RMS)	Data Warehouse (Snowflake)	RMS API (SOAP)	Snowflake JDBC	Batch (Scheduled)	High
ERM	Dashboard	UpdateRiskDashboard	Risk Management (Moody's RMS)	BI Platform (Tableau)	RMS API (SOAP)	Tableau REST API	Event-driven	Simple
ERM	Report	GenerateRiskReport	Risk Management (Moody's RMS)	Risk Management (Moody's RMS)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
ERM	Appetite	Risk appetite statement updated and board approved	Appetite limits by risk category; tolerance bands; board sign-off recorded
ERM	Register	Risk register maintained with current risks	Risks identified, assessed, and assigned; controls documented; owners assigned
ERM	KRI	KRI data loaded with threshold monitoring	20 KRIs monitored; threshold breaches trigger alerts; data refresh daily
ERM	Dashboard	Risk dashboard available with heat map and trends	Heat map by likelihood x impact; KRI trend lines; appetite overlay
ERM	Report	Risk report generated for board and management	Report includes risk profile, KRI status, emerging risks, and recommended actions

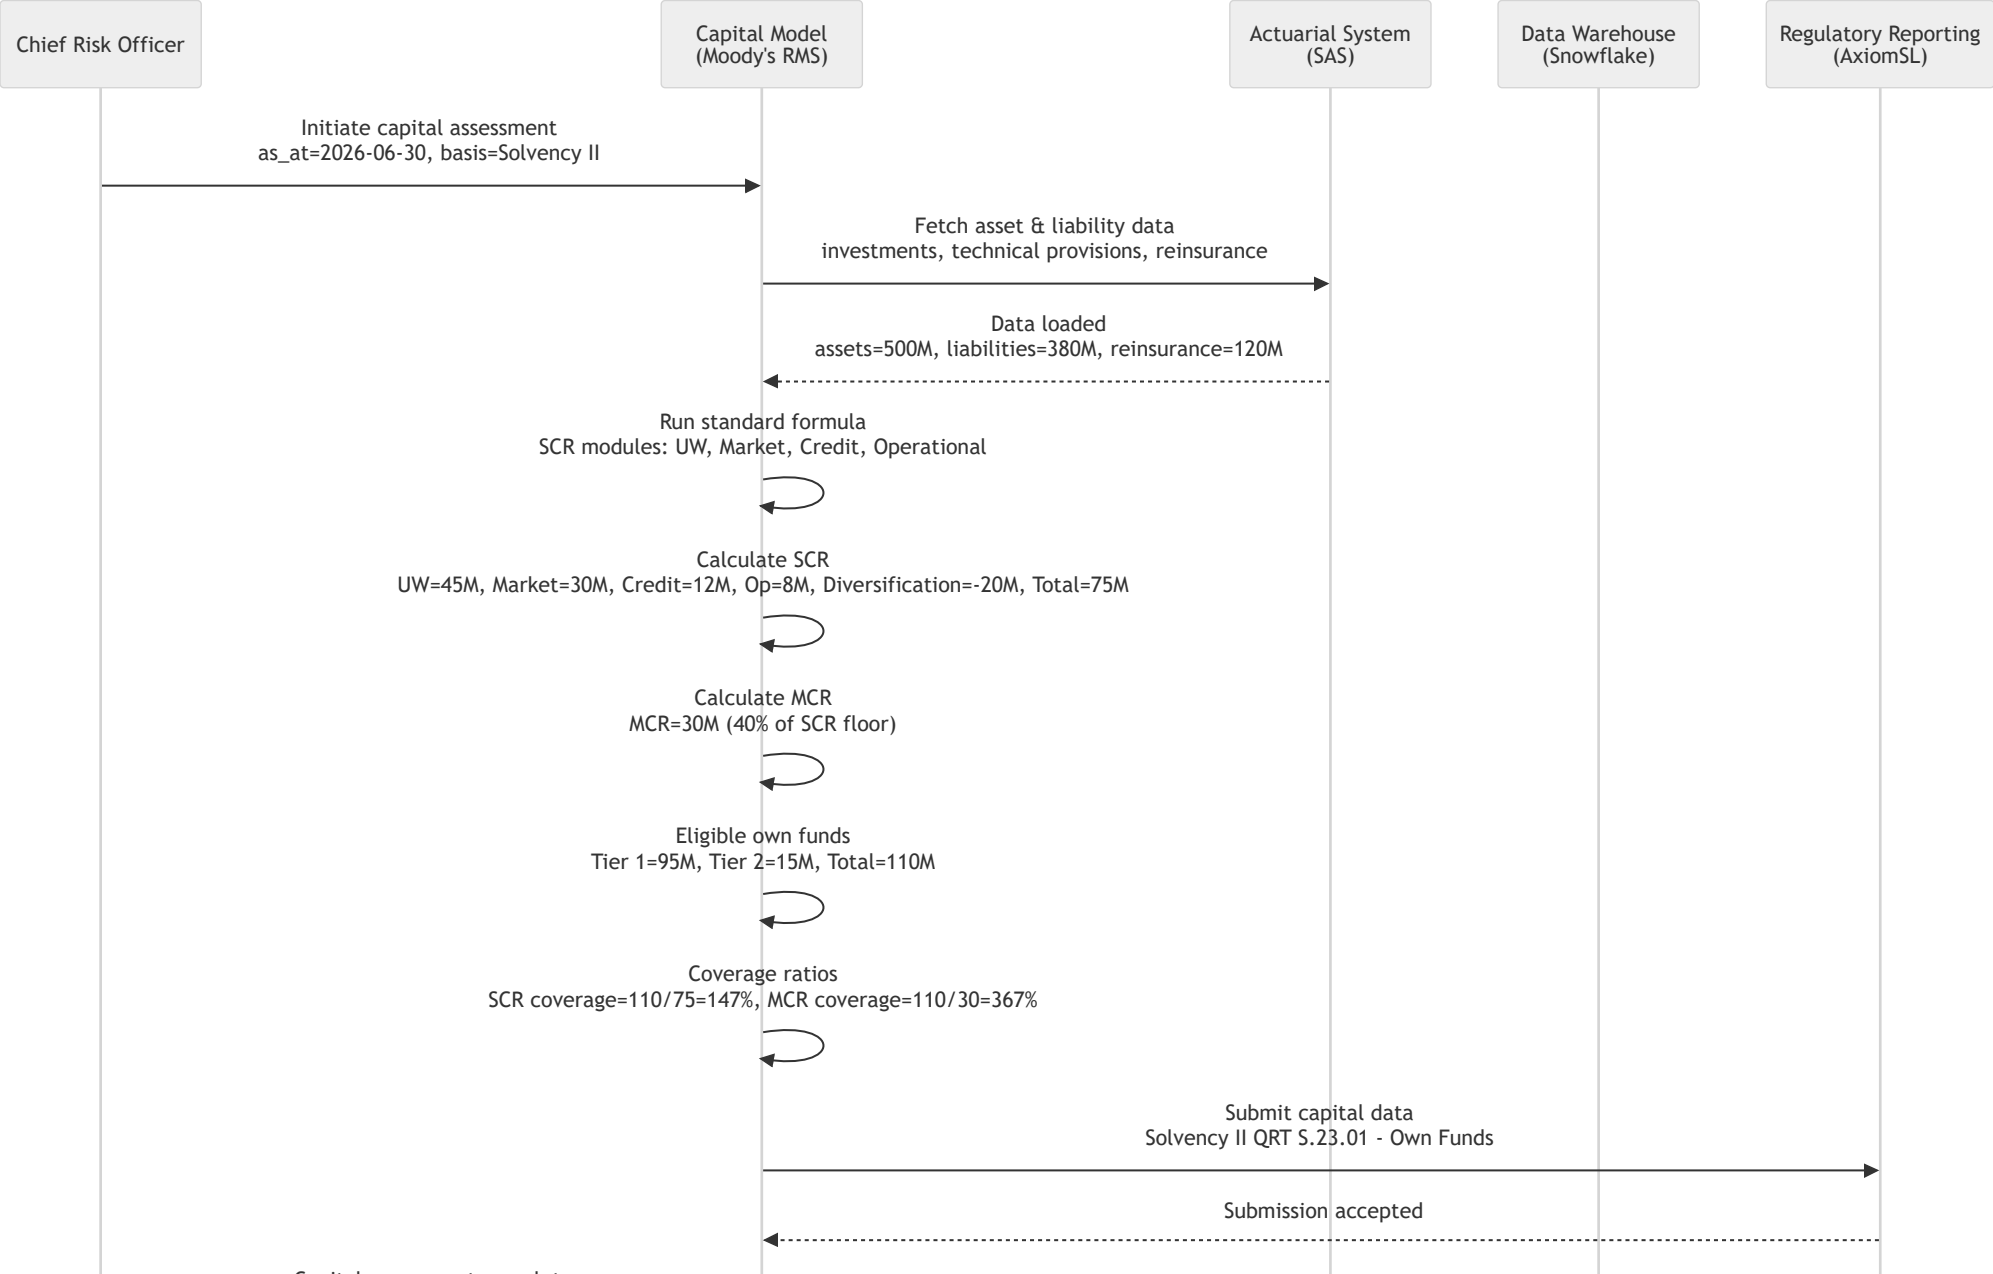

10.2 Capital Adequacy & ORSA

Description: Risk actuary performs capital modeling for Solvency II / APRA / NAIC requirements. Own Risk and Solvency Assessment (ORSA) prepared annually.

Actors: Chief Risk Officer, Actuary, Board, Regulator

Systems: Capital Model (Moody's RMS), Actuarial System (SAS), Data Warehouse (Snowflake), Regulatory Reporting (AxiomSL)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Capital	Data	FetchAssetLiabilityData	Capital Model (Moody's RMS)	Actuarial System (SAS)	RMS API (SOAP)	SAS API (SOAP)	Batch (ETL)	High
Capital	SCR	RunStandardFormula	Capital Model (Moody's RMS)	Capital Model (Moody's RMS)	Internal	Internal	Batch (Scheduled)	High
Capital	MCR	CalculateMCR	Capital Model (Moody's RMS)	Capital Model (Moody's RMS)	Internal	Internal	Batch (Scheduled)	Medium
Capital	Funds	CalculateEligibleOwnFunds	Capital Model (Moody's RMS)	Capital Model (Moody's RMS)	Internal	Internal	API-led (Real-time)	Medium
Capital	Regulatory	SubmitCapitalData	Capital Model (Moody's RMS)	Regulatory Reporting (AxiomSL)	RMS API (SOAP)	AxiomSL API (REST)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Capital	Data	Asset, liability, and reinsurance data loaded correctly	Data reconciled to GL and actuarial systems; valuation bases consistent; data quality check passed
Capital	SCR	Solvency Capital Requirement calculated per standard formula	All modules calculated; diversification benefit applied; capital add-ons included if any
Capital	MCR	Minimum Capital Requirement calculated	MCR between 25% and 45% of SCR; absolute floor checked; corridor tested
Capital	Funds	Eligible own funds calculated and tiered correctly	Tier 1, Tier 2, Tier 3 classification; limits per tier respected; ancillary own funds
Capital	Regulatory	Capital data submitted to regulator	QRT populated; validation rules passed; submission accepted; confirmation received

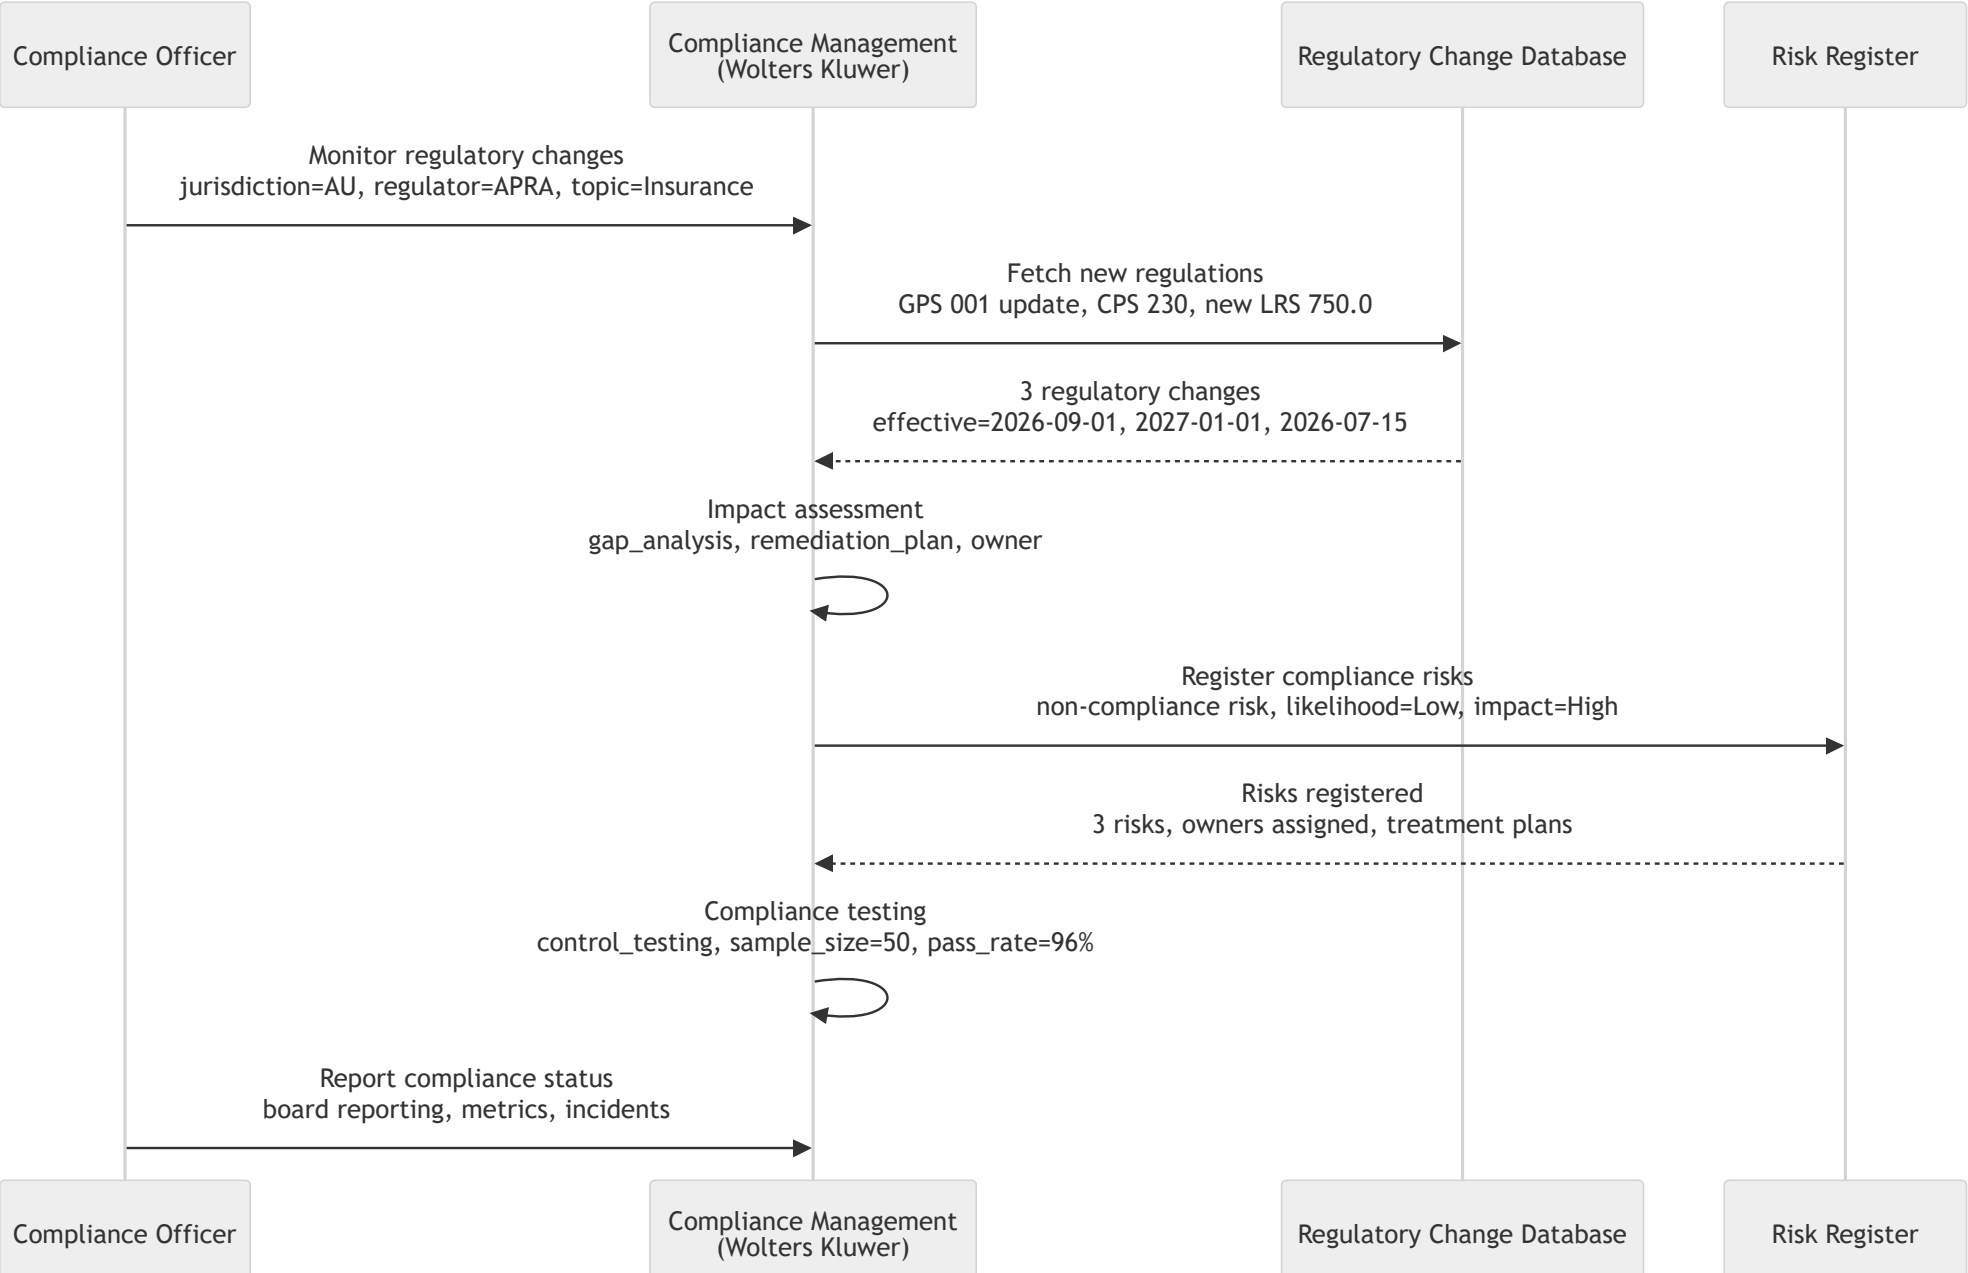

10.3 Regulatory Compliance Monitoring

Description: Compliance team monitors adherence to regulatory requirements across all business units. System tracks regulatory changes, assesses impact, and manages compliance incidents.

Actors: Compliance Officer, Business Unit Head, Regulator

Systems: Compliance Management (Wolters Kluwer), Regulatory Change Database, Risk Register, Audit System

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Compliance Monitoring	Changes	FetchRegulatoryChanges	Compliance Management (Wolters Kluwer)	Regulatory Change Database	Wolters Kluwer API (REST)	RCD API (REST)	Batch (Scheduled)	Medium
Compliance Monitoring	Impact	AssessRegulatoryImpact	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	API-led (Real-time)	Medium
Compliance Monitoring	Risk	RegisterComplianceRisks	Compliance Management (Wolters Kluwer)	Risk Register	Wolters Kluwer API (REST)	Risk Register API (REST)	Event-driven	Simple
Compliance Monitoring	Testing	RunComplianceTesting	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	Batch (Scheduled)	Medium
Compliance Monitoring	Report	ReportComplianceStatus	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Compliance Monitoring	Changes	Regulatory changes identified and logged within 5 days of publication	Changes categorized by jurisdiction, entity, and effective date; affected business units notified
Compliance Monitoring	Impact	Impact assessment completed with gap analysis	Current vs required state; remediation actions defined; resource requirements estimated
Compliance Monitoring	Risk	Compliance risks registered with treatment plans	Inherent and residual risk scored; treatment plan with deadlines; owner assigned
Compliance Monitoring	Testing	Compliance control testing completed on schedule	Testing sample statistically valid; pass/fail recorded; failed controls escalated
Compliance Monitoring	Report	Compliance status report generated for management	Regulatory change tracker; testing results; incident summary; breach register

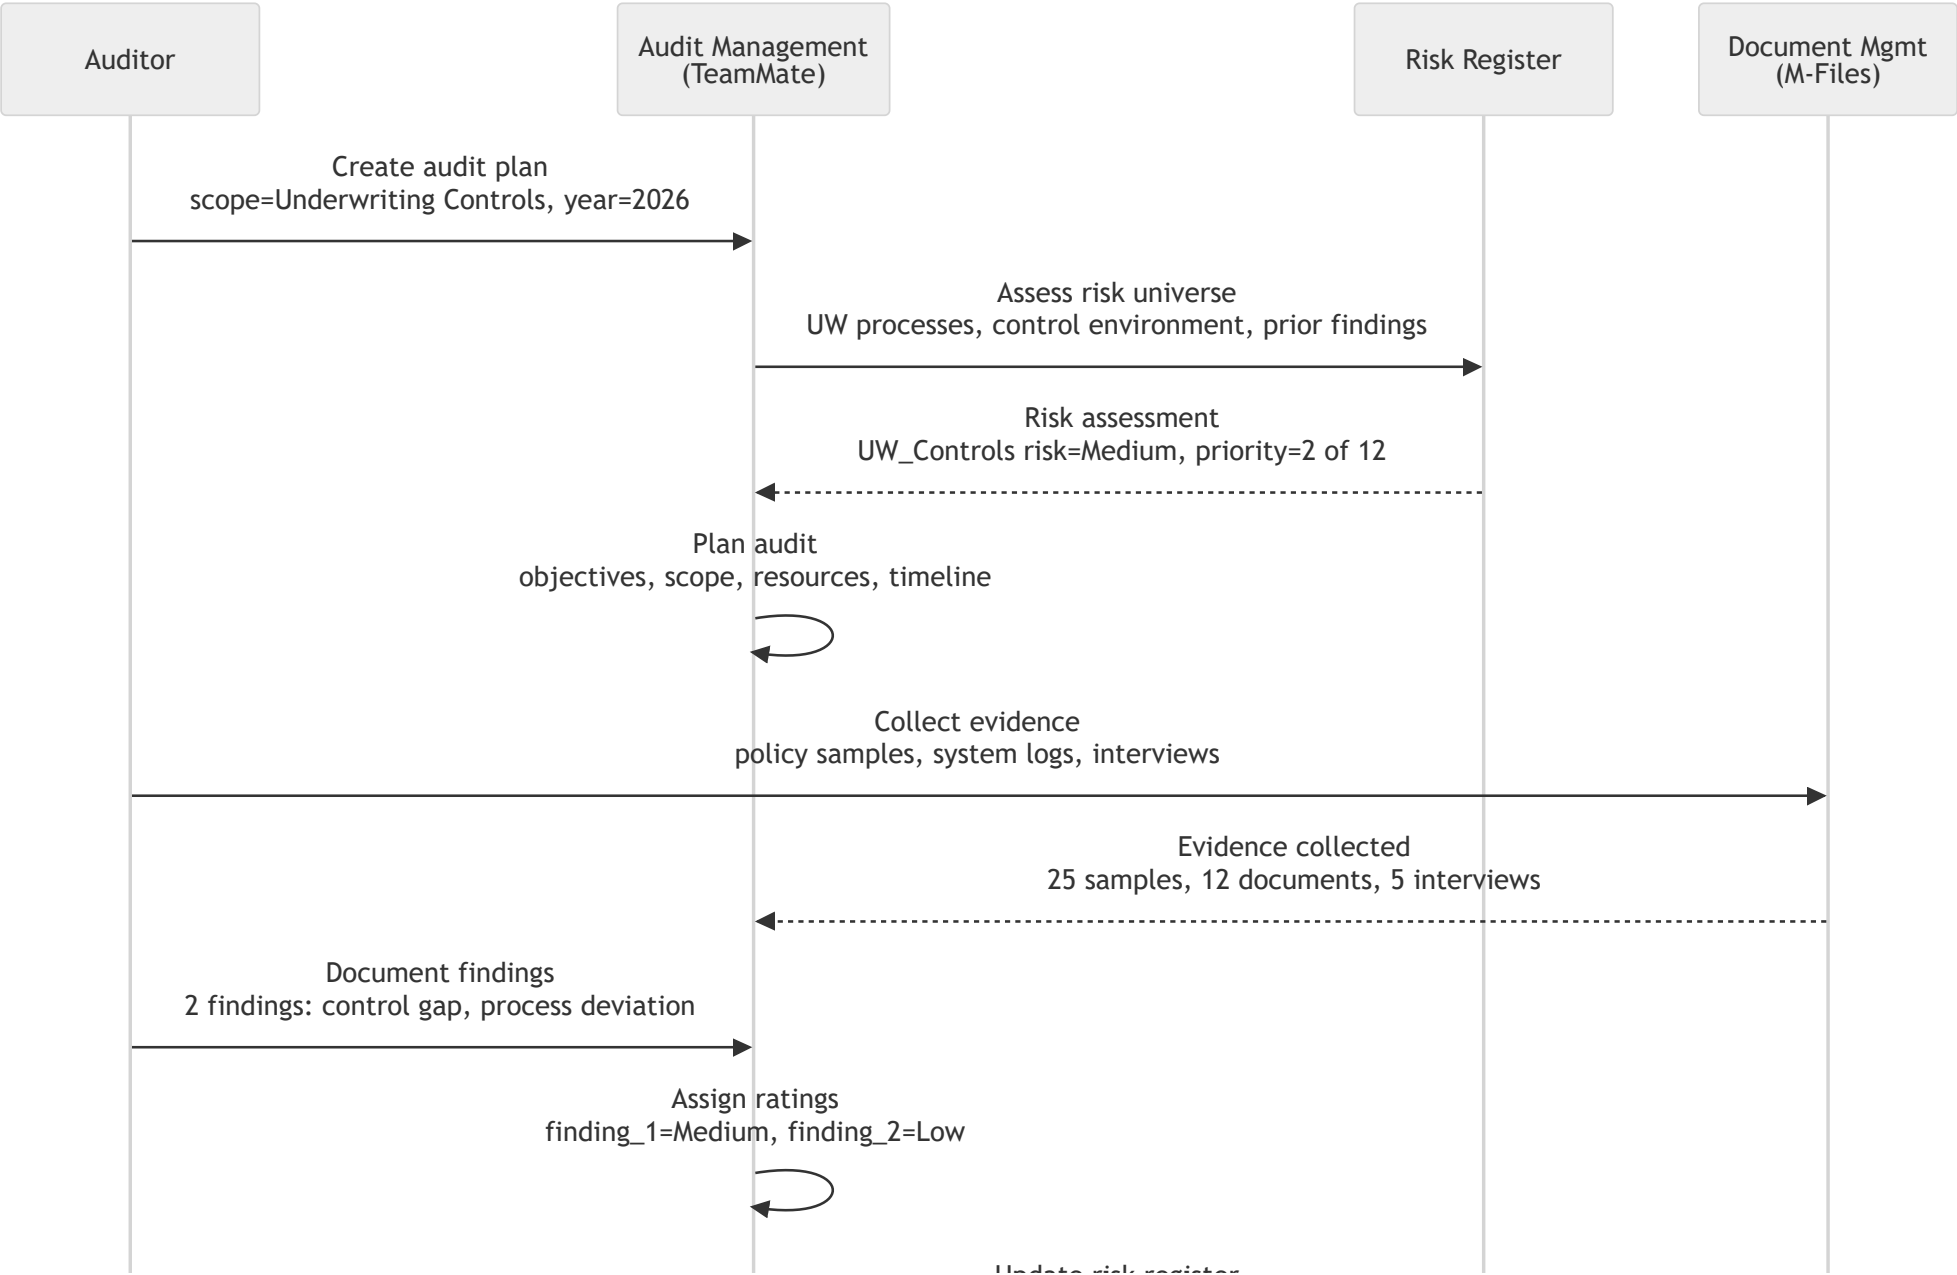

10.4 Internal Audit & Assurance

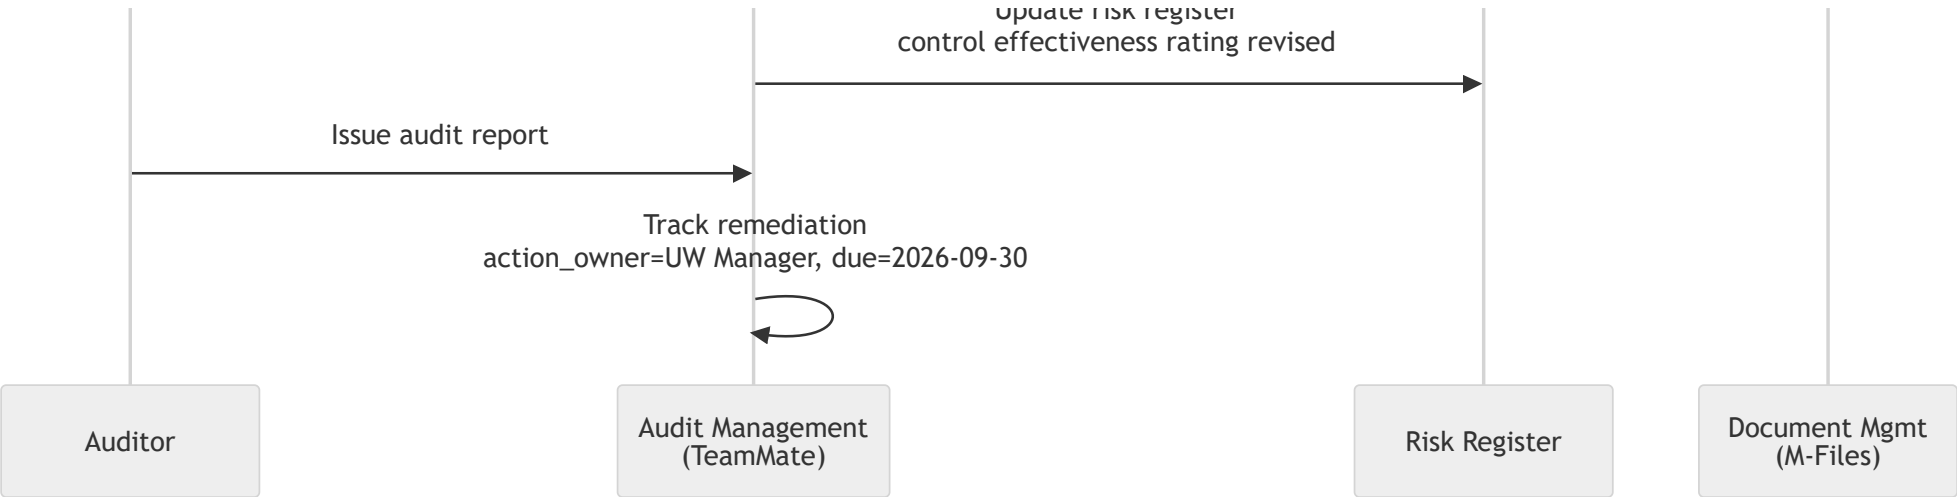

Description: Internal audit team plans and executes audits across business units. System manages audit lifecycle from planning to reporting and issue tracking.

Actors: Internal Auditor, Audit Manager, Audit Committee

Systems: Audit Management (TeamMate), Risk Register, Document Mgmt (M-Files), Compliance Management (Wolters Kluwer)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Internal Audit	Plan	CreateAuditPlan	Audit Management (TeamMate)	Audit Management (TeamMate)	Internal	Internal	API-led (Real-time)	Simple
Internal Audit	Risk	AssessRiskUniverse	Audit Management (TeamMate)	Risk Register	TeamMate API (REST)	Risk Register API (REST)	API-led (Real-time)	Medium
Internal Audit	Evidence	CollectAuditEvidence	Audit Management (TeamMate)	Document Mgmt (M-Files)	TeamMate API (REST)	M-Files REST API (API Key)	API-led (Real-time)	Simple
Internal Audit	Finding	DocumentAuditFinding	Audit Management (TeamMate)	Audit Management (TeamMate)	Internal	Internal	API-led (Real-time)	Medium
Internal Audit	Remediation	TrackRemediation	Audit Management (TeamMate)	Audit Management (TeamMate)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Internal Audit	Plan	Audit plan approved with defined scope and objectives	Risk-based audit plan; resourced adequately; audit committee approved
Internal Audit	Risk	Risk universe assessed before audit execution	Risk ratings current; audit frequency appropriate; emerging risks considered
Internal Audit	Evidence	Sufficient evidence collected to support findings	Sample size statistically valid; evidence cross-referenced; work papers reviewed
Internal Audit	Finding	Findings documented with root cause and impact	Finding rating consistent with risk framework; root cause analysis; management response
Internal Audit	Remediation	Remediation actions tracked to closure	Action owner assigned; due date set; status updates; escalation for overdue items

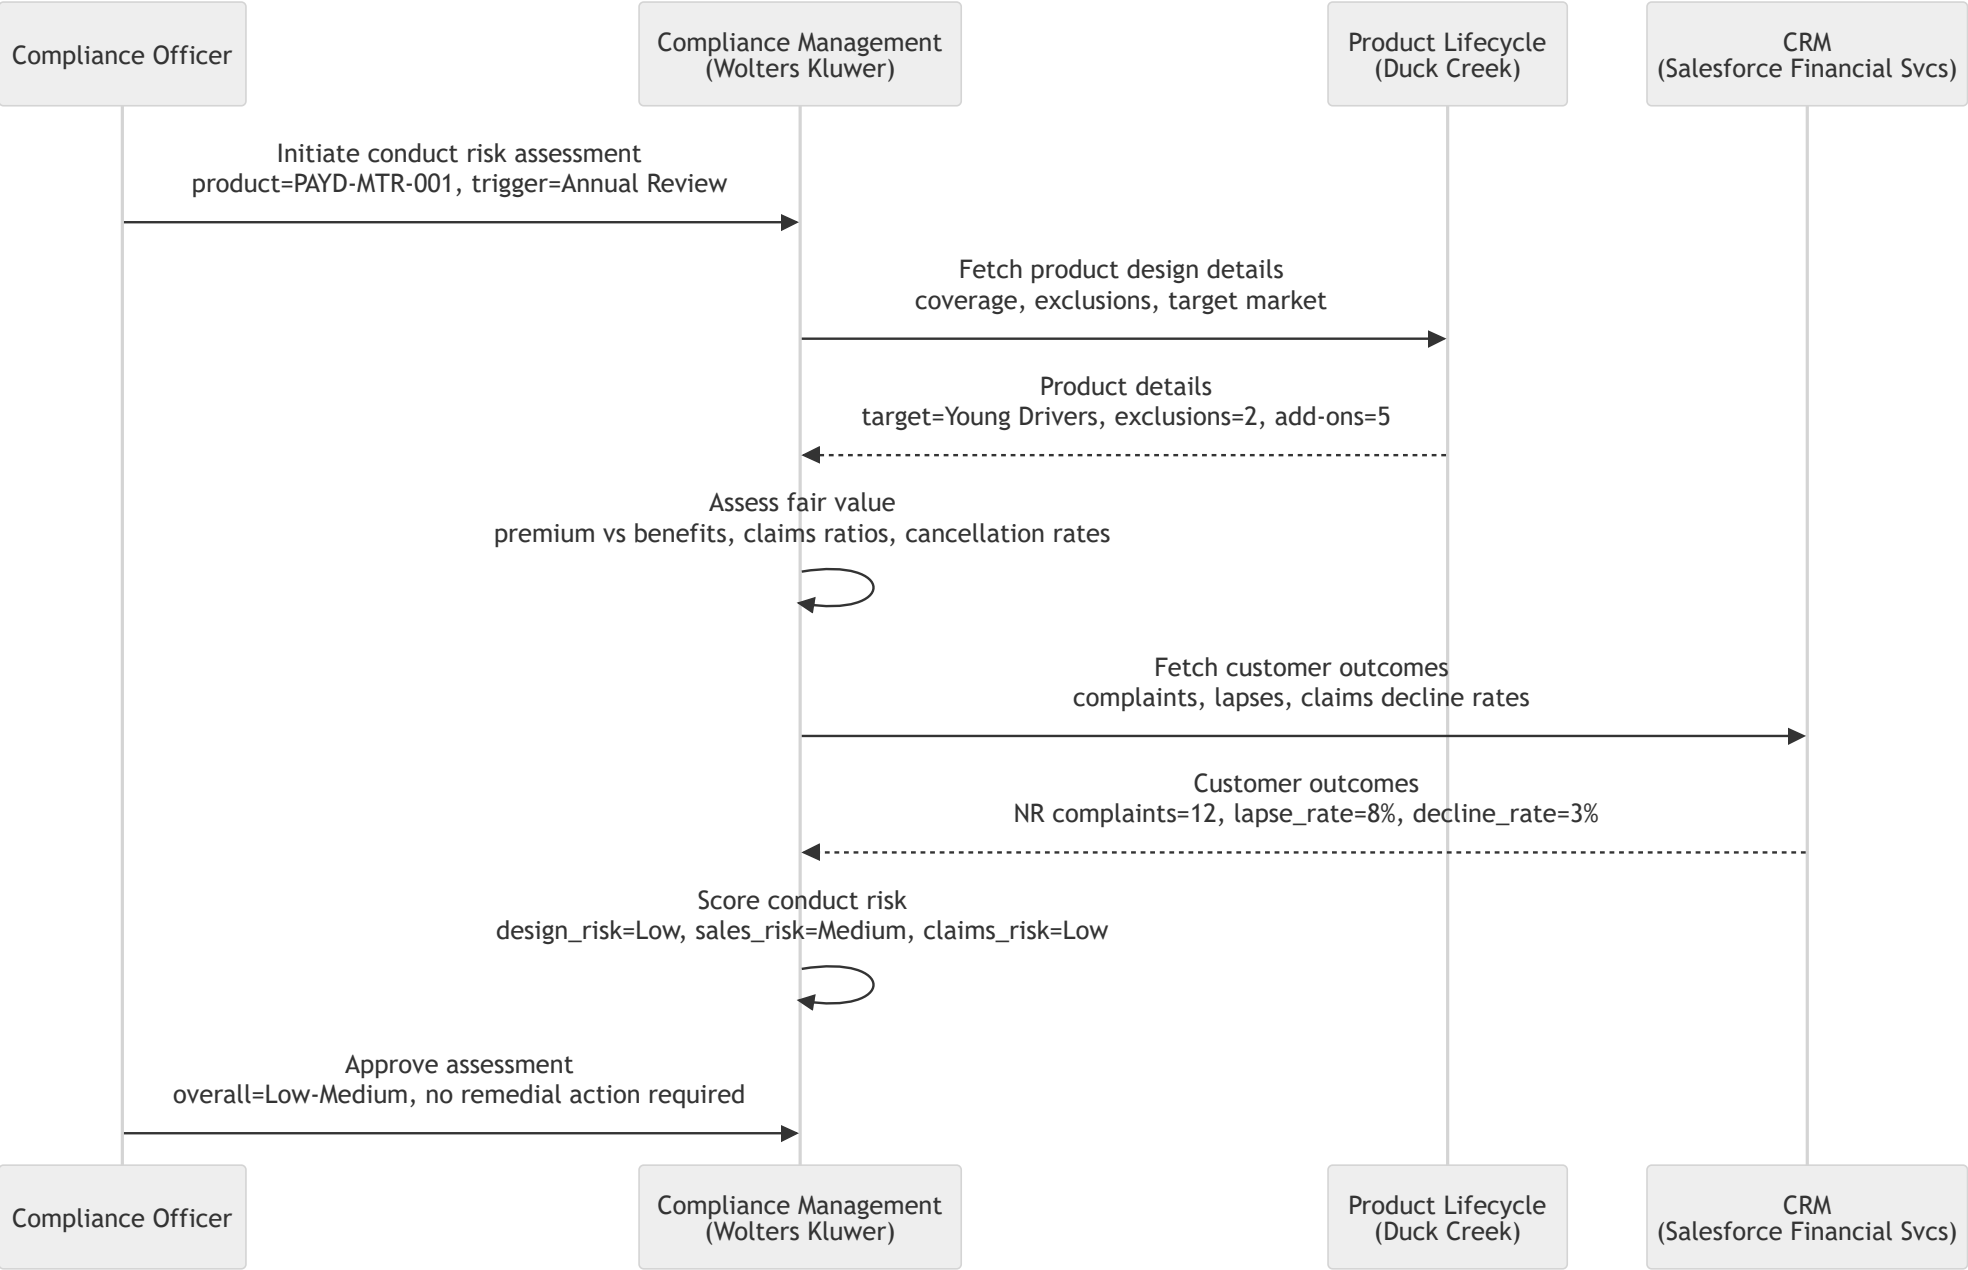

10.5 Conduct Risk & Fair Value Assessment

Description: Compliance and product teams assess conduct risk including product design, sales practices, claims handling, and fair value outcomes for customers.

Actors: Compliance Officer, Product Manager, Conduct Risk Manager

Systems: Compliance Management (Wolters Kluwer), Product Lifecycle (Duck Creek), CRM (Salesforce Financial Services), Complaints System

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Conduct Risk	Initiate	InitiateConductAssessment	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	API-led (Real-time)	Simple
Conduct Risk	Product	FetchProductDesignDetails	Compliance Management (Wolters Kluwer)	Product Lifecycle (Duck Creek)	Wolters Kluwer API (REST)	Duck Creek REST API (OAuth2)	API-led (Real-time)	Medium
Conduct Risk	FairValue	AssessFairValue	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	Batch (Scheduled)	High
Conduct Risk	Outcomes	FetchCustomerOutcomes	Compliance Management (Wolters Kluwer)	CRM (Salesforce Financial Services)	Wolters Kluwer API (REST)	Salesforce REST API (OAuth2)	API-led (Real-time)	Medium
Conduct Risk	Report	RecordConductRiskAssessment	Compliance Management (Wolters Kluwer)	Compliance Management (Wolters Kluwer)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Conduct Risk	Initiate	Conduct risk assessment initiated for trigger events	New product launch, annual review, significant complaint volume, or regulatory change
Conduct Risk	Product	Product design details fetched for assessment	Target market defined; exclusions reviewed; add-ons assessed for fair value
Conduct Risk	FairValue	Fair value assessment completed per regulatory methodology	Premium-benefit ratio benchmarked; claims ratios analysed; comparison with market
Conduct Risk	Outcomes	Customer outcome data analyse	Complaint root causes; lapse patterns; claims decline reasons; vulnerable customer impact

Flow	Entity	Acceptance Criterion	Expected Outcome
		d across product lifecycle	
Conduct Risk	Report	Conduct risk score recorded and remediation actions tracked	Overall rating: Low/Medium/High; remedial actions defined; reassessment date set

11: IFRS 17 Accounting & Finance — IN032

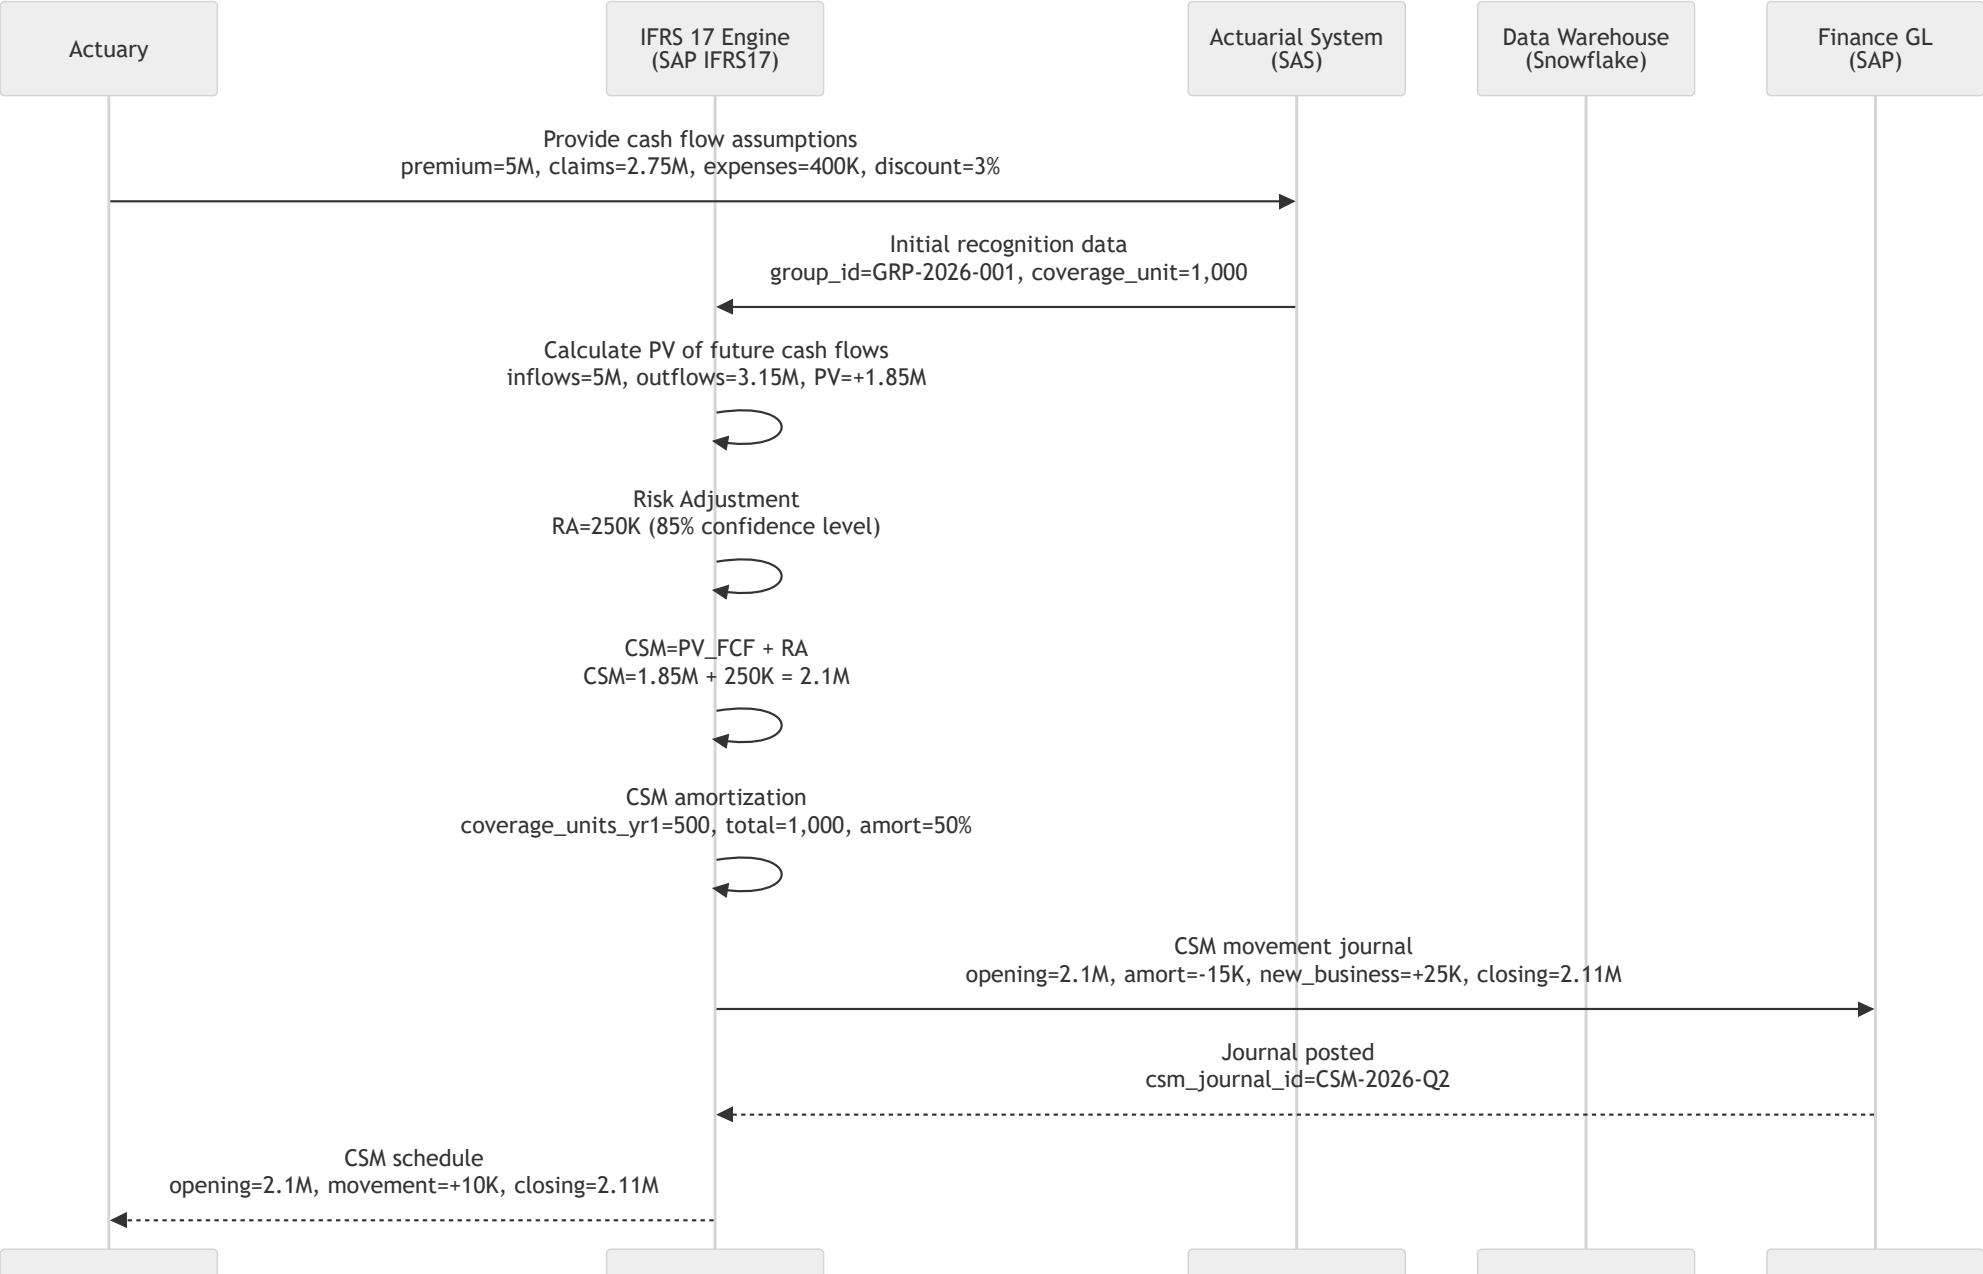

11.1 CSM Calculation & Amortization

Description: Actuarial and finance teams calculate Contractual Service Margin (CSM) at initial recognition and amortize over coverage period per IFRS 17 requirements.

Actors: Actuary, Finance Manager, Auditor

Systems: IFRS 17 Engine (SAP IFRS17), Actuarial System (SAS), Data Warehouse (Snowflake), Finance GL (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
CSM	Data	ProvideCashFlowAssumptions	Actuarial System (SAS)	IFRS 17 Engine (SAP IFRS17)	SAS API (SOAP)	SAP IFRS17 API (SOAP)	Batch (ETL)	High
CSM	PV	CalculatePVFutureCashFlows	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High
CSM	Risk	CalculateRiskAdjustment	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High
CSM	Amortization	AmortizeCSM	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
CSM	GL	PostCSMMovement	IFRS 17 Engine (SAP IFRS17)	Finance GL (SAP)	SAP IFRS17 API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
CSM	Data	Cash flow assumptions provided at group level	Premium, claims, expenses, and discount rate per group; assumptions signed off by actuary
CSM	PV	PV of future cash flows calculated correctly	Inflows and outflows discounted; reinsurance cash flows included; currency FX applied
CSM	Risk	Risk adjustment calculated per IFRS 17 confidence level	RA technique (VaR/CoS) documented; confidence level disclosed; recalculation frequency
CSM	Amortization	CSM amortized over coverage units	Coverage units based on policy count; amortization pattern matches coverage expiry
CSM	GL	CSM movement posted to GL and reconciled	Opening to closing reconciliation; movement by component; audit trail maintained

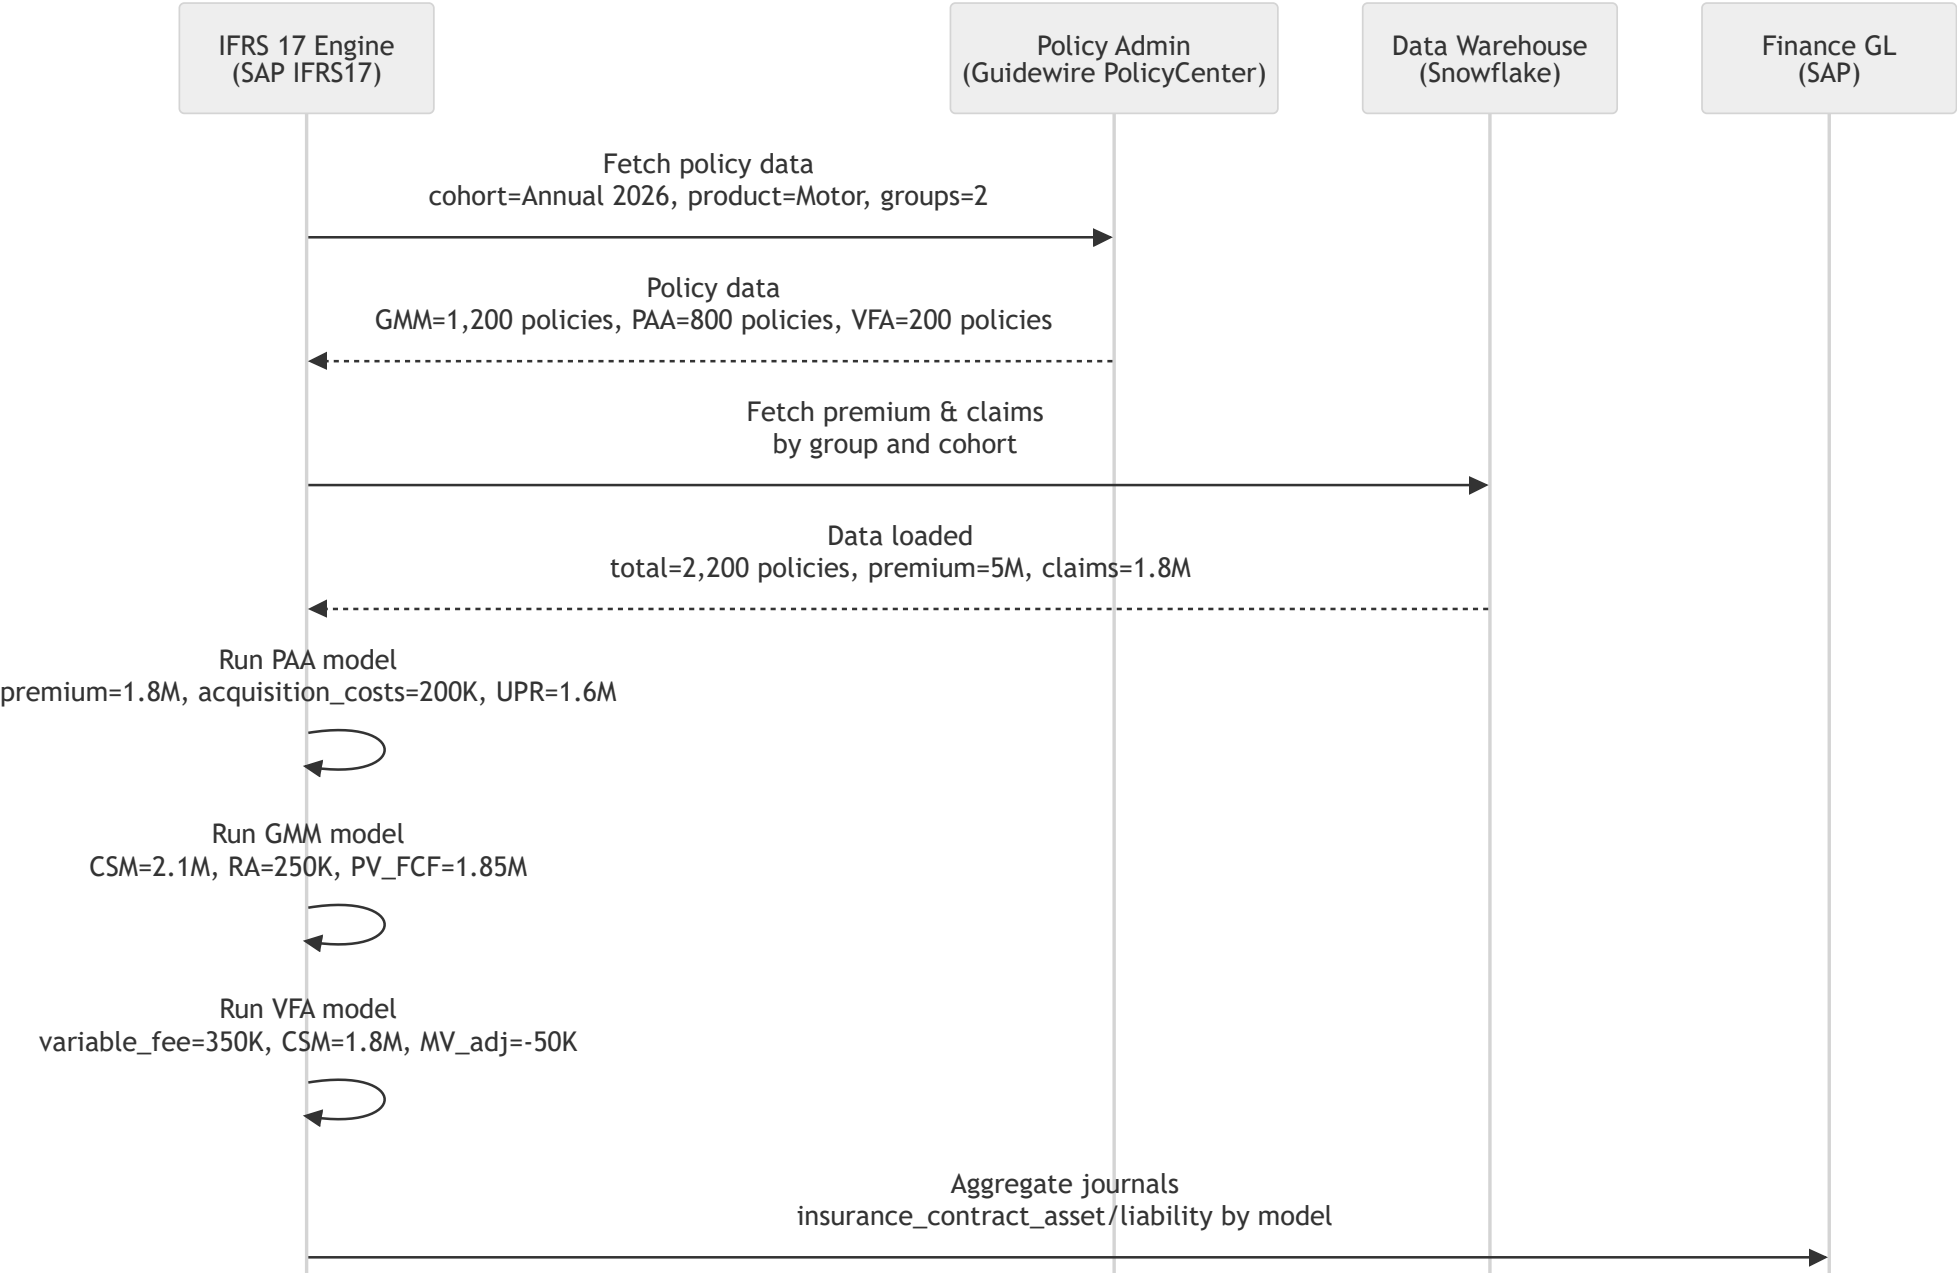

11.2 PAA / GMM / VFA Aggregation

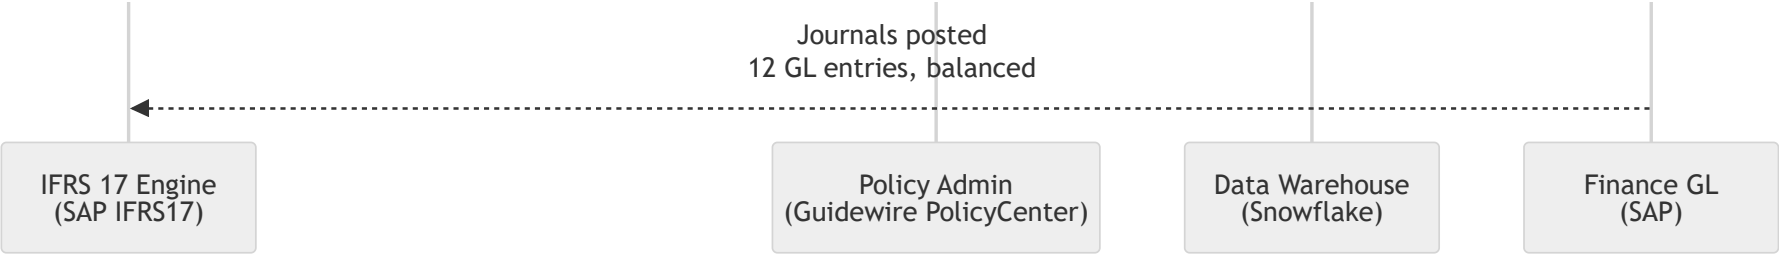

Description: Insurance contracts grouped and measured under Premium Allocation Approach, General Measurement Model, or Variable Fee Approach per IFRS 17.

Actors: Finance Manager, Actuary

Systems: IFRS 17 Engine (SAP IFRS17), Policy Admin (Guidewire PolicyCenter), Data Warehouse (Snowflake), Finance GL (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
PAA/GMM/VFA	Policy	FetchPolicyData	IFRS 17 Engine (SAP IFRS17)	Policy Admin (Guidewire PolicyCenter)	SAP IFRS17 API (SOAP)	Guidewire REST API (API Key)	Batch (ETL)	Medium
PAA/GMM/VFA	Data	FetchClaimsAndPremium	IFRS 17 Engine (SAP IFRS17)	Data Warehouse (Snowflake)	SAP IFRS17 API (SOAP)	Snowflake JDBC	Batch (ETL)	High
PAA/GMM/VFA	PAA	RunPAAModel	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
PAA/GMM/VFA	GMM	RunGMMModel	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High
PAA/GMM/VFA	VFA	RunVFAModel	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
PAA/GMM/VFA	Policy	Policy data fetched with correct model classification	PAA: coverage period < 12 months; GMM: non-participating; VFA: direct participating
PAA/GMM/VFA	Data	Premium and claims data loaded for each group	Data completeness by group; earned vs unearned split; incurred claims accurate
PAA/GMM/VFA	PAA	PAA model calculates liability for remaining coverage	Premium allocation simplified; acquisition costs deferred; loss component if onerous
PAA/GMM/VFA	GMM	GMM model calculates CSM, RA, and PV FCF	CSM positive or zero; loss component separate; interest accreted at locked-in rate
PAA/GMM/VFA	VFA	VFA model applied for direct participating contracts	Variable fee reflects insurer share of underlying items; MV changes adjust CSM

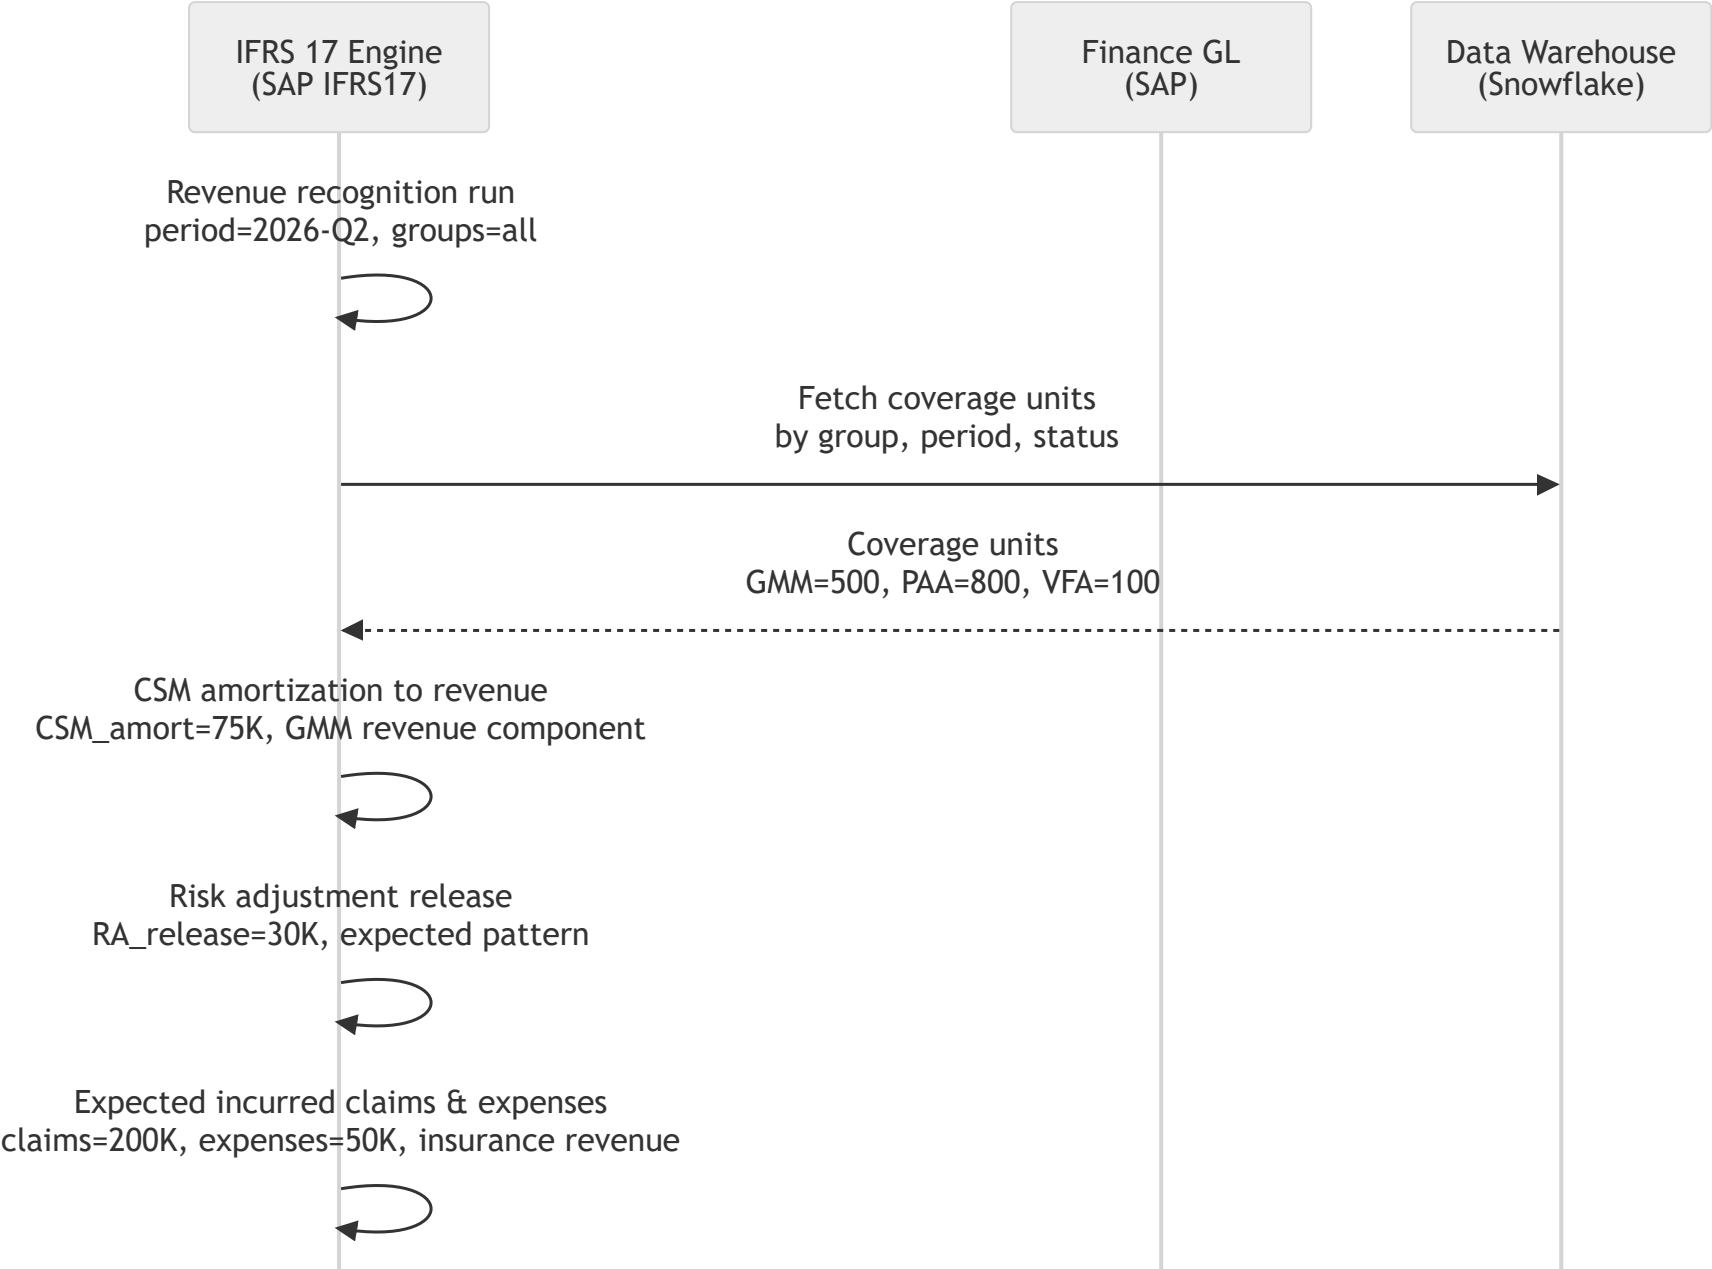

11.3 Insurance Revenue Recognition

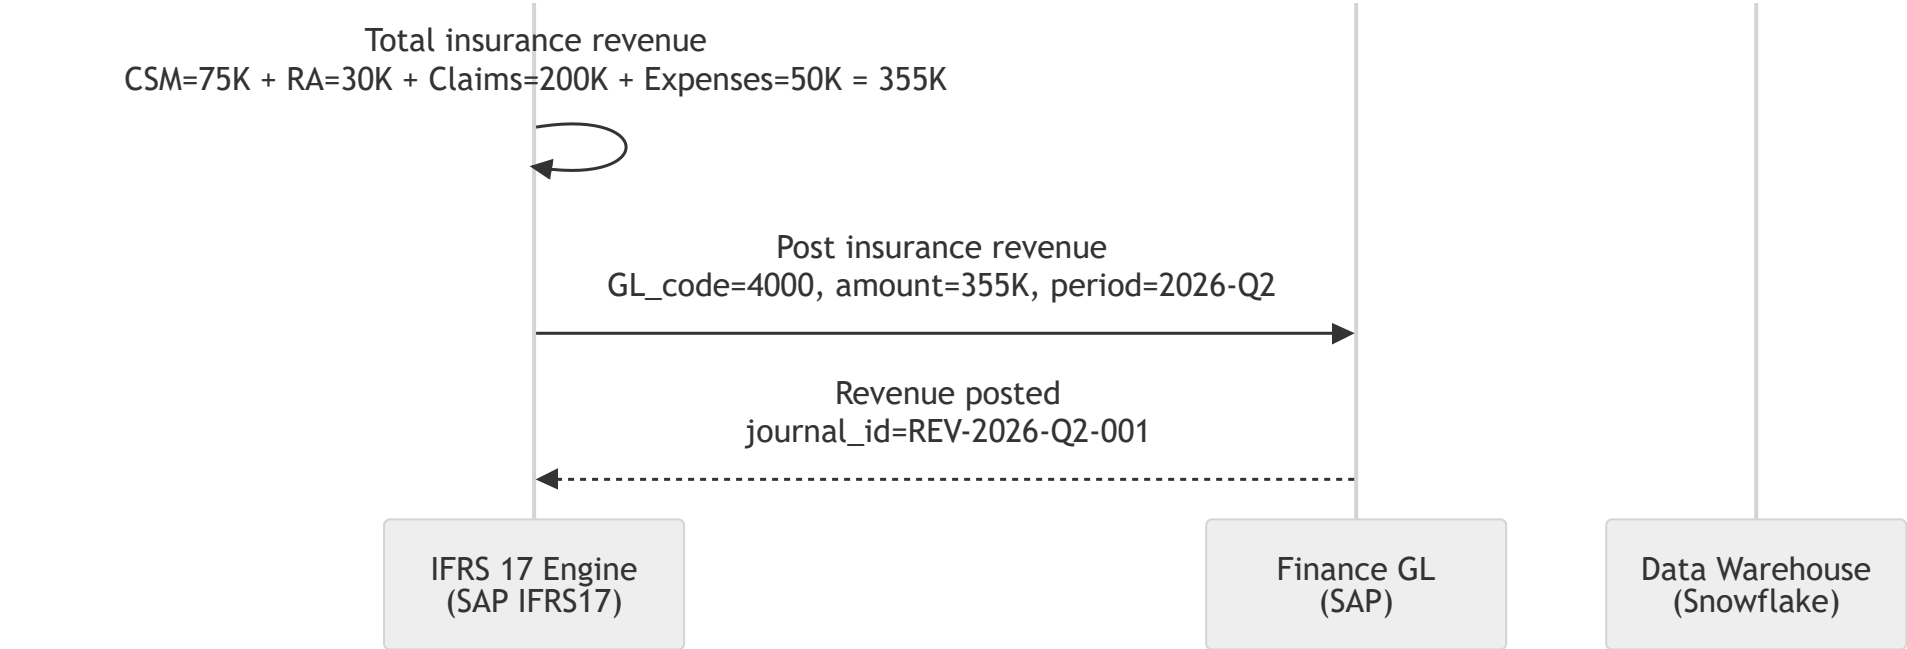

Description: Insurance revenue recognized over coverage period per IFRS 17. System calculates revenue from CSM amortization, risk adjustment release, and expected incurred claims.

Actors: Finance Manager, Actuary

Systems: IFRS 17 Engine (SAP IFRS17), Finance GL (SAP), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Revenue	Units	FetchCoverageUnits	IFRS 17 Engine (SAP IFRS17)	Data Warehouse (Snowflake)	SAP IFRS17 API (SOAP)	Snowflake JDBC	API-led (Real-time)	Medium
Revenue	CSM	CalculateCSMAmortization	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
Revenue	RA	CalculateRARelease	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
Revenue	Claims	CalculateExpectedClaims	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
Revenue	GL	PostInsuranceRevenue	IFRS 17 Engine (SAP IFRS17)	Finance GL (SAP)	SAP IFRS17 API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Revenue	Units	Coverage units calculated correctly per group	Units based on policy count or sum insured; lapses and terminations adjusted
Revenue	CSM	CSM amortization to revenue calculated per coverage pattern	Amortization = opening CSM x (coverage units released / total remaining)
Revenue	RA	Risk adjustment release calculated per expected pattern	Release pattern disclosed; consistent with risk profile of contracts
Revenue	Claims	Expected incurred claims and expenses recognized	Expected claims based on discounted PV; incurred expenses allocated per group
Revenue	GL	Insurance revenue posted to GL and reconciled	Revenue by group reconciled to IFRS 17 disclosures; comparative period consistent

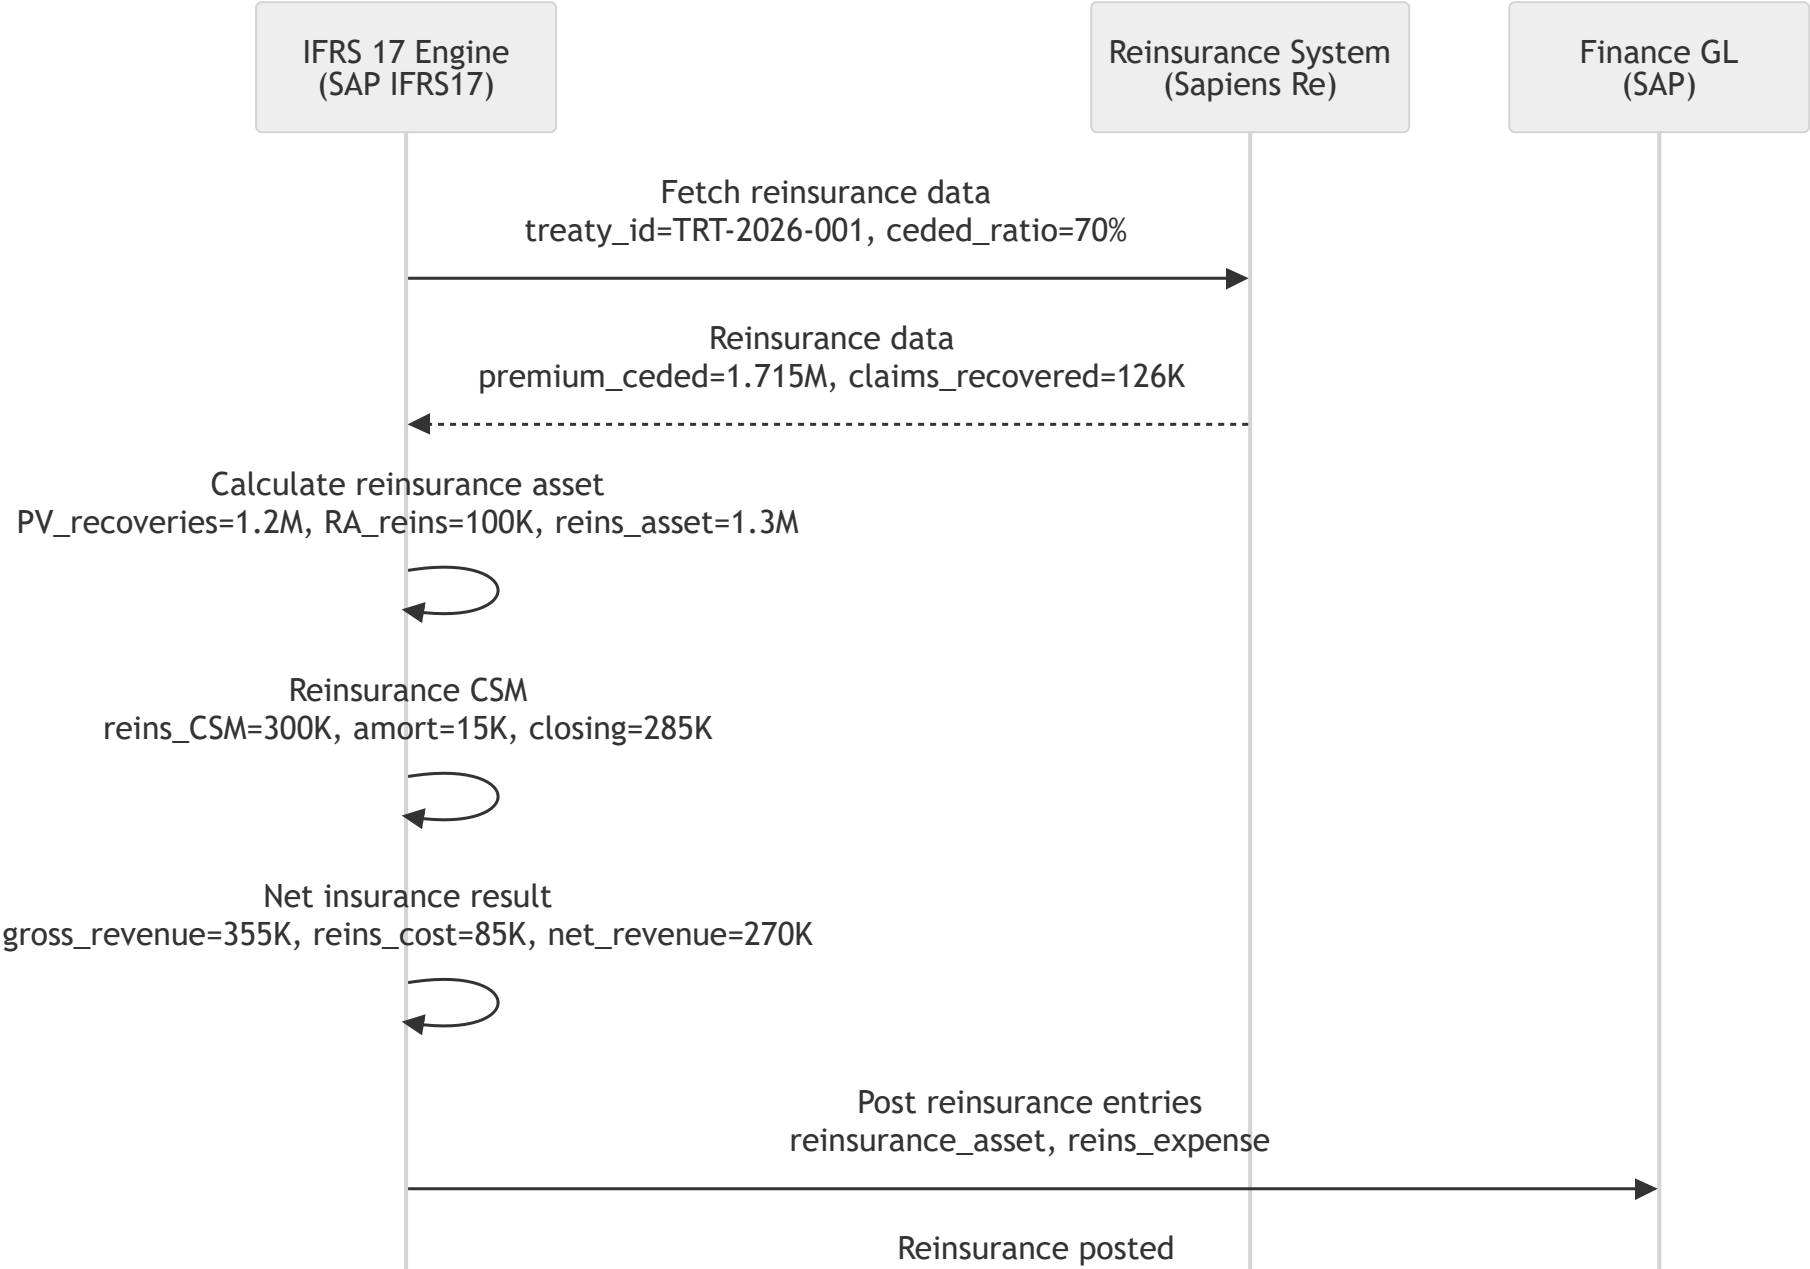

11.4 Reinsurance Impact on IFRS 17

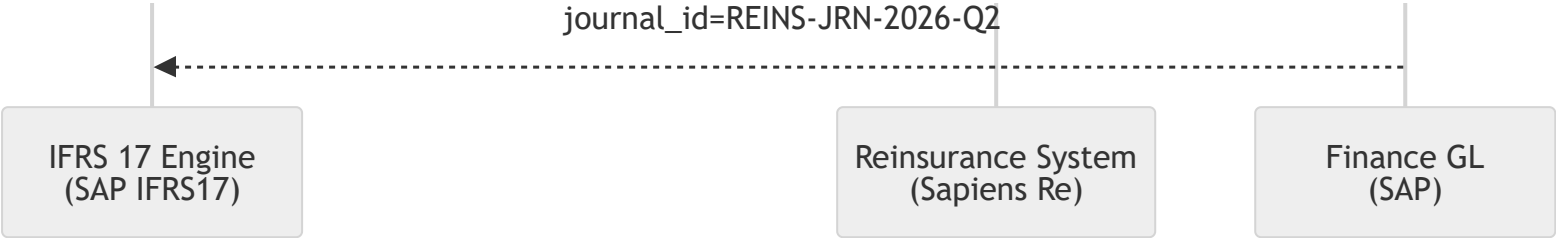

Description: Reinsurance contracts held are accounted separately under IFRS 17. System calculates reinsurance asset, CSM for reinsurance, and net insurance result.

Actors: Finance Manager, Reinsurance Accountant

Systems: IFRS 17 Engine (SAP IFRS17), Reinsurance System (Sapiens Re), Finance GL (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Reinsurance IFRS17	Data	FetchReinsuranceData	IFRS 17 Engine (SAP IFRS17)	Reinsurance System (Sapiens Re)	SAP IFRS17 API (SOAP)	Sapiens API (REST)	Batch (ETL)	High
Reinsurance IFRS17	Asset	CalculateReinsuranceAsset	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High
Reinsurance IFRS17	CSM	CalculateReinsuranceCSM	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	High
Reinsurance IFRS17	Net	CalculateNetInsuranceResult	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
Reinsurance IFRS17	GL	PostReinsuranceEntries	IFRS 17 Engine (SAP IFRS17)	Finance GL (SAP)	SAP IFRS17 API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Reinsurance IFRS17	Data	Reinsurance data fetched and reconciled with direct insurance	Ceded ratios applied correctly; premium and claims consistent with reinsurance system
Reinsurance IFRS17	Asset	Reinsurance asset calculated as PV of recoveries plus RA	Recoveries discounted at same rate as direct; RA reflects non-performance risk
Reinsurance IFRS17	CSM	Reinsurance CSM calculated and amortized	Reinsurance CSM = PV recoveries - premium ceded; amortized over reinsurance coverage
Reinsurance IFRS17	Net	Net insurance result calculated gross minus reinsurance	Revenue net of reinsurance premium; claims net of recoveries; CSM net of reinsurance
Reinsurance IFRS17	GL	Reinsurance entries posted and reconciled	Reinsurance asset on balance sheet; reinsurance expense through P&L; no double counting

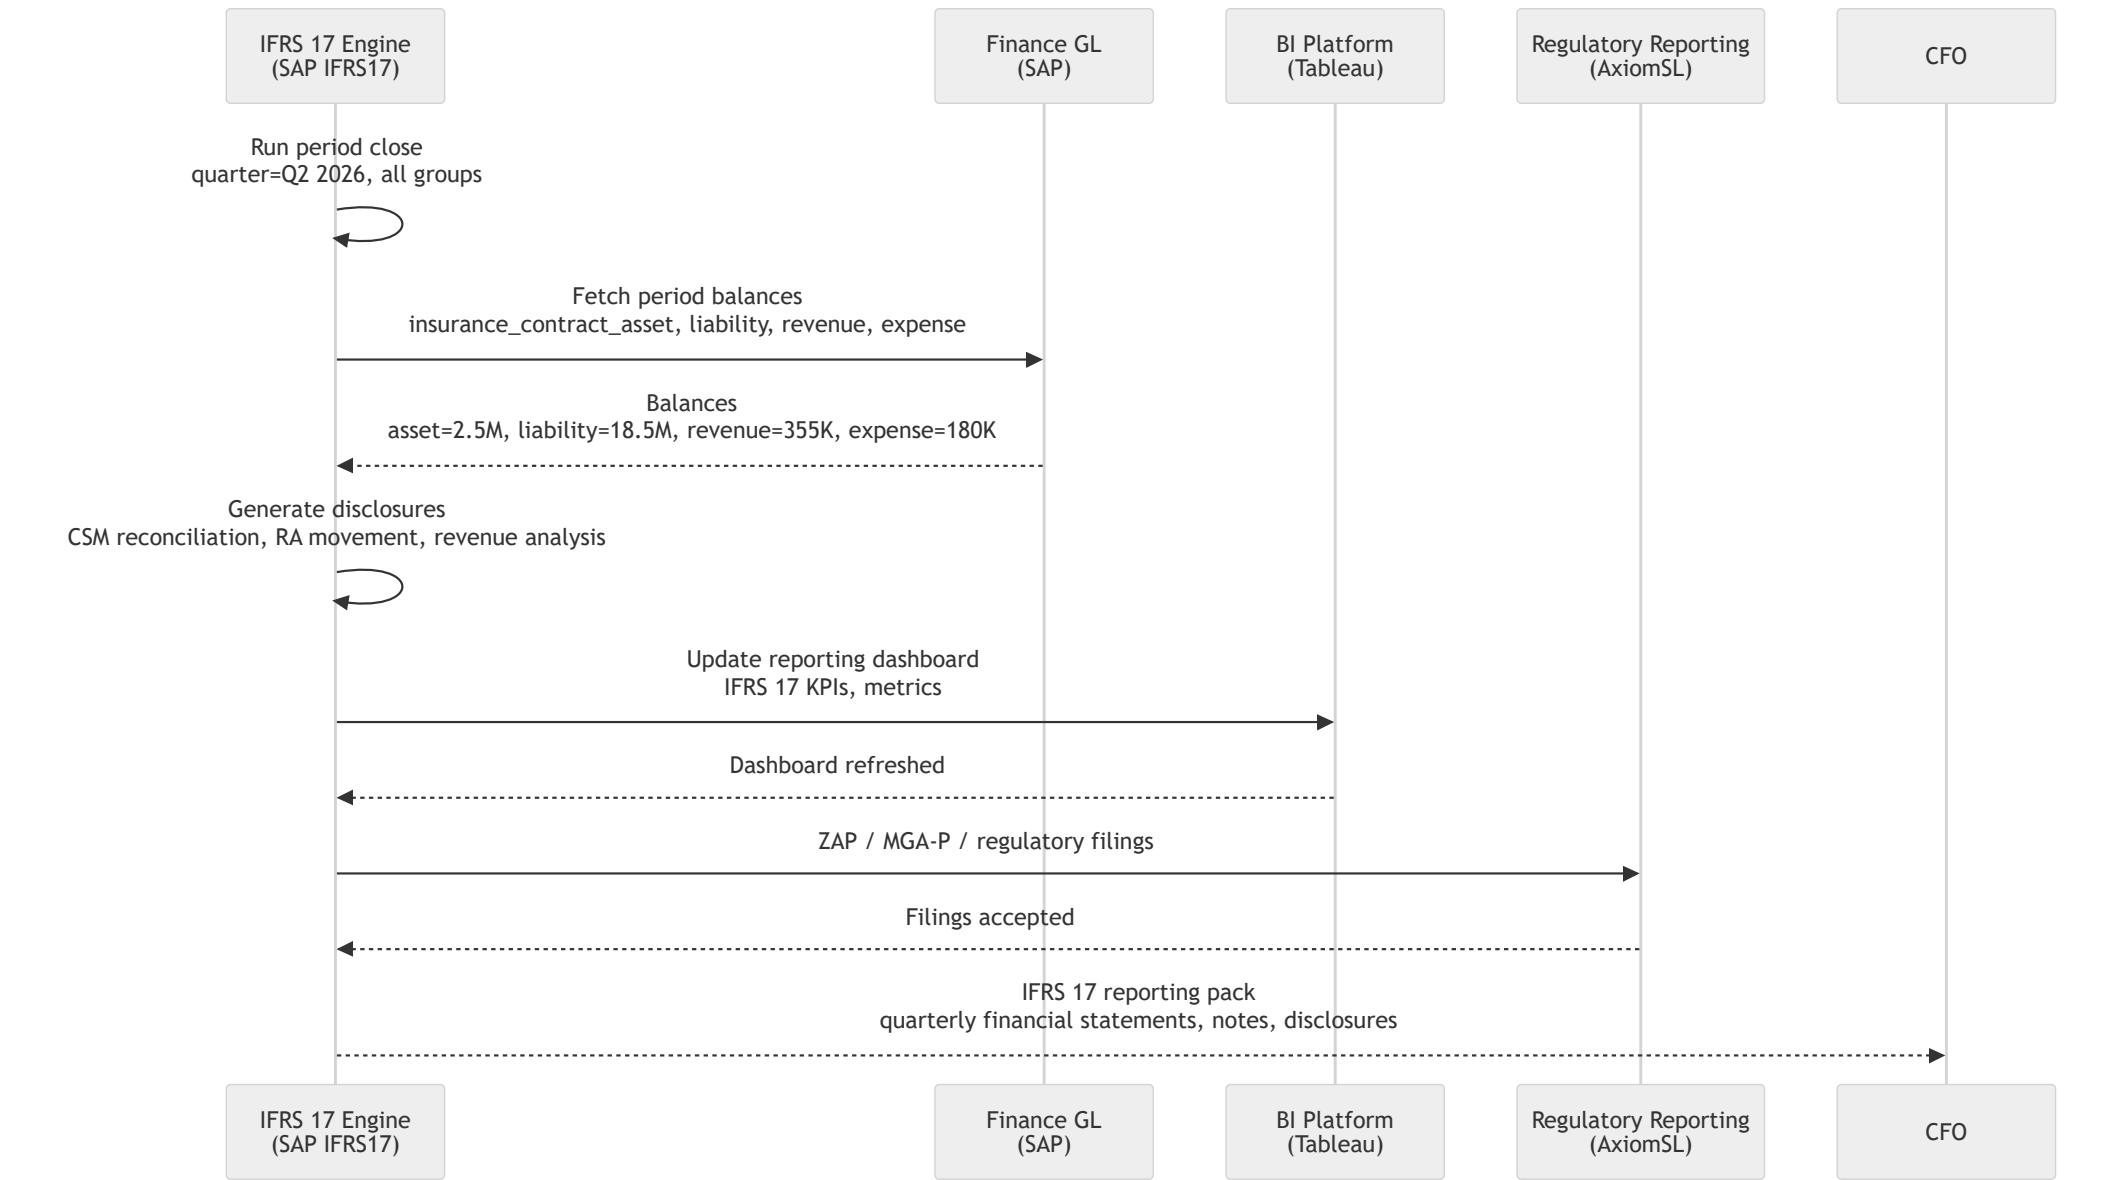

11.5 IFRS 17 Reporting & Disclosure

Description: Finance team prepares IFRS 17 financial statements and disclosures including reconciliation of CSM, RA movement, and insurance revenue analysis.

Actors: Finance Manager, Chief Financial Officer, Auditor, Regulator

Systems: IFRS 17 Engine (SAP IFRS17), Finance GL (SAP), BI Platform (Tableau), Regulatory Reporting (AxiomSL)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
IFRS17 Reporting	GL	FetchPeriodBalances	IFRS 17 Engine (SAP IFRS17)	Finance GL (SAP)	SAP IFRS17 API (SOAP)	SAP API (SOAP)	API-led (Real-time)	Medium
IFRS17 Reporting	Disclosures	GenerateDisclosures	IFRS 17 Engine (SAP IFRS17)	IFRS 17 Engine (SAP IFRS17)	Internal	Internal	Batch (Scheduled)	Medium
IFRS17 Reporting	Dashboard	UpdateReportingDashboard	IFRS 17 Engine (SAP IFRS17)	BI Platform (Tableau)	SAP IFRS17 API (SOAP)	Tableau REST API	Event-driven	Simple
IFRS17 Reporting	Regulatory	SubmitRegulatoryFilings	IFRS 17 Engine (SAP IFRS17)	Regulatory Reporting (AxiomSL)	SAP IFRS17 API (SOAP)	AxiomSL API (REST)	Batch (Scheduled)	High
IFRS17 Reporting	Pack	GenerateReportingPack	IFRS 17 Engine (SAP IFRS17)	BI Platform (Tableau)	SAP IFRS17 API (SOAP)	Tableau REST API	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
IFRS17 Reporting	GL	Period balances fetched and reconciled to sub-ledger	Asset, liability, revenue, and expense balances tie to GL; movement explained by component
IFRS17 Reporting	Disclosures	All required IFRS 17 disclosures generated	CSM roll-forward; RA movement; revenue analysis; experience adjustments; onerous contract details
IFRS17 Reporting	Dashboard	IFRS 17 dashboard available for management	KPIs: CSM, RA, Revenue, Net Result; trend analysis; group-level drill-down
IFRS17 R	Regulatory	Regulatory filings submitted within deadline	APRA LRS 750.0; Solvency II equivalent; NAIC statutory filing as applicable

Flow	Entity	Acceptance Criterion	Expected Outcome
eporting			
IFRS17 Reporting	Pack	Quarterly reporting pack prepared for CFO sign-off	Financial statements, notes, disclosure checklist, and sign-off sheet; audit ready

12: Regulatory Reporting — IN029

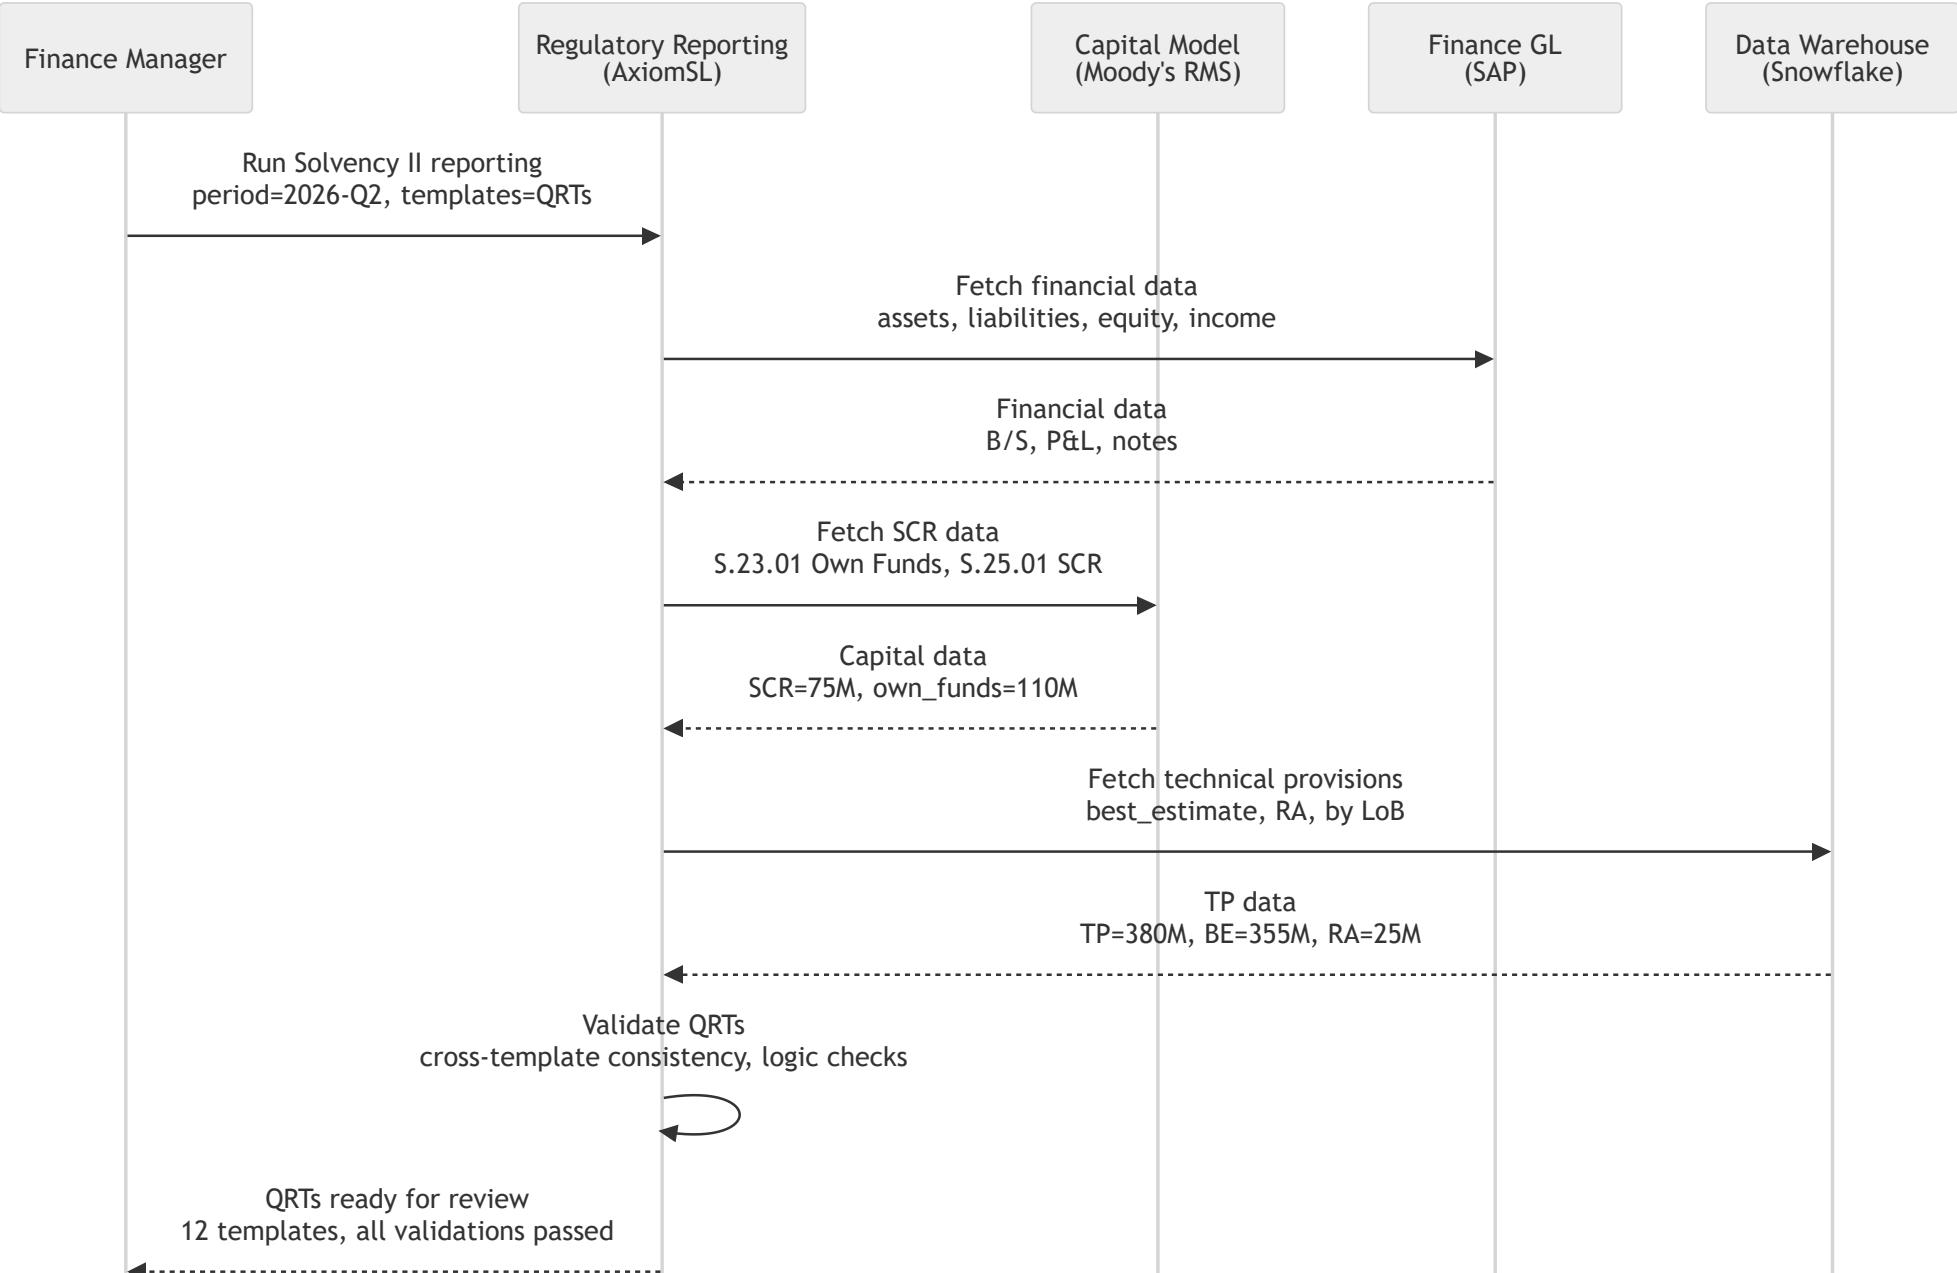

12.1 Solvency II QRT & Narrative Reporting

Description: Finance prepares Solvency II quantitative reporting templates (QRTs) and narrative reporting (SFCR, RSR) for submission to the regulator.

Actors: Finance Manager, Actuary, Risk Manager, Regulator

Systems: Regulatory Reporting (AxiomSL), Capital Model (Moody's RMS), Finance GL (SAP), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Solvency II	Financial	FetchFinancialData	Regulatory Reporting (AxiomSL)	Finance GL (SAP)	AxiomSL API (REST)	SAP API (SOAP)	Batch (ETL)	High
Solvency II	Capital	FetchSCRData	Regulatory Reporting (AxiomSL)	Capital Model (Moody's RMS)	AxiomSL API (REST)	RMS API (SOAP)	Batch (ETL)	High
Solvency II	TP	FetchTechnicalProvisions	Regulatory Reporting (AxiomSL)	Data Warehouse (Snowflake)	AxiomSL API (REST)	Snowflake JDBC	Batch (ETL)	High
Solvency II	Validation	ValidateQRTs	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	Medium
Solvency II	Submit	SubmitToRegulator	Regulatory Reporting (AxiomSL)	Regulator Portal	AxiomSL API (REST)	Regulator API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Solvency II	Financial	Financial data extracted and mapped to QRT templates	B/S and P&L mapped per EIOPA taxonomy; validation rules passed; comparatives consistent
Solvency II	Capital	Capital data populated from capital model	SCR by module; own funds by tier; eligible vs required; any capital add-ons
Solvency II	TP	Technical provisions populated by segment	Best estimate by LoB; RA by confidence level; TP calculated net of reinsurance
Solvency II	Validation	All QRT validations passed with zero critical errors	Cross-template consistency; prior period comparison; reasonableness checks
Solvency II	Submit	QRTs submitted to regulator within deadline	Submission accepted; EIOPA XBRL taxonomy compliant; confirmation received

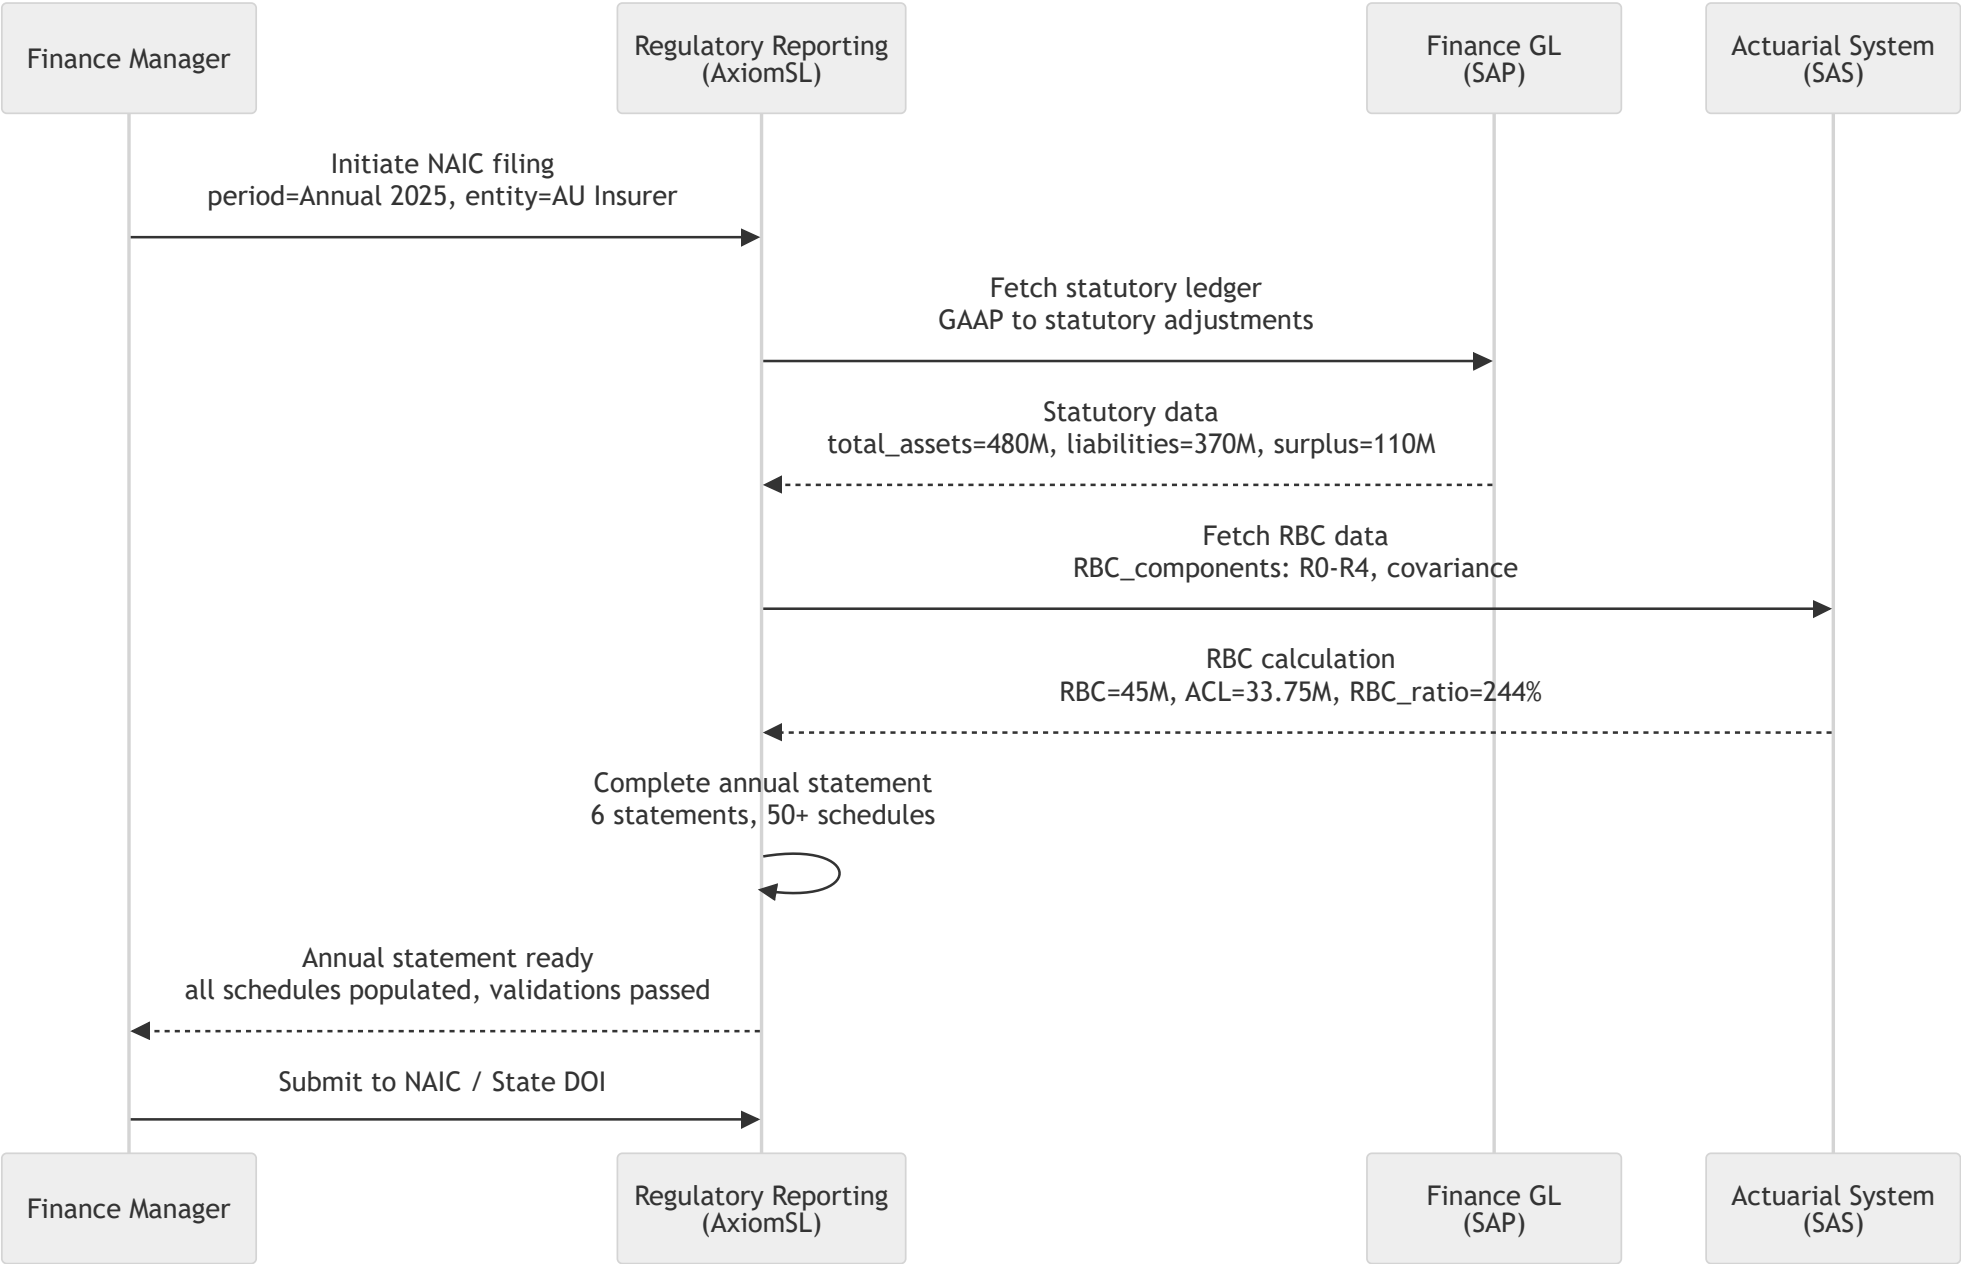

12.2 NAIC Statutory Filing

Description: US insurance entities prepare NAIC statutory financial statements and risk-based capital (RBC) filing in accordance with SSAP accounting principles.

Actors: Finance Manager, Actuary, Filing Specialist, Regulator (State DOI)

Systems: Regulatory Reporting (AxiomSL), Finance GL (SAP), Actuarial System (SAS), Filing Portal (NAIC / State DOI)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
NAIC	Statutory	FetchStatutoryLedger	Regulatory Reporting (AxiomSL)	Finance GL (SAP)	AxiomSL API (REST)	SAP API (SOAP)	Batch (ETL)	High
NAIC	RBC	FetchRBCData	Regulatory Reporting (AxiomSL)	Actuarial System (SAS)	AxiomSL API (REST)	SAS API (SOAP)	Batch (ETL)	High
NAIC	Statement	CompleteAnnualStatement	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	High
NAIC	Validation	ValidateNAICFiling	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	Medium
NAIC	Submit	SubmitNAICFiling	Regulatory Reporting (AxiomSL)	NAIC Filing Portal	AxiomSL API (REST)	NAIC Portal API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
NAIC	Statutory	Statutory ledger populated with GAAP-to-stat adjustments	Assets admitted vs non-admitted; liabilities per SSAP; surplus correctly calculated
NAIC	RBC	RBC calculated per NAIC formula	R0-R4 components; covariance credit; ACL = 75% RBC; RBC ratio computed
NAIC	Statement	Annual statement completed with all schedules	Balance sheet, income, cash flow, underwriting and investment exhibits, notes
NAIC	Validation	Cross-statement validations passed	NAIC validation checks; prior year comparatives; consistency across schedules
NAIC	Submit	Filing submitted to NAIC within statutory deadline	Filing accepted; confirmation of receipt; public filing status confirmed

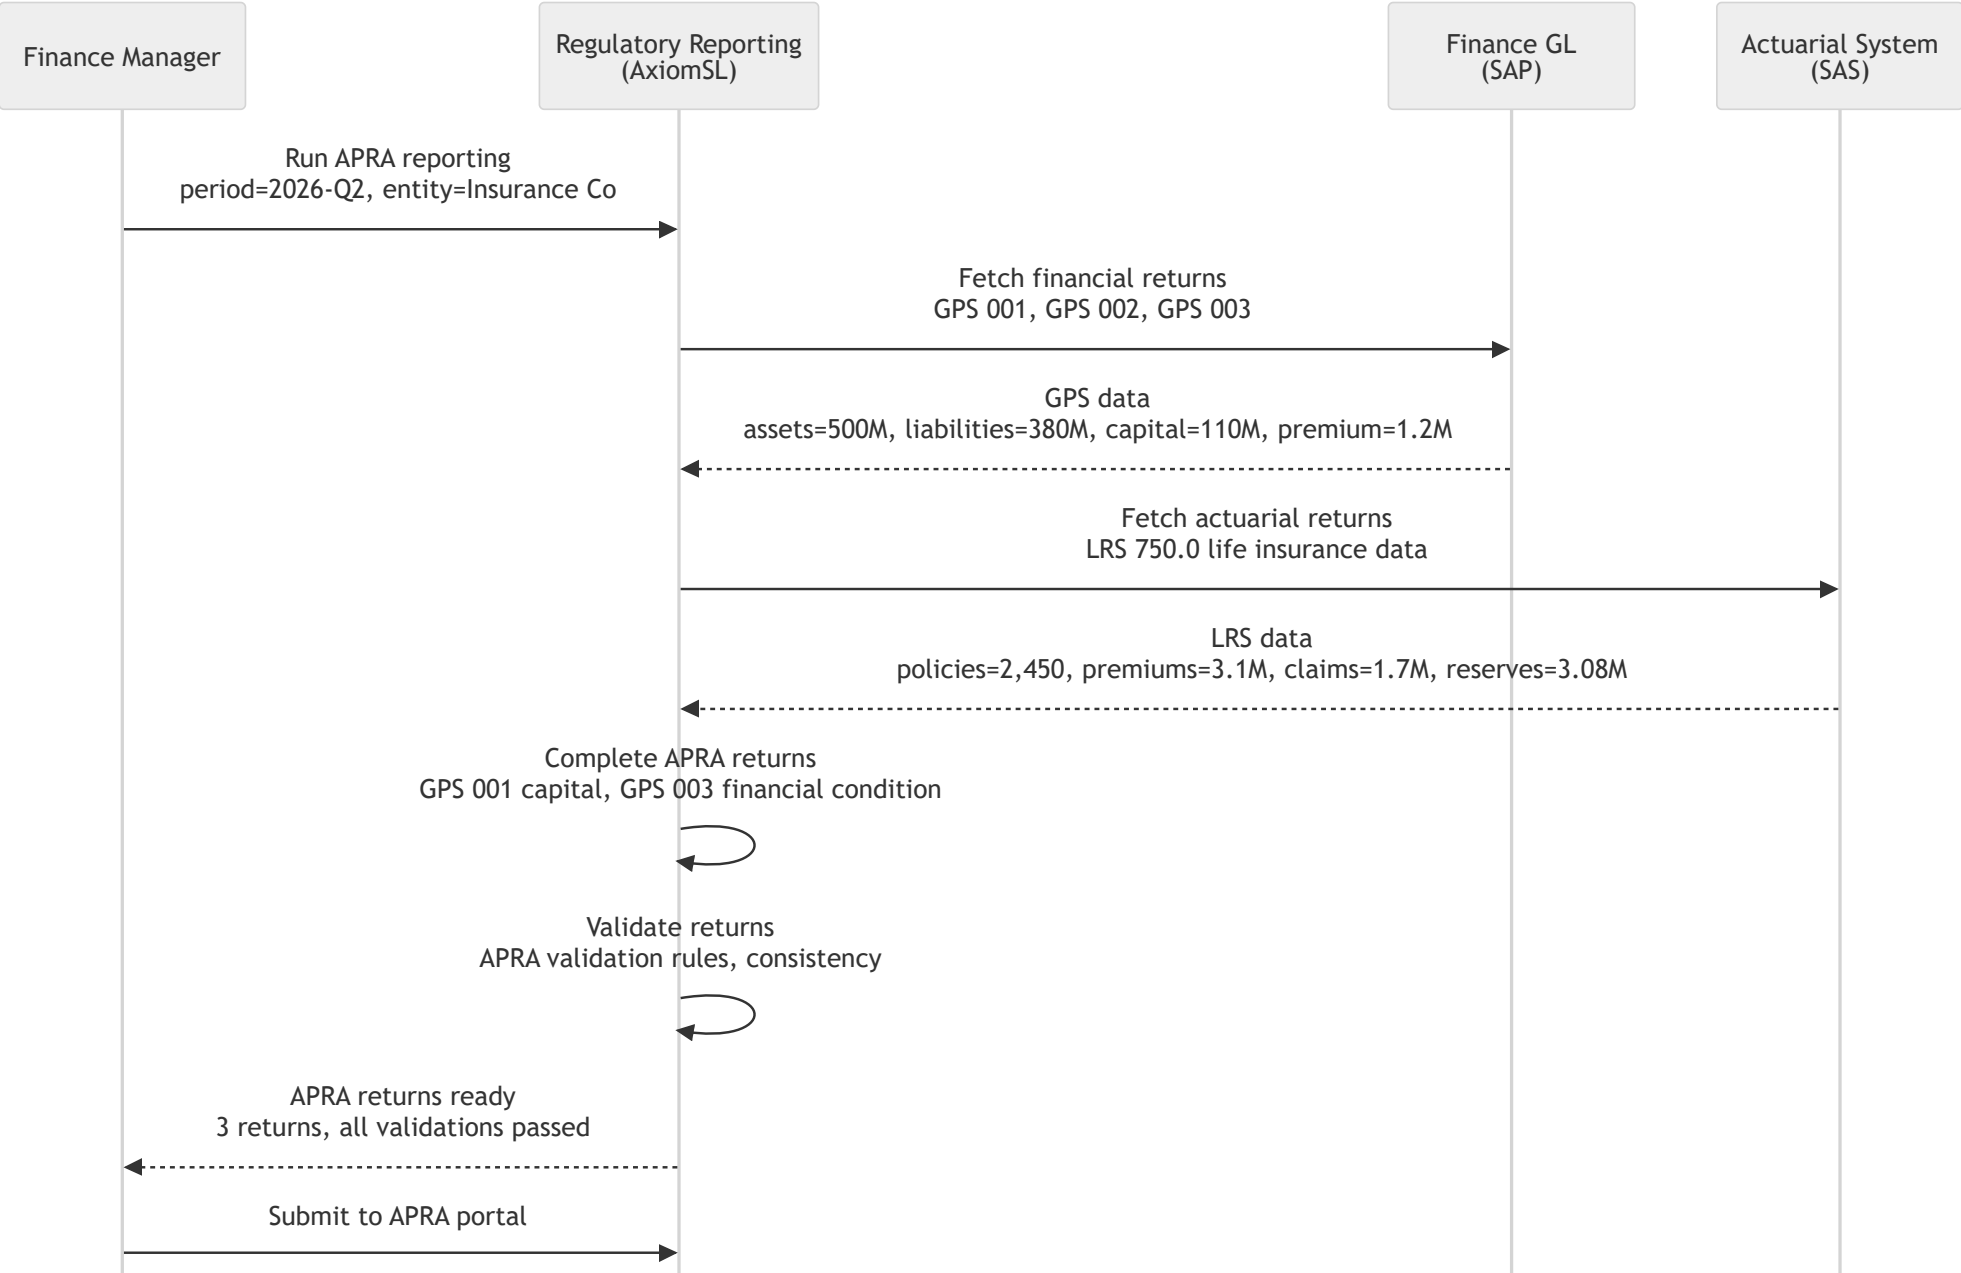

12.3 APRA GPS 001 & LRS 750.0

Description: Australian insurers prepare and submit APRA prudential reporting including GPS 001 capital adequacy returns and LRS 750.0 life insurance statistical returns.

Actors: Finance Manager, Actuary, Compliance Officer

Systems: Regulatory Reporting (AxiomSL), Finance GL (SAP), Actuarial System (SAS), APRA Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
APRA	Financial	FetchFinancialReturns	Regulatory Reporting (AxiomSL)	Finance GL (SAP)	AxiomSL API (REST)	SAP API (SOAP)	Batch (ETL)	High
APRA	Actuarial	FetchActuarialReturns	Regulatory Reporting (AxiomSL)	Actuarial System (SAS)	AxiomSL API (REST)	SAS API (SOAP)	Batch (ETL)	High
APRA	Returns	CompleteAPRAReturns	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	High
APRA	Validation	ValidateAPRAReturns	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	Medium
APRA	Submit	SubmitAPRAReturns	Regulatory Reporting (AxiomSL)	APRA Portal	AxiomSL API (REST)	APRA Portal API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
APRA	Financial	GPS 001 / 002 / 003 financial returns populated	Capital adequacy (GPS 001), financial condition (GPS 003) returns complete; all items mapped
APRA	Actuarial	LRS 750.0 life insurance statistical return populated	In-force, new business, premiums, claims, and reserves by class; validated by actuary
APRA	Returns	All APRA returns completed with required schedules	Every return field populated; N/A fields justified; notes and commentary included
APRA	Validation	APRA validation rules passed without errors	Cross-return consistency; prior period comparison; reasonableness thresholds
APRA	Submit	Returns submitted to APRA within statutory deadline	Submission accepted; APRA reference assigned; hard copy (if required) mailed

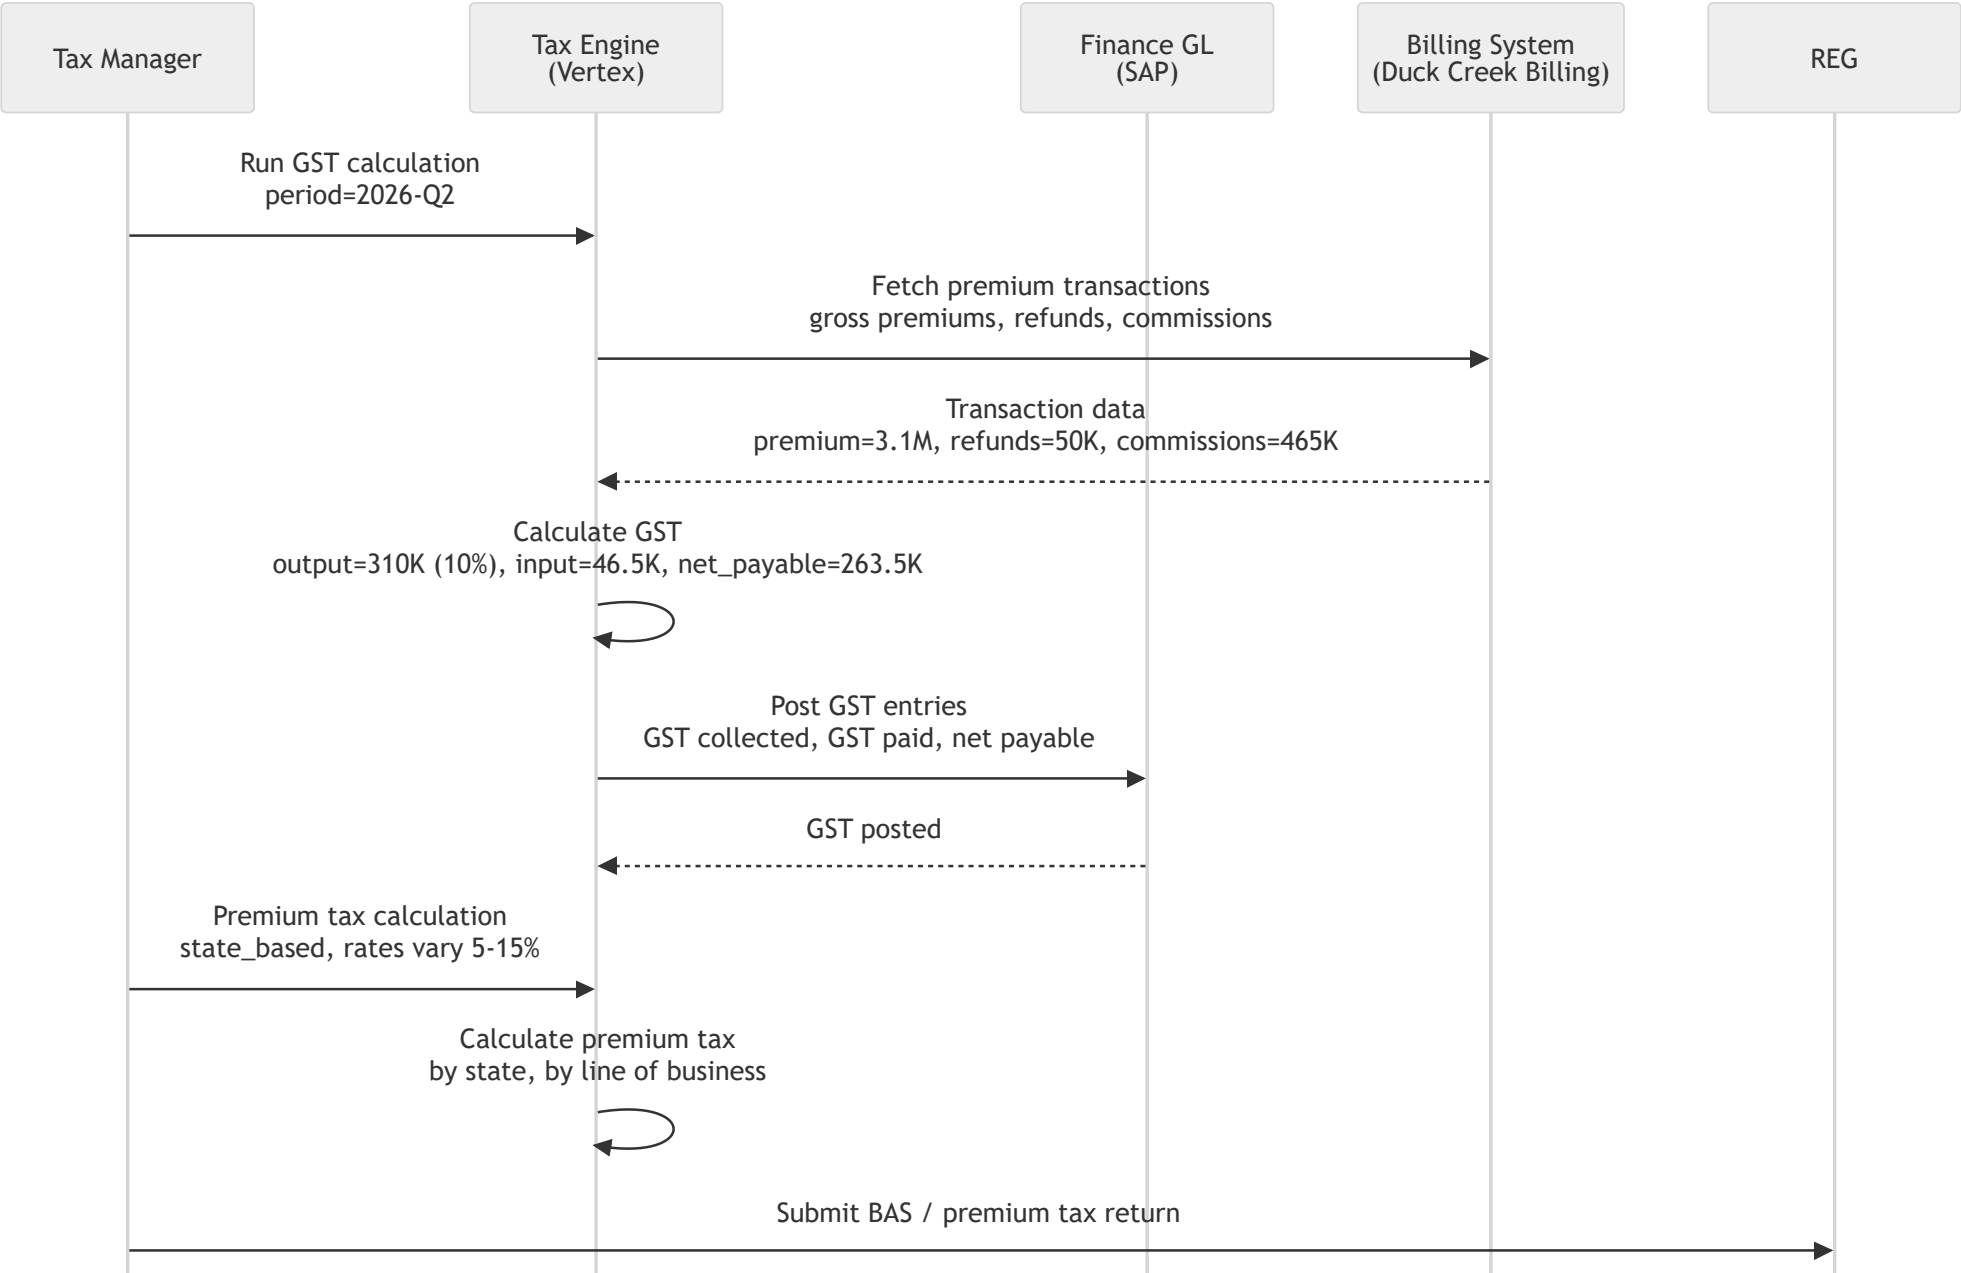

12.4 Tax Reporting (GST / Premium Tax)

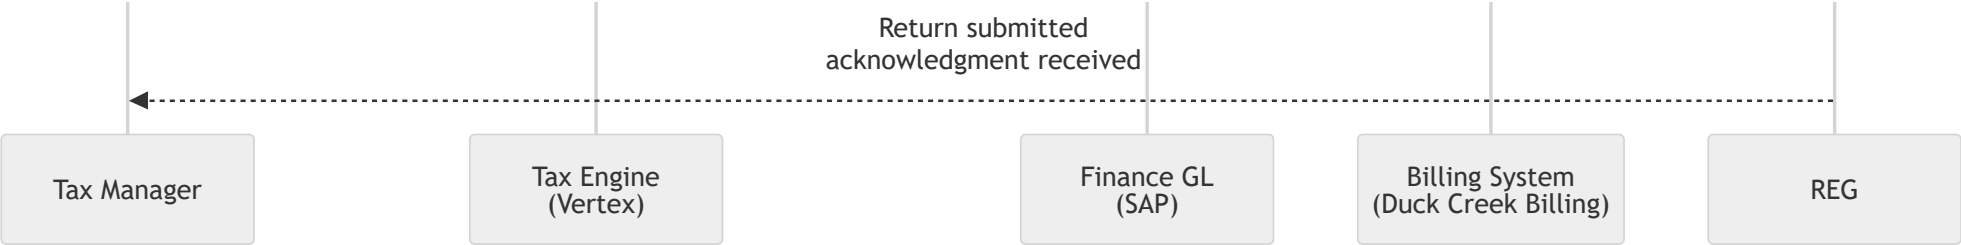

Description: Tax team prepares and submits insurance-related tax returns including GST on premiums, premium tax, withholding tax, and corporate tax.

Actors: Tax Manager, Finance Officer, Tax Authority (ATO)

Systems: Tax Engine (Vertex), Finance GL (SAP), Billing System (Duck Creek Billing), Regulatory Reporting (AxiomSL)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Tax Reporting	GST	FetchPremiumTransactions	Tax Engine (Vertex)	Billing System (Duck Creek Billing)	Vertex API (SOAP)	Duck Creek REST API (OAuth2)	Batch (ETL)	Medium
Tax Reporting	Calculation	CalculateGST	Tax Engine (Vertex)	Tax Engine (Vertex)	Internal	Internal	Batch (Scheduled)	Medium
Tax Reporting	GL	PostGSTEntries	Tax Engine (Vertex)	Finance GL (SAP)	Vertex API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High
Tax Reporting	Premium	CalculatePremiumTax	Tax Engine (Vertex)	Tax Engine (Vertex)	Internal	Internal	Batch (Scheduled)	Medium
Tax Reporting	Submit	SubmitTaxReturn	Regulatory Reporting (AxiomSL)	Tax Authority Portal	AxiomSL API (REST)	ATO Portal API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Tax Reporting	GST	Premium transactions fetched with correct GST treatment	Taxable vs GST-free supplies correctly identified; input tax credits on commissions
Tax Reporting	Calculation	GST calculated correctly per legislated rates	Output GST at 10%; input GST on eligible expenses; GST on imports correct
Tax Reporting	GL	GST entries posted and reconciled	GST clearing account balance reconciles to BAS; net payable matches GL
Tax Reporting	Premium	Premium tax calculated per state jurisdiction	Rates applied correctly by state and LoB; tax codes mapped; exemptions applied
Tax Reporting	Submit	Tax return submitted within regulatory deadline	BAS or equivalent submitted; premium tax paid; acknowledgment received from ATO

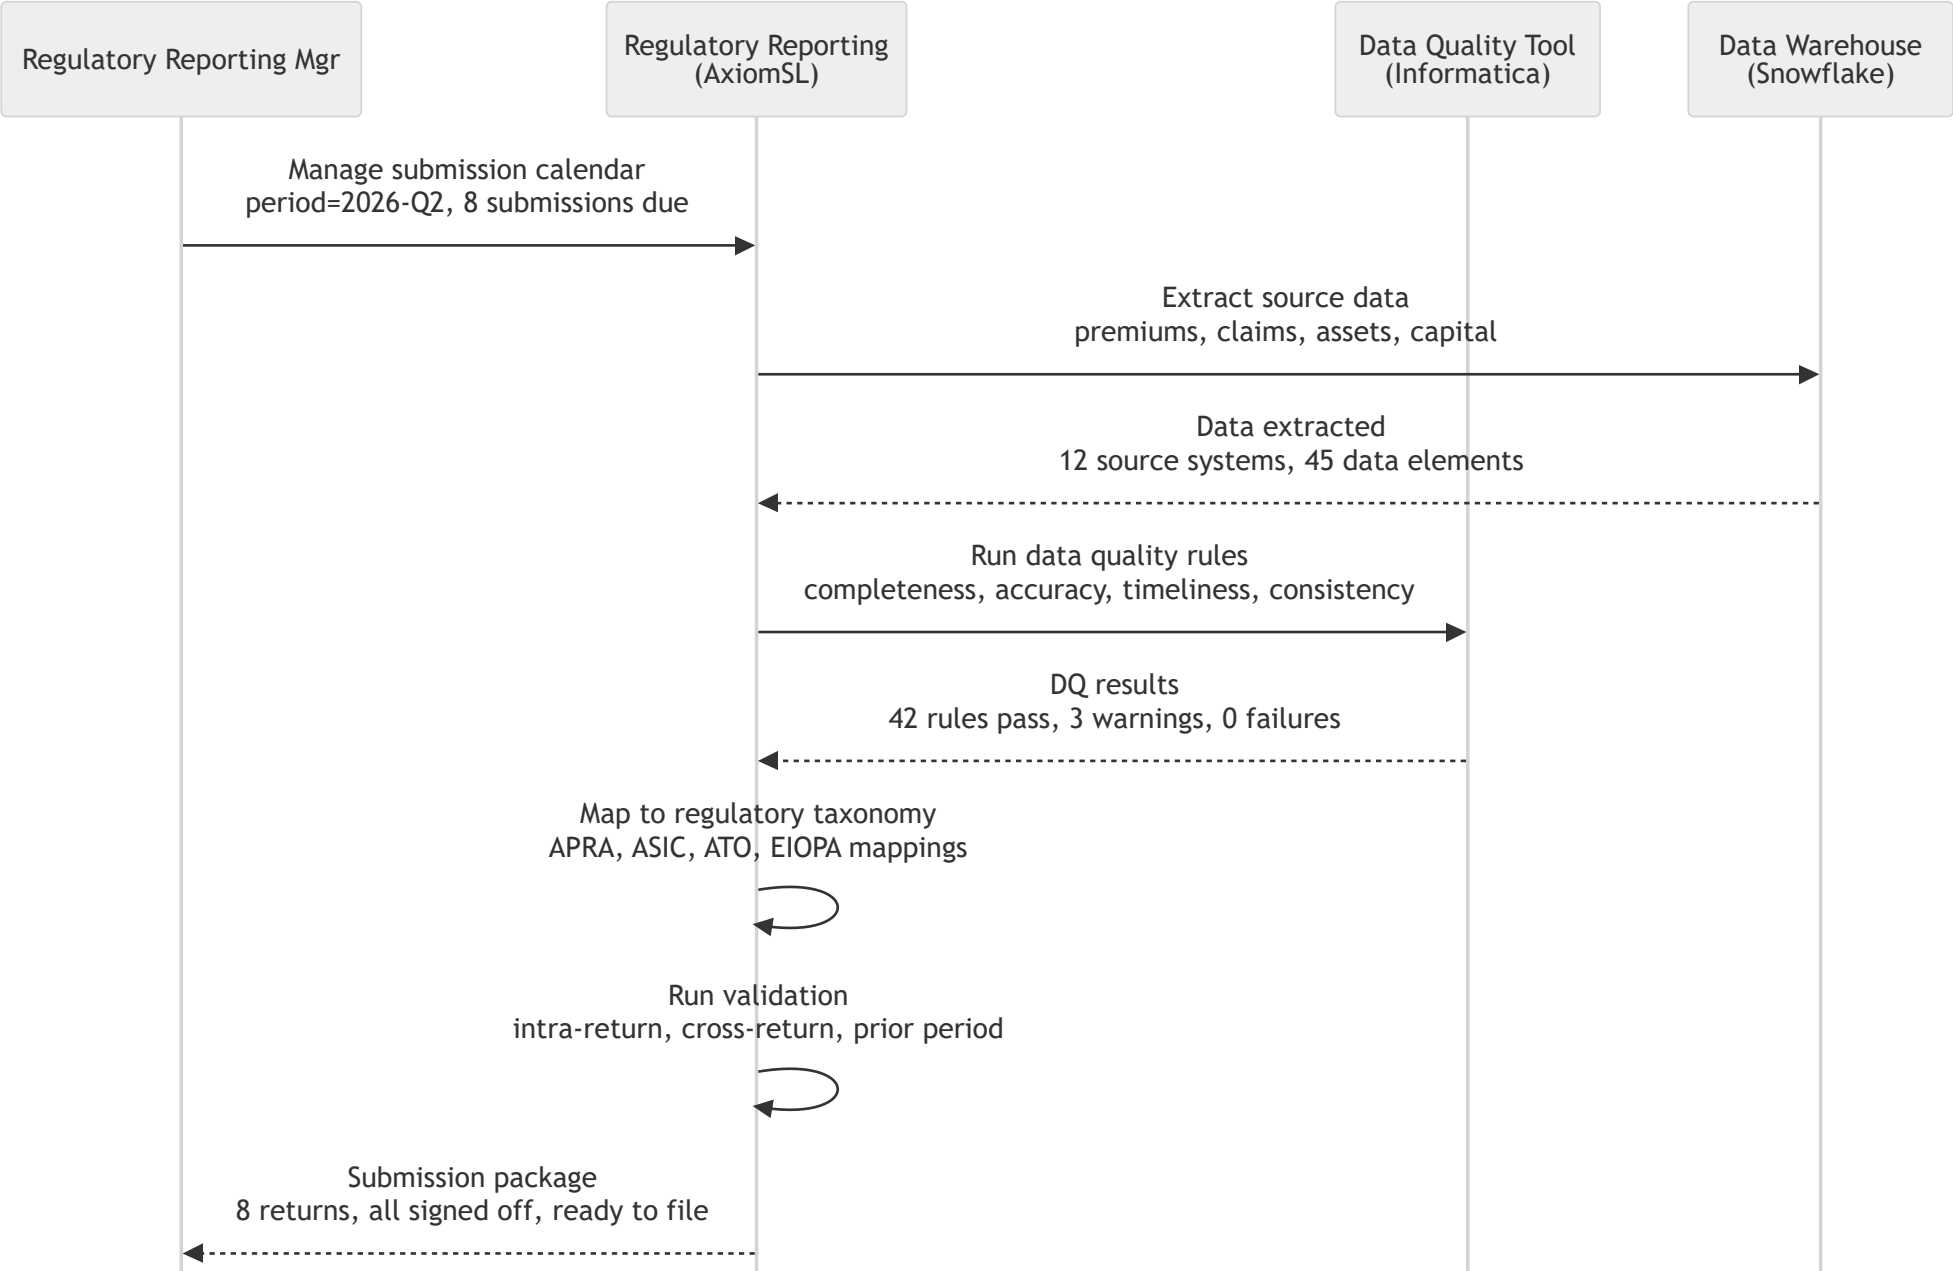

12.5 Regulatory Data Submission & Validation

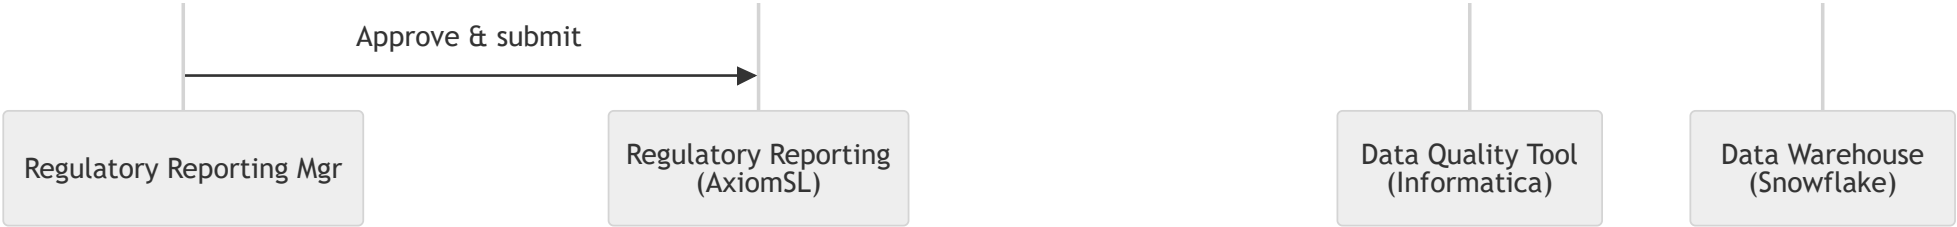

Description: Centralized function manages all regulatory data submissions, ensuring data quality, audit trail, and timely filing across all regulatory regimes.

Actors: Regulatory Reporting Manager, Data Steward, Regulator

Systems: Regulatory Reporting (AxiomSL), Data Quality Tool (Informatica), Data Warehouse (Snowflake), Governance Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Data Submission	Extract	ExtractSourceData	Regulatory Reporting (AxiomSL)	Data Warehouse (Snowflake)	AxiomSL API (REST)	Snowflake JDBC	Batch (ETL)	High
Data Submission	Quality	RunDataQualityRules	Regulatory Reporting (AxiomSL)	Data Quality Tool (Informatica)	AxiomSL API (REST)	Informatica API (REST)	Batch (ETL)	Medium
Data Submission	Mapping	MapToRegulatoryTaxonomy	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	Medium
Data Submission	Validation	RunValidationRules	Regulatory Reporting (AxiomSL)	Regulatory Reporting (AxiomSL)	Internal	Internal	Batch (Scheduled)	Medium
Data Submission	Submit	ApproveAndSubmit	Regulatory Reporting (AxiomSL)	Regulator Portal	AxiomSL API (REST)	Regulator API (SOAP)	Batch (Scheduled)	High

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Data Submission	Extract	Source data extracted from all upstream systems	All data elements mapped; completeness check passed; data lineage documented
Data Submission	Quality	Data quality rules executed with no failures	Critical rules pass; warnings investigated and resolved; DQ scorecard maintained
Data Submission	Mapping	Data mapped to correct regulatory taxonomy	Mapping documented; taxonomy version aligned; mapping changes version-c

Flow	Entity	Acceptance Criterion	Expected Outcome
			ontrolled
Data Submission	Validation	All validations passed before submission	Intra-return and cross-return checks; prior period comparison; sign-off recorded
Data Submission	Submit	Submission made within regulatory timeline	Submission calendar tracked; pre-deadline alerts; submission confirmed; reference stored

13: Data & Analytics — IN033

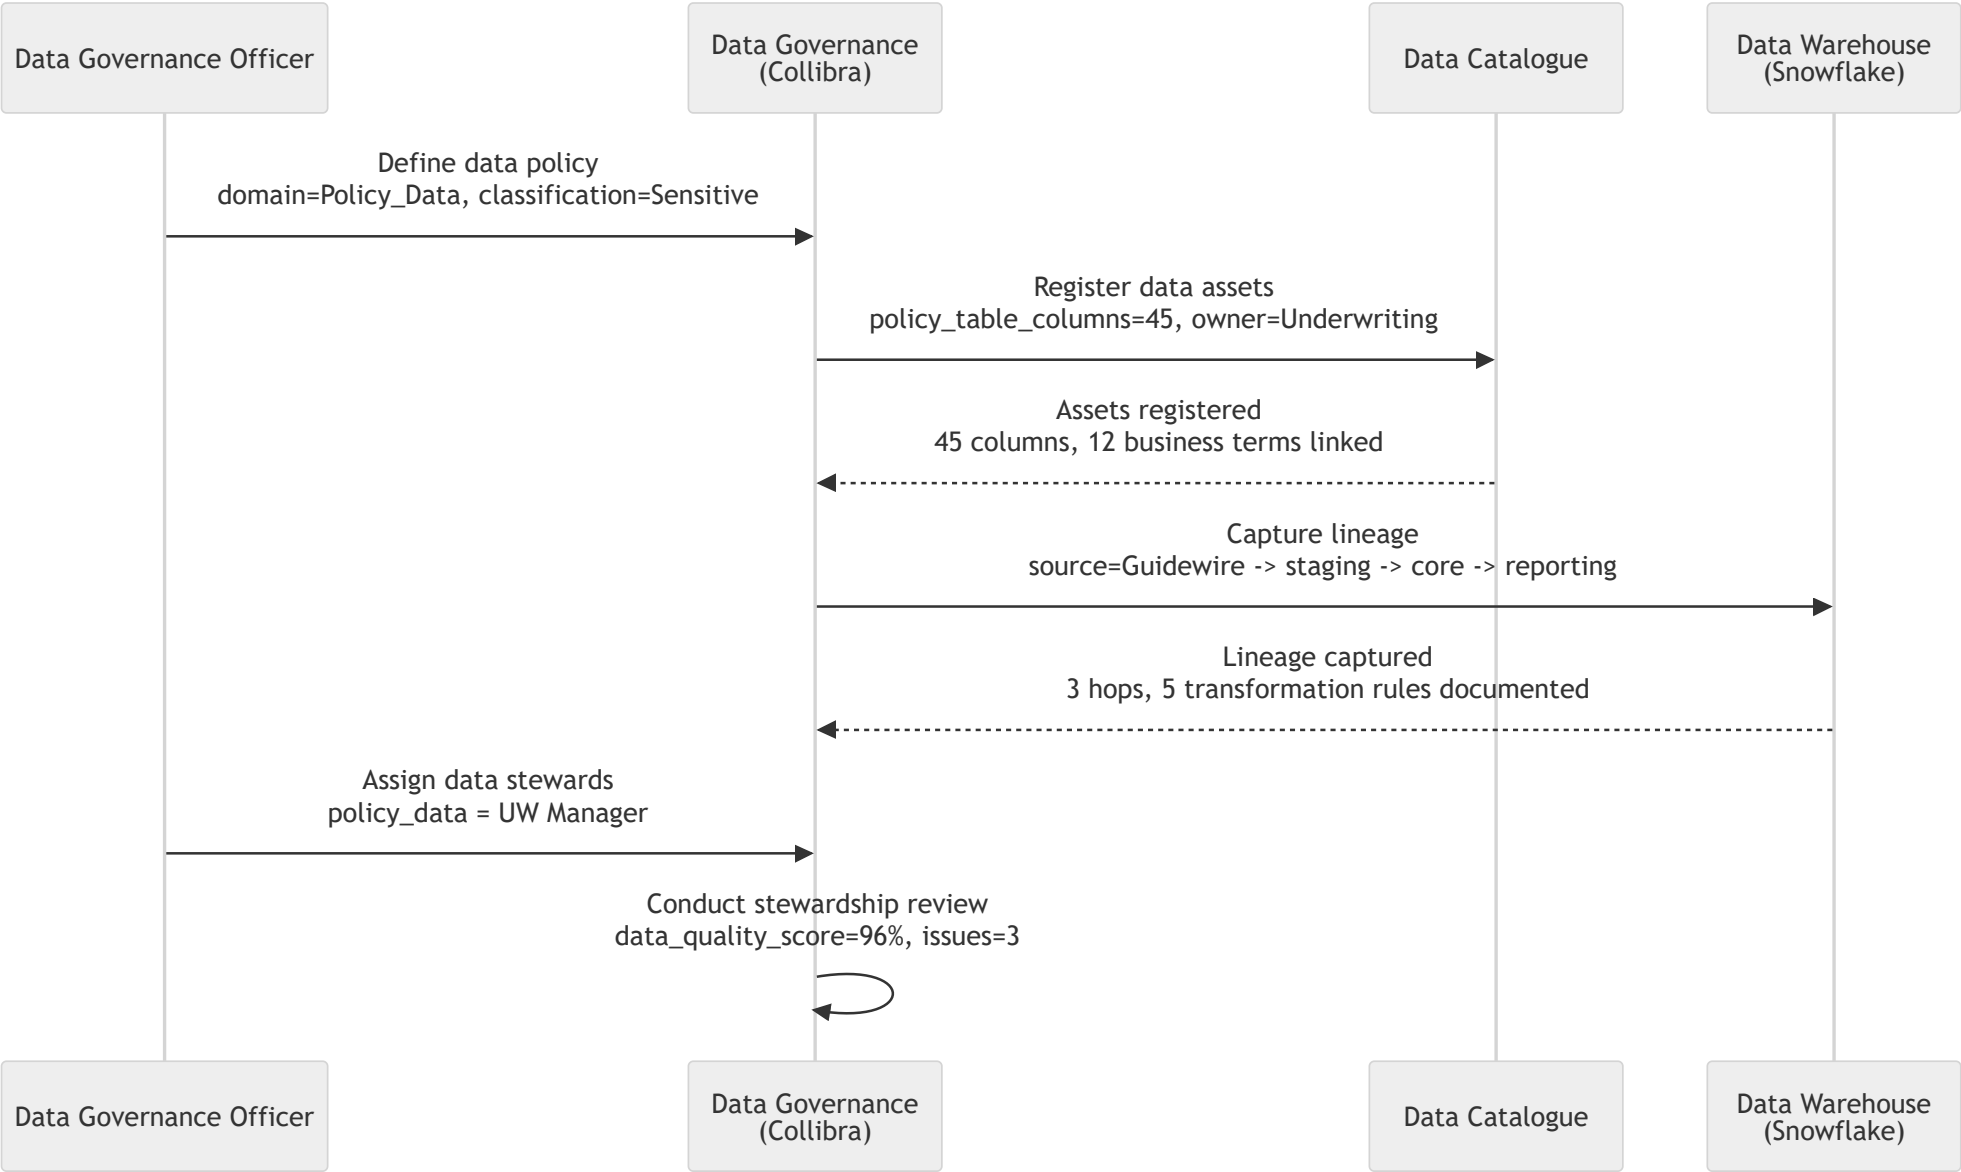

13.1 Data Governance Framework

Description: Data governance team establishes policies, standards, and processes for data management. System manages data catalogue, lineage, and stewardship.

Actors: Data Governance Officer, Data Steward, Data Owner

Systems: Data Governance (Collibra), Data Catalogue, Data Warehouse (Snowflake), Quality Tool (Informatica)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Data Governance	Policy	DefineDataPolicy	Data Governance (Collibra)	Data Governance (Collibra)	Internal	Internal	API-led (Real-time)	Simple
Data Governance	Assets	RegisterDataAssets	Data Governance (Collibra)	Data Catalogue	Collibra API (REST)	Catalogue API (REST)	Batch (Scheduled)	Medium
Data Governance	Lineage	CaptureDataLineage	Data Governance (Collibra)	Data Warehouse (Snowflake)	Collibra API (REST)	Snowflake JDBC	Batch (ETL)	High
Data Governance	Stewardship	AssignDataStewards	Data Governance (Collibra)	Data Governance (Collibra)	Internal	Internal	API-led (Real-time)	Simple
Data Governance	Review	ConductStewardshipReview	Data Governance (Collibra)	Data Governance (Collibra)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Data Governance	Policy	Data policies defined and approved	Policy covers classification, access, retention, and quality rules; approved by data council
Data Governance	Assets	Data assets registered with metadata	Business terms, technical columns, and data domains catalogued; ownership assigned
Data Governance	Lineage	Data lineage documented from source to reporting	System-of-record identified; transformation logic documented; impact analysis enabled
Data Governance	Stewardship	Data stewards assigned to all critical data elements	Stewardship responsibilities documented; training completed; backup stewards identified
Data Governance	Review	Stewardship reviews conducted quarterly	DQ score tracked; issues logged and resolved; improvement plan in place

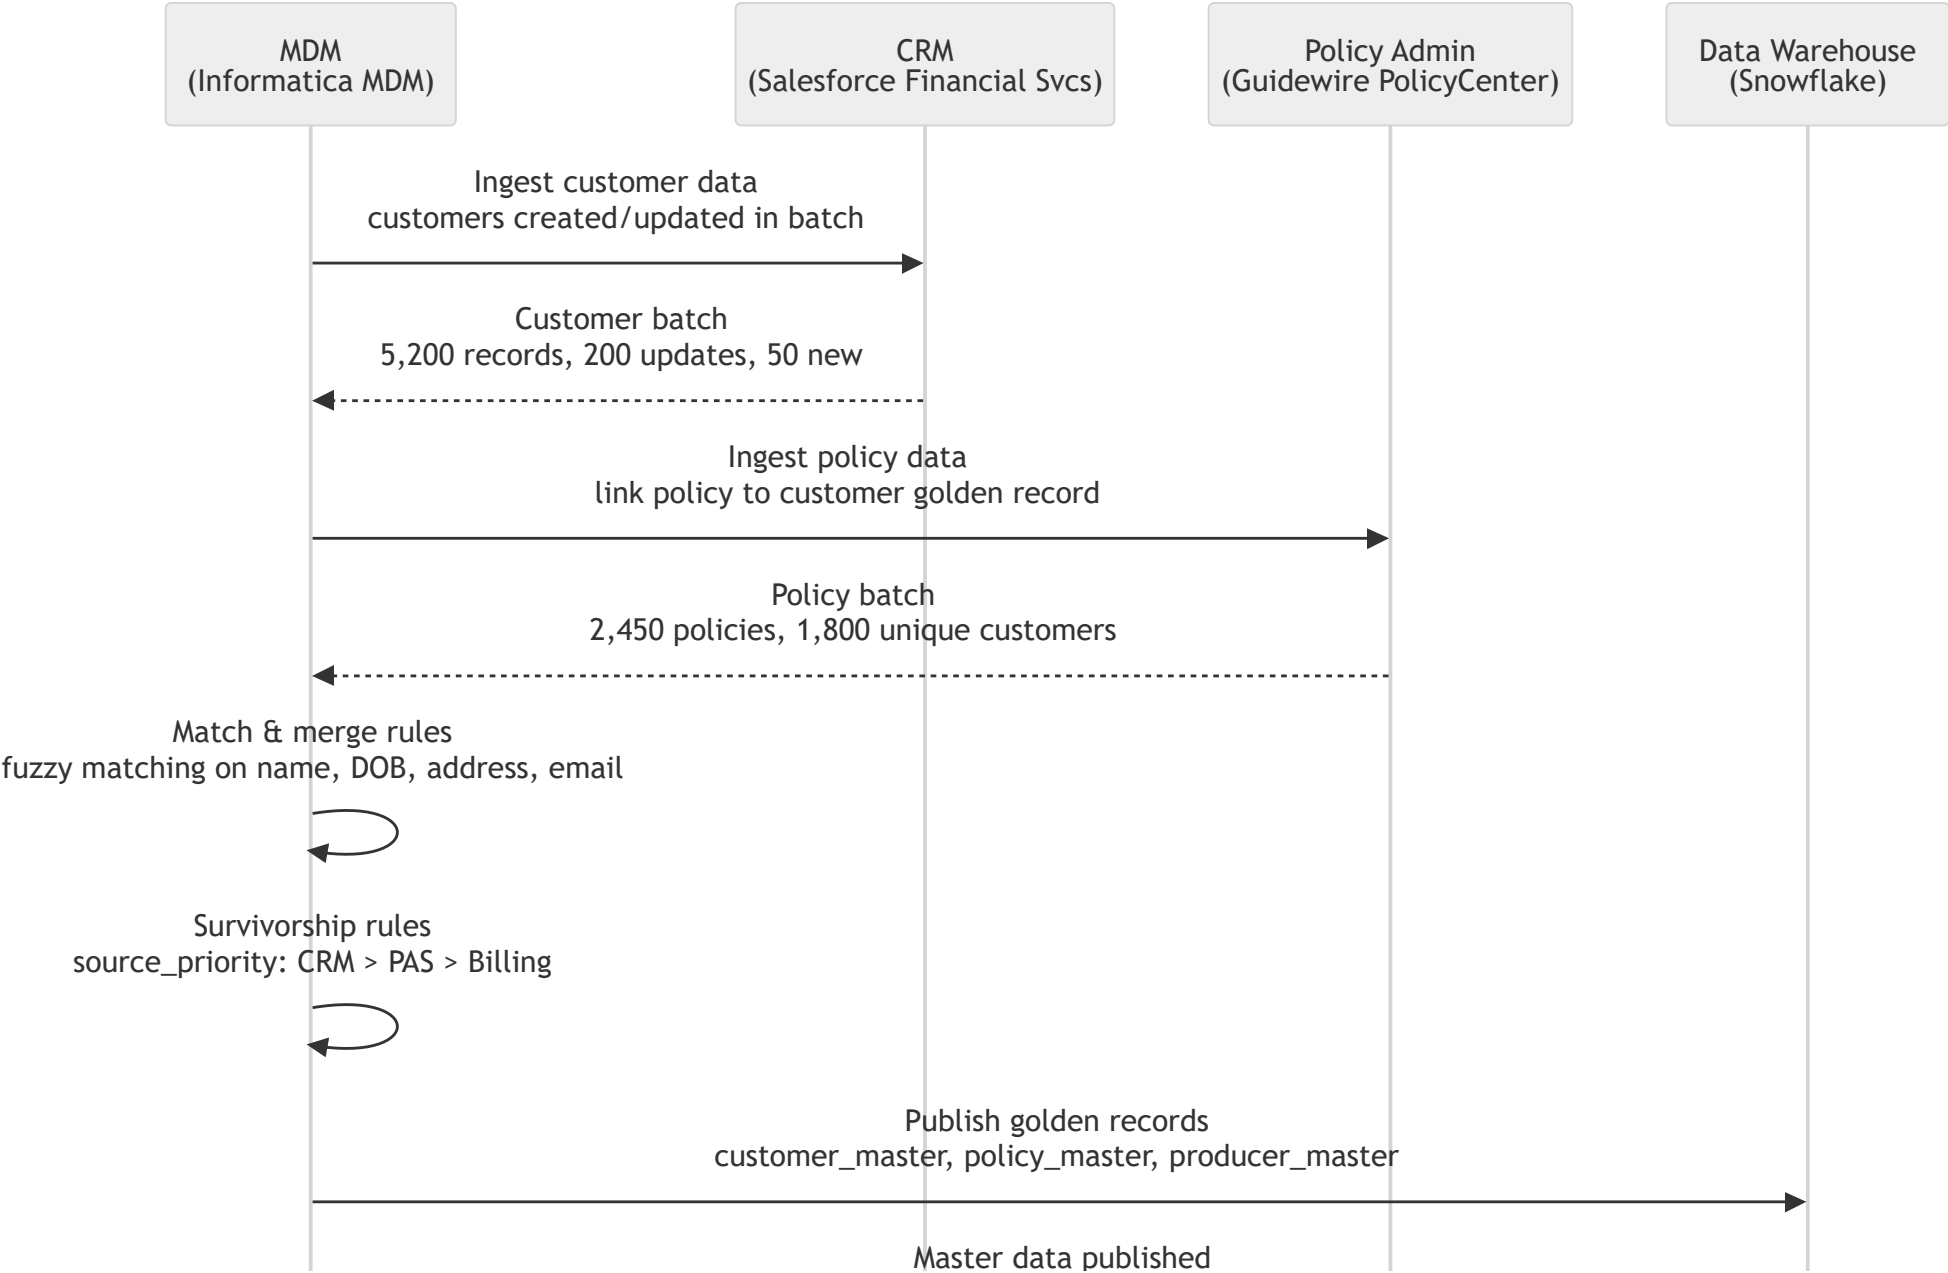

13.2 Master Data Management

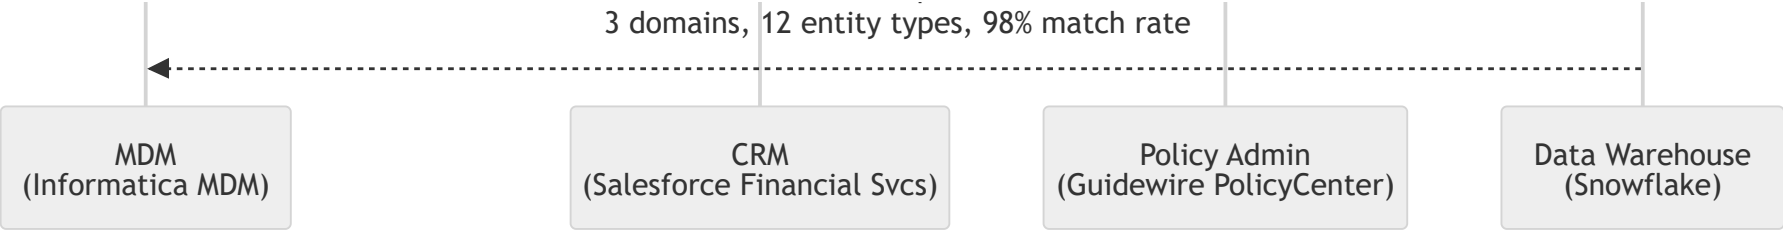

Description: MDM system manages golden records for customer, policy, producer, and product data across multiple source systems with matching and survivorship rules.

Actors: Data Steward, MDM Administrator

Systems: MDM (Informatica MDM), CRM (Salesforce Financial Services), Policy Admin (Guidewire PolicyCenter), Data Warehouse (Snowflake)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
MDM	Customer	IngestCustomerData	MDM (Informatica MDM)	CRM (Salesforce Financial Services)	Informatica API (REST)	Salesforce REST API (OAuth2)	Batch (ETL)	Medium
MDM	Policy	IngestPolicyData	MDM (Informatica MDM)	Policy Admin (Guidewire PolicyCenter)	Informatica API (REST)	Guidewire REST API (API Key)	Batch (ETL)	Medium
MDM	Matching	MatchAndMergeRules	MDM (Informatica MDM)	MDM (Informatica MDM)	Internal	Internal	Batch (Scheduled)	High
MDM	Survivorship	ApplySurvivorshipRules	MDM (Informatica MDM)	MDM (Informatica MDM)	Internal	Internal	Batch (Scheduled)	High
MDM	Publish	PublishGoldenRecords	MDM (Informatica MDM)	Data Warehouse (Snowflake)	Informatica API (REST)	Snowflake JDBC	Batch (ETL)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
MDM	Customer	Customer data ingested from CRM with correct mapping	All fields mapped; duplicates identified; source system ID preserved
MDM	Policy	Policy data ingested from policy admin	Policy linked to customer golden record; policy hierarchy maintained
MDM	Matching	Match rules accurately identify duplicate records	False positive rate < 2%; false negative rate < 1%; match threshold configurable
MDM	Survivorship	Survivorship rules applied with correct source priority	Golden record populated from highest priority source; conflict resolution documented
MDM	Publish	Golden records published downstream for consumption	All consuming systems updated; delta detection; publish schedule met

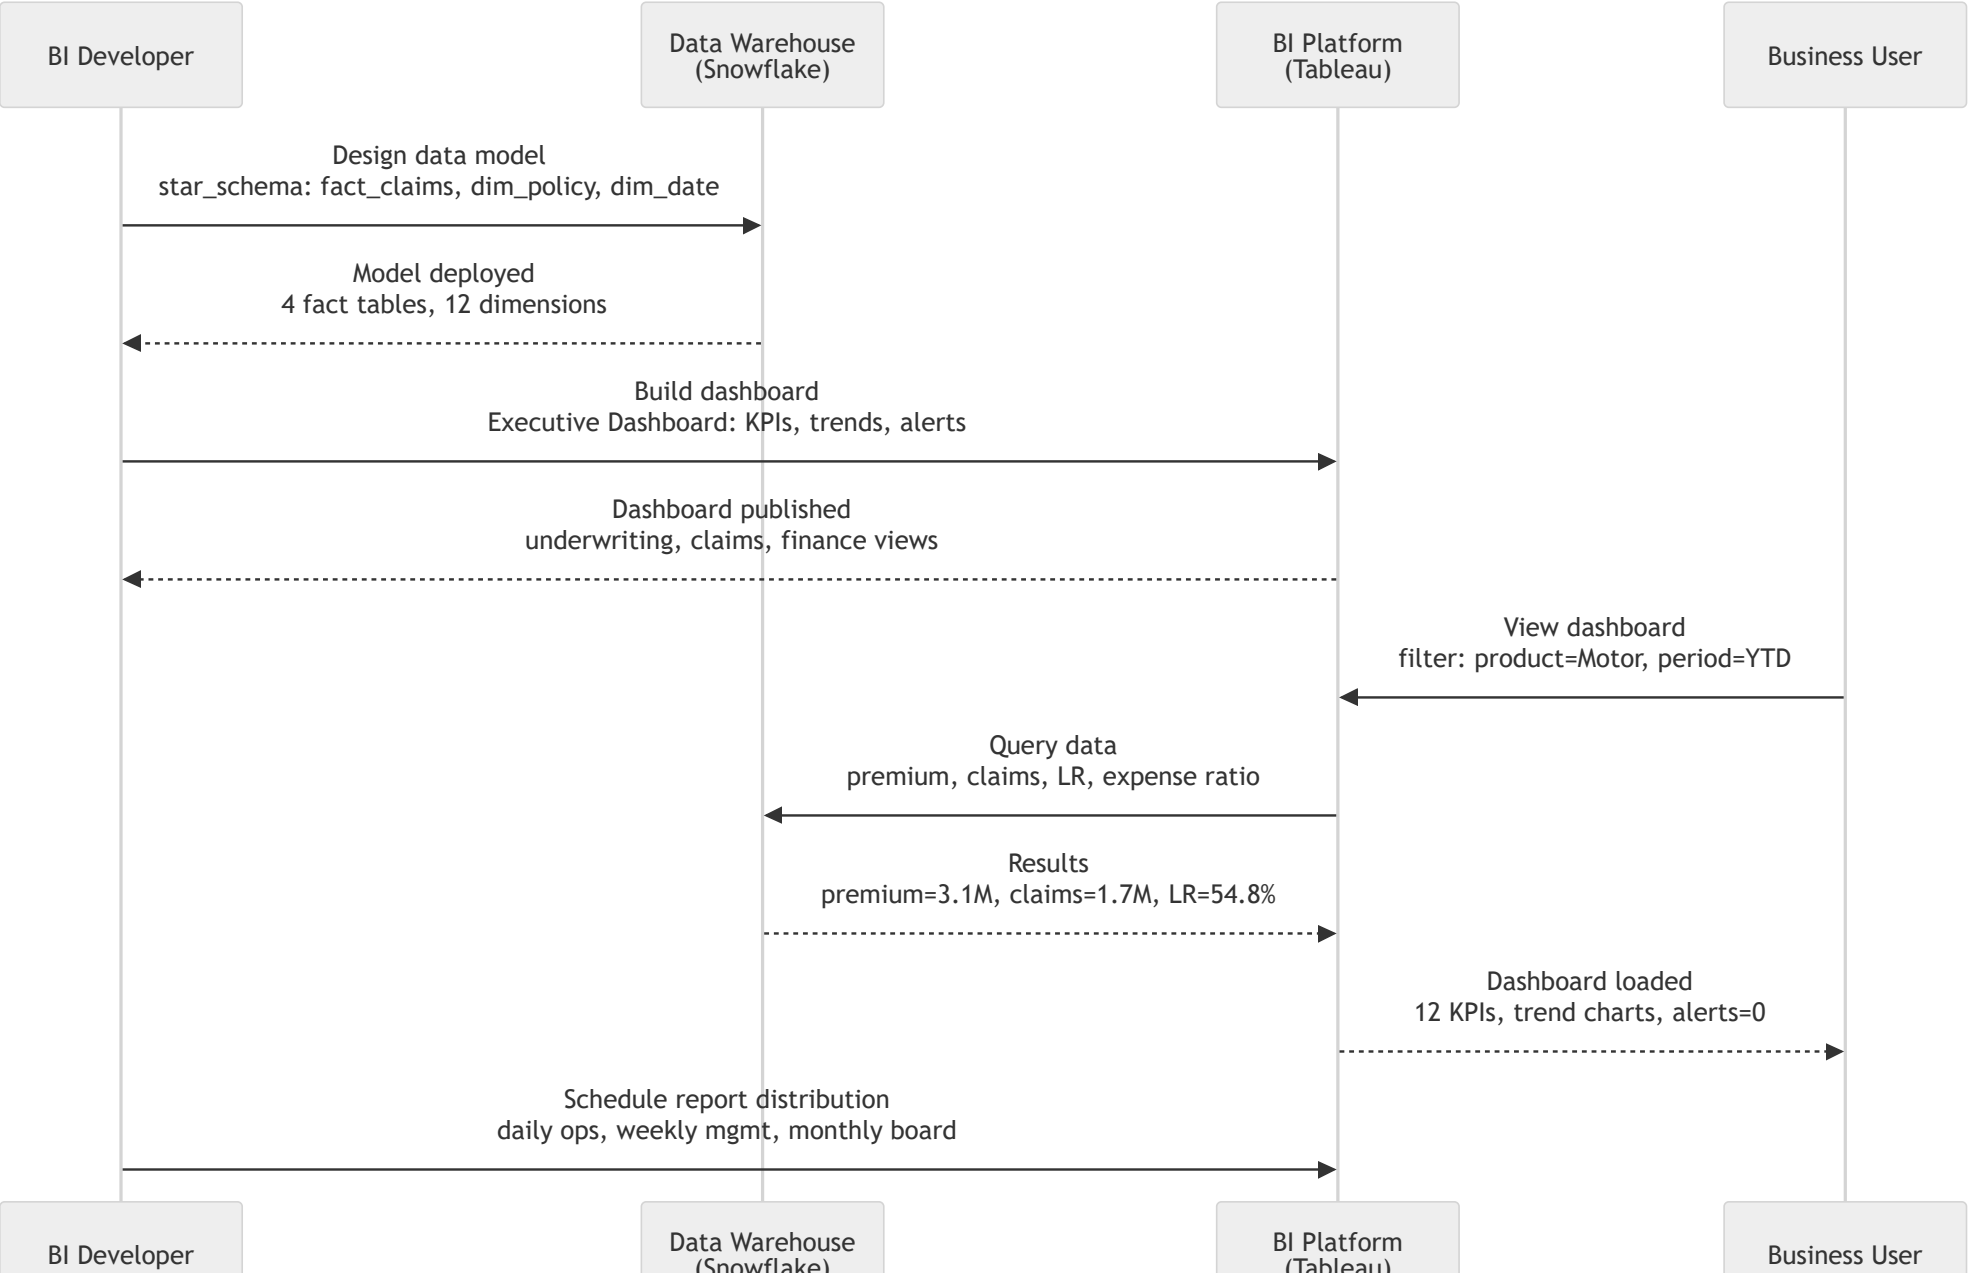

13.3 BI & Reporting Dashboards

Description: BI team develops and maintains dashboards and reports for operational, management, and executive audiences across the insurance enterprise.

Actors: BI Developer, Business User, Executive

Systems: Data Warehouse (Snowflake), BI Platform (Tableau), Power BI, Report Server

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
BI	Model	DesignDataModel	BI Developer	Data Warehouse (Snowflake)	Snowflake JDBC	Snowflake JDBC	Batch (ETL)	Medium
BI	Dashboard	BuildDashboard	BI Developer	BI Platform (Tableau)	Tableau Desktop API	Tableau Server API	API-led (Real-time)	Medium
BI	Query	QueryBIReport	BI Platform (Tableau)	Data Warehouse (Snowflake)	Tableau Server API	Snowflake JDBC	API-led (Real-time)	Medium
BI	Schedule	ScheduleReportDistribution	BI Platform (Tableau)	Report Server	Tableau Server API	SMTP / SharePoint	Batch (Scheduled)	Simple
BI	Access	ManageReportAccess	BI Platform (Tableau)	BI Platform (Tableau)	Internal	Internal	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
BI	Model	Data model designed with appropriate granularity	Star schema; conformed dimensions; slowly changing dimensions for history
BI	Dashboard	Dashboard built with required KPIs and drill-down	Dashboard loads within 5 seconds; drill-down to transaction level; export options
BI	Query	Report queries execute within SLA	Standard reports < 10 seconds; complex analytical queries < 30 seconds
BI	Schedule	Scheduled reports distributed on time	Distribution list correct; format consistent; delivery confirmed
BI	Access	Report access managed by role and data security	Row-level security per user role; access reviewed quarterly; audit log maintained

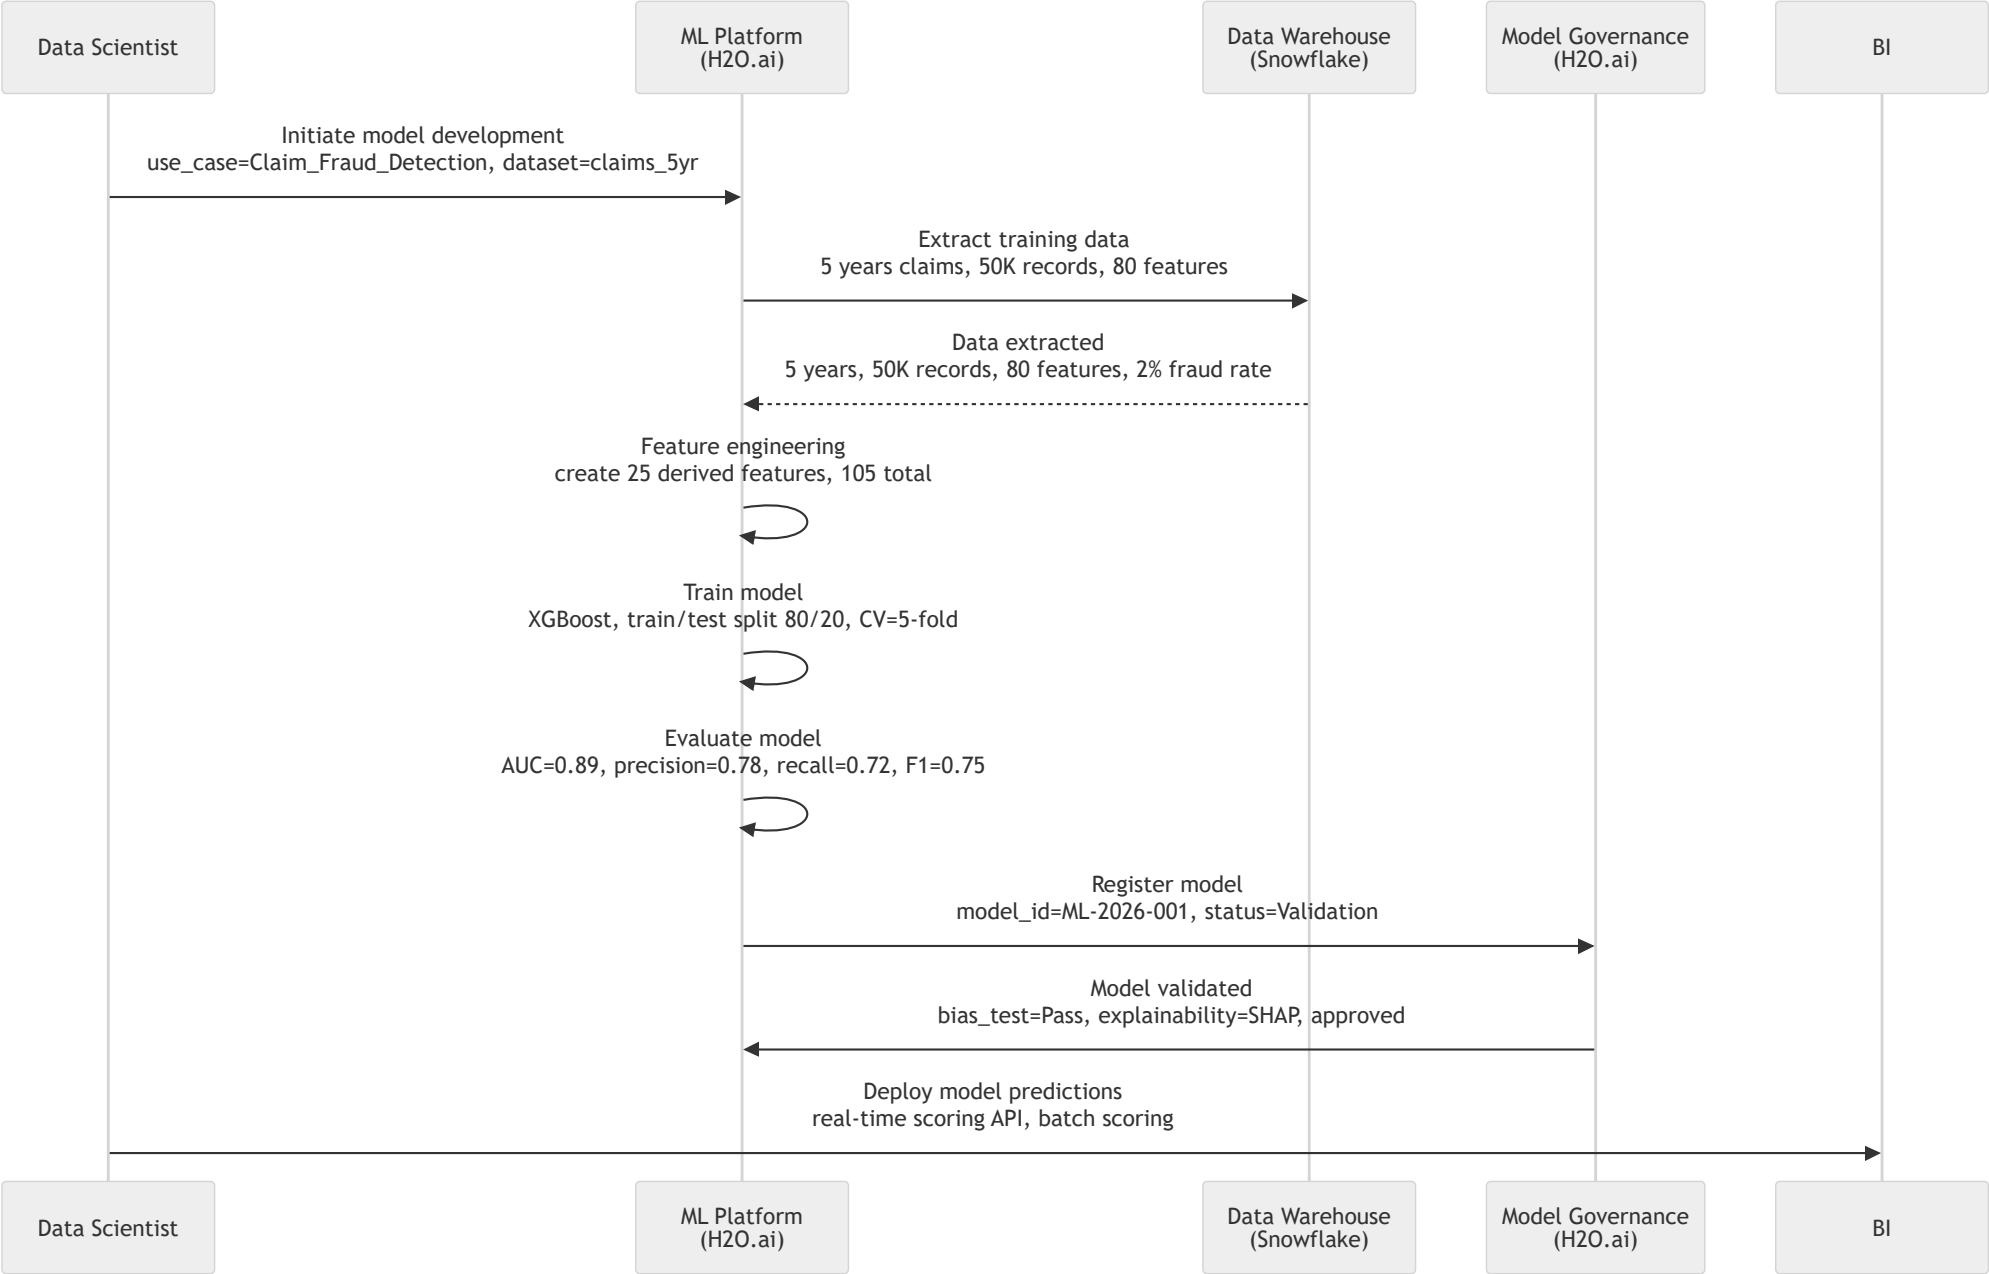

13.4 Predictive Analytics & Modeling

Description: Data science team develops predictive models for underwriting, claims, fraud detection, and customer analytics using machine learning techniques.

Actors: Data Scientist, Actuary, Business Stakeholder

Systems: ML Platform (H2O.ai / Dataiku), Data Warehouse (Snowflake), Model Governance (H2O.ai), BI Platform (Tableau)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Predictive Analytics	Data	ExtractTrainingData	ML Platform (H2O.ai)	Data Warehouse (Snowflake)	H2O API (REST)	Snowflake JDBC	Batch (ETL)	High
Predictive Analytics	Features	EngineerFeatures	ML Platform (H2O.ai)	ML Platform (H2O.ai)	Internal	Internal	Batch (Scheduled)	High
Predictive Analytics	Train	TrainModel	ML Platform (H2O.ai)	ML Platform (H2O.ai)	Internal	Internal	Batch (Scheduled)	High
Predictive Analytics	Governance	RegisterModel	ML Platform (H2O.ai)	Model Governance (H2O.ai)	H2O API (REST)	H2O Gov API (REST)	API-led (Real-time)	Medium
Predictive Analytics	Deploy	DeployModelPredictions	ML Platform (H2O.ai)	BI Platform (Tableau)	H2O API (REST)	Tableau REST API	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Predictive Analytics	Data	Training data extracted with sufficient volume and quality	5+ years; 50K+ records; feature completeness > 95%; target variable correctly labelled
Predictive Analytics	Features	Feature engineering completed with domain-relevant variables	Features approved by business; derived variables documented; correlation analysis done
Predictive Analytics	Train	Model trained with acceptable performance metrics	AUC > 0.85; precision/recall meets business threshold; overfitting tested
Predictive Analytics	Governance	Model registered and approved through governance process	Model card complete; bias and fairness tested; explainability documented
Predictive Analytics	Deploy	Model deployed with scoring pipeline	Real-time API latency < 200ms; batch scoring schedule set; monitoring dashboard active

13.5 Data Quality Management

Description: Data quality team monitors and improves data quality across all critical data elements. System runs quality rules and tracks remediation.

Actors: Data Steward, Data Quality Analyst

Systems: Data Quality Tool (Informatica), Data Warehouse (Snowflake), Data Governance (Collibra), MDM (Informatica MDM)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Data Quality	Rules	DefineQualityRules	Data Quality Tool (Informatica)	Data Quality Tool (Informatica)	Internal	Internal	API-led (Real-time)	Simple
Data Quality	Profiling	RunDataProfiling	Data Quality Tool (Informatica)	Data Warehouse (Snowflake)	Informatica API (REST)	Snowflake JDBC	Batch (Scheduled)	Medium
Data Quality	Execution	ExecuteQualityRules	Data Quality Tool (Informatica)	Data Quality Tool (Informatica)	Internal	Internal	Batch (Scheduled)	Medium
Data Quality	Logging	LogDQIssues	Data Quality Tool (Informatica)	Data Governance (Collibra)	Informatica API (REST)	Collibra API (REST)	Event-driven	Simple
Data Quality	Remediation	ApplyCorrections	Data Quality Tool (Informatica)	Data Warehouse (Snowflake)	Informatica API (REST)	Snowflake JDBC	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Data Quality	Rules	Quality rules defined for all critical data elements	Rules cover completeness, accuracy, validity, consistency, and timeliness dimensions
Data Quality	Profiling	Data profiling completed with baseline measurements	Profile statistics documented; anomalies flagged; trend baseline established
Data Quality	Execution	Quality rules executed on schedule	Daily critical rules; weekly all rules; pa

Flow	Entity	Acceptance Criterion	Expected Outcome
			ss rate trended; threshold breaches alerted
Data Quality	Logging	DQ issues logged with severity and action plan	Issue severity: Critical/High/Medium/Low; RCA completed; remediation plan dated
Data Quality	Remediation	Remediation actions completed within SLA	Critical < 24hrs; High < 5 days; Medium < 30 days; Low < 90 days; re-test passed

14: Information Security & Cybersecurity — IN034

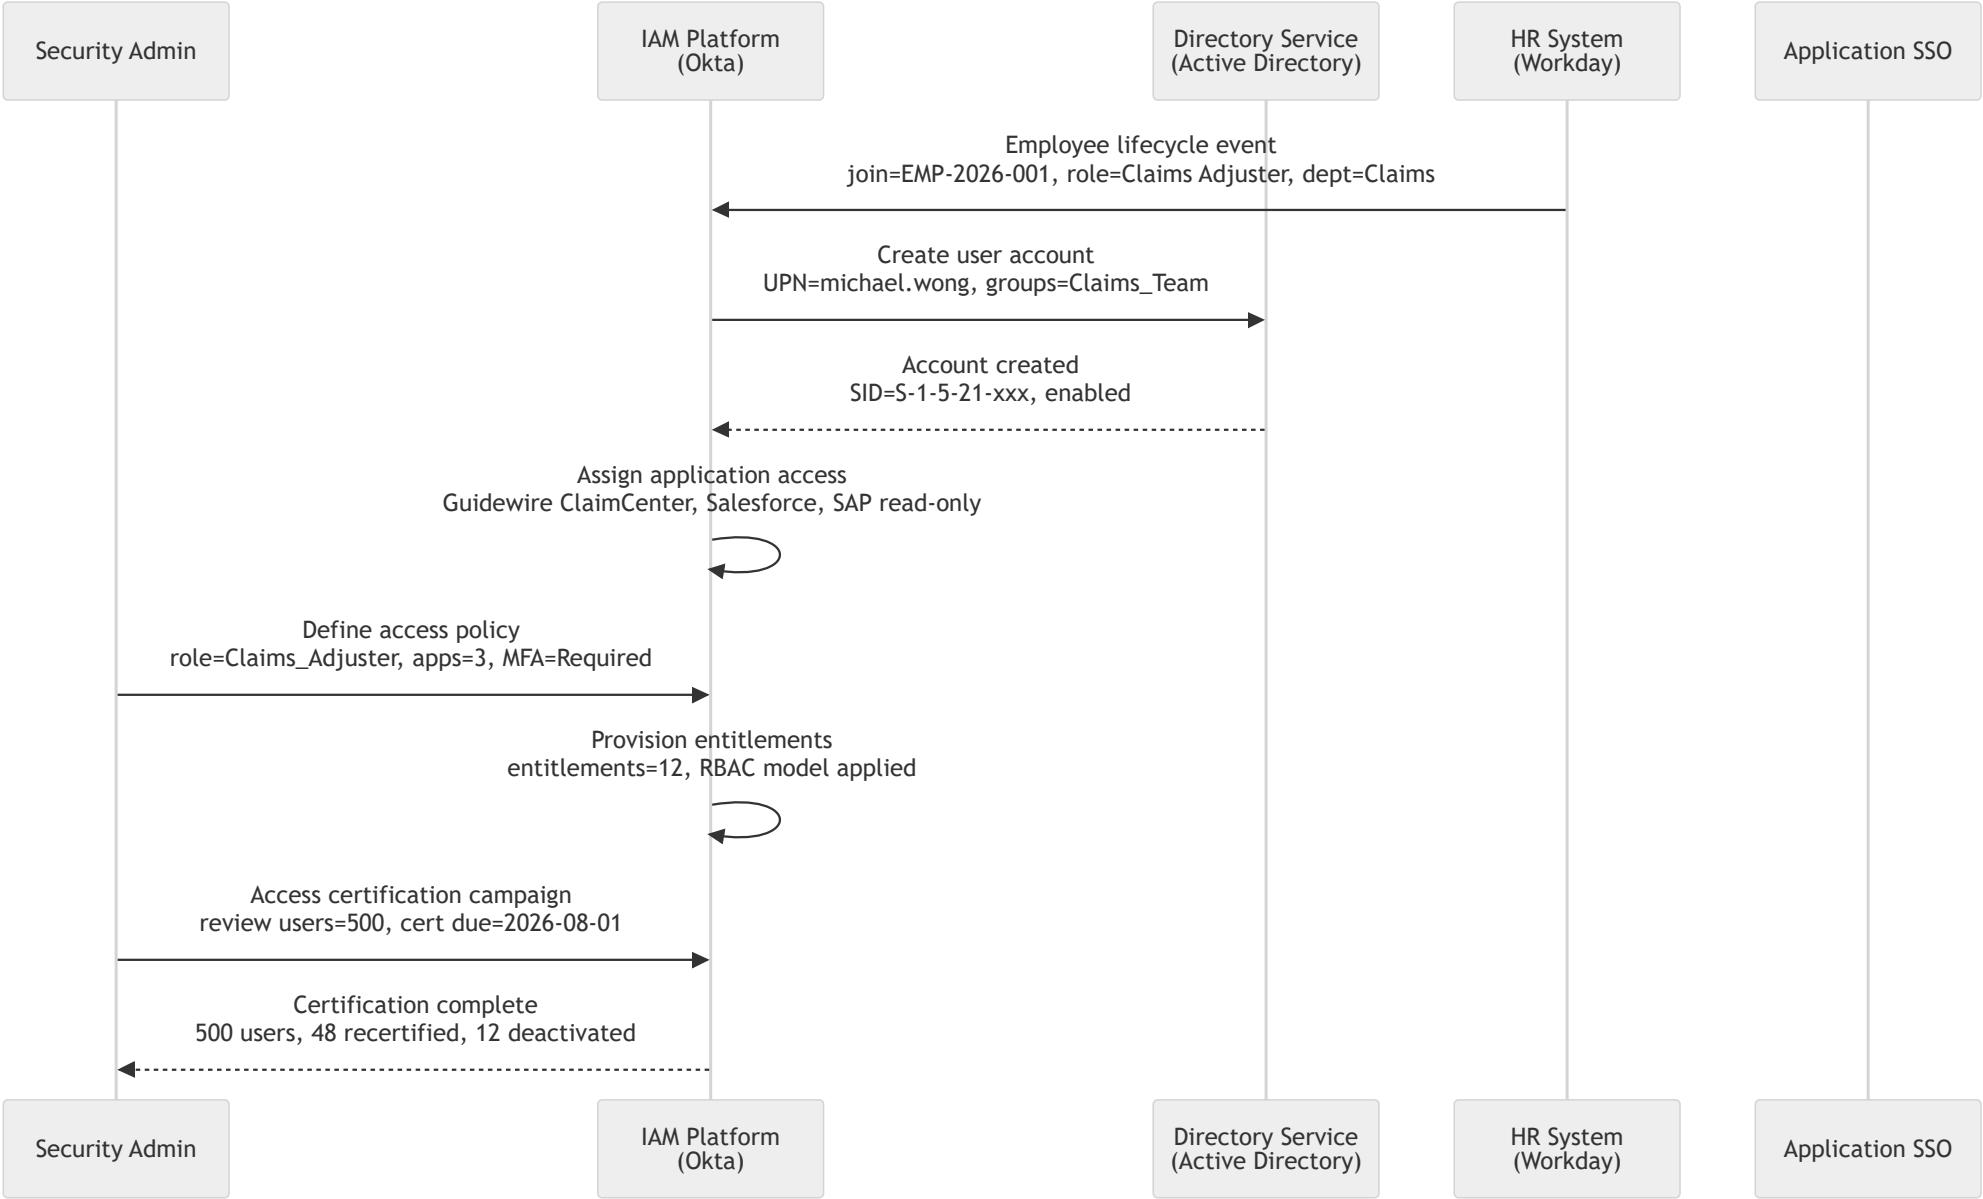

14.1 Identity & Access Management

Description: IAM system manages user identities, authentication, authorization, and role-based access control across all insurance applications and data.

Actors: Security Administrator, End User, Compliance Officer

Systems: IAM Platform (Okta), Directory Service (Active Directory), HR System (Workday), SSO Gateway

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
IAM	Lifecycle	ProcessEmployeeLifecycle	HR System (Workday)	IAM Platform (Okta)	Workday API (REST)	Okta API (REST)	Event-driven	Medium
IAM	Account	CreateUserAccount	IAM Platform (Okta)	Directory Service (Active Directory)	Okta API (REST)	AD LDAP / Graph API	API-led (Real-time)	Medium
IAM	Access	AssignApplicationAccess	IAM Platform (Okta)	IAM Platform (Okta)	Internal	Internal	API-led (Real-time)	Simple
IAM	Policy	DefineAccessPolicy	IAM Platform (Okta)	IAM Platform (Okta)	Internal	Internal	API-led (Real-time)	Simple
IAM	Certification	ConductAccessCertification	IAM Platform (Okta)	IAM Platform (Okta)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
IAM	Lifecycle	Employee lifecycle events trigger IAM provisioning within 5 minutes	Joiners, movers, leavers processed in real-time; account created/disabled within SLA
IAM	Account	User account created in Active Directory with correct group membership	UPN, department, and group membership match HR data; account enabled for network access
IAM	Access	Application access assigned based on role entitlements	SSO configured; MFA enforced for privileged apps; just-in-time access for sensitive systems
IAM	Policy	Access policies defined with RBAC and SoD controls	Role hierarchy documented; privilege segregation; policy change workflow enforced
IAM	Certification	Access certification completed quarterly with all findings remediated	All 500 users recertified; orphan accounts removed; toxic combinations flagged and resolved

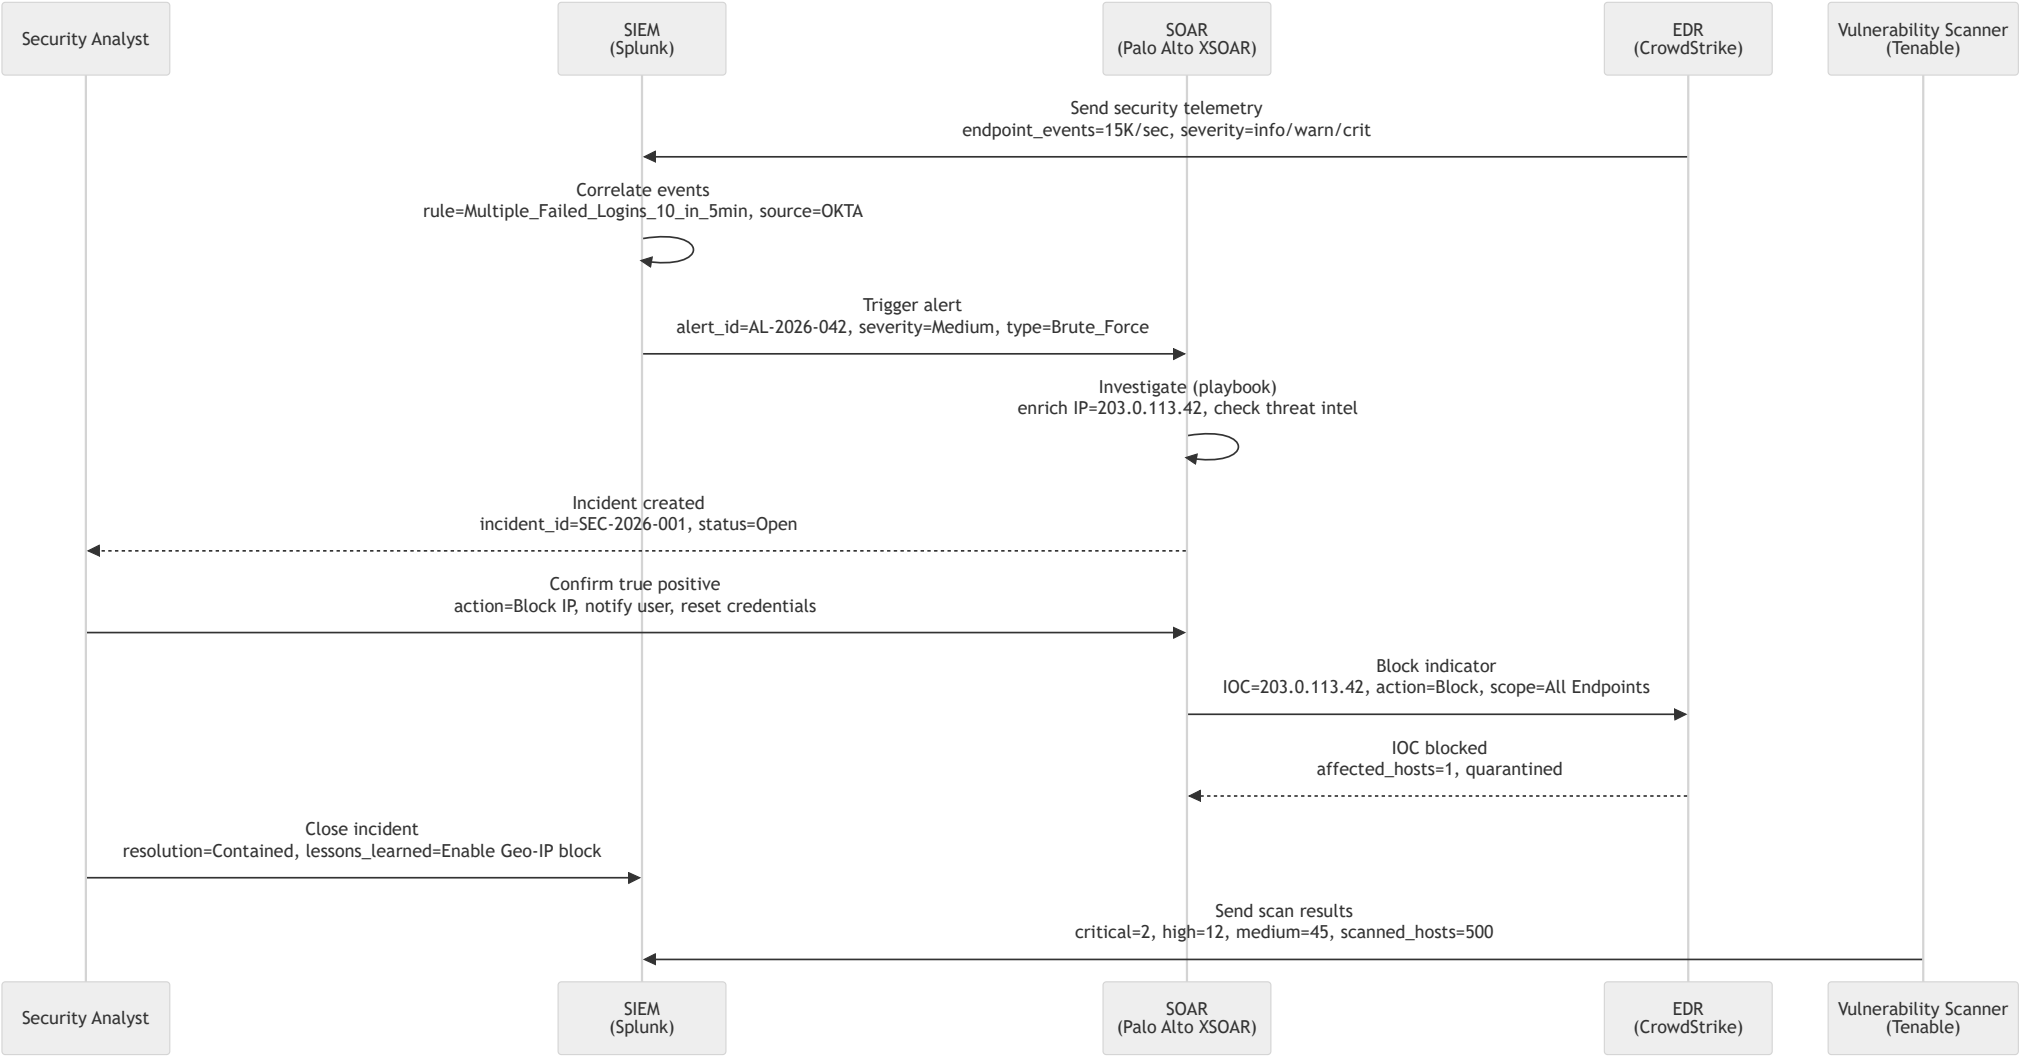

14.2 Security Operations & Monitoring

Description: SOC team monitors security events, detects threats, and responds to incidents across the insurance enterprise infrastructure and applications.

Actors: Security Analyst, SOC Manager, Incident Responder

Systems: SIEM (Splunk), SOAR (Palo Alto XSOAR), EDR (CrowdStrike), Vulnerability Scanner (Tenable)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
SOC	Telemetry	IngestSecurityEvents	EDR (CrowdStrike)	SIEM (Splunk)	CrowdStrike API (REST)	Splunk HEC (REST)	Streaming (Real-time)	High
SOC	Correlation	CorrelateSecurityEvents	SIEM (Splunk)	SIEM (Splunk)	Internal	Internal	Streaming (Real-time)	Medium
SOC	Alerting	TriggerSecurityAlert	SIEM (Splunk)	SOAR (Palo Alto XSOAR)	Splunk API (REST)	XSOAR API (REST)	Event-driven	Medium
SOC	Response	ExecuteIncidentResponse	SOAR (Palo Alto XSOAR)	EDR (CrowdStrike)	XSOAR API (REST)	CrowdStrike API (REST)	API-led (Real-time)	Medium
SOC	VM	IngestVulnerabilityData	Vulnerability Scanner (Tenable)	SIEM (Splunk)	Tenable API (REST)	Splunk HEC (REST)	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
SOC	Telemetry	Security events ingested from all sources with < 60 second latency	15K events/sec sustained; all source types parsed; schema normalised
SOC	Correlation	Correlation rules detect threats with < 5% false positive rate	Rules tuned per MITRE ATT&CK; use-case library maintained; FP reviewed weekly
SOC	Alerting	Security alerts created within 2 minutes of detection	Alert enriched with context; severity accurately assigned; notification sent to on-call
SOC	Response	Incident response playbook executed with containment actions	Playbook steps automated; manual steps documented; containment verified; lessons learned captured
SOC	VM	Vulnerability scan results ingested and prioritised	Critical vulns patched within 48 hours; high within 30 days; medium within 90 days

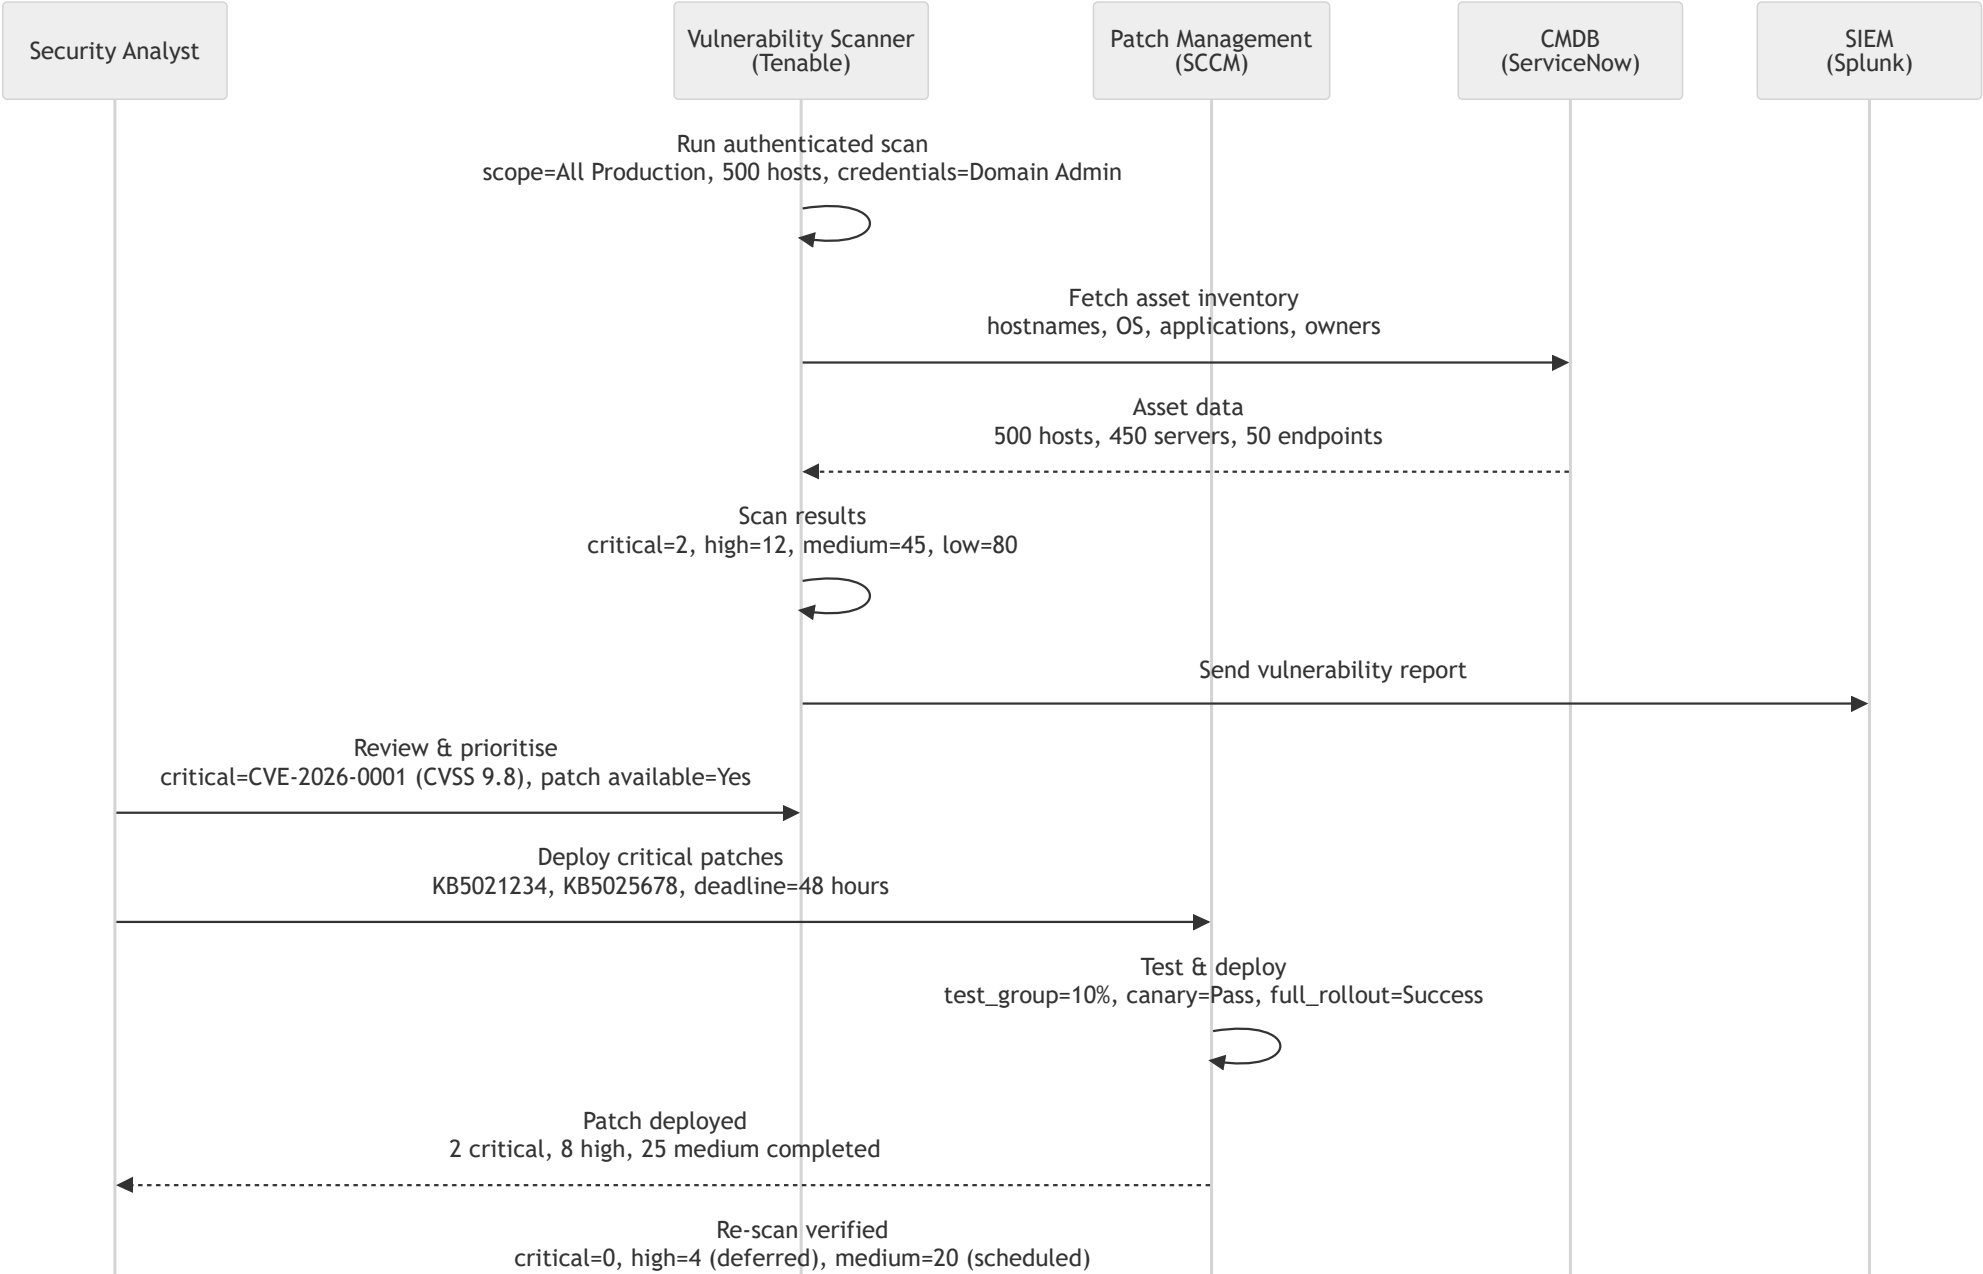

14.3 Vulnerability & Patch Management

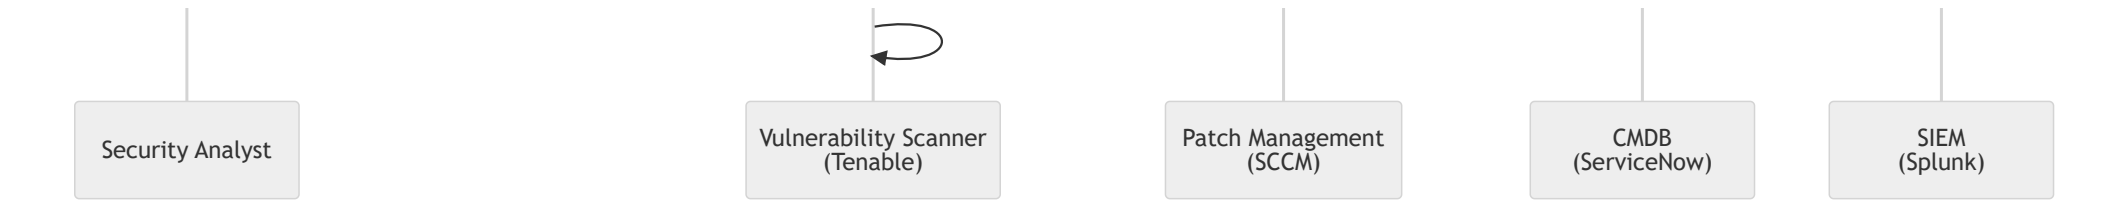

Description: IT security manages vulnerability identification, prioritization, patching, and verification across infrastructure, applications, and endpoints.

Actors: Security Analyst, IT Operations, System Owner

Systems: Vulnerability Scanner (Tenable), Patch Management (WSUS / SCCM), CMDB (ServiceNow), SIEM (Splunk)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Patch Mgmt	Scan	RunVulnerabilityScan	Vulnerability Scanner (Tenable)	CMDB (ServiceNow)	Tenable API (REST)	ServiceNow API (REST)	Batch (Scheduled)	Medium
Patch Mgmt	Prioritise	PrioritiseVulnerabilities	Vulnerability Scanner (Tenable)	SIEM (Splunk)	Tenable API (REST)	Splunk API (REST)	Batch (Scheduled)	Simple
Patch Mgmt	Deploy	DeploySecurityPatches	Vulnerability Scanner (Tenable)	Patch Management (SCCM)	Tenable API (REST)	SCCM API (SOAP)	Event-driven	Medium
Patch Mgmt	Verify	VerifyPatchDeployment	Patch Management (SCCM)	Vulnerability Scanner (Tenable)	SCCM API (SOAP)	Tenable API (REST)	Batch (Scheduled)	Medium
Patch Mgmt	Exception	ManagePatchExceptions	Vulnerability Scanner (Tenable)	CMDB (ServiceNow)	Tenable API (REST)	ServiceNow API (REST)	API-led (Real-time)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Patch Mgmt	Scan	Authenticated vulnerability scan completed across all assets	All 500 hosts scanned; credentials valid; scan duration < 4 hours; no scan failures
Patch Mgmt	Prioritise	Vulnerabilities prioritised by CVSS score and exploitability	Critical/High patched within SLA; Medium within 90 days; Low next cycle
Patch Mgmt	Deploy	Critical patches deployed within 48 hours, high within 30 days	Patch tested in pre-prod; canary deployment passed; full rollout success rate > 99%
Patch Mgmt	Verify	Re-scan confirms vulnerability remediation	Critical vulns zero; high vulns reduced by 90%+; false positives identified and excluded
Patch Mgmt	Exception	Patch exceptions managed with compensating controls	Exception approved by CISO; compensating control documented; re-review date set

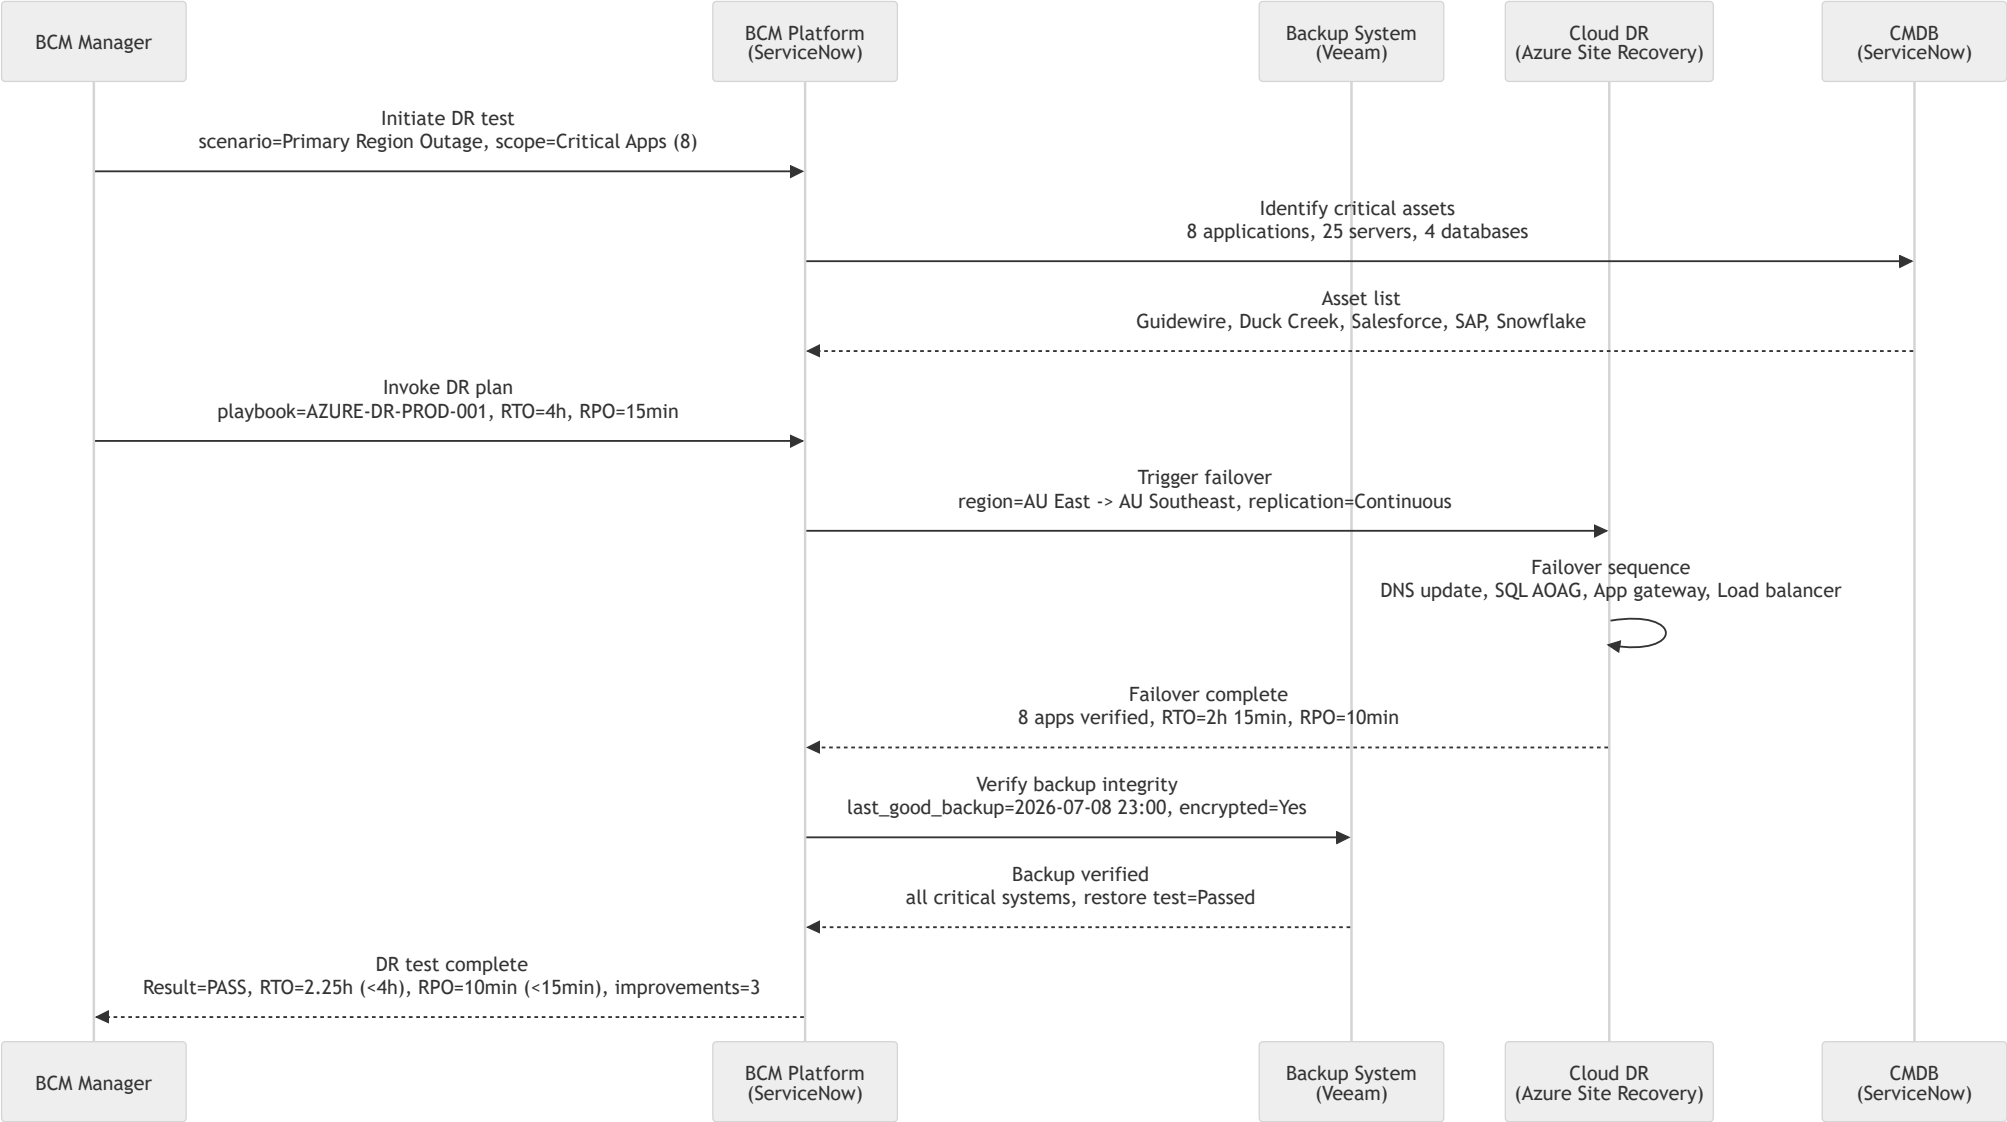

14.4 Business Continuity & Disaster Recovery

Description: BCM team maintains business continuity plans and IT disaster recovery capabilities. System manages DR testing, failover, and recovery procedures.

Actors: BCM Manager, IT Operations, Crisis Management Team

Systems: BCM Platform (ServiceNow), Backup System (Veeam), Cloud DR (Azure Site Recovery), CMDB (ServiceNow)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
BC/DR	Assets	IdentifyCriticalAssets	BCM Platform (ServiceNow)	CMDB (ServiceNow)	ServiceNow API (REST)	ServiceNow API (REST)	API-led (Real-time)	Simple
BC/DR	Failover	TriggerDRFailover	BCM Platform (ServiceNow)	Cloud DR (Azure Site Recovery)	ServiceNow API (REST)	Azure ASR API (REST)	Event-driven	High
BC/DR	Verify	VerifyApplicationRecovery	Cloud DR (Azure Site Recovery)	BCM Platform (ServiceNow)	Azure ASR API (REST)	ServiceNow API (REST)	Batch (Scheduled)	High
BC/DR	Backup	VerifyBackupIntegrity	BCM Platform (ServiceNow)	Backup System (Veeam)	ServiceNow API (REST)	Veeam API (REST)	Batch (Scheduled)	Medium
BC/DR	Report	GenerateDRTestReport	BCM Platform (ServiceNow)	BCM Platform (ServiceNow)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
BC/DR	Assets	Critical assets identified with RTO/RPO requirements	BIA completed; critical assets classified (Tier 1-4); RTO/RPO documented for each
BC/DR	Failover	DR failover completed within RTO	Full failover < 4h; critical apps recover first; data consistency verified after failover
BC/DR	Verify	Application recovery verified with functional testing	All 8 apps functional; data integrity confirmed; user acceptance tested
BC/DR	Backup	Backup integrity verified with restore test	Last backup successful; encryption verified; restore test passed for critical systems
BC/DR	Report	DR test results documented with improvement actions	RTO/RPO achieved; gaps identified; improvement plan with owners and deadlines

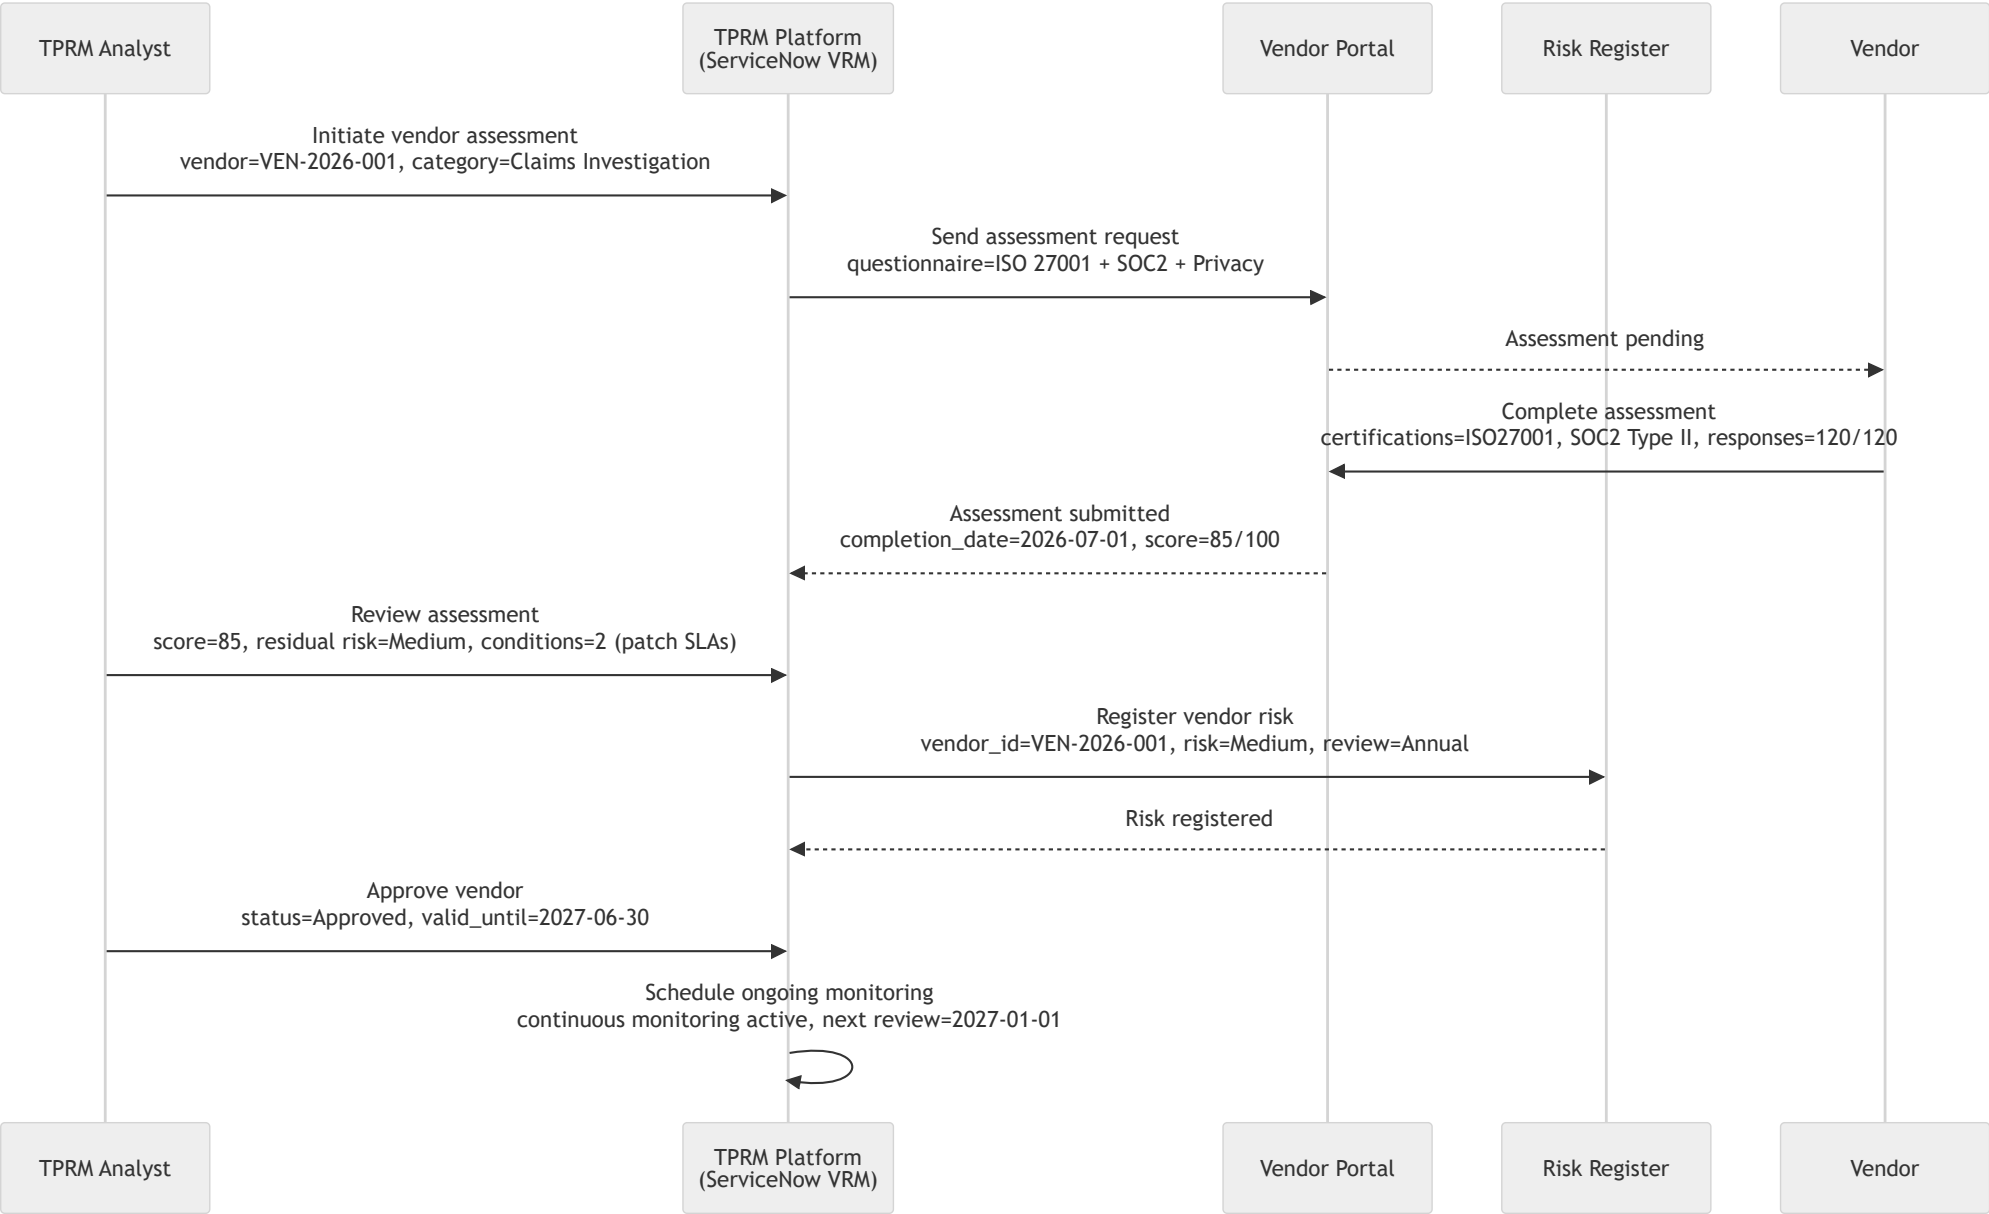

14.5 Third-Party Risk Management

Description: TPRM team assesses and monitors third-party vendors for security, compliance, and operational risks throughout the vendor lifecycle.

Actors: TPRM Analyst, Vendor Manager, Vendor, Compliance Officer

Systems: TPRM Platform (ServiceNow VRM), Vendor Portal, Risk Register, Compliance Management (Wolters Kluwer)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
TPRM	Initiate	InitiateVendorAssessment	TPRM Platform (ServiceNow VRM)	Vendor Portal	ServiceNow API (REST)	Vendor Portal API (REST)	API-led (Real-time)	Simple
TPRM	Questionnaire	SendAssessmentRequest	TPRM Platform (ServiceNow VRM)	Vendor Portal	ServiceNow API (REST)	Vendor Portal API (REST)	Event-driven	Simple
TPRM	Review	ReviewVendorAssessment	TPRM Platform (ServiceNow VRM)	TPRM Platform (ServiceNow VRM)	Internal	Internal	API-led (Real-time)	Medium
TPRM	Risk	RegisterVendorRisk	TPRM Platform (ServiceNow VRM)	Risk Register	ServiceNow API (REST)	Risk Register API (REST)	Event-driven	Simple
TPRM	Monitor	ScheduleOngoingMonitoring	TPRM Platform (ServiceNow VRM)	TPRM Platform (ServiceNow VRM)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
TPRM	Initiate	Vendor assessment initiated for new engagements	Assessment scope defined; questionnaire tailored to vendor services; SLA set for response
TPRM	Questionnaire	Assessment questionnaire completed by vendor	Response rate 100%; evidence uploaded; certifications verified with issuing body
TPRM	Review	Assessment reviewed and scored with findings documented	Scor

Flow	Entity	Acceptance Criterion	Expected Outcome
			es by domain; conditions/weaknesses identified; remediation plan agreed
TPRM	Risk	Vendor risk registered in firm-wide risk register	Inherent and residual risk scored; risk acceptance or mitigation plan documented
TPRM	Monitor	Ongoing monitoring activated with continuous controls monitoring	Dark web monitoring active; breach notification verified; quarterly performance review scheduled

15: Enterprise Services — IN035

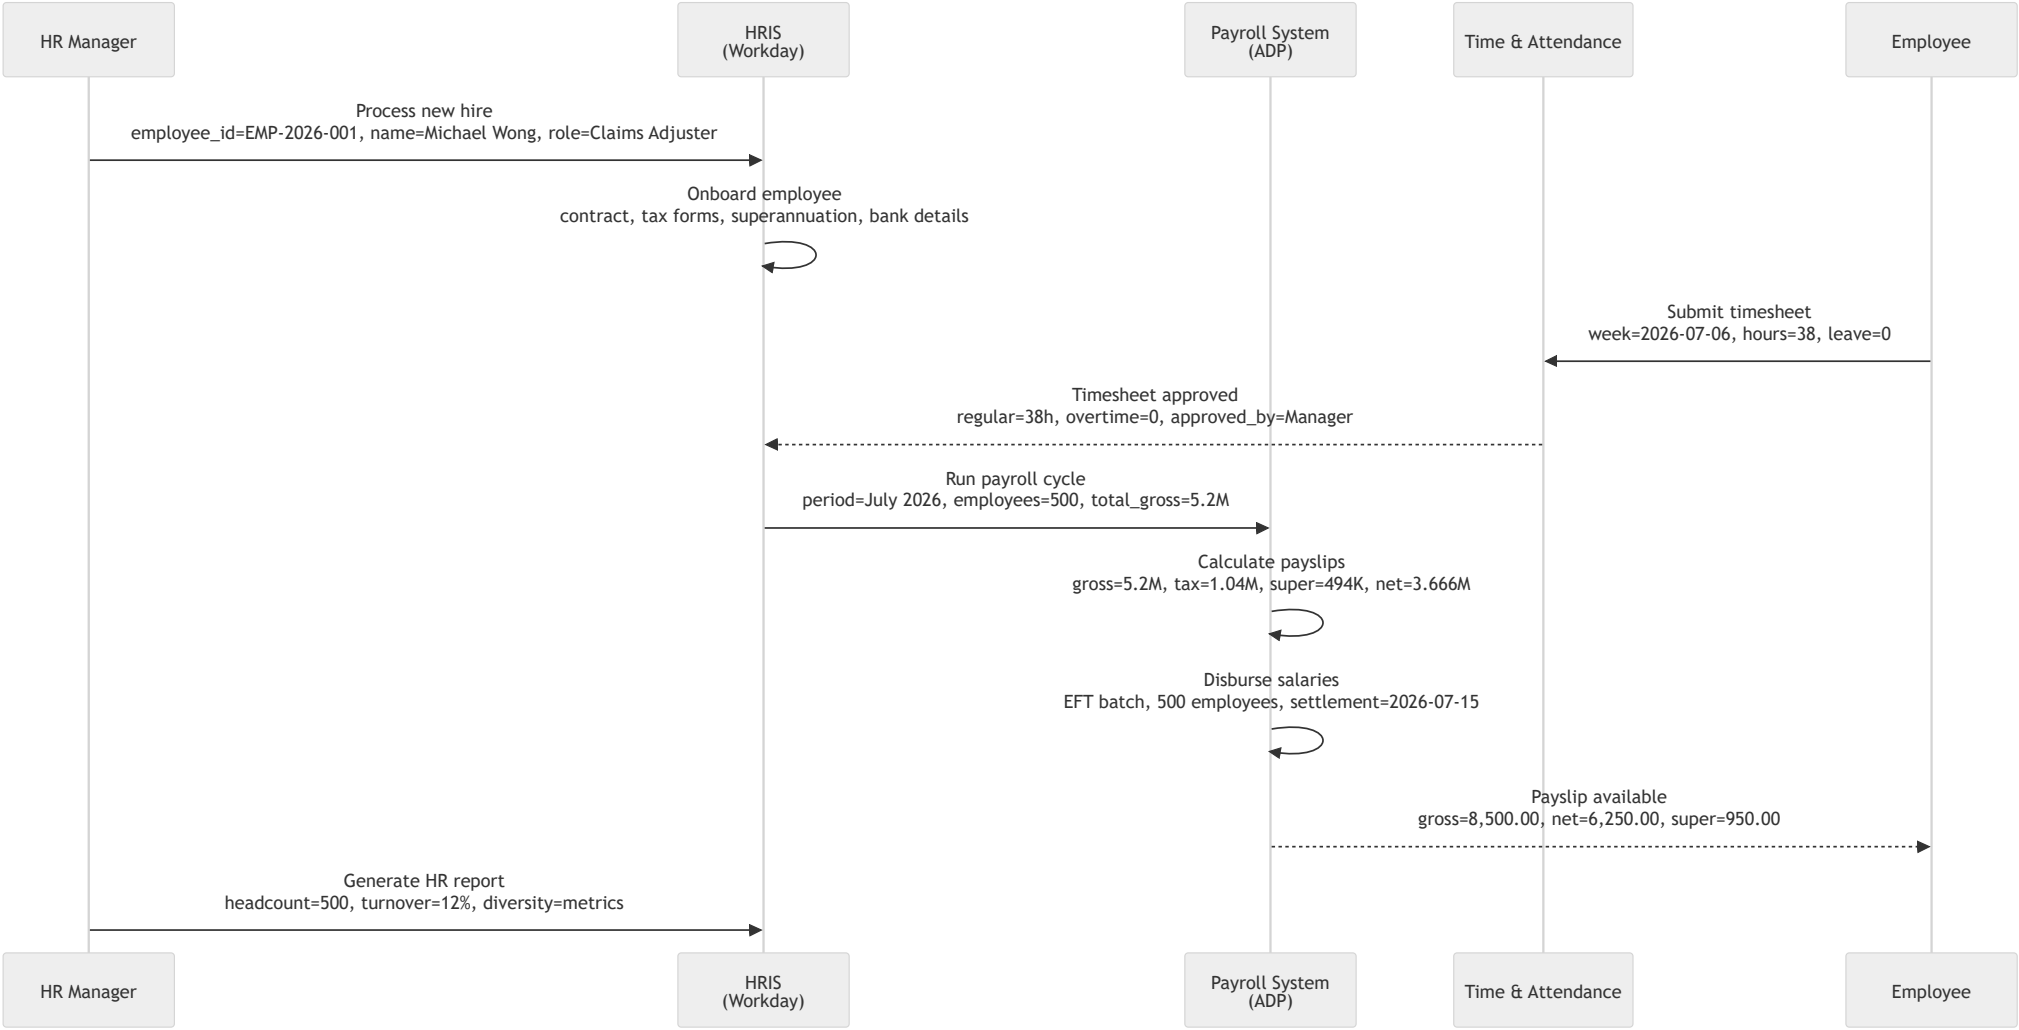

15.1 HR & Payroll Management

Description: HR department manages employee lifecycle, payroll processing, time tracking, benefits administration, and talent management across the organisation.

Actors: HR Manager, Employee, Payroll Officer

Systems: HRIS (Workday), Payroll System (ADP), Time & Attendance, Benefits Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
HR	Onboard	ProcessNewHire	HR Manager	HRIS (Workday)	Workday API (REST)	Workday API (REST)	API-led (Real-time)	Medium
HR	Timesheet	ApproveTimesheet	Time & Attendance	HRIS (Workday)	TA API (REST)	Workday API (REST)	Batch (Scheduled)	Simple
HR	Payroll	RunPayrollCycle	HRIS (Workday)	Payroll System (ADP)	Workday API (REST)	ADP API (SOAP)	Batch (Scheduled)	High
HR	Disburse	DisburseSalaries	Payroll System (ADP)	Payroll System (ADP)	Internal	Internal	Batch (Scheduled)	Medium
HR	Reporting	GenerateHRReport	HRIS (Workday)	HRIS (Workday)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
HR	Onboard	New hire onboarded with all documentation completed	Contract signed; tax forms lodged; super fund nominated; bank details verified; IT access provisioned
HR	Timesheet	Timesheet submitted and approved before payroll cutoff	Hours verified against roster; leave balances updated; overtime approved per policy
HR	Payroll	Payroll run completed with accurate calculations	All 500 employees paid; tax withheld correctly; superannuation calculated at 11.5%; leave accrued
HR	Disburse	Salaries disbursed to employee bank accounts on pay day	EFT batch submitted; settlement confirmed; failed payments flagged and re-attempted
HR	Reporting	HR reports generated for management with key metrics	Headcount, turnover, diversity, and cost reports; data reconciled to payroll; trend analysis

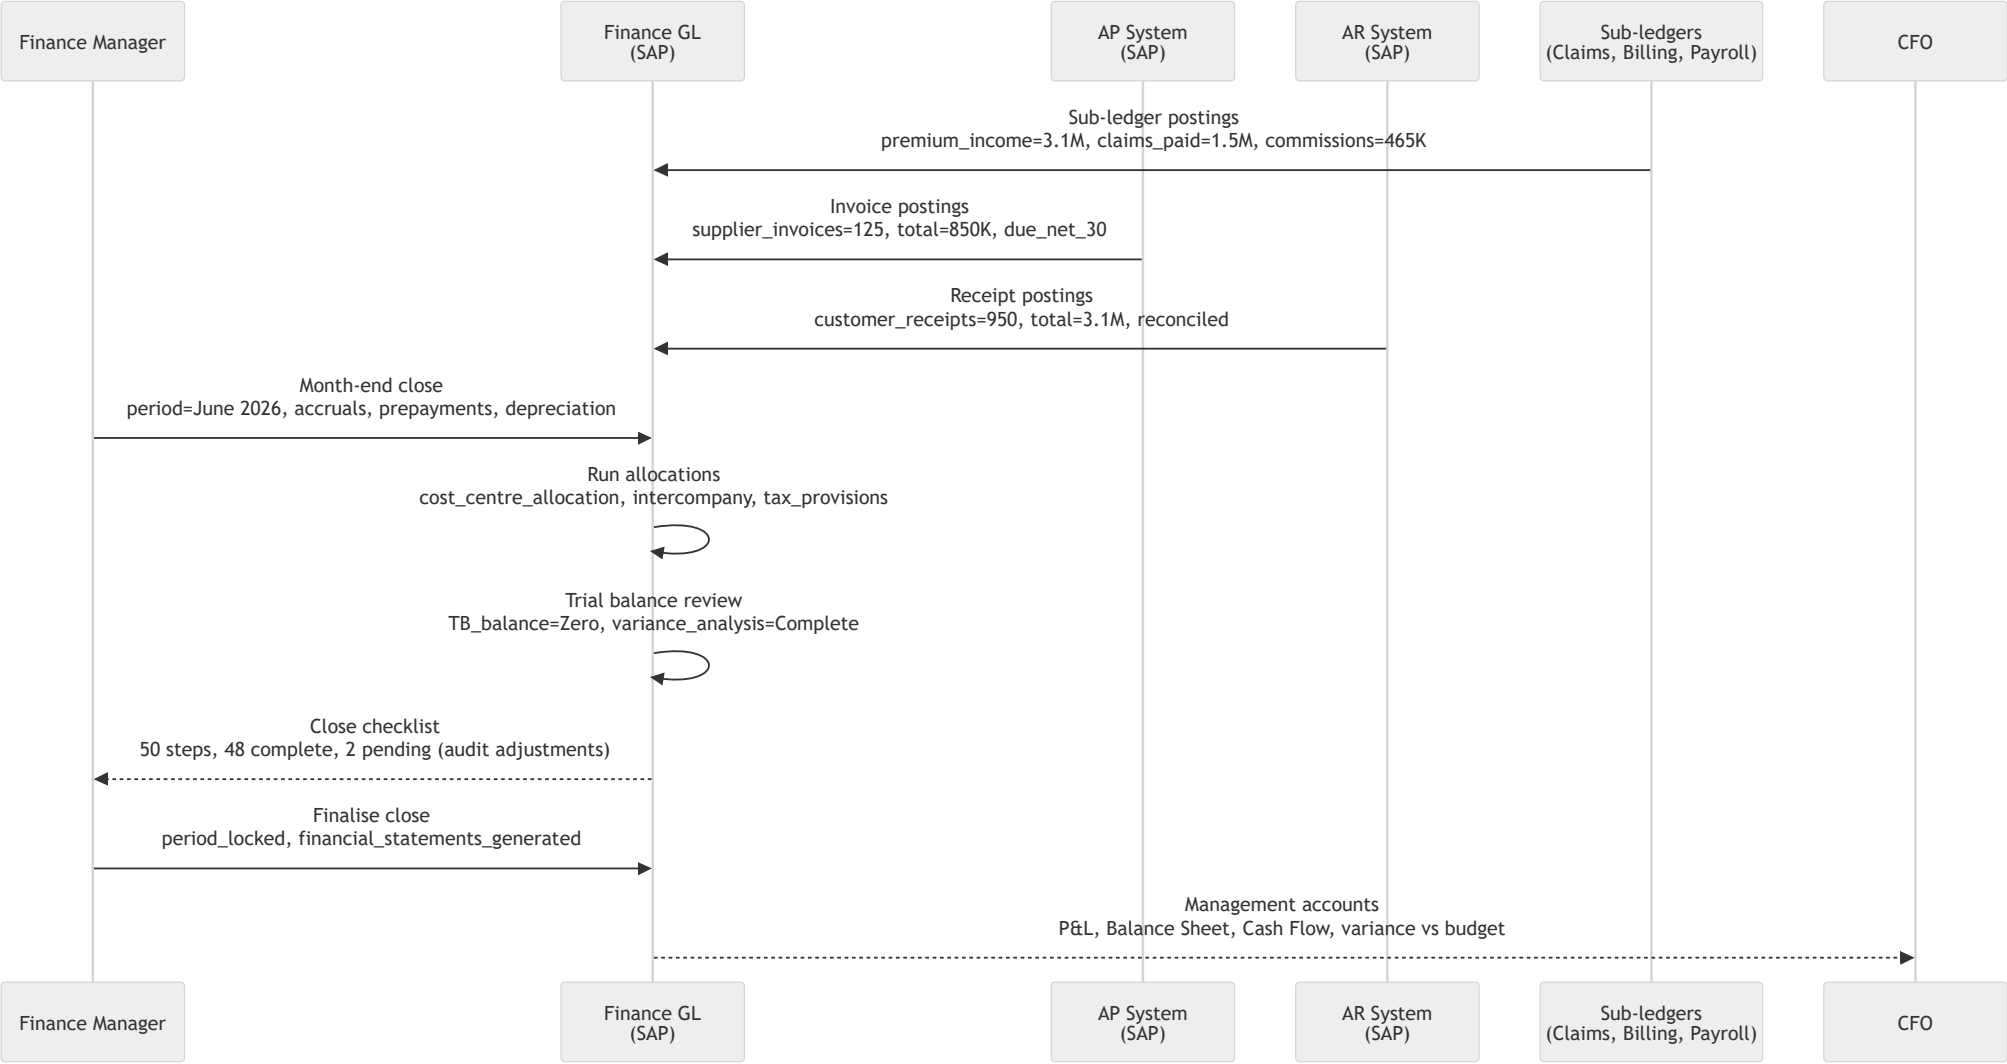

15.2 Financial Accounting & General Ledger

Description: Finance team manages general ledger, accounts payable, accounts receivable, fixed assets, and month-end close process across the insurance enterprise.

Actors: Finance Manager, Accountant, CFO

Systems: Finance GL (SAP), AP System (SAP), AR System (SAP), Fixed Assets (SAP), Treasury (SAP)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Finance GL	Sub-ledger	PostSubLedgerEntries	Sub-ledgers (Claims, Billing, Payroll)	Finance GL (SAP)	SAP API (SOAP)	SAP API (SOAP)	Batch (Scheduled)	High
Finance GL	AP	PostInvoiceEntries	AP System (SAP)	Finance GL (SAP)	SAP API (SOAP)	SAP API (SOAP)	Batch (Scheduled)	Medium
Finance GL	AR	PostReceiptEntries	AR System (SAP)	Finance GL (SAP)	SAP API (SOAP)	SAP API (SOAP)	Batch (Scheduled)	Medium
Finance GL	Close	RunMonthEndClose	Finance GL (SAP)	Finance GL (SAP)	Internal	Internal	Batch (Scheduled)	High
Finance GL	Report	GenerateFinancialStatements	Finance GL (SAP)	Finance GL (SAP)	Internal	Internal	Batch (Scheduled)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Finance GL	Sub-ledger	All sub-ledger entries posted and reconciled to GL	Premium income, claims, and commissions tie to operational systems; reconciling items cleared
Finance GL	AP	Supplier invoices posted and approved for payment	Invoice matched to PO or contract; coding verified; approval workflow completed
Finance GL	AR	Customer receipts posted and reconciled	Receipts matched to invoices; unallocated cash minimised; debtor ageing accurate
Finance GL	Close	Month-end close completed within 5 business days	All 50 close steps completed; accruals posted; intercompany reconciled; provisions updated
Finance GL	Report	Financial statements generated and variance analysis complete	P&L, Balance Sheet, Cash Flow; budget variance commentary; board-ready format

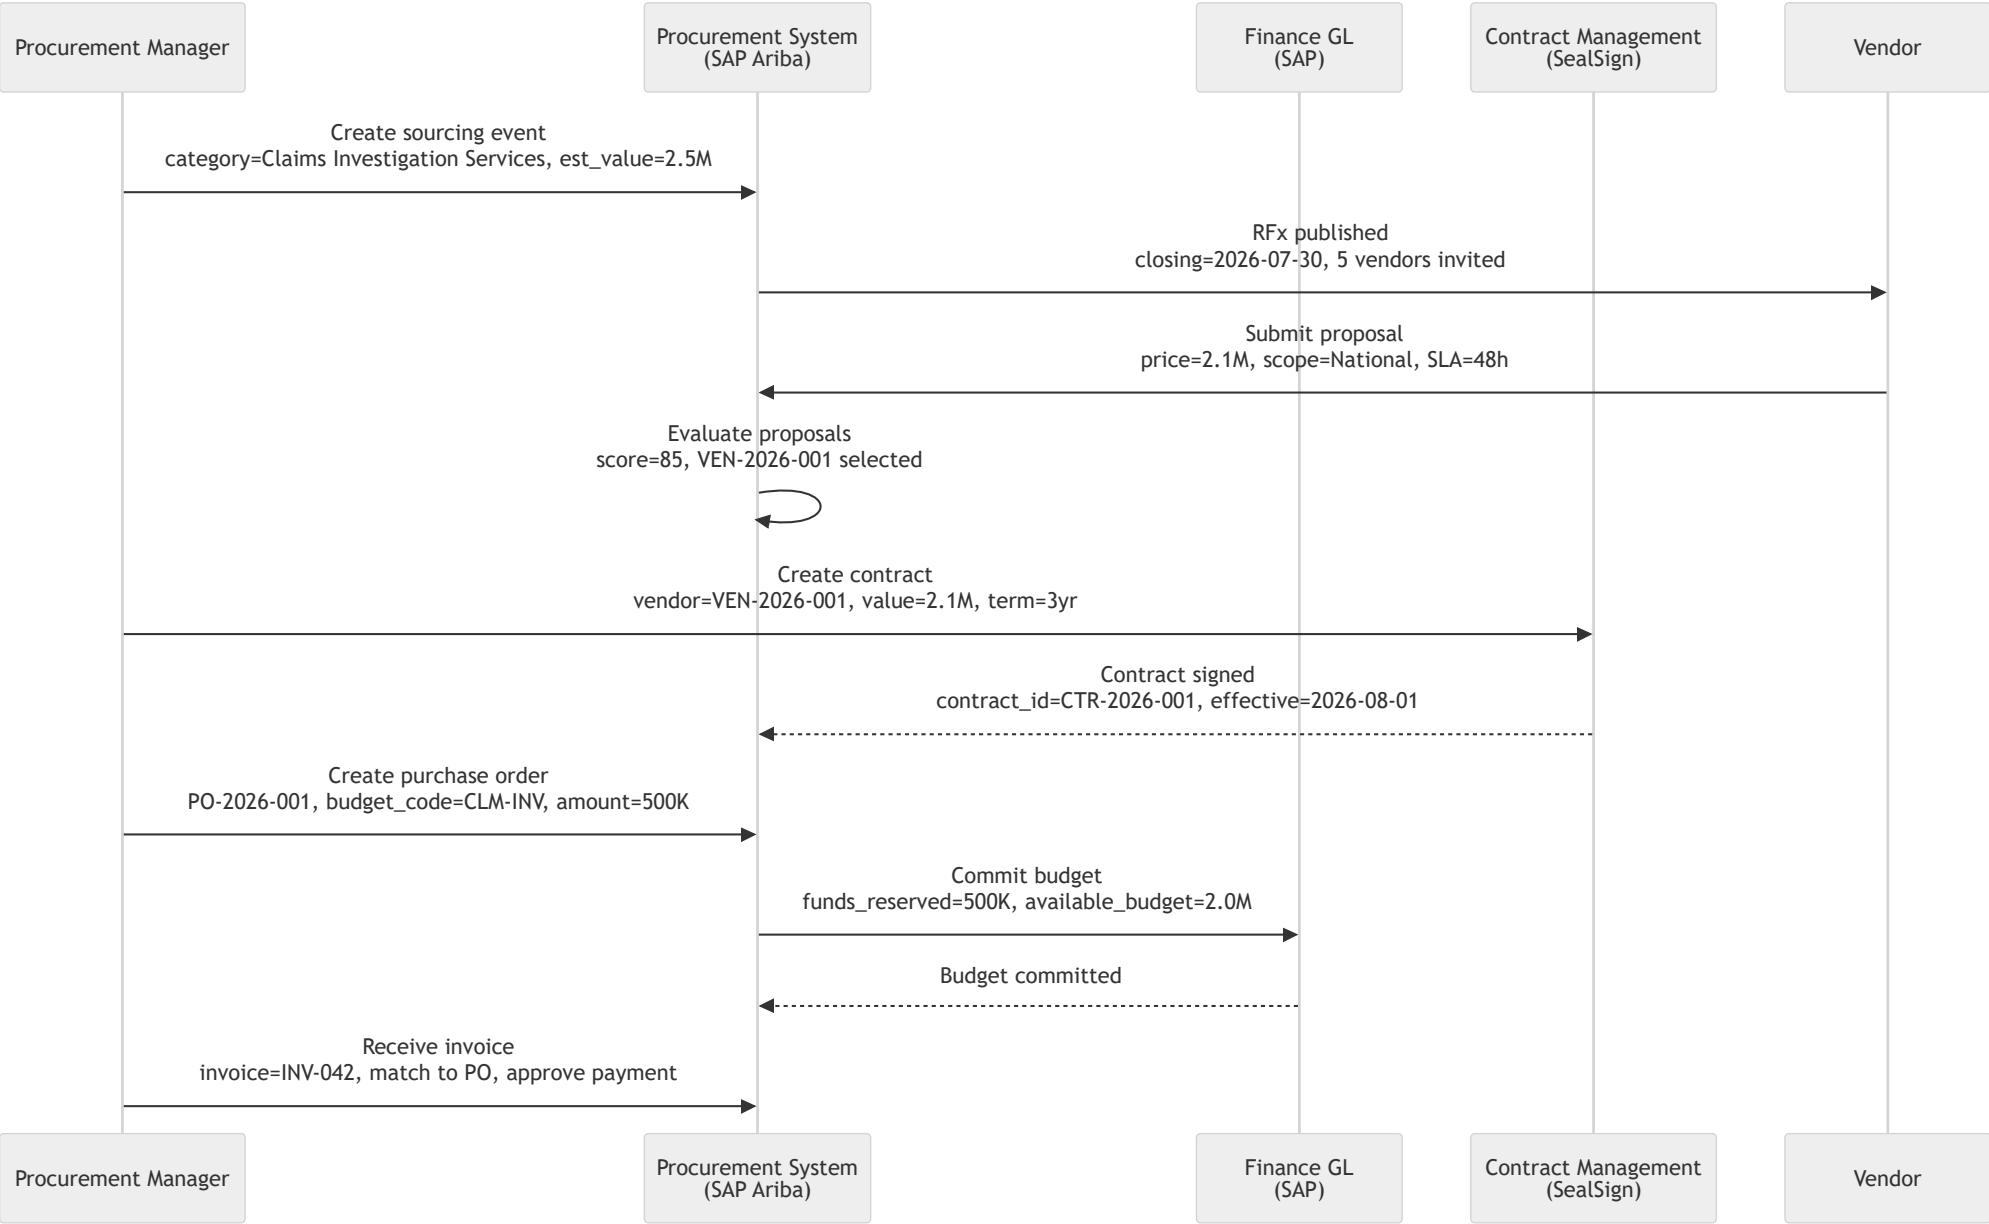

15.3 Procurement & Vendor Management

Description: Procurement team manages sourcing, contracts, purchase orders, and vendor performance across all categories including IT, claims services, and professional services.

Actors: Procurement Manager, Vendor, Budget Owner

Systems: Procurement System (SAP Ariba), Finance GL (SAP), Vendor Portal, Contract Management (SealSign)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Procurement	Sourcing	CreateSourcingEvent	Procurement System (SAP Ariba)	Vendor Portal	Ariba API (SOAP)	Vendor Portal API (REST)	API-led (Real-time)	Medium
Procurement	Contract	CreateVendorContract	Procurement System (SAP Ariba)	Contract Management (SealSign)	Ariba API (SOAP)	SealSign API (REST)	Batch (Scheduled)	Medium
Procurement	PO	CreatePurchaseOrder	Procurement System (SAP Ariba)	Procurement System (SAP Ariba)	Internal	Internal	API-led (Real-time)	Simple
Procurement	Budget	CommitBudgetReservation	Procurement System (SAP Ariba)	Finance GL (SAP)	Ariba API (SOAP)	SAP API (SOAP)	API-led (Real-time)	High
Procurement	Invoice	ProcessInvoice	Procurement System (SAP Ariba)	Finance GL (SAP)	Ariba API (SOAP)	SAP API (SOAP)	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Procurement	Sourcing	Sourcing event completed with competitive responses	At least 3 vendor responses; evaluation criteria applied; preferred vendor selected
Procurement	Contract	Contract executed with approved terms	Signed by both parties; contract value within budget; SLA and KPIs defined
Procurement	PO	Purchase order created with correct budget code	PO within budget; goods/service description accurate; delivery date agreed
Procurement	Budget	Budget commitment recorded in GL	Funds reserved against budget; commitment tracked; available balance updated
Procurement	Invoice	Invoice processed with 3-way matching	Invoice matches PO and goods receipt; approved for payment within payment terms

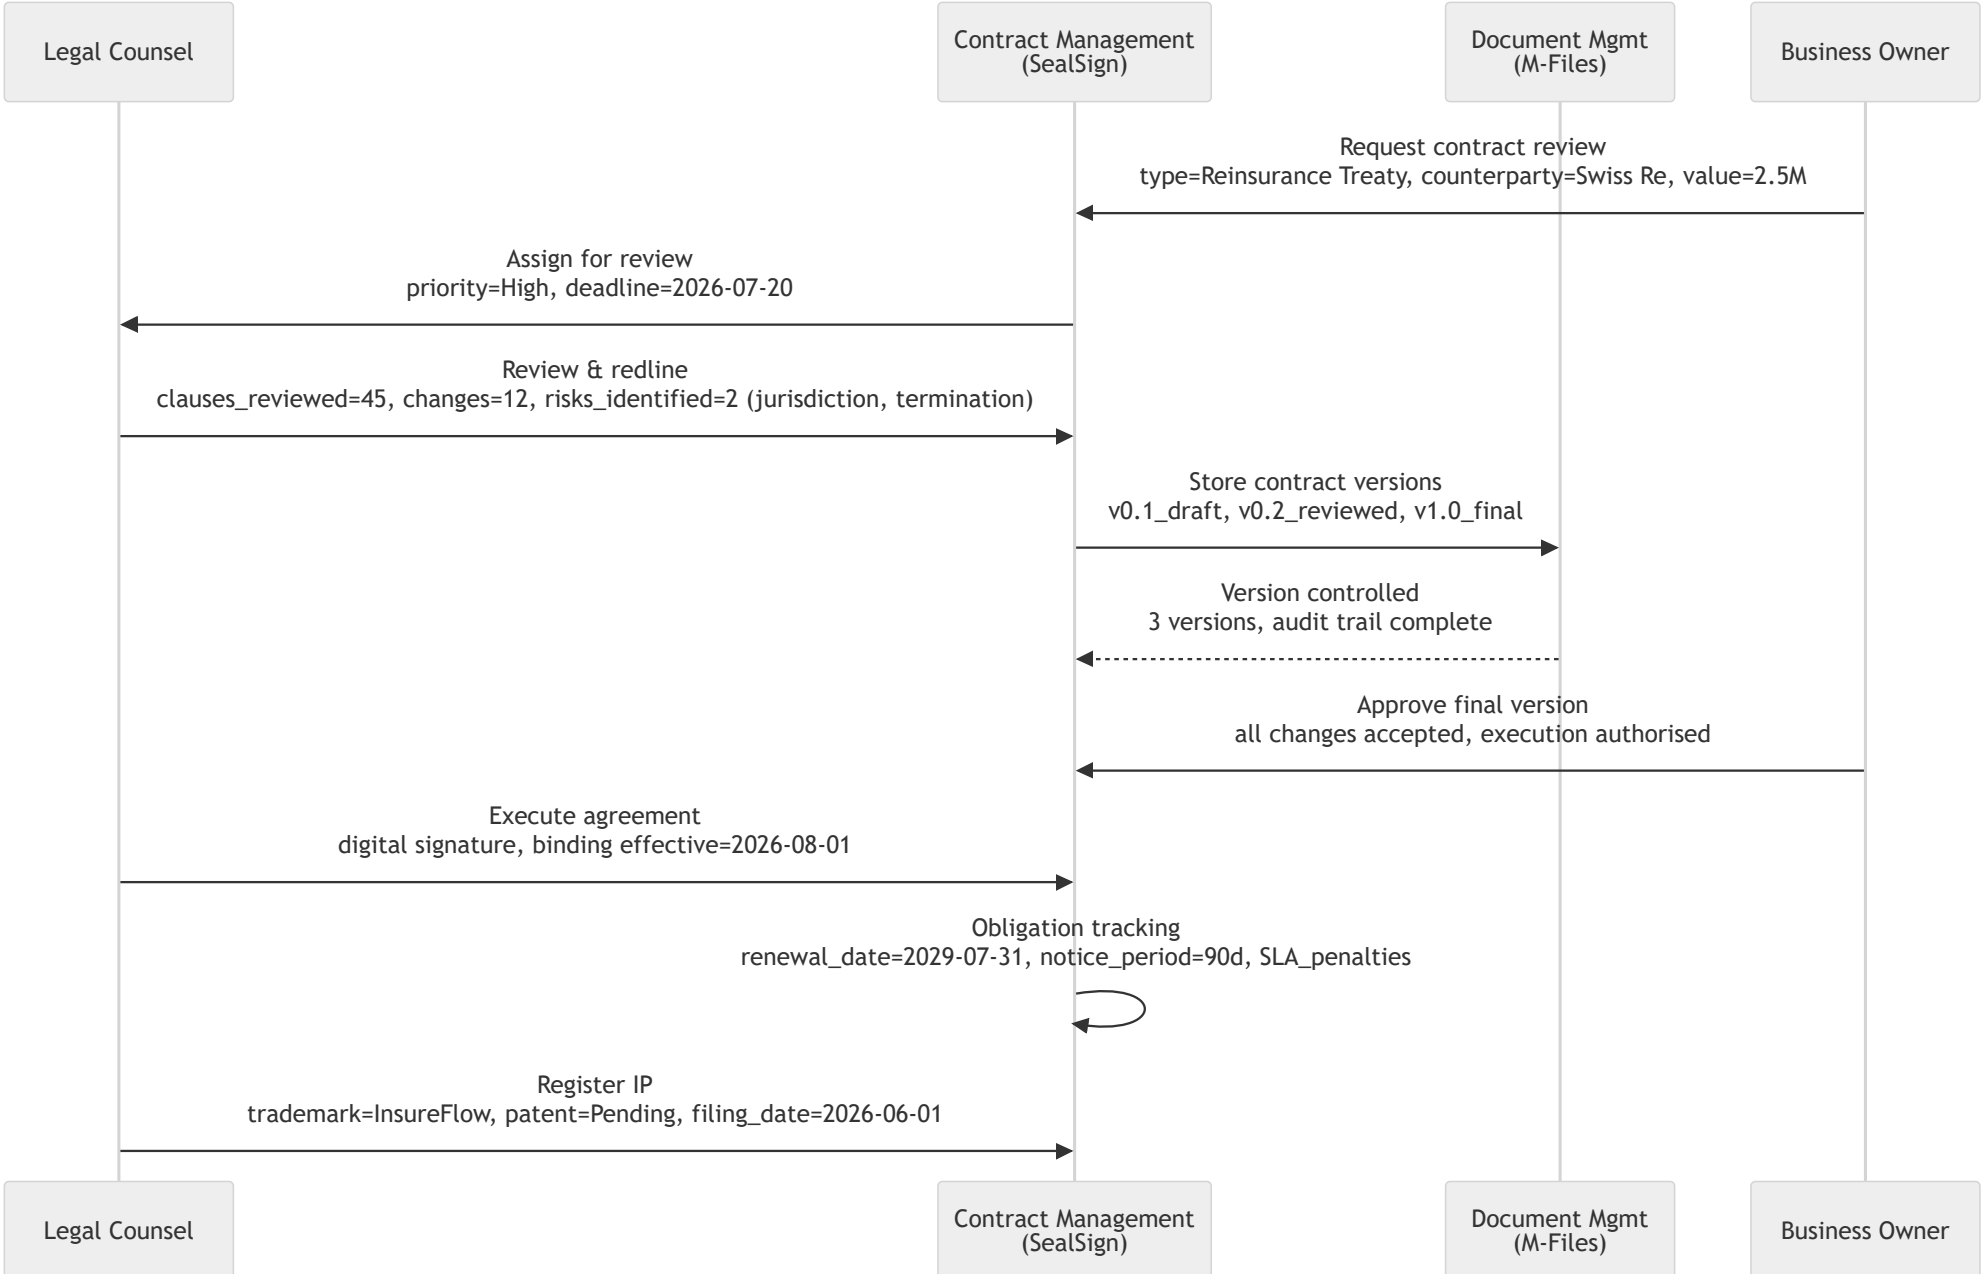

15.4 Legal & Contract Management

Description: Legal team manages contracts, legal agreements, intellectual property, litigation matters, and provides counsel across the insurance business.

Actors: Legal Counsel, Contract Manager, Business Owner

Systems: Contract Management (SealSign), Legal Case Mgmt, Document Mgmt (M-Files), IP Register

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Legal	Request	RequestContractReview	Contract Management (SealSign)	Business Owner	SealSign API (REST)	Email / Portal	API-led (Real-time)	Simple
Legal	Review	ReviewAndRedline	Contract Management (SealSign)	Legal Counsel	SealSign API (REST)	SealSign API (REST)	API-led (Real-time)	Medium
Legal	Version	StoreContractVersions	Contract Management (SealSign)	Document Mgmt (M-Files)	SealSign API (REST)	M-Files REST API (API Key)	Event-driven	Simple
Legal	Execute	ExecuteAgreement	Contract Management (SealSign)	Contract Management (SealSign)	Internal	Internal	API-led (Real-time)	Medium
Legal	Obligations	TrackObligations	Contract Management (SealSign)	Contract Management (SealSign)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Legal	Request	Contract review request logged with correct priority	All contract details captured; SLA based on complexity; legal resource assigned
Legal	Review	Contract reviewed with redlines and risk notes	Key clauses reviewed; risks highlighted with recommended mitigations; negotiation points documented
Legal	Version	Contract versions controlled with full audit trail	Every change tracked; version history complete; approved version clearly marked
Legal	Execute	Contract executed with valid digital signatures	Signatures verified; effective date set; executed copy stored in permanent repository
Legal	Obligations	Key obligations tracked with automated reminders	Renewal, termination, and SLA obligations tracked; alerts sent 90/60/30 days before milestone

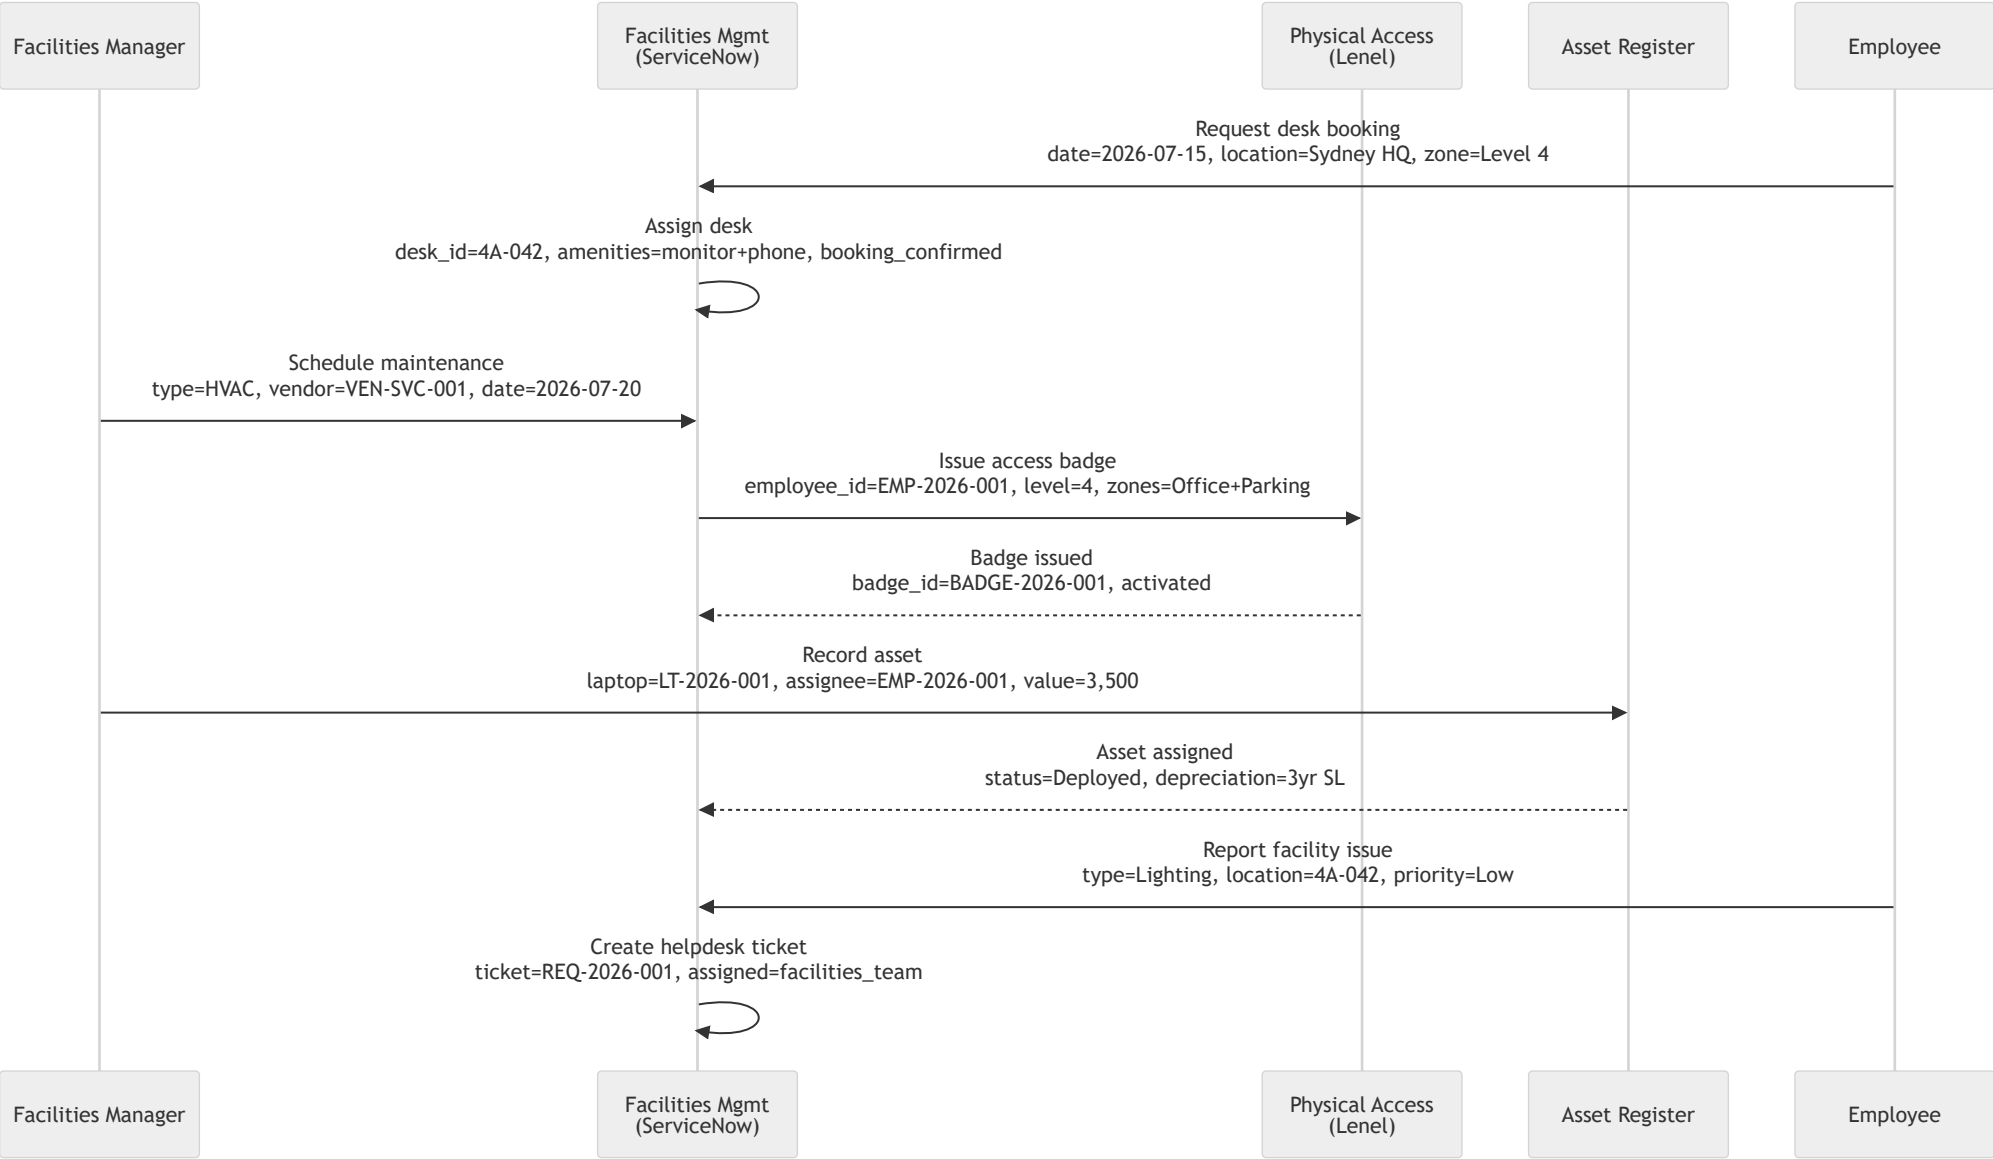

15.5 Facilities & Administration

Description: Facilities team manages office space, physical security, asset management, and administrative services across all company locations.

Actors: Facilities Manager, Employee, Security Guard

Systems: Facilities Mgmt (ServiceNow), Physical Access (Lenel), Asset Register, Helpdesk (ServiceNow)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Facilities	Desk	BookDesk	Facilities Mgmt (ServiceNow)	Facilities Mgmt (ServiceNow)	Internal	Internal	API-led (Real-time)	Simple
Facilities	Maintenance	ScheduleMaintenance	Facilities Mgmt (ServiceNow)	Facilities Mgmt (ServiceNow)	Internal	Internal	API-led (Real-time)	Simple
Facilities	Access	IssueAccessBadge	Facilities Mgmt (ServiceNow)	Physical Access (Lenel)	ServiceNow API (REST)	Lenel API (SOAP)	Event-driven	Medium
Facilities	Asset	RecordAsset	Facilities Mgmt (ServiceNow)	Asset Register	ServiceNow API (REST)	Asset Register API (REST)	API-led (Real-time)	Simple
Facilities	Helpdesk	CreateFacilitiesTicket	Facilities Mgmt (ServiceNow)	Helpdesk (ServiceNow)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Facilities	Desk	Desk booking confirmed with available amenities	Booking conflict prevented; amenities confirmed; check-in/check-out tracked
Facilities	Maintenance	Maintenance scheduled with vendor confirmation	Vendor notified; access arranged; completion verified; invoice matched to PO
Facilities	Access	Access badge issued	Badge activated; test access successful; deactivation triggered on employee termination

Flow	Entity	Acceptance Criterion	Expected Outcome
		with correct zone permissions	
Facilities	Asset	Asset recorded with accurate depreciation schedule	Asset tagged; assignee confirmed; insurance required flagged; disposal date scheduled
Facilities	Helpdesk	Facility issue resolved within SLA	Priority Low < 5 days; Medium < 3 days; High < 24 hours; Critical < 4 hours

16: IT & Digital Platforms — IN036

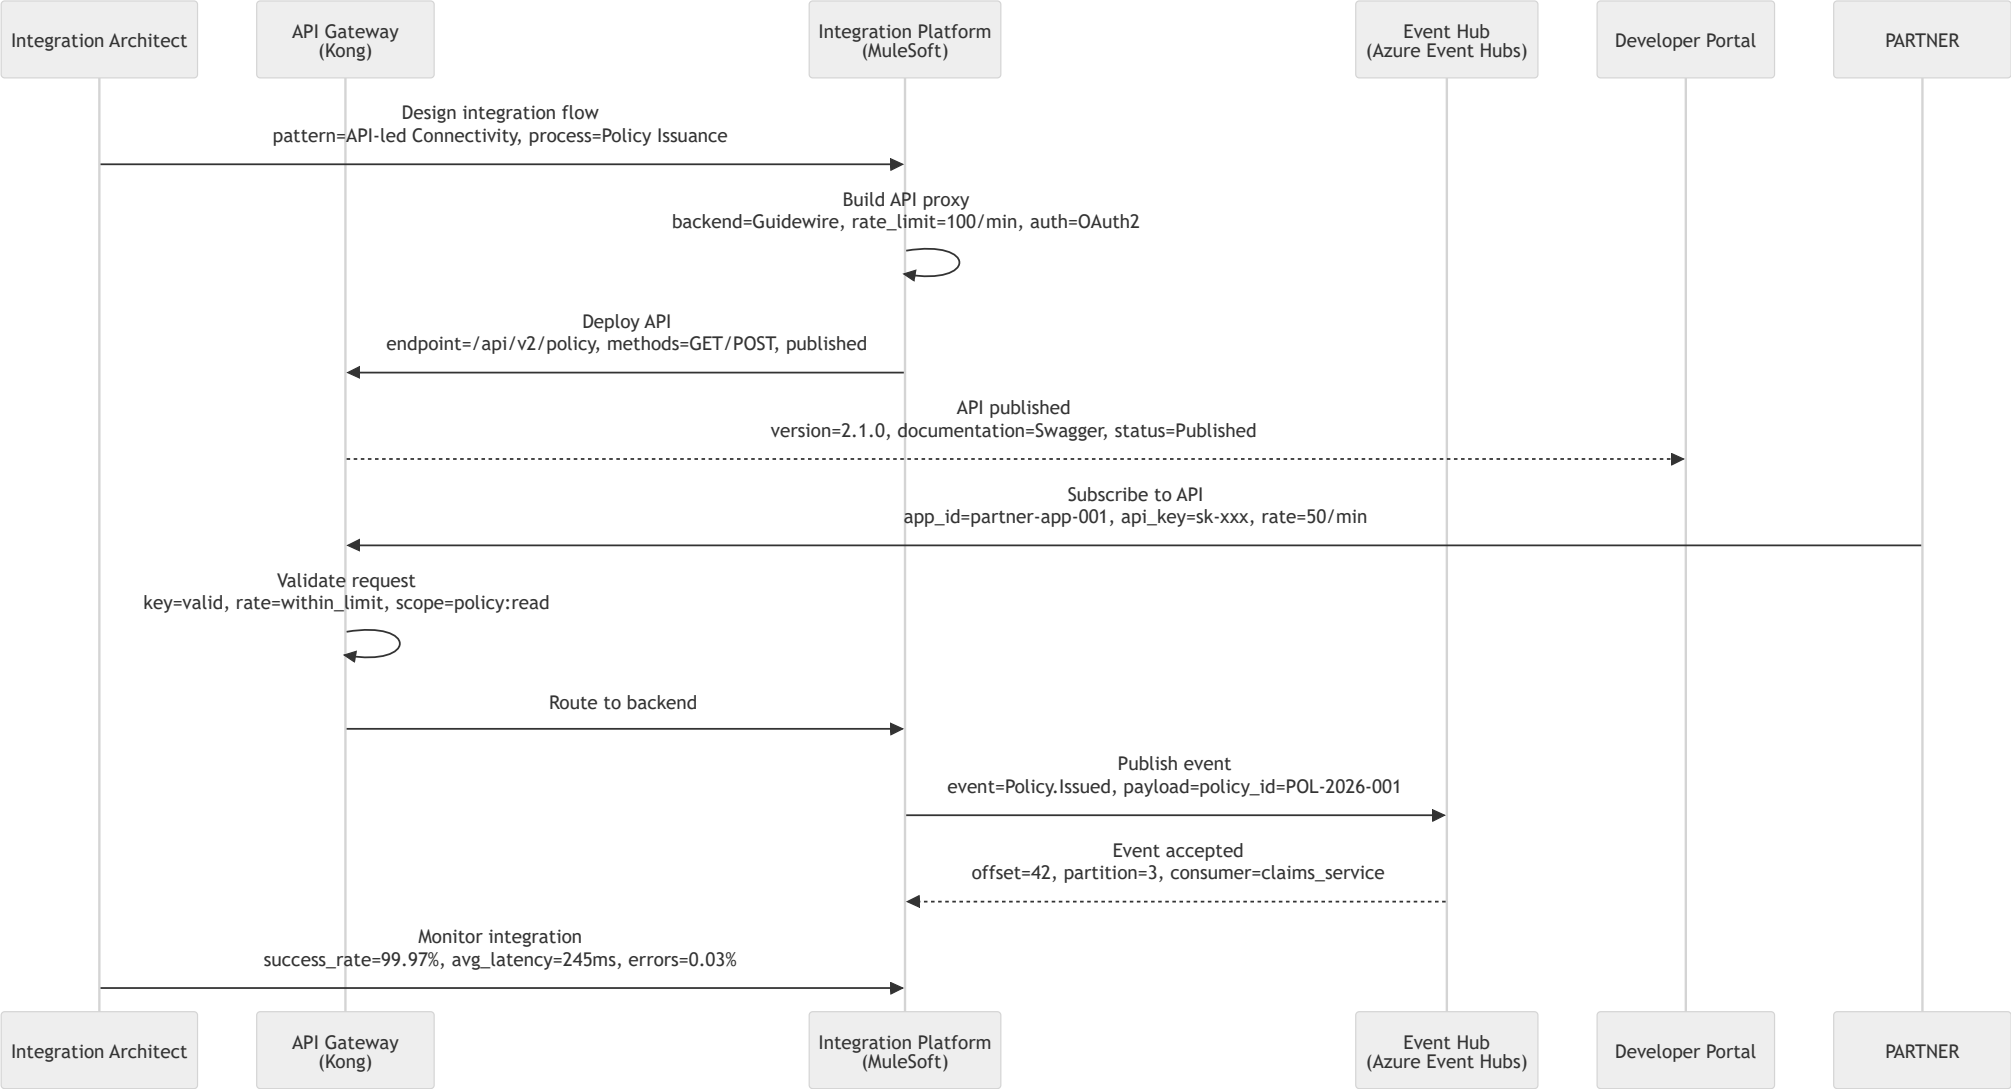

16.1 API Management & Integration Platform

Description: Integration team manages API gateway, integration flows, event streams, and connectivity between all insurance applications and external partners.

Actors: Integration Architect, API Developer, Business Partner

Systems: API Gateway (Kong / Apigee), Integration Platform (MuleSoft), Event Hub (Azure Event Hubs), Developer Portal

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
API Management	Design	DesignIntegrationFlow	Integration Platform (MuleSoft)	Integration Platform (MuleSoft)	Internal	Internal	API-led (Real-time)	Medium
API Management	Deploy	DeployAPIProxy	Integration Platform (MuleSoft)	API Gateway (Kong)	MuleSoft API (REST)	Kong Admin API (REST)	API-led (Real-time)	Medium
API Management	Publish	PublishAPIToPortal	API Gateway (Kong)	Developer Portal	Kong Admin API (REST)	Portal API (REST)	Event-driven	Simple
API Management	Route	RouteAPIRequest	API Gateway (Kong)	Integration Platform (MuleSoft)	Kong Proxy	MuleSoft Runtime	Streaming (Real-time)	Medium
API Management	Event	PublishDomainEvent	Integration Platform (MuleSoft)	Event Hub (Azure Event Hubs)	MuleSoft API (REST)	Event Hubs AMQP	Event-driven	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
API Management	Design	Integration flow designed with API-led connectivity pattern	Experience, process, and system APIs defined; reusability assessed; non-functional reqs documented
API Management	Deploy	API proxy deployed with security and rate limiting	OAuth2 enforced; rate limit 100/min; IP whitelisting for internal; response time < 500ms
API Management	Publish	API published to developer portal with documentation	Swagger/OpenAPI spec published; version management; deprecation policy enforced
API Management	Route	API request routed to correct backend with reliable response	Success rate > 99.9%; timeout handling; circuit breaker pattern; retry policy
API Management	Event	Domain events published to event hub for consumers	Event schema versioned; delivery guaranteed at-least-once; consumer lag monitored

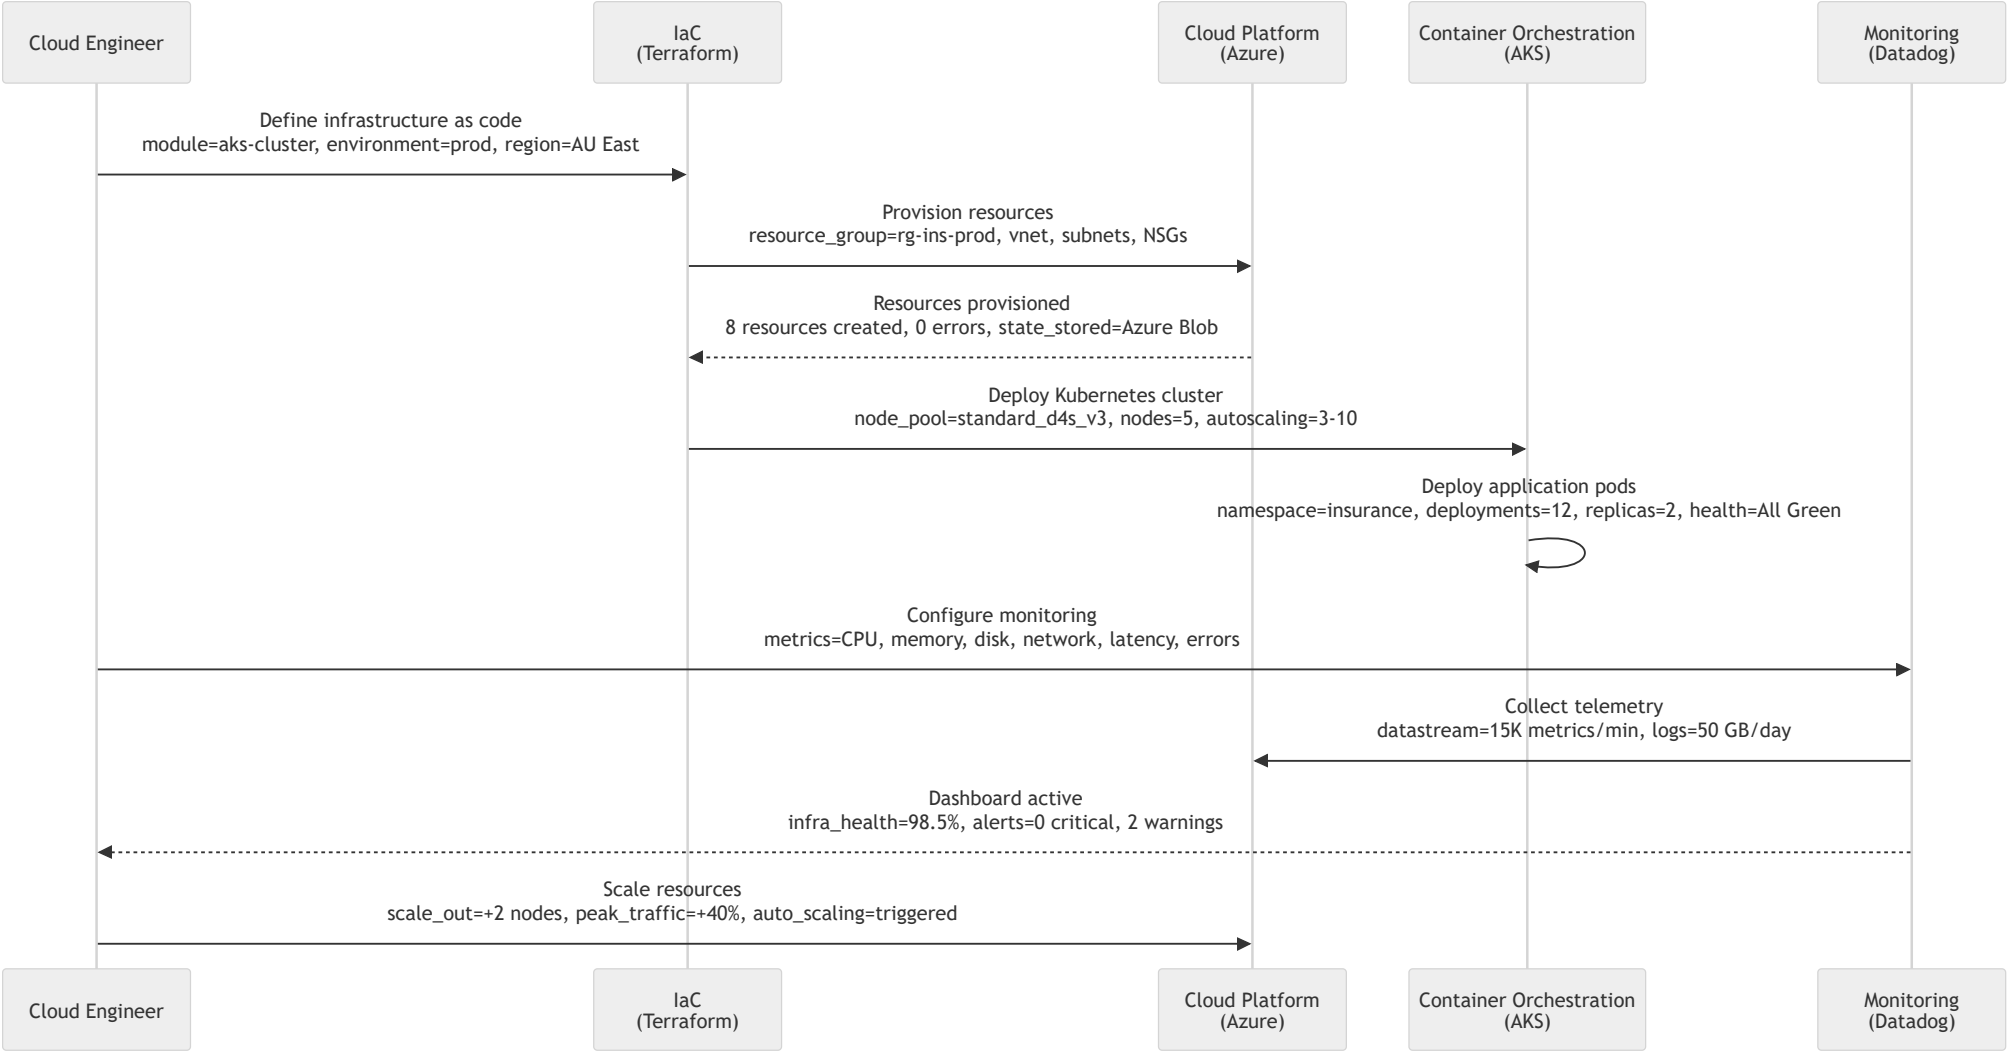

16.2 Cloud Infrastructure Management

Description: Infrastructure team manages cloud platforms, compute, storage, networking, and monitoring across Azure/AWS environments for insurance applications.

Actors: Cloud Engineer, Infrastructure Manager, DevOps Engineer

Systems: Cloud Platform (Azure), Container Orchestration (AKS), Monitoring (Datadog), IaC (Terraform), CMDB (ServiceNow)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Cloud Infrastructure	IaC	ProvisionInfrastructure	IaC (Terraform)	Cloud Platform (Azure)	Terraform API (CLI)	Azure RM API (REST)	API-led (Real-time)	High
Cloud Infrastructure	Container	DeployKubernetesCluster	IaC (Terraform)	Container Orchestration (AKS)	Terraform API (CLI)	AKS API (REST)	API-led (Real-time)	High
Cloud Infrastructure	App	DeployApplicationPods	Container Orchestration (AKS)	Container Orchestration (AKS)	Internal	Internal	API-led (Real-time)	Medium
Cloud Infrastructure	Monitoring	ConfigureInfraMonitoring	Cloud Engineer	Monitoring (Datadog)	Datadog API (REST)	Datadog Agent	Event-driven	Medium
Cloud Infrastructure	Scaling	AutoScaleResources	Cloud Platform (Azure)	Container Orchestration (AKS)	Azure Monitor	AKS Autoscaler	Streaming (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Cloud Infrastructure	IaC	Infrastructure provisioned via Terraform with state management	Drift detection enabled; state file locked; changes reviewed via PR; destroy protection
Cloud Infrastructure	Container	AKS cluster deployed with HA configuration	Multi-AZ; node pool diversity; cluster auto-upgrade; pod disruption budget configured
Cloud Infrastructure	App	Application pods deployed with health checks and resource limits	Liveness/readiness probes; resource requests/limits; horizontal pod autoscaling
Cloud Infrastructure	Monitoring	Infrastructure monitoring configured with critical alerts	CPU > 80%, memory > 85%, disk > 90%, error rate > 1%; alert routed to on-call
Cloud Infrastructure	Scaling	Auto-scaling triggers within performance thresholds	Scale-out < 5 min; scale-in < 15 min; cost optimisation by right-sizing

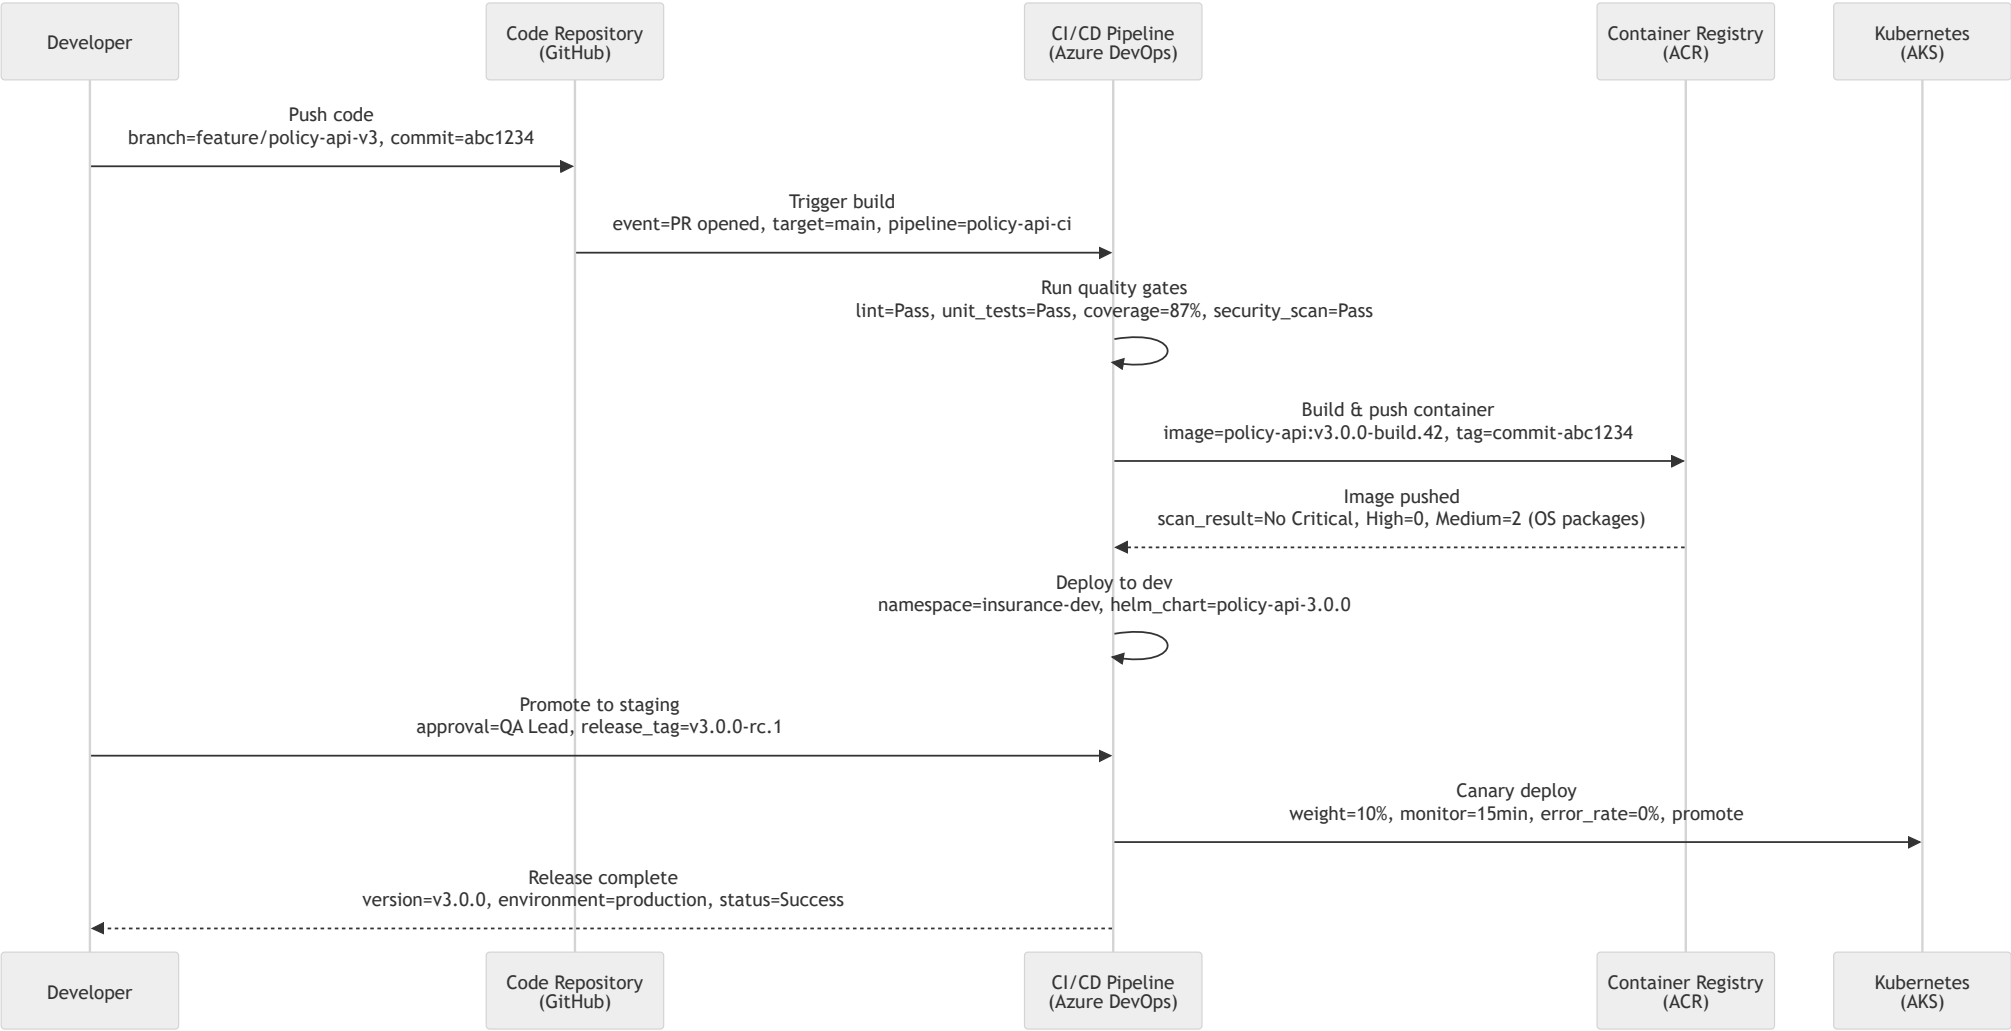

16.3 DevOps & CI/CD Pipeline

Description: DevOps team manages continuous integration, delivery, and deployment pipelines for all insurance applications with quality gates and security scanning.

Actors: DevOps Engineer, Developer, QA Engineer

Systems: CI/CD (Azure DevOps / GitHub Actions), Code Repository (GitHub), Container Registry (ACR), Artifact Repository (JFrog Artifactory)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
DevOps	Build	TriggerCIBuild	Code Repository (GitHub)	CI/CD Pipeline (Azure DevOps)	GitHub Webhook	Azure DevOps API (REST)	Event-driven	Simple
DevOps	Quality	RunQualityGates	CI/CD Pipeline (Azure DevOps)	CI/CD Pipeline (Azure DevOps)	Internal	Internal	Batch (Scheduled)	Medium
DevOps	Container	BuildAndPushContainer	CI/CD Pipeline (Azure DevOps)	Container Registry (ACR)	Azure DevOps API (REST)	ACR API (REST)	Batch (Scheduled)	Medium
DevOps	Deploy	DeployToEnvironment	CI/CD Pipeline (Azure DevOps)	Kubernetes (AKS)	Azure DevOps API (REST)	K8s API (REST)	Batch (Scheduled)	Medium
DevOps	Release	PromoteToProduction	CI/CD Pipeline (Azure DevOps)	Kubernetes (AKS)	Azure DevOps API (REST)	K8s API (REST)	API-led (Real-time)	Medium

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
DevOps	Build	CI pipeline triggered on code push with all quality gates	Build < 10 min; all gates pass; artifacts published to registry; build versioned
DevOps	Quality	Quality gates enforce code quality and security standards	Coverage >= 80%; lint errors = 0; SAST scan no critical; dependency scan no critical
DevOps	Container	Container image built and scanned for vulnerabilities	Image distroless; non-root user; scan critical = 0; image signed and attested
DevOps	Deploy	Deployment to environment successful with health checks	Deployment < 5 min; health checks pass; smoke tests pass; rollback available
DevOps	Release	Canary release with automated promotion or rollback	Canary 10% for 15 min; error rate < 0.5%; auto-promote; rollback on failure

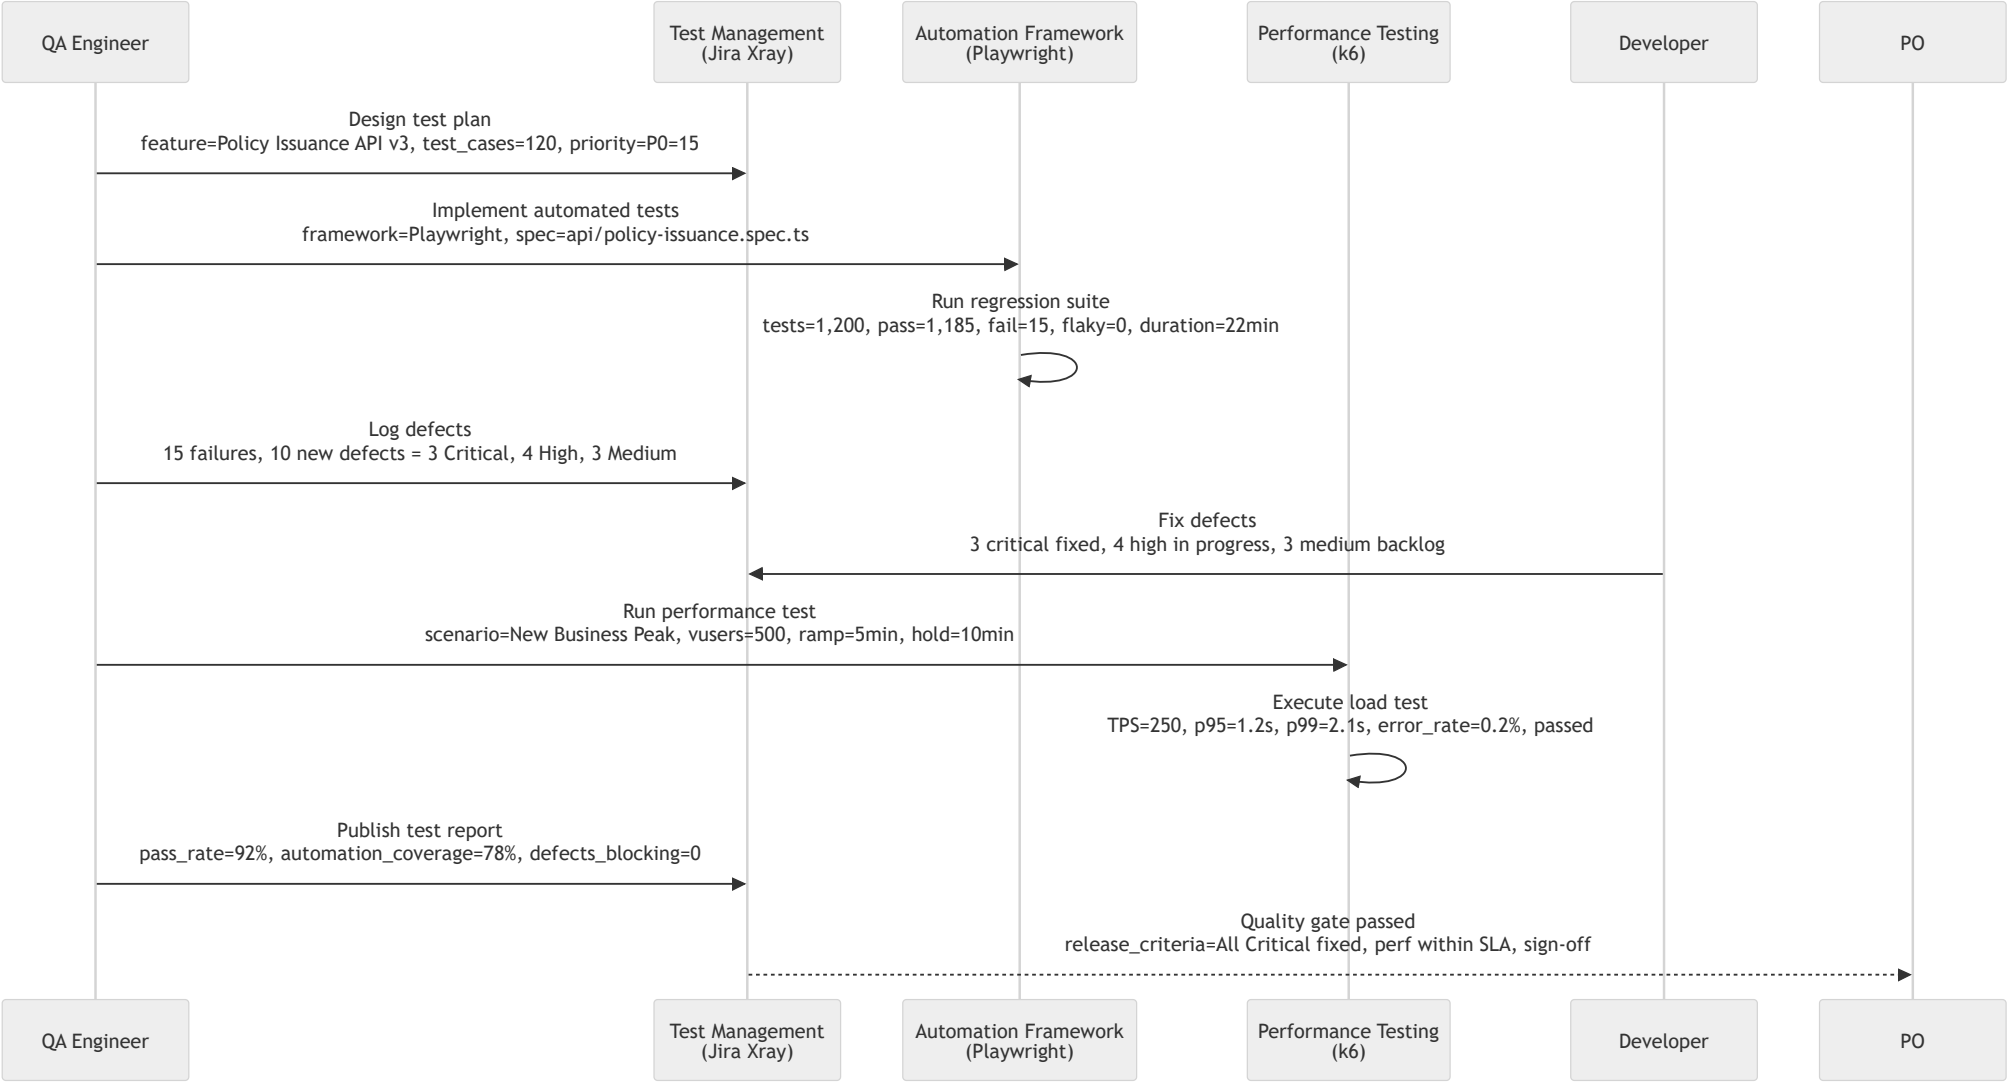

16.4 Testing & Quality Assurance

Description: QA team ensures insurance applications meet quality standards through functional, integration, performance, and regression testing across the SDLC.

Actors: QA Engineer, Test Manager, Developer, Product Owner

Systems: Test Management (Jira Xray), Automation Framework (Selenium / Playwright), Performance Testing (JMeter / k6), Test Environment (Docker)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
QA	Plan	DesignTestPlan	Test Management (Jira Xray)	Test Management (Jira Xray)	Internal	Internal	API-led (Real-time)	Simple
QA	Automation	RunAutomatedTests	Automation Framework (Playwright)	Test Management (Jira Xray)	Playwright API	Jira Xray API (REST)	Batch (Scheduled)	Medium
QA	Defects	LogDefects	Automation Framework (Playwright)	Test Management (Jira Xray)	Jira API (REST)	Jira Xray API (REST)	Event-driven	Simple
QA	Performance	RunPerformanceTest	Performance Testing (k6)	Test Management (Jira Xray)	k6 API (REST)	Jira Xray API (REST)	Batch (Scheduled)	Medium
QA	Report	PublishTestReport	Test Management (Jira Xray)	Test Management (Jira Xray)	Internal	Internal	Event-driven	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
QA	Plan	Test plan designed with full coverage of acceptance criteria	All user stories covered; positive and negative scenarios; regression scope defined
QA	Automation	Automated regression suite runs with > 90% pass rate	1,200 tests; automation coverage >= 70%; flaky tests tolerated < 2%; execution < 30 min
QA	Defects	Defects logged with severity, root cause, and reproduction steps	Critical defects resolved before release; severity classification consistent; retest passed
QA	Performance	Performance tests passed with latency and throughput within SLA	TPS meet target; p95 < 2s; error rate < 1%; resource utilisation < 80%
QA	Report	Test report published with quality metrics and release recommendation	Pass rate; automation coverage; defects by severity; performance KPIs; Go/No-Go recommendation

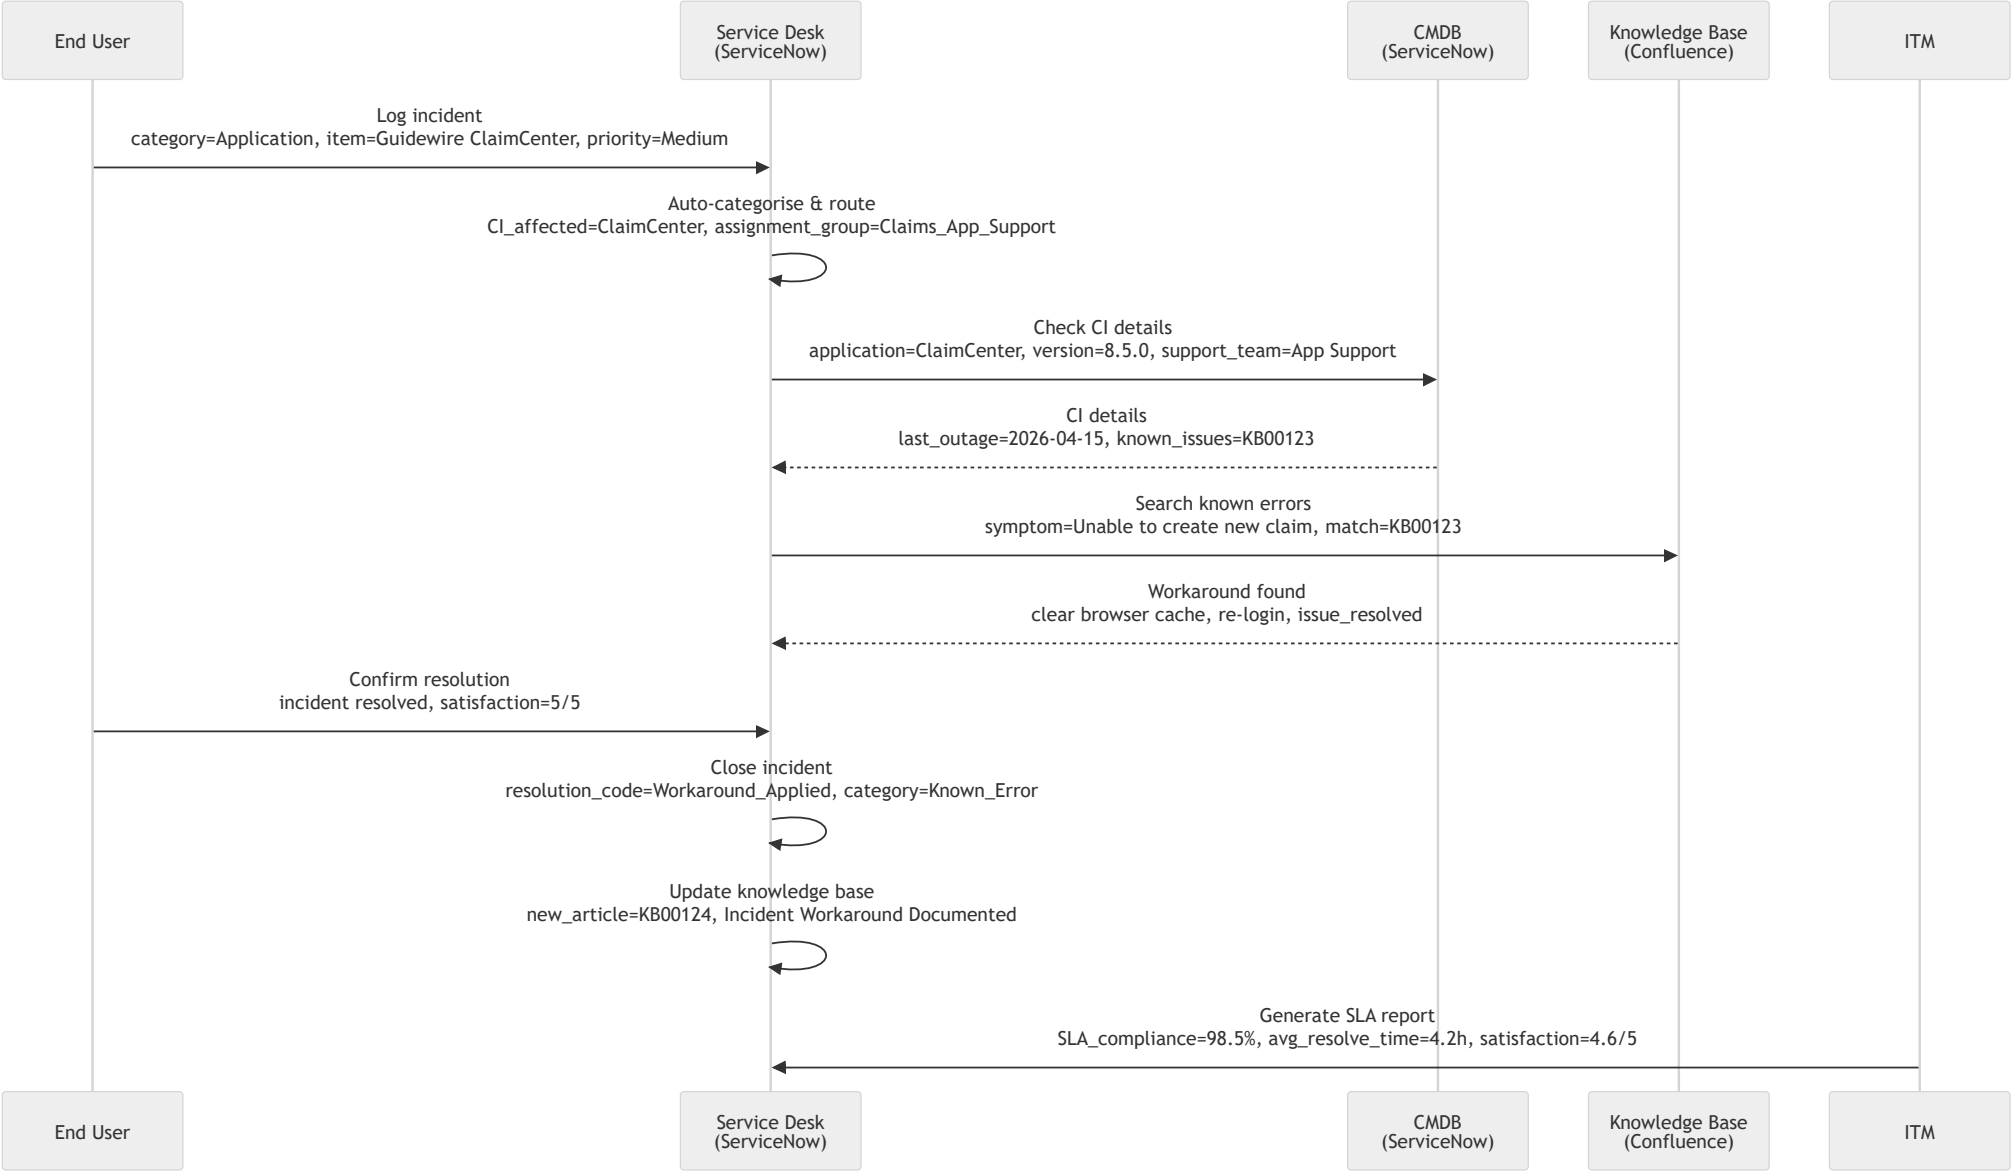

16.5 Service Desk & IT Support

Description: IT service desk manages incident management, service requests, problem management, and IT asset management for all employees.

Actors: Service Desk Analyst, End User, IT Manager

Systems: ITSM (ServiceNow), Remote Support (TeamViewer), CMDB (ServiceNow), Knowledge Base (Confluence)

Sequence Diagram

Integration Details

Flow	Entity	Info Flow	Source	Target	Source Conn	Target Conn	Pattern	Complexity
Service Desk	Incident	LogIncident	End User	ITSM (ServiceNow)	ServiceNow Portal	ServiceNow API (REST)	API-led (Real-time)	Simple
Service Desk	CMDB	CheckCIDetails	ITSM (ServiceNow)	CMDB (ServiceNow)	ServiceNow API (REST)	ServiceNow API (REST)	API-led (Real-time)	Simple
Service Desk	Knowledge	SearchKnownErrors	ITSM (ServiceNow)	Knowledge Base (Confluence)	ServiceNow API (REST)	Confluence API (REST)	API-led (Real-time)	Simple
Service Desk	Resolution	ResolveIncident	ITSM (ServiceNow)	ITSM (ServiceNow)	Internal	Internal	API-led (Real-time)	Simple
Service Desk	Reporting	GenerateSLAReport	ITSM (ServiceNow)	ITSM (ServiceNow)	Internal	Internal	Batch (Scheduled)	Simple

Acceptance Criteria

Flow	Entity	Acceptance Criterion	Expected Outcome
Service Desk	Incident	Incident logged with correct category and priority	Auto-categorisation accuracy > 90%; priority assigned per impact/urgency matrix; notification sent
Service Desk	CMDB	CI details retrieved and linked to incident	Affected CI identified; change history reviewed; related incidents referenced
Service Desk	Knowledge	Knowledge base searched and workaround applied	KB article found; workaround applied within SLA; article updated with new incident
Service Desk	Resolution	Incident resolved and closed with user confirmation	User confirms resolution; satisfaction survey sent; resolution code recorded
Service Desk	Reporting	SLA report generated with key service desk metrics	SLA compliance >= 95%; avg resolution time within target; satisfaction >= 4.5/5
